FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, JULY 23, 1891.

{ VOL. XXXVII.—No. 1.
{ No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.
THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.
Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS
May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers:
Three Copies, \$10. Five Copies, \$16.
Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.
Address all communications

Forest and Stream Publishing Co.
No. 318 BROADWAY. NEW YORK CITY.

BISLEY AND CREEDMOOR.
THE programme of the American National Rifle Association and the telegraphic notes of the British Association meet bring Bisley and Creedmoor into close union in our rifle columns. There should be a closer unity of action by the riflemen themselves. It is now too many years since an international shoot was held. Honors are even as to superiority. American shots hold the Palma for long-range any-rifle work. The Britishers are ahead in the use of the military arm. This last leadership is really the more important of the two, and now with a system of regular military arm drill in so many of the States, it should be very easy to find a team capable of using their regular weapons fully as well as the Volunteers of Great Britain manipulate their Martinis. There ought to be such a match, and it ought to be drawn as to conditions with the broadest possible limits. There ought to be by this time a consensus of opinion that a military arm should not be the most clumsy and cheapest bit of machinery which it is possible to make. Each year the demand is for a finer arm. The sights which were not thought "practicable" over five years ago are now regarded as indispensable to a properly equipped military arm. So of the charges, etc., etc. Nothing is too good for the modern soldier, and he is gradually growing up to the proper use of the finest weapon which the most talented inventor can offer.
Now, the point is, why cannot the militiamen here get ready to bring the military arm championship over to this side of the water as a companion piece to the Palma trophy, now rusting for want of practice in some safe-deposit vault here? It will be necessary to go after that military lead, a team must visit Bisley, meet the pick of the two thousand or more clever shots there and come away victors. California has a fine showing of distinctively military shots. Her team could go over as the

American experts. Massachusetts also has the men, and New York, the leading State in its military equipment, ought to furnish an invincible team. Here then are three commonwealths, and to the one who first starts there is a chance of a good time, a pleasing publicity and a glorious victory.

THE SUMMER CAMP-FIRE.
A THIN column of smoke seen rising lazily among the leafy trees and fading to a wavering film in the warm morning air, or the hotter breath of noon, a flickering blaze kindling in the sultry dusk on some quiet shore, mark the place of the summer camp-fire.

It is not, like the great hospitable flare and glowing coals of the autumn and winter camp-fires, the center to which all are drawn, about which the life of the camp gathers, where joke and repartee flash to and fro as naturally and as frequently as its own sparks fly upward, where stories come forth as continuously as the ever-rising volume of smoke.

Rather it is avoided and held aloof from, held to only by the unhappy wretch upon whom devolves the task of tending the pot and frying-pan, and he hovers near it fitfully, like a moth about a candle, now backing away to mop his hot face, now darting into the torrid circle to turn a fish or snatch away a seething pot or sizzling pan.

Now and then the curious and hungry approach to note with what skill or speed the cookery is progressing, but are content to look on at respectful distance and to suggest, not interfere with aid.

The epicurean smoker, who holds that the finest flavor of tobacco is evoked only by coal or blazing splinter, steals down upon the windward side and snatches a reluctant ember or an elusive flame that flickers out on the brink of the pipe bowl, but most who burn the weed are content now to kindle it with the less fervid flame of a match.

And yet this now uncomfortable necessity is still the heart of the camp, which without it would be but a halting place for a day, where one appeases hunger with a cold bite and thirst with draughts of tepid water, and not a temporary home where man has his own fireside, though he care not to sit near it, and feasts full on hot viands and refreshes himself with the steaming cup that cheers but not inebriates.

Its smoke drifted far through the woods may prove a pungent trail, scented out among the odors of balsams and the perfume of flowers that shall lead to you some pleasant stranger or unexpected friend, or its firefly glow, flashing but feebly through the gloaming, may be a beacon that shall bring such company to you.

In its praise may also be said that the summer camp-fire demands no laborious feeding nor careful tending, is always your servant, seldom your master.

POSSIBILITIES OF THE STEAM YACHT.

THE August number of the *North American Review* contains a most interesting paper on the possibilities of the steam yacht, by Mr. Lewis Herreshoff, a brother of the designer of the now famous *Gloriana*. The writer, who is well qualified to speak on such a subject from his connection with a firm which stands at the head in the construction of fast steam yachts, reviews briefly but very clearly the different factors that go to make up a fast steam yacht or torpedo boat, his conclusion being as follows: "From a general view of the subject it would appear that no marked gain in speed can be reached by confining the attention to any one element or factor of speed; but by a constant devotion to the details of construction, particularly with a view of lessening weights, much can be done to increase the speed of yachts and other vessels, even with the materials now obtainable."

This statement, which holds true in sailing as well as steam craft, is especially important just now as applied to the new *Gloriana*, whose wonderful success is to be accounted for almost entirely through the perfection of detail, and not through the long ends above water which have been so much over-estimated by the majority of critics. Mr. Herreshoff points out first the new use to which the steam yacht is being rapidly adapted in this country, as a convenient and luxurious means of transit from home to business, from Wall street to the shores of the Sound and Hudson, for which purpose a speed of at least 20 miles per hour is demanded. The factors of speed are divided by him between the hull in

model and construction, the motive power, including engines, generator and fuel, and the means of propulsion, the screw and paddle.

In regard to model, when the highest speeds are required, the writer places the general proportions first, as of more importance than mere refinements of form, while lightness of construction is rated as the second factor in the hull. Until the list of available metals shall show something less liable to corrosion than thin steel, wood is placed first as the principal material for the hull. The importance of better and smoother coating for the bottom is also much to be desired.

In engines and generators the line of improvement indicated is in the direction of lessened weight in proportion to power, with the present general forms of the quadruple expansion engine and the tube boiler, both of improved detail rather than general plan, and of some material superior to steel. Mechanical stoking and liquid fuel are looked to as further sources of improvement, the present progress in both being by no means satisfactory. In the methods of propulsion the paddle is considered as not yet out of the race for comparatively high speeds under certain conditions, but the twin screw is placed first; the improvement in the screw itself being indicated in the direction of material rather than form.

The author's conclusions are that "It would not be wise to place an actual limit on possible speed, but we can only admit that, as progress has been made in the last decade, raising speeds from 40 to 50 per cent., it is not unreasonable to expect a still further gain, though not so marked a one. It is surely within the bounds of reason to say that by the opening of the new century steam yachts having a speed of 35 miles an hour will be no uncommon thing; and it is also to be hoped that with the improvements of materials of construction, there will be a like strengthening of human tissue, both in nerve and muscle, for both will be taxed to their utmost in the management of machinery and the guidance of vessels under such conditions."

SNAP SHOTS.

UNFEELING critics have sometimes found fault with the writers of sporting sketches because of their proneness to chronicle their emotions on sitting down to the first meal in the woods, to expatiate on the savory qualities of the camp food, and to aver as a meritorious claim that the party "did full justice to" the cook, the cooking or the food. As we have pointed out, the secret of this is that one finds in the forest an appetite and a relish for food, which any sensible doctor would declare to be unerring indications of improved physical condition. In the year book of the Bisby Club we find a suggestive note in the statement of expenses for the year. "The cost of living in the woods," says Gen. R. U. Sherman, the author of the report, "is not to be estimated by its cost in the settlements. The fact is well established by experience that the consumption per head is, at least, double in the woods what it is outside." And when a man finds in his camp a new stomach and a new palate, a new capacity and a new appreciation of food, why should he not be given the privilege of relating his good fortune and putting it in the permanent record as among those things in search of what it is worth while going fishing and shooting?

The President has appointed Professor Mendenhall, of the U. S. Coast Survey, and Dr. C. H. Merriam, of the Agricultural Department, Commissioners to investigate the status of the fur seals in Bering Sea, and these gentlemen sailed from San Francisco for the North in the U. S. Fish Commission steamer *Albatross* last Saturday. The Commissioners for Great Britain are Dr. G. M. Dawson, of the Canadian Geological Survey and Sir George Baden-Powell, and these four gentlemen will no doubt succeed in collecting during the ensuing season a great deal of valuable information on the subject to which their attention is to be given. Incidentally the subject of marine reservations in the Bering Sea may, it is hoped, receive some attention from our own Commissioners.

From Mr. Starbuck's account it appears that the North Shore is a tempestuous country where fish and gales are measured out with impartial hand; and it is manifestly no place for a tenderfoot.

We have received through Mr. W. Wade, for the Helen Keller fund, \$10 from Mrs. E. A. Walter, of Allegheny City, Pa., and \$5 from Mrs. A. G. Wallace, same place.

The Sportsman Tourist.

IN SUNSET LAND.

IN the Sunset land, in the Sunset land,
Behind the glorious gates of gold unframed of human hand,
There lie the mountain, vale and wood,
The lake, the sparkling stream,
More uncompanied and passing good
Than through the clouds they seem.

In the Sunset land, in the Sunset land,
The pearl-and-opal sea of light in ceaseless motion grand,
Heaves at the feet of hills so bold
We can not dream their height,
Nor guess to where their foreheads old
Bear up the gems of Night.

In the Sunset land, in the Sunset land,
All cool and sweet the pine tree waves its slumber-showering hand,
And liquid argent runs the stream
With slumberous, mystic note,
And fast asleep the white clouds seem
Upon the lakes adrift.

In the Sunset land, in the Sunset land,
No trail of foot or trough of keel is found on leaf or sand;
No hand hath ever harmed a tree
Or bent a blooming flower;
And matchless sweet as matchless free
The landscape lies in power.

In the Sunset land, in the Sunset land,
The dream of Rest swims softly down as in our dreams we planned,
The war of work, the clash of care,
The racking of regret—
No echoing thought of these is there,
So high that land is set.

Oh pearl-and-opal sea of light, barred back by gates of gold,
On rainbow bolts shot all too strong into Time's pillars old—
Let back, let in! and let us wend
Through country heaven-spanned,
And learn the Universe's end,
There, in the Sunset land!

E. HUGH.

SNIPE ON CHINESE PADDY FIELDS.

WATCHING the French fleet as it lay at anchor in the harbor of Hong Kong during the greater portion of the Franco-Chinese war, was at best an easy and monotonous task, as the vessels remained riding at anchor in the outer harbor day after day, week after week, each a "painted ship upon a painted ocean." The long summer days were very much the same, each as hot and uneventful as the other, and although Hong Kong is a truly beautiful little island, we soon tired of it; as the wild excitement of a *jinrickshaw* ride to Happy Valley, a trip to the top of Victoria Peak, a visit to the native quarter, and the thing is done. Good hotels? Yes; plenty of them. Then the society of the hill and garrison officers' quarters was all that could be desired; but the half-dozen war correspondents stationed here found the time hang rather heavily on their hands after the first three weeks. They were at a loss for both occupation and recreation. The Colonel and I found a bungalow out near Pokfulun and thus escaped the glare and heat of the city. The owners and occupants of this cosy nest on the mountain side were two of the people, Mr. and Mrs. De Crude, we may call them. They were to us landlord and landlady who, for a fair consideration, gave us two clean, cool rooms, good beds and seats at the family table. Mr. DeCrude was a ship chandler, and a wealthy one at that. He was over fifty, short and stout, with a fiery red head, partly bald, and with an appetite for rum and sugar that had given his rather hesitating nose a rich purple color and spoke volumes for his refined taste. He came to China as veterinary surgeon to a horse artillery company, bought his discharge, made a fortune in opium, purchased the ship chandlery establishment and continues to prosper. Mrs. DeCrude was a matron of forty; with a good complexion and a fondness for the pleasures of the table that had caused her waist to entirely disappear, as intelligent nature had evenly distributed her abundant flesh from the most attractive and, in fashionable society, the most often seen portions of female anatomy to the points of her broad hips, until she presented a series of straight lines where one usually looks for graceful curves. Some idea of our dinner table conversation may be gained by the knowledge that our host firmly believed that Walker and Webster were engaged in the rice trade somewhere up the coast, and that Lindley Murray was first officer of a tea steamer; while our hostess repeatedly assured us, "Me and John don't want no money," spoke of the delicious weather, and pressed us to partake of the elegant soup, and committed enough atrocious gastronomic lapses in a single meal to cause Ward McAllister to become a shattered inebriate.

We were at first amused, then bored, and were on the point of doing something desperate when Major D., of the Third Buffs, informed us that there was some good snipe-shooting back of Kowloon, just across the bay. You can imagine the effects of this intelligence on two travelers who would not start anywhere, even on light marching orders, without a trunk rod, fly-book and fowling piece being stored away somewhere in the luggage and considered absolutely necessary for the trip. We hailed the Major as our preserver and instructed our common property and joint valet, Ah Hoy, to engage a boat and see to our lunch, we looking to it that our fowling-pieces were in good order and that our shells were loaded just right, the Colonel insisting that 3drs. of powder with an ounce of shot was the proper load for "Jacks," while the writer, true to his early education on Long Island marshes, adhered to the theory of the old timer and used 1½oz. of shot with 4drs. of driving power behind it.

Ah Hoy requires an introduction. Well, here he is *in propria persona*, with his five feet three of Anglo-Chinese humanity, straight as a plumb-line, quick and silent as an Oriental only can be, and as faithful as the sun. Ah Hoy is indebted to the land hunger of old Albion and the civilizing influence of scarlet coats and pipe clay on the moon-eyed maidens of the Flowery Kingdom for his existence. His mother was a very ordinary celestial who resided on the outer edge of Happy Valley just back of Hong Kong; his father was probably a private in Her Majesty's—Foot. He was a very bright

boy who, when we enlisted him as guide and interpreter, had just finished his studies in a mission school, having been previously instructed in Cantonese and Mandarin by an old Buddhist priest. He was fond of the folk-lore of his native land and could both speak and write English and Chinese with equally proficient fluency. On our trips to the interior, through countless cross-paths and almost impenetrable swamps, in search of information and malaria, he would, with great pride, point out many curious and instructive things that often the most keen observer would in all probability have entirely overlooked. He knew all about China and things Chinese, excepting the haunts and habits of wild game and the pursuit of it, either for pleasure or profit. We decided to make him our guide and trust to our energy, the reported plentitude of birds, and our earnest wish for sport and exercise to give us a good bag.

We started in a hackboat for the main land about four o'clock on the morning after receiving the information that the birds were on the rice swamps and we had located the swamps. A strong land breeze sent our quaint little craft through the water at a fine rate of speed, and we were soon several miles up a large creek back of the English town of Kowloon. The *sampan* was beached and a hasty breakfast eaten; then we started for the paddy fields with Ah Hoy carrying our supplies in the rear. He evidently did not understand the trip and determined to have as little to do with it as possible. A walk of a few hundred yards brought us to the dyke or embankment that invariably surrounds a paddy swamp, and then the fun commenced in good earnest. Birds everywhere. The air was literally full of them. As we cleared the clump of small trees on the near side of the rice field, the Colonel's hammerless twelve-bore spoke twice, and the writer noted the miss with the first while a fine, fat, true snipe plumped down into the swamp at the report of the second. This was before I fired a shot. Ah Hoy saw the bird fall, and dropping all the stores at the great risk of serious loss by breakage, he ran out in the mud and retrieved the dead bird. This was the first wing shot our Celestial friend had ever seen, and it was the making of a keen sportsman and valuable retriever at one and the same time. Ah Hoy stroked the rich brown feathers of the dead bird and said, with a peculiar light in his small, teady eyes, "These plenty everywhere on rice swamp," and we found it so. The Colonel, who is one of the best amateur wing shots I ever saw, bagged twenty-three brace of fine snipe, in every respect apparently the same as the *Gallinago wilsoni*, the back and tops of the wings having the same rich dark brown-and-tan, the tail nearly red, the stripes and marks appearing the same to us as the Wilson snipe. The best specimens averaged about 10in. in length, the tails being about 3in. Ah Hoy questioned several farmers about the birds and was informed that they were always there. This is probably true, as the climate in the vicinity of Hong Kong is nearly the same the year round. The Chinese manner of rice-farming is curious and gives the birds just the sort of cover and food they require.

A Chinaman will take a small piece of ground and build a dyke or wall clear around it; then he brings water from the nearest stream to his inclosed plot by cutting a ditch. The rice fields are usually on a hillside, so that the water can be used over and over again. This is done by having the fields one below the other and letting the water run into the highest until it reaches the desired level, when a gate is cut and the surplus water allowed to flow into the next field. This is often repeated, until the whole hillside is covered with a series of terraces, each level being a rice field and, it is always safe to say, each field well stocked with birds.

A few English residents of Hong Kong and the officers of the garrison are the only ones who shoot in this vicinity. John Chinaman is not allowed to keep firearms, and could not shoot anything if he had the free use of the most improved implements of the chase; consequently, game is plentiful and never very wild, except in the immediate neighborhood of large seaports where there are English residents.

After a fine morning's sport, we retired to our sampan and enjoyed a good lunch of boiled rice, fried chicken, potatoes and egg plant, together with a couple of bottles of white label which had been kept cool by being hung over the stern of the boat well down into the bed of the creek. After lunch, we devoted an hour to the burning of some really good Manila cheroots, and then gave orders to return to the city, which we reached in good time, delighted with our first day's shooting in China.

Ah Hoy became such an enthusiastic sportsman that he was soon well informed on the best shooting grounds and guided us to many a warm corner during our stay on the only English island in China. J. CHAS. DAVIS.

A PLEA FOR THE GIRL.

IT is well for the sportsman so often to make his son a participator of his recreations, but if there be only a daughter, or also a daughter, why not give her similar opportunities to enjoy pleasant and invigorating pastimes?

It is true she often does accompany him when the outing is to be on lake or river, and when the sport is fishing. Her friends admire her no less if the delicate bloom of her cheek is browned by the sun and wind, nor do they deem her unmaidenly if she enters, heart and soul, into the sport, and in time equals or excels her brother in the gentle art. Nay, rather, her exploits are cherished tenderly and often recounted in words all of praise.

If in the outing, as sometimes happens, she kills the largest and finest fish in a skillful manner, her fellow sportsman, combining the pride of teacher with that of relative or friend, is not niggardly of praise for her courage, her steadiness and skill, nor does it seem unwomanly to him for her thus to conquer a game fish that calls forth more of her real fighting qualities than would any furred or feathered game she is ever likely to encounter.

Then, when her prize is gained, he notes with self-reproach for his own carelessness in that respect, how eager she is that it may be humanely killed at once and an end put to its gaping, writhing misery. Thus, whether for trout in the Adirondack streams, bass in Champlain waters or salmon in Canadian, the girl is everywhere learning the use of the rod, and fast becoming an adept at it without losing any of her gentle attributes.

But if the boatmen are in pursuit of feathered game, and guns are to be used, if the girl is allowed to accompany them at all, she usually sits in the boat decorously inactive, albeit so ready to applaud the others for a skillful shot, they are secretly glad she came, and wonder they had not thought before that she might enjoy seeing them shoot so well. Or if fur is sought and the chase is to be over hills and woodlands, she is left at home, or only accompanies the braves to the hilltop in sight of home, to which retreat she returns tardily, often listening if she may catch the call of the hounds among the hills.

If, in rare instances, she should so desire, why not teach her the use of the gun as well as the rod, and when the exact and careful knowledge is acquired, give her the same chances to practice it that her brother has? The invigorating walk, the charms of the ever-shifting scenes, the thrill of joy brought by success in the practice of her newly-acquired skill would give her as great pleasure as they give her father and brother, and she would often gather a larger store of health for body and soul, than do they, for her need is greater. Though she may have no liking for the gun, still, invite the girl, when going afield.

With a girl's natural fondness for flowers, a taste for botany will rapidly develop when she has safe opportunities to wander in the great wild garden of nature, and see the sky, and sweet places where her rarest flowers hide. You will cease to regret your dog discovers no scent of bird or beast when you see her delight over an unknown aster or a late blooming gentian, whose beauty, without her, you would have passed unnoticed as many a time before, and with almost her own enthusiasm you will help search for a rare fern or curious seed-producing plant she is told grows in the very woods you have so often traversed, nor had you before noticed the fit surroundings of each growing plant, from the gray lichens on the gray fences, and the green mosses on the ledges of old red sandstone, to the white birches growing in the border of the hillside woods, against whose leafless brown trees and clusters of evergreen ferns their delicate and graceful branches shine, white and distinct.

Take the girl. If she have skill with her pencil, while you search hither and yon for game whose life alone will satisfy your aspirations, she will put the very spirit of your favorite haunts in the pages of her sketch book.

If she have some knowledge of photography she will make a pleasing comrade, and furnish you with many souvenirs of your day's sport. You may miss the fox by an instant of time through some exasperating mischance, but in that instant the camera may capture him, not a lifeless ball of tawny fur, but an agile, alert creature, full of life and grace. Behind him, too, is a bit of the hemlock bole against which you have leaned so many times waiting and listening, and beyond the woodland path with its border of ferns and arching tree branches.

Then, whenever practicable, take the daughter also to the fields and woods and waters. Her spirit rises quickly to the blessed influences of nature; her languor is soon forgotten; her feet, weary of the monotony of floors, grow pleased and rested on the turf, and before long, without weariness, she can climb the hill pastures where the plover calls and the squirrel gathers his store of nuts, and can tramp through woods where the fox and partridge hide and along miles of fish-inhabited streams.

A day spent in outdoor freedom, enjoying the best and highest of a sportsman's pleasures; acquiring a knowledge of the life, habits and home surroundings of the game sought that he must of necessity possess to insure success; or in discovering some of nature's treasures and reading some of her secrets, or in admiring the skill of others with rod and gun or in practicing her own, or in making sketch or photograph of wild creatures and their haunts is far better than indoor existence with its idle work of crochet hook and embroidery needle or the reading of the latest novel, or in an aimless ramble around the house or a day spent in making calls or in pretended shopping.

At home there will be less crazy patchwork, fewer crocheted tidies, embroidered scarfs and inane decorations to distract its inmates. Such tiresome amusements will gladly be exchanged for outdoor recreations and the delights inseparable from them, that nature is ready to give impartially to boy and girl alike.

AGMA AWANSOOSE.

MR. VAN DYKE PROTESTS.

SAN DIEGO, Cal., July 10.—*Editor Forest and Stream:* In FOREST AND STREAM of the 2d I notice this clipping in a letter from Montana:

YELLOWSTONE NATIONAL PARK, June 22.—*Editor Forest and Stream:* About six weeks ago the Government scout and soldiers stationed at Soda Butte arrested T. S. Van Dyke, a hunter and trapper who for years has been furnishing Cooke City with game, he was found asleep in his camp on Laman River—east fork of the Yellowstone. In his camp was found two heavy traps and other outfit. The party making the arrest removed his arms, field glass and Kodak. With the camera they took several shots at him while yet asleep. He was taken into Ft. Yellowstone, where he was held for thirty-four days and his property confiscated. He says he is loser about \$350—for that is the sum at which he values his horses and outfit.

Some of your readers may think this refers to me. The part about being found asleep in camp seems so natural that I almost believe it myself. If it had only said that some one else was doing the cooking at the same time it would have been so natural that I could hardly deny it.

I have not been furnishing Cooke City with game for several years. When I first started out with a rifle I felt like supplying several States, but have always since had all I could do to supply myself. Neither am I a trapper. I tried a little trapping here during the great real estate boom, but since then the wool has been rather short on the lambs and the quality has not been extra good either. T. S. VAN DYKE.

"HALF HOURS IN THE SIERRA NEVADA."—Auburn, Cal.—To-morrow I am off for my annual angling tour for the next four weeks. Perhaps I may give your readers another "Half Hour in the Sierra Nevada" when I get back, if they have not already received a surfeit of that kind of reading, and provided, also, that I meet with anything worthy of note in my outing.—AREFAR.

SUNDAY TRAIN TO MOMENCE.—The Chicago & Eastern Illinois Railroad placed in service June 14 a Sunday train between Chicago and Momence, leaving Chicago at 8:32 A. M., and returning leave Momence at 8:45 P. M., thus affording anglers a fine opportunity to spend a day on the Kankakee River.—ADDU.

Natural History.

TAXIDERMY AND COLLECTING.

MR. W. T. HORNADAY has written, and Messrs. Chas. Scribner's Sons have published, a work, "Taxidermy and Zoological Collecting," which is destined to do a great deal of good, and which cannot fail to be warmly welcomed by all naturalists. All over the world a rapid destruction of wild animals is taking place, and already a number of most interesting species have been practically exterminated, so that to-day the collector sent out to obtain specimens for a great museum will look in vain for a bison, a California sea elephant, a rhytina, a great auk, or a Labrador duck. Other species are rapidly diminishing in number, and the opportunities to secure them are each year becoming fewer. This being the case, it is important that all the specimens collected should be prepared and preserved in the best manner possible, that the animals should be studied in life, and full notes and measurements, together with photographs and sketches, made of them if possible. If all this is done, the taxidermist who ultimately performs the artistic work of mounting the specimens, has an opportunity given him of doing justice to his work and to himself, and the museum is likely to have life-like representations of the animals added to its list of specimens. And when a species is almost extinct and the opportunity for seeing more examples of it has passed away, this means a good deal.

There is something fairly ridiculous—if it were not painful—in the absurd mounted specimens of birds and mammals even now to be seen in the exhibition cases of our best museums. In old times if there was brought to a museum a skin which had on it the complete head and the hoofs, this was enough. It was mounted, that is, was set up on its legs, stuffed with hay or straw, put on a stand, and was then regarded as an adequate representation of the animal in life. As a matter of fact, it looked often like a stuffed sack standing on four pegs, tightly covered with a hide of the animal in question. It is only within a few years that persons in charge of museums have come to realize that taxidermy is an art, that their specimens should be modeled from life, that, to give the public a true notion of the animal on exhibition, something more is required than its shapeless, dried skin stuck up on a board. For a number of years Mr. Hornaday has been regarded as the most skillful taxidermist in this country. He has had very wide experience and has occupied positions which could be held only by one who stood in the first rank of his profession. But quite apart from any manual skill is the artistic temperament and the passionate love for nature which has led Mr. Hornaday to study the minutest characters of his subjects and has made him the producer of some of the most superb groups of mammals that have ever been put up.

In the admirably complete work which he has given us, Mr. Hornaday has covered the whole field of ordinary zoological collecting, though, of course, only brief mention is given to the subject of the collection of marine invertebrates. The book is divided into six parts, which treat (1) of Collecting and Preserving, (2) of Taxidermy, (3) of Making Casts, (4) of Osteology, (5) of the Collection and Preservation of Insects and (6) of General Information. Under these divisions is given a vast amount of information, which is so clearly expressed that a careful reader, though wholly unacquainted with the subject, may by following out the instructions given, easily become, with a little practice, a skillful taxidermist. While it is impossible to give here any adequate notion of any one of the sections of this book, it may be said that Part I. contains chapters on the outfit of the collector, how to select and study fresh specimens, treatment of the skins of small mammals, collecting large mammals, birds, large and small; reptiles, fishes, marine invertebrates, and birds' nests and eggs. The book contains 362 pages, and the profuse and beautiful illustrations, which number 23 full page plates and 104 text cuts, simplify and render more clear the already very plain descriptions of the text.

While the value of this book will, of course, be greatest to the zoological collector as such, the man who makes it his business and his profession to collect specimens for museums, yet it will have a far wider field than that. Every sportsman who hunts big game likes to bring back from his excursions the trophies of his chase, but through ignorance it often happens that skins are taken off and heads cleaned in such a clumsy, unskillful fashion, that they either spoil before reaching the hands of the taxidermist, or else are in such bad shape when he receives them that no life-like mounting is possible. Each big-game hunter then ought to make Mr. Hornaday's book a part of his camp outfit. Its clear directions will save him many hours of time and trouble, and much worry.

The young ornithologist, and even the casual duck hunter, who now and then wishes to save some unusually fine specimen that he has killed, will find this book a very useful one. It is by all odds the best work which we have ever seen on the subject, and deserves a wide circulation.

SOME MICHIGAN BIRD NOTES.

Editor Forest and Stream:

Your Florida correspondent, "Didymus," is correct in supposing that the Northern crop of hummingbirds is short. We have noted their scarcity, and while at present our front piazza is brilliant with the gorgeous blossoms of cactus and honeysuckles of different varieties—flowers much loved by these little gems of the air—we scarce see a half dozen in a day, while formerly they would have been in sight every few minutes.

My observation of the birds has been conducted this season for the most part at very long range. In the early spring our lake was visited by a number of large black ducks, species not identified, but not common here, and much resembling those often seen on Canadian waters.

March 18.—Crows appeared.	April 21.—Kingfisher.
April 1.—Robin appeared (reported March 24).	April 30.—House wren heard, not seen.
April 18.—Frogs peeped.	May 10.—Brown thrasher seen.
April 19.—Crow blackbirds seen.	May 13.—Hummingbird seen.
April 19.—Ice disappeared from view.	May 14.—Catbird heard.
April 21.—Barn swallow seen.	May 20.—Whippoorwill heard.
	May 21.—Powit seen.

The house wrens, which have built nests in our buildings for many years, have not done so this season, and we have feared that they had been killed. Two days ago one sat on the roof-tree and sang—the second time only that we have heard their song.

The catbirds, which have only visited us within a very few years, are not as numerous as last year. Then, one built in a syringa bush within three feet of the coffee mill. This year a little finch added an upper story to the old nest and there hatched its brood.

The house sparrows have in past years nested in our vines, and have been ejected by the English sparrows,

day proved too much for them, and rather than to remain in their nests and bake, they essayed to fly, and tumbled ignominiously to the ground. I was absent during the hottest part of the day, but on my return in the evening I was immediately aware that there was trouble among my tenants by their distressful clamorings. I went into the yard and found twelve young birds scattered among the grass, and the remains of three more that the cat had made away with. I first chivied the latter off the premises, and amid the pleadings of the parents, collected the helpless youngsters. What was to be done with them? I tried to put them back by placing them upon the end of a long pole, and raising them to the house. The little wretches were paralyzed by terror, and would only yell and kick and peck fiercely with their great soft beaks, and then tumble helplessly to the ground as soon as released. I then took a long ladder and tried to put them back, but I suppose I put them in the wrong apartments, for they all came tumbling out again before I got to the ground. I then took a bird cage, removed the bottom, turned it upside down, and put the little fools in that. This I suspended to a high branch of a walnut tree, and soon had the satisfaction of seeing the parents feeding their demoralized young. I felt as proud as I ever did over my first success in surgery. But alas! in the morning I found they had all clambered up the wires of the cage, fallen out and died. And I know that those poor bereaved parents blame me for the whole business. *Hine ille lacryme!* AREFAR.

AUBURN, Cal.

BIRDS OF MANITOBA.

IN the Proceedings of the U. S. National Museum Mr. Ernest E. Thompson gives us a paper of very great interest on the Birds of Manitoba.

When we consider its great extent and the fact that it adjoins our borders it seems rather singular that so little ornithological work should have been done in the Province, but it is true up to the publication of Mr. Thompson's list of the birds of western Manitoba in the *Auk* in 1888, not much was known of the avifauna of this section.

The Province of Manitoba includes within its borders a great variety of country. There are great lakes, bare, level prairies, tracts of forest and marsh, hills rising to the dignity of mountains—at least in name—reaching an altitude of 2,500ft. above the sea level and 500 or more above the surrounding plain. In this varied region Mr. Thompson observed

bird life during a three years' residence, and has given us the results in this paper. His own observations are supplemented by those of other observers, to whom credit is given by name throughout the paper.

In a short introduction, the author gives a description of the Province, naming its boundaries and describing in some detail its physical characters, which are still further explained in the accompanying map. Then we have the annotated list of birds, which numbers 273 species and subspecies; a chronological list of the principal books and articles consulted, a list of the manuscripts used in completing the foregoing notes, and an index to the birds of Manitoba.

Mr. Thompson's field notes, which have been transcribed apparently with little change from his daily journal, are to our mind the most important, as they certainly are the most delightful, of this paper. These notes are unusually full with regard to many species, and in some cases, notably with some of the grouse, an almost complete life history of the bird is given. The notes on game birds are especially full, which gives this paper an interest to sportsmen far greater than such lists usually possess. Among the points which especially touch on birds interesting to gunners is the following statement with regard to pinnated grouse which we give in substance. In 1873 Dr. Coues wrote of this bird: "I have no reason to believe that it occurs at all in northwestern Minnesota or North Dakota. * * * I have met with no indication of its occurrence north of the United States boundary." In 1882, when Mr. Thompson first visited Manitoba, the species was almost unknown in the country, the only known specimens having been taken near Winnipeg in 1881. In 1883 Mr. Hine informed the author that it had begun to be common at Pembina. In 1884 it was not only common at Winnipeg, but had also made its appearance at Portage la Prairie on the Assinaboine, where it is now resident, tolerably common and increasing every year. In December, 1886, one was seen at Carberry. The bird appears to be working north and west and is evidently following the plow.

Mr. Thompson's paper is full of interesting information about the birds of which he writes, and contains many notes of habits in species as yet unobserved. The account of the western meadow lark and the record in musical notation of some of its songs will be new to many persons. It is greatly to be desired that more attention might be given to the writing out of birds' songs, a subject which as yet has received but little attention.

Mr. Thompson's paper is not without certain minor faults of execution, but it is not quite certain that these are to be charged altogether to him, for he has not seen his manuscript since it was passed over to the editor, nor has he read his proofs.

GROUP OF COYOTES. MOUNTED BY THE AUTHOR.
From Hornaday's "Taxidermy and Zoological Collecting."

but this season they have managed to hold their own, with perhaps a little help from my firearms.

The season has been cold and backward, the most so of any spring since my residence in this county. Late frosts are unusual along the Intermediate Lakes, but this year we have had many. Rains have been scarce, and crops are poor; but I should say that the game, what little there is left, has probably had a good chance.

Trout and bass fishing are poor, and will so continue until the fish have better protection.

I have been surprised to hear that coons are said to catch rabbits. It may be true that they do so, though I never saw anything which would confirm the statement.

In this connection I may say that I was not long ago told by a farmer that the woodchucks, which had been very troublesome, were growing scarce, and that they were often killed by the badgers. To this fact he attributed their scarcity.

P. S.—I'm going fishing in a few days, and if I have any luck will try and let you know. Old "Kingfisher" and I are going to try the bass again. KELPIE.

CENTRAL LAKE, Mich., July 12.

MY MARTINS.

IT was a small thing, in the economy of nature, but it almost broke my heart, and the hearts of the parents also. Three years ago I erected a tenement house in my back yard, for the use of a family by the name of Purple Martin. I saw them house hunting in the town, and there being no suitable residence to be found, I immediately erected one, as soon as it could be constructed. I got it up late in the spring, but it was at once thankfully occupied by a belated pair, who had been unable to secure suitable apartments sooner. Every season since that time my tenants come in March and leave in the latter part of July, or first week in August. They pay their rent ten thousand times over every day by their happy gurgling notes, and engaging, companionable ways. I have come to expect their arrival every spring, with the liveliest anticipations of delight, and to look for their departure with regret.

The house was occupied this season by five families, each of which had a large and promising brood of young. The season, up to the 25th of June had been a very cool and pleasant one, with no hot days, an unusual thing for Californian climate. On that date it began to get warm, then hot, hotter, hottest, until it was hot as Hades; in fact, the very hottest ever experienced since records have been kept in the State. On Tuesday, the last day of June, the mercury indicated 105° in the coolest shade to be found. The young martins were about two-thirds fledged and had begun to poke their heads out of doors, when the hot wave struck us. The heat on this memorable Tues-

THOSE GROUSE CHICKS.

Editor Forest and Stream:

The announcement of the death of the grouse chicks recently hatched under a hen (FOREST AND STREAM, July 9), though not wholly unexpected, is nevertheless a matter of regret. It is highly probable, however, that all attempts to rear the ruffed grouse under the domestic hen will end in the same futile way. The two species are so utterly unlike in all respects that they refuse to affiliate, even when maternity on the one side and infancy on the other, would seem to bring them most nearly together. Some four or five years ago, when the writer was more actively interested in this subject, "Uncle Fuller" (Orin Belknap), of Washington, kindly undertook to assist him. That gentleman procured a sitting of grouse eggs which he placed under a common hen, and in due time they were hatched. But the "unnatural foster mother," instead of caring for the chicks as a mother should, went savagely to work and murdered the entire brood.

I am also inclined to think that in the case recently noted in the FOREST AND STREAM, the grouse chicks did not have proper food. In the native state the young birds are fed on insects, larvæ, vegetable growths, etc. Their immature gizzards are not tough enough to masticate grains of any kind, and these with other unsuitable foods no doubt laid the foundation for the chronic indigestion which was the probable cause of their taking off. The ruffed grouse can be bred and reared in confinement, but the chicks must come from eggs laid by partly domesticated birds, who must look after their own young.

TOLEDO, O., July 18.

JAY BEEBE.

THAT WHITE MUSKRAT.—I find that none of the readers of FOREST AND STREAM have ever seen a white muskrat, or at least I infer that they have not since none of them have replied to the request that I made a few weeks since when noticing the capture of this animal. I now think that it is a greater curiosity than ever, for what some of the readers of FOREST AND STREAM have not seen in the way of animals must be most remarkable. However, it might be interesting to them to know that F. M. Noble, of Ellensburg, Jefferson county, N. Y., a man that has handled hundreds of thousands of muskrat skins, and a friend of the writer, assures me that in all his life he never saw nor heard of a white one.—A. H. G. (Sing Sing).

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

A HUNT IN IDAHO.

Editor Forest and Stream:

In September, 188-, having accepted a position with a mining company in the West, I started out filled with the idea that at last my opportunity had come for a crack at some of the big game of this country. I arrived safely at my destination, which was a little mining camp in the southeastern part, and not far from the Wood River district, and immediately began to cast around for a suitable chum to go with me. I found one that had the hunting fever as badly as I had in the person of one Jim M., the most ungainly specimen of the genus *homo* that I have ever been my luck to come across.

At the time I write of, Jim was about 18, stood 6ft. 2in., and weighed only about 110lbs. He was all bones, and the bones were at all angles. He was a splendid shot with either pistol or rifle, but had a supreme disgust for a shotgun. He was very wiry and could tramp all day over the mountains, either on foot or on snowshoes, and come into camp at night with a deer on his back as fresh as though he had only just started out. Jim, by the way, had a history. His father was one of Custer's most noted and trusted scouts. He was with him at the battle of the Little Big Horn, and, like many another brave man, met his death that day. Jim inherited from his father his Winchester rifle and an intense hatred of all Indians. He passionately loved the hunt, so that it was no trouble for me to induce him to start off for a week's sport at whatever kind of game fortune might throw in our way.

Our outfit consisted of a saddle horse apiece, one pack horse pretty well loaded down with our cooking utensils and a few provisions; we took a little flour and salt pork, a few potatoes and beans, salt and pepper and coffee and sugar. Thus equipped we mounted our horses in front of my cabin one splendid morning late in September, and started off with a brisk lope down the trail, aiming due north. The scenery was superb, we going through cañons, over ridges and divides, down into valleys and up other cañons. We started many rabbits of the "snowshoe" variety, grouse and sage hens, but in our ride of forty miles we saw no large game. About 4 in the afternoon we started to make our camp at the entrance of a big gulch, Jim saying that in the morning we ought to be able to get a deer.

We unloaded our pack horse, spread out our blankets, gathered wood for the night, turned loose our saddle horses, and fixed everything snugly, so that we could turn in at dark. I then suggested to Jim that I wanted grouse for supper, and taking my 10-bore Scott, which, by the way, Jim had done his best to leave at home, we started off following a little stream that came down through the gulch. We had not gone far before Jim flushed five that were feeding close to the water. They were very tame and simply arose from the ground and lit in some pines close by. Right here I saw the first expert pistol shooting I had ever witnessed. Jim approached to within about 30ft. of three grouse and drew his six-shooter, a Colt .45. He shot one after another of the three grouse, taking the lower ones first, and cutting the head or neck of each one. At the last report the two remaining birds flew, and in my hurry I scored a beautiful miss with my first barrel, but retrieved myself with a good clean kill at long range for the second. Having picked up our birds, which were more than enough for our present use, we started back to camp and Jim went to work preparing supper. Our evening meal was quite a good one in its way. After our soup we had grouse, biscuits, fried potatoes and coffee, and lighting our pipes

we rolled up in our blankets and Jim proceeded to tell hunting stories and his different experiences after big game. I think his bear stories interested me more than any others, and I went to sleep that night full of a feeling of awe and admiration for the powerful brute that Jim called the bald-faced grizzly, and wondered when the time came that I first met one, I should do like the Eastern tenderfoot that Jim had been telling me about, who climbed the first tree at hand, and when he came to the top kept right on climbing, and of course fell right into Baldy's path.

I had not quite settled just what I would do, when sleep overtook me; and the next thing I remember was Jim shaking me roughly by the shoulder and saying if we wanted to get any deer, it was time we were out. The stars were still shining and the air was cold, and every thing was so still that it did not seem a living object could possibly be within miles of us. We got our horses saddled up and made everything ready for a start, first tethering our pack horse and fixing things snugly in camp so that they would not be injured in any way during our absence. By this time daylight was beginning to show itself, and we started away, bound for a hot sulphur spring which Jim knew of some three miles away. Going within a mile of the place we dismounted and proceeded cautiously on foot; here and there we found signs of the near proximity of deer, and our advance became more and more cautious.

Just as we came to a little ridge on the other side of which lay the springs, Jim whispered to me to get ready, for if we were going to see any that day we would start them up on the other side; and sure enough, the minute our heads showed above the top, up started a band of seven black-tailed deer with a magnificent buck in the lead. They were about 75yds. away when they first broke, and the way those deer put space between us was a caution. I killed one, a young buck, using up all the shells in my Marlin .45-70 caliber to do it. I will never be able to tell if I had buck fever or not. I thought I was cool enough, only I couldn't seem to be able to hit deer. Jim only fired once, killing the old buck in the lead, the rest of the time he spent laughing at me.

We cleaned our game and hung them up and started back for our horses. On reaching them Jim suggested that we take a tour and come around from the springs on the other side, thereby getting a view of the surrounding country. On the way I had a shot at a silver gray fox, and had the satisfaction of killing him at a distance of about 100yds. We came across some very large bear tracks, and I got my horse and measured one of them. I was wearing quite a large Mexican sombrero and it would only just a little more than cover one of the bear's footprints. Jim said it was a grizzly and that we would try to locate him the next day. I did not say much, but I felt as though I had not lost any bear myself. I asked Jim what he thought the bear making that size footprint would weigh, and he said, "Oh, about fourteen to sixteen hundred," in a careless sort of a way, as though it was an every-day occurrence with him to bag two or three such birds. We finally came to where we had hung up our deer, packed them on our horses and struck out for camp, where upon arriving Jim proceeded to skin the deer and cut them up ready for use.

In the afternoon again we took the shotgun and started out to have some fun with the grouse. I had splendid sport with them for an hour and a half, killing over a dozen, all single shots. Jim acted as retriever and picked up the birds. So ended our second day. Bright and early the next morning we started off on foot for bear, and although we saw many tracks and fresh signs, still we walked all day without seeing one; and came back to camp pretty well tired out.

The next morning we broke camp and started up the gulch, bound for a pass in the mountains that would let us down in the foothills and gulches at the other side of the range. It was a long tedious ride and very slow, the horses having to pick their way over fallen trees, broken from last year's snowslides, and the country was very rough generally. As we went through the path, which as it neared the top narrowed down, Jim told me of how a party of them had not long before driven a band of antelope through there, out of which they killed over a hundred before they broke away. I am thankful to be able to say that the meat was all used, nevertheless it must have been slaughter. Jim told me there must have been a thousand in the band, and that they crowded and jumped over one another in their efforts to get away. On the north side of the range we made a cache, burying all our game in a huge snow bank. We made camp about two miles down a magnificent cañon at the edge of quite a brook, had supper, rolled up in our blankets and went to sleep.

In the morning early we mounted our horses and struck out, leaving all our traps except guns and ammunition in camp, and rode down the gulch, Jim taking one side of the brook and I the other. We had gone about a mile when Jim, whom I could not see on account of the trees and bushes, suddenly commenced to whoop and yell and I heard his horse tearing down the gulch. I at once put spurs to my pony and managed to keep abreast of the noise, although every second I expected to get a nasty fall, the ground was so rough. It seemed about five minutes, it probably was not one, before we came to a clear space where I could see what was the matter, and then I saw Jim, rifle in one hand and sombrero in the other, chasing an old black bear and her cub. Jim was whooping like a Comanche Indian at every jump his pony took, and quicker than it takes to tell it Jim's whoops had the desired effect, the cub got rattled and went up a tree, and the old one crossed the brook right in front of me. My pony stopped short with a snort of fear, and I jumped off and commenced what I thought was going to be a fight, but it wasn't, for the bear kept right on running. I struck her three times, and although every time I hit her she would roll over and over, yet she would get up and keep on going and she disappeared over a little ridge. I then crossed the brook to Jim who had already killed the cub, which weighed about 140lbs., helped him hang it up, and then we took the trail of the old bear which we followed easily by the blood, which showed that she had been hard hit. We had not gone over 300yds. when we suddenly came upon her; she was lying on the first branches of a fir tree, about 18ft. from the ground, busily engaged in licking her wounds. Quick as thought we both shot, and down she came and never moved after striking. We quickly skinned her, and then hunted up my horse and went after the cub. Jim had tied his horse, but mine ran

about half a mile away; we, however, caught him without any trouble. When we came to put the cub on Jim's horse we had a circus, such bucking and jumping I never saw; it took us over half an hour, but we accomplished it, and went back to camp.

That night in talking over our plans we decided to make pack horses of all our animals and strike out for home, walking up the ridge by the pass where we had made our cache and come by a roundabout way to my cabin. This necessitated our going over Mt. G., where Jim promised me some shots at the Rocky Mountain goat. In the morning early we started and plodded on steadily without anything eventful happening until late in the afternoon, when we suddenly caught sight of a grizzly bear feeding on berries. He was back to us about 300yds. away, and did not see or hear us. We quietly drew out of sight and securely tied our horses and held a hurried consultation in which we agreed to stick together, for Jim said "grizzly" would undoubtedly come straight for us the minute he was hit and found out where we were; then we started and came to within 200yds. of his bearship. Both fired together at the word, and both bullets went home, knocking the brute over; he was up in an instant, and turning snapped at his flank, where one of the bullets had struck, and growled savagely. He could not see us, but Jim firing again, the smoke from our rifles showed where we were, and lowering his head he started for us. To me he looked like a huge pig, and I don't know what I was thinking about—probably of home and mother—when the crack of Jim's rifle and his hurried "Why the devil don't you shoot?" roused me, and throwing my gun to my shoulder I commenced to pump lead at him. I remember that once we stepped to one side to get away from the smoke of our guns, I also imagined myself in a real battle. The crack, crack, crack, of our rifles seemingly was multiplied a hundred times. I was cool through it all, but it was a mechanical kind of coolness. Every time a bullet struck over would roll the bear, but he would get right up again and keep a-coming; every second that bear seemed to grow larger, until he looked to me as big as a house.

The funny part of it to me was that the nearer he came the better I shot. Through it all I kept slipping shells into the magazine of my gun, and when finally grizzly dropped for the last time, only 50ft. away, I had seven shots left in my rifle. We found him badly cut up, two legs broken in three places, and completely riddled through the body. A peculiar fact was that not a bullet had struck him in the head. We cut him open and found that his heart was cut to pieces. We estimated his weight between eleven and twelve hundred, and after taking his hide we went back to our horses and camped for the night. I hardly slept, for after it was all over I caught a bad case of rattles and was completely unstrung.

We reached home early next day, going over Mt. G. We saw one small band of goats, but too far away to shoot. Later that same fall we made a pilgrimage after them, and perhaps at some future date I will tell you how successful we were.

IDAHO.

SOME REMINISCENCES OF WYOMING.

WALKING home one autumn afternoon, not long ago, tired and despondent, I found my thoughts wandering back to some of the pleasantest memories of my life. Again I could smell the aroma from the pitch logs sputtering in the camp-fire about which three of us lay in the dark Wyoming woods. Again I could hear the light, fitful airs whispering in the treetops over our little tent. Now I was scanning in the bright sunlight a great sweep of rolling plains country, from the back of my sturdy pony, hoping for a sight of a "bunch of antelopes," the cool, strong wind blowing in my face and pulling at my hat brim.

"Hello!" shouts a fellow at my elbow, scattering my thoughts very suddenly. At the sharp warning I dodged just in time to save my head a blow from a timber two men were carrying across the sidewalk in front of me. In the street a small fire of boards and latls was crackling, and from it to me the wind blew a thin veil of smoke. The spicy odor of this it was which sent my thoughts back to the times I hunted and explored in and near the Rockies.

But a few years ago there was, perhaps, no region in the world where sport with the rifle could be more healthfully and pleasantly pursued than in the Rocky Mountain region from southern Colorado to the British possessions. Favored by a high altitude where the atmosphere was dry, bracing and healthful, here the hunter could follow his chosen sport or vocation in a country filled with noble game, and in a region where each day brought a new surprise or stranger experience. With weeks of fine, clear weather; with youth, health and a clear conscience, is it a wonder happy memories were left? It was my good fortune in May, '81, to take a journey to Colorado. While in Denver, where my cousin and I rested after some trips to the mining towns, we received a letter from an old friend of ours then living on a small ranch in Laramie county, Wyoming. Her husband had moved there from Colorado some six years before to take up a claim. We had not met in over ten years. Mr. and Mrs. H. both made the invitation to visit them, urgent and hearty; and being very glad of the chance to see a bit of frontier life and to renew an old acquaintance, we decided to accept and visit the H. ranch. We had never seen more wild game than the few antelopes our train scared away before it in crossing western Kansas; so the thought of seeing plenty of wild life fascinated us.

On June 1, a sunny, lonely afternoon, the Union Pacific eastbound train set us down at Pine Bluff, Wyoming, a little cattle-shipping station near the Nebraska line. H. had arranged to meet us with his ranch wagon. His ranch lay across the plains some thirty miles northwest. As he had not yet come, my cousin and I strolled to the end of the little platform to look about us and watch the departing cars. As the train clattered slowly off and disappeared from sight, a great loneliness stole over me. I had viewed the immensity of the plains from the car windows; but being set down and left at a tiny, lonely way-station offered a new experience. The agent and the man with him were the only human beings in sight; though a thread of smoke came from the section house across the track. The only sounds came from the far distant train and the ticker in the agent's office. Besides the section house across the way, there was the station, water tank, and a small log cabin with a rough-board addition used as store and saloon, on our side of it. All this was "Pine Bluffs,"

The wide reach of blue sky, the great stretch of yellow plains, and the long line of gray bluffs and broken hills to the east and south of us, with the huge swells of the plains, gave the landscape that solemn and dreamlike aspect of the sea. We gazed at it all in silence for a while; but the cool, tempered breeze gave us a new impulse; and we walked past the platform, where we could just see a group of section hands working on the track ahead. As we approached them one nearer than the rest stopped working suddenly and began firing missiles at an object in the grass. We ran up, and he pointed out to us the head and neck of a rattlesnake thrust up out of some reeds and grass. It was despatched, and the six or seven buttons pulled off. Though I saw many afterward, and killed some, I never came near being bitten but once, and through no fault of the "rattler." Once, carrying a mountain sheep on my back down the cañon of the North Laramie River, I got going at too quick a gait, and though I heard a buzzing in the rocks lower down, was unable to stop till almost on the snake. That ominous humming noise gives a good warning.

When we got back to the station the agent carefully scanned the prairie for us to the north, and finally pointed out to us a tiny black spot, some five miles away, which he said was the team. We watched it alternately vanish and reappear, and grow bigger and bigger, till we could make out horses and wagon. Rather over an hour afterward our new acquaintance introduced himself, and we made friends at once.

Going back to the wagon we helped carry into the log cabin, against which the saloon stood, the blankets and quilts and the mattress H. always carried with him across the wagon seat. Then the grub box was brought in and a good cold supper spread on the dirt floor. While it was yet light enough we made our beds, and H. changed the mares' picketings. Then rolling up in our blankets, we sought sleep; but the novelty of it all kept us awake a while asking questions and listening to explanations of what we saw and should see.

A freight train roaring and puffing by about midnight was the only thing to disturb us till the morning's frosty air sought the thin places in our coverings, and H.'s getting up awoke us. When H. came back from the ponies we were dressed and washed, and all then helped get breakfast, which was soon ready. At 8 o'clock we drove off, the little colts cavorting merrily about their mothers, apparently not "done up" by the previous day's travel. An overcoat and gloves were yet comfortable, though we shed the coat by 9 o'clock or so. A mile out we crossed Pole Creek, and leaving a solitary ranch far to one side, "took up" on the divide a little east of north.

I shall never forget that morning's ride. A few puffy snow-white clouds hung here and there above and above the horizon, set in the purest, clearest blue sky; a great sweep of straw-colored plains stretching under it, flushed with the green new grass coming up among the dried last year's stalks; the gray walls of bluffs lying four or five miles off to the east and northeast, spotted here and there with the dark green foliage of the straggling, stunted pines and cedars growing tentatively on them. The fresh morning air blew gently in our faces and seemed to give newer souls and bodies to us at every breath.

This section of the country that spring was thickly stocked with cattle, owing to the good grazing and numerous water holes, and we frequently passed small groups and herds of them, which looked up curiously at us as our little outfit jogged slowly past. H. had brought his rifle—a .44cal. Winchester repeater—and he assured us the chances of getting an antelope were excellent, as there was but little travel on this road. We scanned the landscape carefully and persistently in friendly rivalry as to who should first see game, but H.'s experienced eye found it first. He snapped his blacksnake off to westward and called our attention to a round, white, glimmering spot, as big as one's hand, near a bunch of distant cattle and called it an antelope. While our untaught eyes were seeking for a four-legged, buff-colored, deer-like creature his trained eyesight looked for any color or shape that would suggest an antelope in any one of his hundred aspects in varying lights and positions. A round white spot, a black or buff shape, the edge of a knife-blade erect on the horizon, any thing that instinct told him had life in it. We watched the distant animal turn this way or that, while it fed, its aspect changing as often as its position. Sometimes it seemed dark brown, again an almost black spot, then it would show its true shape and buff color. We strained our eyes looking at it and wished it nearer.

Further on we drove through a prairie dog town, and the little rodents were much disturbed, and hurriedly interrupting visits to neighbors sped home to their own burrows, there to bark at us shrilly and defiantly till we were by them. Occasionally from the frequent water holes, accumulated from the recent spring rains, a pair or a small flock of teal or mallards would be scared away. We secured a few with the rifle, but were not so successful with the jacks, of whom a number were started from cover. Before we camped for noon we had each had several shots at antelope, and some were good ones—the shots, I mean. Most of the balls fell too short, and one, I regret to say, wounded an antelope in the hip and he got away. With H.'s field glasses we could see him as he ran limping up a lower place in the bluff two miles away. A true hunter hates to wound his game and see it get away. It is to be regretted that a sport in most ways so manly, and that makes the hunter a student of nature as well, should have the taint of blood about it. Cruelty is only for the brute. What fascinates in hunting is the matching of one's faculties and endurance, one's skill and courage, against those of the game.

At noon we drew up near a thick patch of "bluejoint" and not far from a water hole. The horses were unhitched and turned loose with their picket ropes dragging. Though the wagon stood in a hollow, or swale, the wind blew rather strong and cold, so a blanket was hung over the wheels on one side for shelter. After a hearty lunch of tea, boiled over a fire of sage roots, buffalo chips and the few dry sticks in the wagon, and plenty of sandwiches, cookies and pie, we stretched out in the shade of the blanket and dozed a while.

A couple of hours later we were again on the trail. An isolated pine or two could be seen later in the afternoon on the horizon ahead; and not long after we were trotting down the sandy and steep trail through a kind of cañon in the bluffs. From our elevated outlook we could trace for a while the great bare valley to the north, through

which Horse Creek flowed as it swept in a big curve northerly to Goshen Hole. A mile down, on our way occasionally startling a kilderfer from the little brook we crossed and recrossed, or a mourning dove from the box elders that lined its banks, we struck this valley, and turning to the left, followed it up west for four or five miles to H.'s ranch. A few log cabins were passed, but hardly half a mile of fencing was seen in all till we reached our friend's. After a cordial greeting from Mrs. H., we dragged in our trunks and traps and were made to feel at home.

Next morning we were taken over to our friend's ranch. Within a week he took us over the prairies in several antelope hunts; but we were still unsuccessful. A week of this ranch life satiated my cousin, and we took him back to Pine Bluffs. I had arranged to spend the summer on the ranch, so we made our farewells as the train left.

It being late in the afternoon when we left the station H. decided to camp at Pole Creek, where we might get an antelope coming in to water in the morning.

We picketed the mares securely toward nightfall, and built us the usual tiny camp-fire of dead sticks and odd scraps of wood, and supper was soon over.

As it looked somewhat overcast the ground under the wagon was smoothed of its hummocks, stones and prickly pears, and our mattress spread there. A blanket was fastened to the wheels on the windy side and weighted down with stones, and then we snuggled down in our blankets, and I tried to sleep. But the novelty of the thing kept me awake. It was my first bivouac.

Through the spokes of one hind wheel I could catch an occasional glimpse of a star or two, as the clouds broke over them. A coyote's distant howlings, the murmuring of the breeze about the wagon, the noise of a dragging picket rope as a mare nosed along to a more tempting bit of grass, the sigh of one of the colts lying down, were all distinctive and agreeable sounds enough, and made more interesting in the gloom of night. The brisk breeze made the coals of the dying fire glow and glow, till finally they burnt out.

We got an early start next day, and made eight or ten miles before the sun got very hot. Pretty lark buntings were soaring, to stay suspended for awhile singing above their mates (squatting in the grass) and till they lit again. Some scratching marks in the road attracted our attention, and our companion explained them as made by a buck antelope, who will often follow a road for a mile or two pawing and leaving his sign at frequent intervals. We kept alert and soon spied the buck off to our right at long rifle range. Like many another fool buck, he is convinced we mean harm to him on that side of the road and his only safety lies on the other. Away he dashes off toward the road and way ahead of us. Crossing it at top speed, and with a grace and elegance hard to describe, he heads for our other side—the right—there stopping short, not nearly as far away as his first position. H. has the rifle and succeeds in dropping a shot near his feet. The buck does not run, only swings a little and shows more of himself. Another shot; another, and he goes down in a heap, and we hear the ball spat at the same time. We drive right up to where he lies, to find him dead enough. The game is soon dressed by my friend and lifted into the wagon; and the horns are added as a trophy.

Ten days or so later, after I had shot my first antelope, a doe, we started one morning with the ponies and their coats, having enough provisions in the wagon for a five or six days' hunt. We head for Jordan's Cañon, which lies just over the Nebraska line a few miles, and was about twenty-five or thirty miles away to the northeast. There were fewer ranches in this section; in fact they lay fifteen or twenty miles apart; so H. hoped there would be more game of all kinds for us to hunt. Antelope, mountain sheep, blacktails, with a stray elk now and then, were to be expected there. We nooned at Hawk's Spring, sixteen or seventeen miles north, and found ourselves in the late afternoon about twelve miles beyond this to the northeast, after a fiery hot drive over an extensive alkali flat, where the air was almost like a furnace blast. Jordan's Cañon we had passed a couple of miles to the south, and as the bluff wall was here much broken we had no great trouble to drive to a rather elevated place on the tableland and near the source of a tiny stream, which flowed a couple of miles into the plains from its north side. Antelope we had seen in numbers, both singly and in herds, and we knew we could get all we wanted here.

As soon as the horses were unhitched and picketed we started off for a still-hunt. Not far from camp we saw a doe ahead, and H. shot at her. She flung up her head repeatedly as if hit there. The game did not run far, and after some maneuvering we spy it feeding behind a sandy, irregular knoll. With this for a cover we crept up within easy range, about 60 yds., and I rise up, take hasty and excited aim, and fire. She falls and lies struggling till another shot hits a vital spot. We examine her and find the shot H. fired had cut a slight hole in the bone of her nose. The game was dressed and packed to our tent on one of the ponies. While H. was kindling a fire and collecting the dried limbs and sticks lying under the few cottonwood and box-elders growing down in the gulch, I scooped out a place near the bank and brought some clear water. Soon tea was boiling and venison steak broiling, and not long after, as we were about to sit down to supper, a coyote's despairing, agonizing yowls told us the steaks smelt sweet, but were not for him, he quite realized. Dishes washed, tent pitched and horses repicketed, we stood a while near them watching a fine sunset. When the sun was well down, the evening chill of this high altitude (5,000 ft.) drew us to the fire, where guns were cleaned and inspected, and then for a time we reclined in a thoughtful spirit, though keeping up a pleasant if rather desultory conversation. Perhaps the most agreeable part of camp life is had around the camp-fire after all the day's work is done, and when the harmonious spirit has its full sway. The disagreeable is forgotten; one lies about the blaze comfortable and restful in body, and mind, too; and so one's fancies are peaceful and pleasant. One's imagination also is more free, and we conceive new adventures where we should have acted more cleverly at some critical time than we yet had. There is something, too, about the night which gives a spice to any narrative or story; and H., who had fought in the war with an Indiana regiment, and spent ten or twelve years in the Far West, had many an interesting tale to tell, that he told with considerable skill,

We sought our bed late, but I resolved nevertheless to get up early.

In the gray of the morning, while yet a few stars sparkled and before even an attenuated coyote had given so much as a howl, I crept out of the blankets, softly untied the flap of the little A tent and taking the carbine sallied forth. The horses were up and feeding—it seemed as if they never stopped eating and never lay down—but I did not wait to get any breakfast. The night before I had resolved to get an antelope by my skill alone. Striking off southward through the broken, bluff, rising ground which continued to the south, I had covered nearly two miles while the east reddened. After the sun was up I found myself crossing the heads of two deep draws which swept off eastward and united, a mile away, in a larger valley. Here I saw several antelope, but the nature of the ground and the direction of the wind prevented me from working them. About five miles from camp I decided to return, as the hungry stomach complained. As I crossed the small ridge between the heads of the two draws I had passed earlier in the morning I saw an antelope scud across the wider valley a mile east of me. It was no use, I saw, to try to get him, but my glance in returning happened to rest on a black shining object, half hidden in the grass, well up the south side of the nearest draw; and it was surely an antelope, I thought. Over a slight rise in the ground ahead of me I could just see it with my field glasses; and it proved to be a fine buck, lying beside a cluster of soap weed and now and then licking its side or nibbling at some grass within reach. I stood all this time, of course, stock-still and carefully studied the lay of the land with the aid of my glasses. It was evident I must retrace my steps four or five hundred yards; then swing rapidly around to the east and northeast and ascend to the crest of the ridge he was on, at some place above him. The latter part of the way a slight breeze would be blowing at my back. Bad that; but if I walked or trotted fast enough I might at least travel with its not gaining on me much. Drawing carefully back behind the hill, I skulked off, and in twenty or thirty minutes was hurrying rapidly up the ridge which was now between me and the game. Rifle ready, and I ascended a rather steep pitch near the top, to find the buck right ahead in plain sight and not eighty yards away. He was standing looking at me, slightly quartering. I stopped instantly, bringing carbine to shoulder, and took steady, careful aim at his breast. With the report of the piece he took a great leap sideways and backward, and dashed over the top of the swell out of sight. I ran after him, reloading the gun. He was not in sight from the top of the ridge, so I ran at full speed down the hill in the direction he must have taken. Near the bottom a few sprawling footprints in the loose, dry earth guided me further; and on, another hundred yards or so, over a broken sandy knoll, I found him lying on his side quite dead, shot through the heart. He looked trim and pretty enough in his clean buff color and plump outline, and I felt a vague regret at having ended his harmless life.

The sun was beating down fiercely hot in this sandy, scantily grassed valley, and I hastened to dress the carcass; then started toward camp for a pony, first, however, having stuck my ramrod with handkerchief attached in the ground beside the game to guide me back from a distance, as also to warn off any predatory wolf or coyote. About nine o'clock I reached camp to find it deserted. A scant breakfast was eaten, Judith was saddled, and I rode back the four or four and a half miles for my quarry. I had not appreciated what an undertaking it was to secure a good-sized buck on to the saddle. It took a deal of planning, lifting and tugging to get the hind legs fastened to the cantle, though the mare stood quiet enough. After a lot more contriving and efforts I tied the buck's forelegs securely with the ends of a rope, then getting up and standing in the saddle, I lifted my best. The limp and before unmanageable body had to come up, and I got it across the saddle and properly fastened. Herrick was back in camp when I got there, and gave me "pleasing flattery" for the good shot and good luck. He had not been successful, having wounded a buck which got away. But he had two cottontails for our larder. We rested about the tent and among the cottonwoods in the gulch during the heat of the day, and in the afternoon when it was cooler hitched up and drove down over the bluffs and up into Goodwin's cañon, southwest, where we hoped to find a blacktail. The bluffs here rose sheer and precipitous from the great basin called "Goshen Hole," and several smaller cañons tributary to this large one, made it a fine hunting ground. TILGUM.

SHAWANGUNK WILD HOGS.

THAT the wild boars of the Shawangunks have been increasing in numbers almost from the time of their escape is now generally believed in this vicinity. Indeed, the killing of a two-year-old native of the species last fall put the fact beyond dispute. That event proved that there were at least two distinct herds, one in Forestburgh, one inhabiting the mountain fastnesses east of the Never-sink. Shortly after the boar was slain a denizen of Lumberland, an adjoining township of Sullivan county, but separated from Forestburgh by the Mongaup River, announced that he had seen wild hogs in the woods on his side of the river.

When the strange quarry was exhibited in Port Jervis immense excitement prevailed among our local nimrods, and several parties started out after the game, boasting that they would not return without securing at least one porker. The announcement of the departure of these hunting parties by the local press fairly glowed with excitement, and readers were led to expect great things. Alas, not one of these expeditions returned, judging from the silence of the newspapers on the subject. So far as I have been able to learn, not a glimpse of the wild boars were again seen by any one for several months. It was even mooted that Judge Crane's "wild hog" was secured from elsewhere, the whole affair being an ingenious electioneering dodge. However, the close cover within which the creatures have succeeded in keeping themselves did not at all disturb the confidence of many that blue boars were ranging the woods around us in considerable numbers. At various times last year, from early spring until snow, the gamekeeper at Hartwood discovered boar tracks (which, by the way, are quite different from deer tracks). They range in size from those of a few weeks'-old pig to the fathers of the herd—tusk, ugly-looking customers, no doubt.

After Mr. Crane's success, members of the Hartwood Park Association, who reside mostly in New York city, were generally anxious for a boar hunt, and efforts were made last December to definitely locate the herd. It was at this time that, as mentioned in a previous article, several deer were seen by the guide and an officer of the Association, standing within easy rifle range as if tempting them to break the game laws. In a conversation shortly afterward with the latter gentleman he expressed a wish that the boars might prove as difficult of capture as he believed they would. Whether wholly due to brute strategy or in part to lenient design on the part of the Hartwood Park Association, the boars have not incurred serious molestation since last fall.

Ever since the boars escaped from Mr. Plock's inclosure, five or six years ago, they have been a menace and annoyance to the farmer of the narrow but fertile valley of the Neversink. Every summer with increasing fervor the agriculturists of that region are worked up to a high pitch of anger owing to the depredations of the uncivil foreigners in their potato and grain fields, and even in their gardens. They have made many fruitless sorties against the enemy. In organized bodies the farmers have hunted them by daylight and torchlight, being rewarded only by sundry fleeting glimpses of the swine. Men armed with guns have perched in treetops all night awaiting the arrival of the creatures to the scene of their havoc the night previous. Their vigils were never rewarded with sound or sight of the boars, and yet, perhaps, the very next night would furnish unmistakable signs of their presence. All efforts to lead them into pitfalls, snares or traps have proved futile. The lines of corn leading over these dangerous constructions would be followed up and devoured to within a few feet of their location, then the boar would walk around to the other side, follow up and devour the rest of the grain. These facts prove the extreme cunning and keen senses of the boars.

The agriculturists generally concede the point that they are not equal to a contest with wild swine, however satisfactory their dealings with the domestic variety. Of course they are all clamorous for extermination. They would hail with open arms whoever furnished a good recipe for accomplishing this end. The adage "you must catch your hare before you cook him" has a peculiar application here. Many irate farmers with an eye on millionaire Plock's treasure box are anxious to take one of the depredators in the act in order to fix damages on the importer. When this occurs the courts will be called upon to decide just how far Mr. Plock is responsible for the acts of descendants of animals *ferre nature*.

This season's reports of the doings of the wild "hogs" in the valley of the Neversink have already begun to come in. A few days since the following appeared in the Port Jervis *Gazette*: "The wild hogs of the Shawangunks still live and flourish. Indeed they multiply. A voracious veteran of a valley near the haunts of these untamed swine recently saw a sow surrounded by a large litter of little pigs, but didn't see 'em long. As soon as they became conscious of his proximity they fled like frightened foxes, the little ones making as good time as their maternal parent, and almost instantly they were lost to sight. But their existence argues plenty of wild hogs soon in the Shawangunks. Ere long wild hogs will be very abundant in this region and in Sussex, Sullivan and Pike. They are prolific animals and are very hardy. Wild hog hunting some of these days will be a famous sport among the Shawangunks and other mountains in the counties named."

The same paper suggests that the agricultural societies of the neighboring counties take the matter into consideration, as these savage members of the porcine family will soon become very destructive of ungathered farm products. This is undoubtedly true. In Belgium, where the population averages nearly five hundred to the square mile, the wild boar still holds his own in the historic forest of Ardennes, and no longer than last summer grain fields along the Meuse suffered from incursions of boars. Probably no wild animal is so well fitted by heredity and instinct for an independent existence in proximity to the haunts of man as the wild boar of Europe. In Great Britain he is now extinct, but for upward of two thousand years boar hunting has been a leading sport in France, Austria and Germany. True, the boar is now limited to a few extensive forests in the countries named, and these have been greatly contracted within recent times. The population of this country will have increased many fold before there will be any marked increase in the number of men who struggle for existence in the wilds of the Shawangunk. Those who have studied the matter are pretty well agreed that extermination of the boars, which are now well acclimated there, is practically out of the question. These animals have the best protection in the nature of the ground they occupy and in the fleetness of foot. They repose in almost absolute security in the fastnesses of the mountains in which man can only penetrate with extreme difficulty.

In the table lands of Bengal the boar is hunted on horseback. "Pig-sticking," as the English call it, is there a famous sport. Arabian coursers are used, and some idea of the boar's ferocity may be had from the fact that from twenty to twenty-five minutes are required to run them down. When at bay he is a formidable enemy. Not infrequently, if the spearsman be unskillful, aiming at the chest belly or flanks of the horse, he inflicts terrible, sometimes fatal, wounds with his tusks.

At the breeding season the boar selects a well-secluded den and leads a solitary life, and perhaps at no time is he gregarious, in the strict sense of the word, although several adults appear to join in their nocturnal foraging expeditions. They have been seen in bands of seven or eight, but this may include only a single family. The domestic sow usually breeds twice a year, and twelve or more at a litter is not uncommon. The wild boar and the domestic swine freely inter-breed. If it be true, as men employed in the blue stone quarries of western Pike county assert, that wild hogs, the descendants of individuals which escaped from railroad wrecks, are often seen in that region, propagation by intermixture with the blue boars may occur.

These tales have heretofore been discredited, as it was not believed that the domestic hog could maintain an independent existence through the average Pike county winter. But the "American Cyclopædia" informs us that hogs run wild in the woods of Canada. From the same authority we learn that vast droves of wild hogs abound in the forests of South America. They are the descend-

ants of individuals which, like those of the horses and cattle of the llanos and pampas, escaped from the domestic state.

In what degree the boars suffer from the depredations of their natural enemies who inhabit the woods with them, we have no means of ascertaining. These are principally the bears and the various members of the feline tribe. Bears have become very numerous within late years in the Shawangunks, and bruin's proclivity for fresh pork is well known. He will take great risks to gratify this taste from the farmers' piggery. He has been detected in the act of walking off with a squealing porker under his arm, with two or three dogs disputing his right of way. I am inclined to think that a grown up hungry black bear would prove too much for an average boar in a rough and tumble contest, although in a running match he would not be in it. Then there are the wildcats proper and the lynxes or bobcats. These may be destructive to the young boars.

Assuming that the blue boars are as prolific as their domestic relatives, it will be readily perceived that they will soon be pressing on the verge of subsistence. Then, indeed, they will become a trying nuisance to the farmers as well as dangerous to those who invade their haunts. These animals promise to add an interesting chapter to the natural history of this region. It must be admitted that the American sportsman is a very destructive being as regards all manner of game life, yet the time seems at hand when he may be bidden God's speed in doing his worst to the wild boars of the Shawangunk, for it promises to become a patriotic duty to lessen their numbers. In Europe it is considered unsportsmanlike to shoot the boar, but I opine that the conditions of the hunt will be considerably altered in the Shawangunks, and that he will not be deemed unworthy to be called a nimrod who captures a boar even by shooting him. B. F. HURLEY.

PORT JERVIS, N. Y.

PORCUPINES IN MICHIGAN.—New Albany, Ind.—In the *FOREST AND STREAM* for July 16 Dr. Gibbs says he has hunted in both peninsulas of Michigan and never saw over 25 porcupines. He must have struck bad seasons for "porkies." Some half-dozen years ago I spent some days on Gogebic Lake. A St. Louis party camped near us were compelled to shoot 30 or 40 of them to prevent their camp being devoured. A party from Nashville, Tenn., killed nearly as many. One of the latter party was sitting on a box writing a letter telling how numerous porcupines were, when he heard a gnawing sound, and looking down discovered one of the stupid creatures eating up his seat. Our party killed a half-dozen or more about the camp.—JAP.

CANADIAN DUTIES.—Ottawa, Ontario, Canada, July 20.—The Collectors of Customs have been notified that they may accept entry and duty on guns, fishing rods, and other equipments of parties visiting Canada for sporting purposes, with the condition that the duty so paid will be refunded on proof of the exportation of the same within a period of two months from the date of entry.

GARDINER'S ISLAND.—F. Augustus Schermerhorn, of New York, has leased the privilege of shooting and gunning on Gardiner's Island, in Long Island Sound, for five years from Mr. Gardiner. The sport is excellent on the island. Mr. P. Douglass was the former lessee.

THE WORLD MOVES.—Alpheus Patton was fined \$25 in Catskill, N. Y., last week, for shooting a wild duck at night.

"Forest and Stream" Nursery Rhymes.

A gunner went out to shoot,
An owl commenced to hoot,
They both came together,
Result—nary feather,
With a busted gun to boot.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

ON THE NORTH SHORE.—XII.

[Concluded from Page 514.]

THERE was a little swell from the recent blow, but it was fast dying out as darkness approached. The drizzle, which had all along been gently falling, began to enlarge its tiny drops, and though at no time it assumed the proportions of rapidly falling rain, it was enough to make every one exceedingly uncomfortable. The men stood around, wrapped up in their great overcoats, and rubbers, like silent spectres, the steady champ of the engine sent the pulsations into every timber of the little tug, the steam puffed out with a shrilly scream; the receding waves rose and fell with clock-like regularity; the vapory masses swept with a chilly influence, and when darkness finally engulfed us in its sable folds the situation was truly dismal and absolutely cheerless.

The depressing situation was still further aggravated when the aroma of coffee and the flavor of "baked meats" arose from the cabin, where a favored few, who had taken an earlier passage than us, were feasting. We were in the condition of the fabled Tantalus who, amid the most tempting fruits, could neither touch nor taste them. Our philosophical spirits were, however, equal to the occasion, for the delicious odors were suggestive of a prospective meal which was rapidly organizing within us and which would realize when we were ashore.

Ned found on board one of his old North Shore boatmen, Louis Miron, a half-breed, who is now acting as lighthouse keeper at Gargantua. They had quite a talk over old times, and when Louis told him that he had seen several large trout the other day when out in his boat, Ned's eyes fairly sparkled with that excitement which naturally comes to an angler who is so agreeably reminded of his gentle pastime. Louis gave him a very pressing invitation to visit his place next summer, promising to give him all the sport he desired among the

scarlet-hued tribe. Ned booked himself for the trip, so he and Miron will doubtless have a delightful time along the rocky coast, luring the huge *fontinalis* that abide in those icy waters.

Charley Pim, another lighthouse keeper, who is stationed at Caribou Island, was also aboard. He carries on a large fishery in connection with his official duties. He says that in the fall his catch is simply enormous, and that the whitefish average near 15lbs. There is a reef fifteen miles long extending from the island, on which he fishes, and though in the fall and early spring it is frequently white with foam, his men, who are expert sailors, manage with caution to make their "lifts." The 200 barrels of salted whitefish aboard the tug belonged to him and were his first shipment that season. In fact he had chartered the boat especially for this trip.

Pim, like all seafaring men of the North Shore, is of a hardy and muscular form, though small in stature, and on his weather-beaten features is written, in unmistakable language, that dauntless courage which his hazardous calling so frequently requires in fierce encounters with terrific gales. About seven o'clock we neared the Bache-wanaung Lighthouse and soon after entered the bay. A whistle or two from the boat, and then a couple of lanterns were seen flashing at the landing place. In the course of half an hour we were alongside the bank, an improvised landing made from the refuse of sawmill timber, and as the passengers started to leave the tug the captain sang out, "Look out for the slabs."

It was a prudent warning, but some enterprising passenger who was eager to reach *terra firma* jumped from the guards, and came down with a groan and a laugh from the passengers. Another "smart Aleck"—not your distant correspondent—tried the same involuntary feat, and was as successful as the first. After these two examples of fallen greatness, the remainder of the party picked their way cautiously to the shore and over the slippery slabs.

Joe took our boat down to our old camping ground, where we joined him, and soon there was a cheerful fire blazing and a meal in course of preparation. Our fire attracted some of the supperless passengers, and of course the hospitalities of the camp were freely extended to them. Supper over, the tents were soon up, and after a thorough drying out at the fire, we retired into our tents where Morpheus soon took us to his slumbering arms.

At three o'clock the next morning we were all up, as the boat was to leave at four, and after a hurried breakfast to which we gave cordial invitation to all those who had again joined us around the fire, were soon ready to embark on the Annie Clarke. A few more tons of freight, in the shape of two fish cars for ballast (?) I presume, were put aboard the boat, and then the whistle rang out in the early morn, and the passengers crowded aboard and disposed themselves in the circumscribed space on deck, on fish barrels, in the cabin, and wherever they could get an eyebrow hold. I was lucky in getting my old seat on the stanchions, and there I sat like a piece of rude sculpture during the entire trip.

It was very evident after we had entered the broad lake that we would have a very lumpy sea, for the waves were tossing in foam and the breeze increasing every minute. The little tug ploughed along over the billows with a full head of steam that tossed the foamy water from her bow, which sparkled in the sunlight and raced along her sides in rippling cadence. The sky was full of white and purple clouds, which constantly passed over us in great swirls, now creating a slight haze and again a transparent condition of the atmosphere, that we though would soon allay the spitefulness of the wind, which was rapidly tumbling the lake into surges that buffeted the tug with considerable violence. About 8 o'clock the lake had reached a condition that was not so pleasant to contemplate, as we were compelled to almost run in its trough. The wind was northwest, and that is a wind that excites more than any other, as it comes sweeping along its entire length, and when it begins to narrow, as it does here, the tumultuous waters command reverent respect. The three boats in tow were being tossed around on the high seas in a very ugly manner, and as one of them, the smallest, contained two occupants, soldiers from the "Soo," there was evident danger of being capsized. The men, however, sat there perfectly unconcerned, unaware of danger, consequently not fearing it. As the men were under charge of a lieutenant, who was aboard, it is presumed he, like the men, was unaware of the peril. We had now crossed Goulais Bay, and the Pillars of Hercules and Gros Cap Island were coming into view. On went the little tug straining and struggling under the buffeting of the unruly waves. The big seas were now beginning to break over the guards. First it was a sprinkle of spray, and then some huge sea would come tumbling against the windward side and, breaking over the railing, cover the stern deck, where we all were, three or four inches deep. The water thus received would go dashing around the toppling fish barrels until it finally escaped through the scuppers. There was always a general tumble for the barrels when such an immersion took place, and the most active fared the best. Some humorous seaman would occasionally cry out on such a deluge, "Three inches and rising;" while a pallid-cheek tenderfoot, whose heart was beating with anxiety, never could see where the humor of that "sailor man" came in. I stuck to my stanchion and took my uncalled-for bath as complacently as I could, though at no time did I feel as "cool as a cucumber." The wind seemed to increase with the passing hours, and the waves came tumbling over the railing with a frequency and freedom not at all relishable. Occasionally a barrel or two would roll over and go tumbling about, and then the big fish-cars would groan and tremble as if they, too, would like to take a hand in the game of rough and tumble. All at once Joe, who was endeavoring to make our boat ride the waves in a straight line by manipulating the rope, cried out, "She's broke loose." Ned and I ran to the stern, and there we saw our boat riding the crested surges some distance away.

Knowing it impossible for the tug to turn around in such a heavy sea, we heaved a deep sigh and about gave her up as a total loss, as well as all our tackle and traps, which in round numbers we valued at \$500. There was that little Chubb rod, which I valued more than aught else and which I cherished for the skillful battles it had so grandly assisted me in winning, departing on the tumultuous sea. I sighed to think of it; and then Ned groaned for those little bags of tackle which were priceless pearls to him. It was really an occasion for tears, and with bowed heads and humble hearts

we turned our faces from the sympathetic crowd and sought to hide our grief under the shadow of placidity.

Joe, who was interested about his boat, came to us and said that if he could have the use of the boat in green, in which the two soldiers were toying with their lives, he would tempt the angry seas and go after her. I sought its owner, or rather the one who had it in charge, a lieutenant, and asked for its loan to save the property, but he flatly refused, saying, "I couldn't think of doing it," or words to that effect.

"Well," says I to Ned, "what do you think of that?" He at first seemed to doubt the refusal, but when it dawned upon him in its ignoble proportions, he found that the infirmities of the English language hemmed his rage, so he sought consolation in Arabic, which is expressly designed for the use of the afflicted. With these indignant manifestations, the lieutenant was completely obliterated from our memories as if no such selfish being ever existed.

At this juncture Ned went into the cabin to tell of the involuntary departure of our boat to Mr. Ganley, of Bachewanung Bay, one of the principal owners of the North Shore Fisheries. As soon as he was made aware of the loss he came hurriedly on deck, and taking in the situation at a glance, ordered the engineer to slow up immediately, and then told Joe and John to take the remaining Mackinac sailboat that was in tow, and start for the boat. The craft was pulled up, and our boys sprang into her over the railing like monkeys, and at once seizing the oars, soon had her riding the waves safely.

"Now," says Mr. Ganley, "those soldiers must come out of that green boat, or she will capsize below, where we strike the heaviest seas."

The boat was immediately pulled up, and the soldiers, who had begun to realize by this time their hazardous situation, were glad to reach the deck of the steamer. A full head of steam was again put on, and the little tug thundered along once more.

Mr. Ganley stated that our men would be at the "Soo" with our boat long before dark. "Both of them," he continued, "used to fish for me at the bay, and I have seen them go out to the reefs to lift their nets when the sea was boiling in foam. I know just exactly what they can do in stormy weather, and this blow is nothing to them."

We felt relieved at this statement, as the contents of the boat were of no consequence to us when compared to hazard of life.

Mr. Ganley is one of nature's noblemen, and carries the impress of it in his frank and manly countenance. His presence on the boat was fortunate for us, for it not only resulted in the saving of the boat and its contents, but without doubt the lives of the soldiers also.

We watched our boat as she rode the battling waves until it disappeared from sight, and then we again took additional interest in the tumultuous waters that were pounding and drenching the little tug that was making the most strenuous efforts for the distant port.

Ned said to a crowd that had gathered around him: "This little flurry of the sea is simply child's play. I have seen the waves on many an occasion roll so high as to throw the water in the smokestack; and in the late fall frequently noticed the boats come in to the 'Soo' so completely covered with ice that it required hours to clear it away in order to release the crew and passengers."

Some one, as Ned concluded, gave a shrill whistle, while another cried out "Haul in the slack;" but just at that moment an unusually heavy sea broke over the rail that scattered the crowd to the barrels on the lee side and thus stopped Ned's yarning. The sky had now deepened into violet and the clouds coursed along it in white masses like the kaleidoscope texture of cobwebs. The wind gathered additional strength every moment and the waves rose higher and higher, while the bow of the steamer buried itself in the foamy masses that were spitefully tossed aside.

Some one cried out after we had got well by Parisian Island: "She is all right now."

I wondered if she had been all wrong before. It was, doubtless, the response of some gladdened heart, who, ascertaining that we were now out of the trough of the sea, with the wind at our heels, thought that all danger, if any, had passed.

The tug was assuredly going all right, for the pounding at the windward had now ceased, and the angry waves, though heavy, raced at us as "stern chasers." The lake was rapidly narrowing and soon we were through Whitefish Bay and into the head of the river, and then all was lovely, indeed, for the tumult of the sea had here become perfectly insignificant. It was but a few miles to the "Soo," through beautiful stretches of scenery, and then the trouting trip, which had been one of unalloyed pleasure to us, had now become a reminiscence ever pleasant to dwell upon.

Joe returned before dark with our boat, which he had captured near Gros Cap Island, and that was the closing incident of the month's outing. ALEX. STARBUCK.

CINCINNATI.

NEW YORK STATE ASSOCIATION.

ROCHESTER, N. Y., July 18.—*Editor Forest and Stream:* Articles by Gen. Bruce in your paper on the State Association have interested me, and I hope that they will attract sufficient attention to result in a movement that will lead to a State organization with branches in every county, whose object shall be better protection.

If Gen. Bruce should receive enough encouragement, let him call a meeting at Syracuse, and through your paper invite all parties interested.

It has occurred to me that much more will be accomplished and that we will have the general public with us if we make our object protection of food fish; that is, fish that is found in the market at ten cents a pound or less.

Let the matter of game fish protection come in afterward, for what do 90 per cent. of the people care whether the brook trout are protected.

They can never enjoy them by catching, nor afford to buy them, or in other words, an organization desiring to get protection by the laws must not confine themselves to narrow, selfish purposes, but endeavor to accomplish something resulting in the good for the public generally.

This they can do by increasing the supply of cheap food fish, and when they have accomplished this and the good results seen they will have no difficulty in enlarging the laws to protect the game fish.

FRANK J. AMSDEN.

RUBBER WADERS.

Editor Forest and Stream:

The insatiable Hough having fired one conundrum at his fellow fishermen about his wading gear, follows it up with another far weightier shaft, almost before his bowstring has ceased to vibrate from the first. The writer (who thought he knew before just what Mr. Hough wanted) has been a little more wary this time and has been waiting patiently to hear some piscatorial expert tell Mr. Hough why his waders persist in leaking. But as nobody else seems disposed to venture an opinion, possibly a suggestion or two may be serviceable. Mr. H. does not say whether the wading outfit of which he complains is a new one and leaks *ab initio*, or whether the difficulty which he seeks to remedy comes from use. If in the first case, the probability is that his waders "seep," that is to say, they leak in the seams. This is the most annoying defect and the hardest to remedy. The higher priced waders, made on silesia, are most liable to this kind of leakage, and one large dealer in rubber goods says confidentially that he has always found silesia waders, such as list at \$10 to \$14, open to this objection. The easiest remedy is to apply a coating of liquid rubber cement along the seams, but this is only temporary and must be renewed at intervals. Strips of what is known as "surgeons' tissue" (a very thin rubber sheeting) might be laid along the seam and cemented down with a hot iron, or still better, a somewhat heavier sheeting could be used and fastened in place with rubber cement. A good way not to prevent leaking is to coat the feet and legs of the waders with a waterproof paint prepared for folding boats, as the writer once did. The operation was a success, as far as stopping the original leak was concerned, but the original material (silesia) became so hard and stiff that it cracked nearly every time the pantaloons were put on, and the last estate of that garment was infinitely worse than the first.

The ordinary dull finish waders, such as list at \$6, are much less liable to leak in the seams than the more expensive goods; but they crack and split after a time, especially if used much in cool weather and cold water. The golden mean is a wader that is light enough to be thoroughly pliable and to avoid cracking, and yet heavy enough to be serviceable and strong under all probable conditions of wading and necessary walking on shore.

As to repairs. If Mr. Hough will go into the nearest bicycle shop in Chicago and purchase a 25-cent roll of the rubber cement used for fastening the rubber tires on wheels, he will have a most valuable adjunct to his fishing kit. A bit of rubber cloth coated with it and pressed on with a hot iron will make any ordinary sized hole or rent impervious to water, and its general adhesive qualities are of the highest order. It is a most excellent article for fastening the ferrules on a rod, since they are simply immovable at all natural temperatures, but slip off readily when heated. For snelling hooks or tying flies, a bit of this cement produces the most durable of work, and after he has once used it he will never be without it. Lastly, if Mr. Hough will ever stop in Toledo longer than is necessary for him to jump from one train to another, possibly we might be able to tell him several other things he would like to know. JAY BEEBE.

TOLEDO, O., July 18.

AN AFTERNOON ON THE SACO.

AS I was unable to make satisfactory arrangements for my annual trip to the Maine wilderness, I decided to take a week's vacation at my old home, a small village in Maine, near the Saco River. A few years ago, thanks to the efficient Fish and Game Commissioners of the State, this river was stocked with black bass; and with these and what few partridges we might drive up, I hoped to have some fair sport. My companion in "Fishing Under Difficulties" being unable to join me until the second or third day of my vacation, I was forced to entertain myself alone.

So one noon I approached my father with, "Don't you want to go fishing this afternoon?" "No, I don't believe I can go." But as it did not come out with his usual decision, I took it as an acceptance and proceeded to get ready. When I came out with my minnow pail, basket and an extra rod, and asked him if he was ready, he replied, "Yes, I guess so, but I don't want to fish." "Oh, well, I can tend two rods all right," I replied; and we started for the river. We lost no time in getting our boat fixed up, and started for a sandbar to catch our bait. After I had secured five or six minnows, father frequently advised me that we had "more bait than we'd git fish."

Acting upon his advice, I made for our fishing ground with about a dozen lively minnows. We soon reached my favorite spot, a wide, deep pool in the river at the foot of some rapids, and tied up under an old tree. As soon as I could get fixed up and a minnow on the hook I passed it to "the boy" and again heard "I don't want to fish." "Well, you hold the rod till I get mine ready," I replied. I took plenty of time in doing this, hoping that father would get a strike, and knowing that if he did I should only have one rod to handle. And sure enough, before my arrangements were complete, he had hooked a small bass and landed him in the boat with little ceremony. I lost no time in baiting his hook and we cast our minnows together. Taking as much interest in watching his line as my own, I was soon rewarded by seeing it rapidly taken to the middle of the river. "I've got a good one this time," and in came a monster—chub. "Humph! only a chub." While he was disposing of his catch I had secured another, and was rewarded by hearing the old gen say: "We're catching cat food now." But on the next cast he hooked a dandy bass and by the time we had him in the landing-net, my companion was enthused with the true fisherman's ardor. And now, while waiting for the uncertain bass, and losing several minnows rather mysteriously, he entertained me with many reminiscences of his boyhood, and how sixty or more years ago he had run away fishing, to receive on his return the usual slipper application, which in no wise discouraged him from trying it again, however. And later, how he had been codfishing on the banks when it took more pluck and time than it now requires to make the trip.

While listening to him I had felt something fooling around my hook, and with a quick pull I hooked what seemed to be the bottom of the river. Reeling in my line I was told, "If I can get my hands on that line I'll show you how to do it." I stepped into the bow and brought the line in so that he could grasp it, and he

quickly pulled a 4lbs. eel into the boat. And now the fun began. The eel had the hook well down in his throat, and how to get it out was a corker. "Let me hold him," and father made a grab at the eel. But the eel wouldn't have it. "I know I can hold him," and rubbing his hands on the bottom of the boat, the old gen grabbed him again, with a grip that would have held a veritable sea serpent. With considerable trouble I got the hook out, and we put him in the locker with the rest of our catch. And as we put him away we knew that the robber which had taken our minnows had met his fate. A few more casts and the last of our minnows was gone. As the sun was getting low we started for home. Securing the boat, I put our catch into the basket and found the scores to be: Father's—1 chub, 1 eel and 5 bass, Mine—4 chub. But notwithstanding my poor success I had passed the pleasantest half day of my vacation.

MALDEN, MASS.

THE DRUMMER.

THE CATFISH OF THE SOUTH.

THERE are some things about our catfish down here in Texas that are not known to those living in the North, and are worthy of note. They abound in great numbers in our rivers, and are highly esteemed as table fish, and here in Victoria, Texas, catching them is quite an industry that furnishes employment the year round for a number of men, who delight more in the hunter's and trapper's life than in following the more humdrum home pursuits.

We ship from here per week about 4,000lbs., and the other day I heard a fisherman say that he was going to quit, as that week he had only caught about 800lbs., and that catch didn't pay him well enough. They sell readily to the shipper here at 3 cents per pound, and keep better than almost any other fish, and have fewer bones. They grow to weigh over 100lbs., and are of two kinds. The mud cat has a very large head and yellowish color, and is not attractive looking; but these are not the most abundant and are not very frequently caught.

The fish that is mostly caught is a blue catfish, with long slender body and small head, and when taken from the water it is really a handsome fish. They are caught by stretching lines across a river or bayou, and attaching to it a number of short lines, with sinker, baited with beef or perch, and in endeavoring to secure the bait the fish usually hook themselves. The long trot line being tied to small trees, which are flexible like a pole, and give way somewhat to the struggles of the fish, serve to prevent their escaping until the fisherman in his boat comes along and secures them.

These fish inhabit the same clear water as the black bass, and are as game as any fish caught in our waters. I have caught them on a spoon in the clear water, and watched them dart at the bait and take it with almost as swift a rush as the bass, and the playing of a 10 or 12lb. blue cat furnishes as much enjoyment as the handling of any fish that can be caught, the only difference being a sense of security which the angler has after one is once securely struck, owing to the toughness of their mouths. But even their tough mouths do not always secure the hooked fish to the angler.

I have on two occasions hooked blue cats, of about 5 or 6lbs. weight., on my 12oz. pole, and had them escape by making a vigorous spring out of the water and several feet in the air and shaking the hook from their mouths on the slack thus gained.

In common with a majority of fishermen, I had never believed that a catfish would take an artificial bait until by actual experience I have found otherwise. I have caught them on a trolling phantom minnow, on a spoon, and on an alligator's tooth, with feathered-tail hook and when in pursuit of bass. Now, I am never surprised to find that a furious rush and swirl of water results in the capture of one of these game and thorny fish.

I feel compelled by a sense of justice to this despised species, so little thought of by fishermen and so contemptuously mentioned generally, to say this much in its favor. The pleasures of bass fishing with us are not marred by the fact that one may now and then capture one of these fine fish; for they are more highly esteemed by those who live nearest to our angling waters than any other fish for the table. GUY.

VICTORIA, TEXAS, July 1.

ANGLING NOTES.

THE railway service between New York and the Thousand Islands has been greatly improved lately; formerly it took 18 hours to reach Clayton, and now the time has been reduced to about 10 hours. The Clayton express leaving this city at 7:30 P. M. lands the angler at Clayton at 5:30 A. M., in time for a bath and breakfast before starting out for the day's fishing. Large catches of black bass are reported from the St. Lawrence River, but it seems a pity that so many fish should be taken just for the sake of making a display at the landing. At a locality where so many thousands are constantly fishing it would improve matters very much if fishermen could be limited to a reasonable number, say twenty-five bass to a rod and the rest returned to the water.

The through sleeper to North Creek which used to leave the Grand Central depot at 7:30 has not been put on this season, though so advertised in the Adirondack guide books. It is a great disappointment and inconvenience to hundreds of sportsmen and tourists who wish to visit the Blue Mountains and Raquette region. Whenever there is any disagreement among railroad men the public have to suffer. Sportsmen, perhaps, do not mind it so much, for anything that tends to keep the crowd away helps the supply of fish and game. The N. Y. Central is now booming the Saranac and St. Regis region. Speaking of the St. Regis, Superintendent Pillsbury recently returned from his usual trip to Paul Smith's, and any one that saw samples of trout that he brought back would not think that the fishing was played out in the Adirondacks. But Mr. Pillsbury is a past-master in the art of fishing, and seems to know exactly when and where to go for big speckled trout.

A telegram just received from the Restigouche River states that the water is high and salmon taking splendidly. SCARLET-IBIS.

TWO SWORD-FISHING SCHOONERS of Stonington, Conn., captured twenty-four large swordfish in a week recently.

NEW ENGLAND WATERS.

IT has already been mentioned that fishing for pike and mackerel off Boston Harbor was popular this season, and it is now observed that this sort of fishing is getting to be a very popular fad. Men who have never fished before in their lives are delighted with the sport, and even ladies, though there is danger of seasickness, are being much pleased with the novel notion. There were said to be more than twenty boats off Beachmont and Ocean Pier on Sunday with parties engaged in this sort of fishing. Two or three members of the leather trade were out, but old Neptune soon had the attention of two of them to the extent that they were obliged to go ashore without catching a perch.

Mr. Brown, of the firm of Wright, Brown & Crossly, patent lawyers and solicitors, returned from a two weeks' fishing trip in Maine on Monday. It is not mentioned where he went, but he caught fish and got a good deal browned. Mr. James S. Gates, principal of the Globe Nickel Plating Co., is spending the month of July in the woods of New Hampshire. He is an enthusiast with the rod and line, as well as a beginner with the camera. He will hunt and fish when there is weather. But the most of his shooting will be with the camera.

Mr. E. B. Fessenden, of Providence, R. I., is reported to have recently taken a trout from Rangeley Lake weighing 64lbs. W. H. McDonald, the celebrated baritone of the Boston Ideals, and W. J. Fegan have been to Kennebago, with good luck on trout. They also tried for landlocked salmon on Rangeley Lake. Mr. McDonald had a strike which he at first considered was a small fish. He drew it in easily till Martin L. Fuller, the guide, was about to net it, when it suddenly objected. It was a salmon that Mr. Fuller estimated to have weighed 7lbs. at least. It came out of the water several times, salmon like, and finally escaped from the hook after the most magnificent fighting the gentlemen ever witnessed. They are loud in their praises of the gamy qualities of Rangeley salmon, though they did not secure this one. Mr. Fuller is sure that the fish actually stood on his tail out of the water for as much as one second. Report has Mr. Edwards, of Lowell, Mass., take a trout at Middle Dam, Richardson Lake, weighing 9lbs. 5oz. If this account is true, Mr. Edwards has the honor of the biggest trout of the season thus far at the Rangeleys.

The reports of deer are numerous in Maine. They are frequently seen by the fishermen who go into the woods. Already some illegal shooting has begun. I have now one authentic report of a deer killed by a well known guide and camp keeper, and another by his guest, a Boston poacher. This dastardly work has begun early, but the ending may not be as easy for the law breakers as a year ago, when illegal shooting was by far too common, as already explained in the *FOREST AND STREAM*. But this year the case is liable to be different. The Commissioners are neither dead nor asleep, and a warden is likely to drop in when least expected. The able and conscientious Commission has some means to work with this year, and I am sure it will be used in just such a way as the Commissioners themselves believe to be for the best. Neither the opinion nor the consent of certain individuals, themselves poachers, will be asked. These individuals will be allowed to falsify and malign the Commission in such of the public prints as will grant them the space, and no notice of their defense of murderers and outlaws will be taken, except possibly they may be invited to answer to libel suits later on.

SPECIAL.

Rev. Dr. Munger writes in *Summer Rest* of the name of Sunapee: "In default of legend or incident we can fall back upon the name itself as furnishing material for poetic associations. It is soft, multifarious and full of suggestion—Soonipi—wild goose water. Scarcely anything in the habits of animals is more beautiful than the migration of wildfowl, a habit which Bryant has made the theme of what the English critics regard as the finest American poem. The southward journey of wild geese from their summer home in the north, flying high above 'the fowler's aim' in a wedge-like procession, led by the strongest of the flock, settling at night upon the bosom of some lake like this and lingering for days with the lingering summer for the young to rest, seeking at night a sheltered nook, like 'Job's Creek,' until at last, warned by some colder wind, rising on their wings with screams that grow soft and almost musical in the distance, pointing their way unerringly to the south—this is itself a poem wrought into the name of the lovely lake, where we, too, are resting for a while."

HOW TO PRESERVE FISHES.

WHENEVER it is possible fishes should be put into the preserving fluid as soon as they are taken. After remaining in it a few hours it is necessary to take them out, rub off the mucus and make incisions in the belly, and if the fish is large, on the sides, to allow the fluid to penetrate thoroughly. For the first bath a mixture of equal parts of alcohol and water is suitable. The second bath, however, must contain a larger per cent. of alcohol—not less than 70. In order to insure perfect preservation the specimens must be examined every few days until the fluid has completely saturated them. For final preservation the writer prefers equal parts of alcohol, glycerine and water. In this mixture the fishes remain flexible for study and retain their colors longer than in any other fluid known to him. Whenever the preservative becomes discolored and organic matter collects in the bottom of the jar or tank, fresh liquid must be substituted for it. Eternal vigilance is the price of a collection of fishes.

THE CONNECTICUT TROUT SEASON.—Connecticut anglers are greatly dissatisfied with the present short open season for brook trout, and a bill to extend the fishing period was introduced in the last Legislature by Representative Mower, of Roxbury. No other New England State has so brief a season for trout, and this fact, together with the unsatisfactory catch up to July 1, naturally excites discontent among the lovers of fishing. The proposed change of law embodies provisions for preventing the taking of trout under gin, in length and regulating the capture of fish for artificial propagation.

SALMON IN THE PENOBSCOT.—More salmon have been taken in the Penobscot this season than during any other season for the past ten years, and the proportion of large fish weighing 20lbs. to 30lbs. has been unusually large.

WOOD'S HOLL, Mass., July 16.—Bluefish have made their appearance and a few have been caught in the "hole" on trolling lines with live eels for bait. The hook generally used is Harrison's largest size sea bass hook, which has an eye in the shank. Two hooks are fastened a few inches apart on a copper wire one foot or more in length. The wire is attached to a swivel and this to the ordinary heavy cotton or linen line. One hook is passed through the mouth and the other through the tail of the eel. The line is then trolled behind a sailboat in the usual manner, or operated by heaving and hauling into an eddy close to the edge of the tidal currents, in which the fish may be seen feeding on young herring and occasionally breaking water. For still-fishing (or heaving and hauling) menhaden is more killing here than eel, and chumming is resorted to. The fish are uncertain in their movements and in their readiness to take the bait. "Here to-day and gone to-morrow" expresses the bluefish situation in this locality. It is evident that most of the schools are merely passing through from Buzzard's Bay to Vineyard Sound. We cannot learn that any have been seen much to the eastward along this cape. They always appear to follow along the north shore of Buzzard's Bay and are caught earlier at New Bedford than here. The same is true of tautog and other fishes.—T. H. B.

QUANANICHE AND LANDLOCKED SALMON.—Fryeburg, Me., July 10.—*Editor Forest and Stream*: Will you kindly inform me through your paper what difference there is between the landlocked salmon of Sebago Lake and other Maine waters and the quananche of Canada? I notice that Hallock in his "Fishing Tourist" notes a difference, while some of your correspondents speak of it as identical.—EDWARD E. HASTINGS. [The quananche, or winninish, of the Saguenay region is believed to be identical with the Schoodic salmon of Maine. We have compared Canadian landlocked salmon with the Maine fish and can find no distinguishing marks by means of which to separate them. Singularly enough, this little salmon is known in some Nova Scotia streams as the grayling, to which it is not closely related. Landlocking of the sea salmon is observed in Europe as well as in America; indeed, more than one member of the salmon family has both marine and fresh-water representatives. The winninish has been pretty fully discussed in *FOREST AND STREAM* of May 29, Aug. 21, Sept. 11, 18 and 25, 1890, and to these issues we refer you for detailed descriptions and accounts of fishing for this superb game fish.]

THE ADIRONDACK LEAGUE AND STATE LANDS.—Northwood, N. Y., July 20.—*Editor Forest and Stream*: I desire to call your attention to the fact that the Adirondack League lands cut off a large tract of State lands from those who do not belong to the league. Practically the State lands become a part of the league preserve. What ought we do about it?—RAY SPEARS.

THE JOINTED SINKERS described in our advertising columns are a great convenience at times when, as often happens, it is desired to make a change quickly without actually undoing one sinker and putting on another. They are well worth a trial.

Fishculture.

WISCONSIN FISHCULTURE.

WE have received the report of the Commissioners of Fisheries of the State of Wisconsin for the years 1889 and 1890. The Commission had an appropriation of \$12,000 for their work during each of these years, and the results obtained appeared fully to satisfy the people of the State. The distribution of eggs and fish was as follows:

	1889.	1890.
Brook trout.....	3,190,000	3,320,000
Rainbow trout.....	2,615,000	3,460,000
Whitefish.....	30,000,000	27,600,000
Lake trout (impregnated eggs).....	27,322,500	30,963,800
Carp.....	5,230	37,541
Pike (wall-eyed).....	14,050,000	14,680,000

The demand for brook trout was so great that only about 50 per cent. of the desired number could be furnished, and less than 30 per cent. of the wall-eyed pike asked for could be supplied.

A special appropriation of \$10,000 in addition to the regular annual grant is urged by the Commissioners for the purpose of increasing the hatching facilities. The value of intelligent fishculture in attracting visitors to the State is thus recognized by the Commissioners: "In our report two years ago, we called attention to the large sum of money being brought into Wisconsin each year by the tourists who flock to our summer resorts. The testimony which we then published, from prominent railroad officials, was to the effect that hundreds of thousands of dollars are annually received by Wisconsin people from this source, exclusive of railway earnings, which are in turn taxed to meet the expenses of the State government."

"One of the features of this rapidly-growing tourist invasion has been the erection of attractive summer homes upon the banks of some of our beautiful inland lakes, chiefly in Waukesha, Walworth, Racine, Kenosha and Green Lake counties. Herein dwell thousands of people from Chicago, St. Louis and other cities beyond the borders of the State. They have made valuable as building lots the farm lands bordering upon these lakes, and are customers for much farm produce. These summer dwellers and transient sporting tourists, who bring so large a revenue to our State, seek not only fine scenery, boating and fresh air. Our lakes and rivers are also attractive to them because of their fish supply. This supply needs continual protection as well as reinforcement. The business of hatching and protecting should, in all our waters, go hand in hand. That the institution of the present system of fish and game warden has wrought some improvement there is no doubt. This is more plainly to be seen with regard to the Great Lakes, from which source alone statistics are obtainable. A steady increase in fishing industry there is apparent from an examination of the comparative table which we publish in the appendix. Nevertheless it is painfully apparent to any one who has had occasion to examine the practical workings of the existing warden system, both inland and on the Great Lakes, that the results are quite unsatisfactory as compared with what is desirable and possible. The laws relative to fish and game warden need the prompt and serious attention of the Legislature. A complete revision will alone meet the difficulty."

"While upon this matter of fish protection, we desire again heartily to recommend the formation of local fish and game clubs. Those already organized are doing good work in fostering a healthy, popular sentiment in favor of protecting fish in the spawning season, and have often rendered

efficient aid in prosecutions for the violation of law. These clubs deserve all possible encouragement."

Attention is called to the custom among land owners in some parts of the State of renting portions of creeks flowing through their premises to individuals and sporting clubs. There is some doubt whether or not this can be prevented by law, but the Commissioners have for the past two years refused to furnish fry for stocking such rented streams.

The Legislature is asked to appropriate money for a suitable display by the Wisconsin Fish Commission of the fishery interests of the State at the Columbian Exposition in 1893.

The rainbow trout which was introduced into Wisconsin streams a few seasons ago has succeeded so well that there is no longer any doubt of its value for permanent residence. Individuals weighing upward of 10lbs. have been taken near Antigo, and the species has become thoroughly acclimated in many portions of the State. By some anglers the rainbow is not considered equal to the brook trout as a game fish, but it is adapted to warmer waters and has some advantage over the brook trout because the fry are deposited later in the spring, when there is less danger from freshets. The eye disease, which attacked some of the trout two years ago at the Madison hatchery, has not recurred. The claim is made by the Wisconsin Commission that the cost of fry is only 24 cents per 1000, the same as in Michigan, while in Minnesota the cost is 30 cents, in the Dominion of Canada 39 cents, in Pennsylvania 44 cents, in Nebraska 48 cents, and in New York 80 cents per 1000.

The list of the Commissioners of Fisheries of the United States is stated to have been compiled from information recently obtained, but in many respects we find it at least several years behind the times.

From the report of the superintendent, James Nevin, we learn that the experiment of impregnating whitefish eggs and immediately depositing them on the natural spawning beds was made in 1889 and repeated in 1890. More than 58,000,000 of eggs were so treated. Mr. Nevin states the belief that not one egg in 100,000 naturally deposited by the parent fish in the Great Lakes is impregnated. This is accounted for by the lack of coincidence in the time of arrival of the two sexes on the spawning grounds. Of the first run 80 per cent. are males, and in the later run of spawners 70 per cent. are females, so that when the eggs are about to be deposited there is a lack of males to fertilize them. It is supposed in some parts of Wisconsin that brook trout artificially planted do not reproduce in the streams, but as the natural increase is only about one per cent. annually the results are so slow as to mislead casual observers. The streams would soon be self-sustaining if the ruthless slaughter in some localities during the spawning season should give place to rational fishing.

The increase of whitefish in Lake Erie, as a result of artificial culture, was so marked in 1890 as to attract the attention of every one interested in the subject.

Some Wisconsin people have been successful in carp culture. Mr. Gurke, of Fillmore, fed about 300 bushels of corn to his carp in one year. A carp weighing 12lbs. is among the large ones reported.

Mr. Nevin thus expresses his views about the proper age at which to deposit fish: "It is my belief that the fry should be planted as soon as the food-sac is absorbed, and while they inherit the natural instinct to hunt for their natural food in the streams and lakes. About four years ago we planted 400 lake trout in Lake Mendota, which were two years old and would weigh about a pound each, and the result was that within forty-eight hours four of these same trout were taken to Mr. Dunning's store that had been taken from the mouths of pickerel, which had been speared. These trout had been reared in ponds where there were no other fish except of their own size, they did not know what it was to have an enemy and had lost all the natural instinct to look out for themselves. It was like placing a lot of lambs in a den of lions. Mr. Watkins, of the Minnesota Commission, tells me of a similar experience. If the applicants will follow our printed instructions for planting, and the water is suitable, with an abundance of food for the kind of fish planted therein, there can be no failure in planting fry."

RAINBOW TROUT IN COLORADO.—U. S. Fish Commissioner McDonald has received from Mr. William R. Scott, of Denver, a very interesting statement of the result of planting the California rainbow trout at an unusual elevation in Colorado. We believe this is the greatest height at which any member of the salmon family is known to exist in America. A variety of the red throat (*Salmo mykiss* or *purpuratus*) is recorded by Cope from the Sierra Madre, in Mexico, at an elevation between 8,000 and 9,000ft., but in the case here mentioned the rainbow is not only existing but flourishing, at a greater height than its kindred in any other part of the world. Mr. Scott has recently visited Naylor Lake, in Clear Creek county, a body of water with no visible outlet, covering about 50 acres and lying about 300ft. below the limit of trees, or nearly 11,000ft. above the level of the sea. Here the rainbow breeds at the inlet and thrives wonderfully; its flesh is beautifully colored, and Mr. Scott saw individuals weighing 4lbs. The trout were planted about 9 years ago by the Colorado Fish Commission.

LARGE MAINE SHAD.—We are indebted to Commissioner McDonald for permission to publish the following interesting letter relative to a shad of unusually large size: "BATH, Me., July 3, 1891.—U. S. Fish Commissioner. Sir—The annexed record of a large shad is thought worthy of notice and is vouched for by a reliable person, John W. Curtis, of Topsham, Me., who now has the fish, but with head cut off, dressed and salted. Caught June 25 in the Androscoggin River at Topsham. Extreme length, 27in.; extreme girth, 17in.; weight, 8lbs. Respectfully, H. W. SWANTON." This is the maximum weight of the shad in Eastern waters according to the most reliable records of the present period. It is claimed that shad weighing 14lbs were taken in the early days of our history, but such examples probably are not to be found now except in the waters of California, where the fish has thrived beyond all expectation.

HATCHING WHITE BASS.—Walter Marks, superintendent of Michigan hatcheries, and James Nevin, of Wisconsin, early in June collected eggs of the white bass (*Rococcus chrysops*) at the outlet of Lake Mendota, Wis. They reported a total of 16,000,000 eggs, each female yielding about 50,000. The fish were not hurt by handling and were liberated alive. In water at 60 degrees the eggs hatched in ninety hours.

THROUGH VESTIBULED AND TOURIST SLEEPERS BETWEEN CHICAGO AND TACOMA, WASH., AND PORTLAND, ORE.—The Wisconsin Central and Northern Pacific Lines run through Pullman Vestibuled and Tourist Sleepers between Chicago and Tacoma, Wash., and Portland, Oregon. The train known as the "Pacific Express" leaves the Grand Central Passenger station, at the corner of Fifth avenue and Harrison street, at 10:45 P.M. daily. For tickets, berths in Pullman or Colonist Sleepers, etc., apply to Geo. K. Thompson, City Passenger and Ticket Agent, 205 Clark street, or to F. J. Eddy, Depot Ticket Agent, Grand Central Passenger Station, corner Fifth ave. and Harrison st., Chicago, Ill.—Ado.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. This book is pronounced by "Nant," "Glean," "Dick Swiveller," "Sybillene," and other competent authorities to be the best treatise on the subject extant.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Sept. 1 to 4.—Second Annual Dog Show of the Kingston Kennel Club, at Kingston, Ont. H. C. Corbett, Secretary.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

Sept. 8 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.

Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.

Sept. 22 to 25.—Inaugural Dog Show of the Montreal Exposition Company, at Montreal, Canada. Entries close Sept. 3. J. S. Robertson, Secretary.

Sept. 29 to Oct. 1.—Third Annual Dog Show, in connection with the Central Canada Fair, at Ottawa, Ont. Alfred Geddes, Supt.

Jan. 13 to 14.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. E. Capers, Secretary, Greenville, S. C.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Secretary.

Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.

Nov. 23.—Irish Setter Club's Field Trials, at High Point, N. C. G. G. Davis, Secretary, Philadelphia, Pa.

Nov. 23.—Gordon Setter Club's Field Trials, at High Point, N. C. L. A. Van Zandt, Secretary, Yonkers, N. Y.

Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.

Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

DEATH OF CHAMPION DOC.

IT is with regret that we must chronicle the death of one of the most noted cocker spaniels in America, champion Doc (A. K. S. B. 5511). This handsome little fellow died last Sunday morning of congestion of the lungs after one day's illness. At the time of his death and for a couple of years or so he had been owned by Mr. A. Clinton Wilmerding, of Bergen Point, N. J., who purchased him from Mr. William West, of Philadelphia, Pa.

Doc was bred by Mr. J. B. Robertson, of New Haven, Conn., and was by Young Obo out of Rose Obo, therefore particularly strong in the celebrated Obo blood. Mr. James Watson having a commission to pick up a good cocker pup for Mr. West, saw what he thought a good one in this pup at the New Haven show in 1886, and wired Mr. West, who at once gave \$100 for him on Mr. Watson's judgment. That this judgment proved correct is shown by Doc's subsequent career, when, though not always shown to the best advantage in coat, he won thirty-six prizes, most of which were firsts and challenge prizes, and the last time he was shown in the States was at Boston in 1890, where he won over the celebrated Jersey and Ot's, taking the challenge prize and the stud dog cup; his last appearance in the ring being at Ottawa, 1890, where he captured the challenge prize and two specials.

As a sire this cobby and active little dog proved himself unusually vigorous, getting, as a rule, large litters, averaging about 7 and 8 pups in number, and last summer in four consecutive litters that he sired the numbers respectively were 8, 8, 8 and 15 pups, and afterward another litter of 13 was put to his credit; thus he proved himself, as a rule, a very sure stock getter. Several of his get have proved prize winners on the bench, among them being La Tosca, Red Doc, Young Doc, etc. There was always a good demand for his services, and aside from his loss as a companion Mr. Wilmerding valued him highly from a financial point, several times refusing very liberal offers for him. Everything was done for him that was possible, Dr. Arrow-smith being telegraphed for at once when it was found he was seriously ill. Mr. Wilmerding tells us he has something to replace him in two good litters to pick from, by Doc, which are now out at walk. These he will keep until sufficiently old to decide on their merits. Spaniel men all knew Doc and his owner and will heartily sympathize with the president of the Spaniel Club in his loss.

THE MONTREAL DOG SHOW.

THE Montreal Exposition Company's first International Dog Show will be held on their exhibition grounds, Sept. 22, 23, 24 and 25. Over \$1,600 is offered in cash prizes, and in addition diplomas and specials in the form of silver plate. One of the buildings on the grounds is being enlarged and specially fitted up for the occasion. The committee of management is made up of a large number of public-spirited, representative citizens, interested in the welfare of this branch of the exhibition. Our object has been to make the show worth visiting by breeders of every class, and to insure such management as will cause all who may patronize us to leave Montreal satisfied. Accordingly we have arranged that the carriage of dogs both by express companies and railroad companies will be at greatly reduced rates. To insure a healthy show we shall take special pains, such as extreme cleanliness, good disinfection and ventilation; as well as suitable feeding, and exercise of the dogs. Dogs sent by express unaccompanied will be duly cared for and returned after the show.

Believing that puppies in shows serve no useful purpose worthy of consideration, and are a source of much disease, "puppy classes" have not been provided. This step has been taken, not in imitation of any other show, but on the advice of the superintendent, who has advocated the abolition of puppy classes persistently through the Canadian press. We can promise exhibitors that all dogs will be subjected to a careful medical inspection, so that animals that are dangerous to others or unfit from disease for the public eye will not be admitted. No distinction will be made between exhibitors, and we cannot promise to large exhibitors that their dogs will be benched together, etc. Believing that ornamental draperies tend to carry disease from show to show, they will not be permitted. At the same time, when possible, dogs of the same breed in charge of one handler, will be benched to suit his convenience, provided no one else suffers thereby. Prize money will be promptly paid before the close of the show. The judges are, for Cocker, field and cocker spaniels, Mr. P. G. Keyes, of Ottawa, Ont., and for all other classes, Mr. John Davidson, of Monroe, Mich. The judges will be instructed to withhold prizes when not merited, so that the awards will have full value. Dogs and bitches will in all cases compete separately. All non-resident exhibitors desiring to show at Ottawa may leave their dogs in our charge till ready to start for that show, without expense. The Toronto management has kindly

offered to hold dogs in the same way for our show after their closes. For premium lists apply shortly to the secretary, J. S. Robertson, 56 St. Peter street, Montreal.

WESLEY MILLS, M.D., Superintendent.

MASTIFFS AT NEW YORK.

Editor Forest and Stream:

Mr. Marshall's report on his judging of mastiffs at the late New York show was very unfortunate. The idea of such reports must be that they are educational, surely it is not that they afford the judges opportunities to defend their awards? The regular kennel press should give ample opportunities for such an object. Mr. Marshall's ideas as to Beaufort are most disastrous. I did not see the dog when judged, but constantly saw him both before and after the judging, and at no time did he show the least feebleness or even lassitude, he was as active as ever I saw him at any time. Nor should the least attempt be made to blame his owners for trying to earn large stud fees and win prizes all at once. Why should they not? Is not the dog kept for both purposes? Perhaps I am revealing a secret (that was a bit of an open one), but I cannot resist saying that the reason Beaufort was in stud service when Mr. Marshall wanted him in the ring a second time was that his owner did not wish to run any more risks as to the dog's being misplaced in the specials, and to avoid any conflict with any rules, insisted that I should mate my bitch Emma with Beaufort again. I could not see through the good of this, as a service a few days before was said to be a satisfactory one, but consented to Mr. Winchell's wish, and afterward I found that his idea was to make it impossible for the dog to compete at the time! This is not meant to reflect in any way on the judge, but the Yankee cuteness of the idea, and the immenseness of the joke, are too great to justify keeping the secret.

As to the correctness of the judging, I must say that I have had letters from the foremost English judges, some of whom should have been prejudiced in favor of Ilford Chancellor as against Beaufort, and all agreed in the most sweeping condemnation of the awards. I dislike saying anything that may appear to be keeping up the condemnation of this unfortunate judging, but the embalming a defense in the sacred pages of the official exponent of doggy wisdom leaves nothing else open. Mr. Marshall is utterly wrong as to Caution's Own Daughter, wrong in every point; she is not light colored in mask and ears; I cannot remember a ginger-faced one as dark a red. Calling her "white or pink-faced" is utterly misleading, and it is Simon-pure non-

COCKER SPANIEL CHAMPION DOC.

sense to say that such markings suggest freaks, albinism, mongrelism or anything of the sort. Mastiffs have been of nearly all colors—blacks, pikes, brindles, reds, and there have been instances of whites. Certain colors are preferable, but indicate nothing whatever as to the purity of the blood, and but the merest trifle as to the likelihood of perpetuation. Crown Prince, a decided ginger-faced one, got very few of that color, and I doubt if among the number of his progeny a dozen of them can be found. His dark-faced sister, Dolly Varden, threw almost nothing else, and his black-faced sons got many. Should Crown Prince have been avoided, and his brothers, sisters and sons bred to?

Again, Mr. Marshall is wrong in saying that opinion unanimously agreed to The Lady Dorothy being ahead of C. O. D.; nine out of ten competent critics put them the other way, and this is their established position to-day. In conclusion, let me say that I intend no disrespect to Mr. Marshall personally, I have said in print that there was not the faintest evidence of any partiality in his awards. I believe he is a gentleman worthy of respect in every way but as a mastiff judge, and in that position I hold him the most complete failure that ever appeared in an American ring. How can one be qualified as a judge and devote no more time to keeping up in it than going to a show once a year?

In the days to come, when Mr. Marshall will wear judicial ermine of a higher type than ornaments dog shows, he will not adjudicate without keeping himself thoroughly in the front as to information, and this every dog show judge should also do. Much more blame-worthy than Mr. Marshall are the authorities of the New York show who selected him as judge. The mistake of Lady Orson's second last year should have warned them. But it is the rule to have mastiff judging butchered at New York.

HULTON, Pa., July 17.

USE VS. FANCY.—Hulton, Pa.—*Editor Forest and Stream:* Yours of the 16th makes me say "Take Mr. Mason's illustration of a prick-eared spauel, such an animal would be utterly uncharacteristic, yet should such an one compete with one radically defective in some essential for his use, the latter should be preferred" (the italics being of this present writing). Who is responsible for such a ridiculous blunder? I, or the printer? The context makes it evident that "latter" should read "former."—W. WADE. [It was "latter" in the copy.]

COLLIE CLUB SPECIALS.—Ottawa.—*Editor Forest and Stream:* The Collie Club of America will offer the following specials at our show in September next: Silver club medal for best collie in open class, and a bronze club medal for second best collie in open class, exhibited by members of the Collie Club.—ALFRED GEDDES, Supt.

Mr. W. H. Sprague, who has done so much for the English Bulldog Club, is hors de combat with the influenza.

NATIONAL BEAGLE CLUB MEETING.

Editor Forest and Stream:

A meeting of the Executive Committee of the National Beagle Club was called to order by President O. W. Brook- ing at 286 Washington street, Boston, Mass., at 8:20 o'clock. Roll call showed three absentees. Minutes of last meeting were read and approved. It was then moved that entrance fees to each class in the field trials be \$5, and that the number of entries necessary to run a class must be four or more.

This motion called forth much discussion, and being finally put to vote resulted in Messrs. Power and Clark voting in affirmative, Messrs. Chapman and Jamieson in negative. The president then gave the deciding vote in the affirmative.

Moved that prizes be to first 40 per cent. of entrance fee, to second 30 per cent., to third 20 per cent., and the remaining 10 per cent. to go toward defraying the expenses of the field trials. The club also decided to add \$25 in each class which shall have ten or more entries.

It was also resolved that the entrance fee to "absolute winner" class should be free, and that the "absolute winner" receive a suitable medal donated by the club.

It was also decided that a puppy class be run for dogs or bitches twelve months or under from date of closing entries. Moved to adjourn.

HUBITE.

EXPLANATIONS FOR MR. WADE.

Editor Forest and Stream:

I must confess to being a good deal surprised on reading Mr. Wade's comments on my letter of last week. If Mr. Wade will refer to the FOREST AND STREAM of June 4, he will find in the letter in that number alone, not to mention several others that transpired since, statements which are false as to facts, and Mr. Wade knew that so well that he wrote to this periodical denying some of the imputations, so did Mr. Fellows, Mr. Lacy uttered his own conviction and I myself denied them. And anything more contemptuous than some of the utterances of that letter referring to the present writer I doubt the English language capable of. Notwithstanding all these corrections not a word of atonement for this insult and injustice has appeared from the original writer and author of these false and offensive statements. And when Mr. Wade asks for more specific charges on the face of all this, the situation is simply comical, as I do not doubt in the least his sincerity. Now, although Mr. Wade's hero has been most ready to call for and to force apologies from others, he has shown in this case no disposition to act in this respect as one gentleman is supposed to do toward another, and how is it that Mr. Wade has not perceived this? This is a very serious charge, and the worst of it is, it is obviously true. I tried to avoid anything that could be in the least offensive even to those who have shown very little of the same sort of consideration for me, hence kept clear of detailed or "spicy" references.

I am inclined to think that Mr. Wade and myself are quite in accord as to the functions of dog shows and what they do and do not accomplish. I could point Mr. Wade to what I have myself written insisting on the very ground he takes, that dogs should be judged as they are—not on their pedigrees, reputation, etc. But in this case there have been hints as to "no pedigree," "mongrel," etc. So far as the greyhound in dispute is concerned, the whole purpose of my writing was to show that he had not been known as he was presented in the ring, but that the Toronto judge had done his work so badly that there was very much about the dog he could not be in a position to know at all; that in consequence his statements about the dog's ears were not accurate, and that two other judges were made to lie under an imputation of error which was based on this misapprehension. But really I do not think other readers of my letter have misunderstood the case as Mr. Wade seems to have done.

I am sorry that my critic has seen fit to suggest a meaning to my statement of why Elcho was withdrawn at New York which is not necessarily in it. I had to mention the New York show to complete the brief account given of Elcho's bench career, and I should probably not have mentioned the withdrawal had not "Nut-cracker," as Mr. Wade well knows, published a most infamous falsehood about the affair in the English Stock- Keeper.

I only know Mr. Huntington as a very enthusiastic and courteous correspondent of the Greyhound Club. Elcho was withdrawn not because I believed the judge would intentionally favor the dogs he had so long and so recently owned but because I believed he was human and I doubted the ability of any man to be fair under the circumstances. I thought then that Mr. Huntington committed an error of judgment when he accepted the position of judging under these circumstances, and this is the whole matter. That this opinion was correct events proved, for, while the awards were correct on the whole, when it came to comparing the judge's (till recently) old Balkis and the new-comer Gem of the Season, he made the great blunder of putting Balkis over a dog far superior, an error which even his best friends have not excused.

Oh, yes; we are all human—Mr. Wade included, who has the human imperfection of sticking to his old friends through thick and thin—a very admirable weakness, but it seems to me there is a more excellent way.

WESLEY MILLS, M.D.

MONTREAL, Canada.

JUDGING AT NEW YORK.—*Editor Forest and Stream:* Being passionately fond of a good greyhound, and taking a deep interest in all the writings on this graceful breed in your paper, I of course read the controversy over Elcho. Can a man such as I would suppose Dr. Wesley Mills to be think to gain glory by casting a slur at a gentleman like H. W. Huntington? Such remarks may be listened to by strangers, but to those who know Mr. Huntington and his character it raises him far above the man who would assail his name. Mr. H. is well known, and his dogs speak for themselves. The Doctor does not consider Elcho a first-class dog, and yet he would crack him up and try and make him far above what he is. Why does he not come out and say, don't breed to Elcho if you can get a better? As to his breeding dogs and other animals, I have bred a few dogs myself (also other animals), and have raised some that at coursing were hard to beat, as many of your readers can testify. I always bred to the best I could get. I would not have written this, but I do hate to see a man hit at one who has done so much for the greyhound in America as H. W. Huntington. As to his slap at Mr. Mason, I can say nothing as I do not know the gentleman personally, but should judge he was a gentleman beyond reproach. Some of your readers in the Far West will remember me as—GREYHOUND OSBORN.

CHESAPEAKE BAY DOGS.—*Editor Forest and Stream:* I wish some of your readers would kindly give us a short account of dogs known as the Chesapeake Bay dog, e.g., history, origin, genesis, average weight, color, points and general appearance.—DR. F. A. HODSON.

SOME NOTED DOGS CHANGE HANDS.

Editor Forest and Stream:
I have disposed of the greater part of my kennel of Irish setters to Mr. F. B. Bishop, of Cincinnati, the owner of the Glenmore Kennels and who is well-known as the owner of a racing stable in which are some of Kentucky's finest running horses, and I am happy in the knowledge of the fact that my dogs have fallen into the hands of so thorough a sportsman and appreciative a fancier as Mr. Bishop is known to be.

Owing to ill health and pressure of more important business it was impossible for me to give my dogs proper attention, and unless one gives such matters close personal supervision, as I have found it impossible to do of late, it is difficult to attain satisfactory results.

In this deal Mr. Bishop has acquired the celebrated setters champion Ruby Glenmore, champion Molly Bawn, champion Winnie Jr., Sarsfield, Bess P., Dan Mylrea, etc., and I have retained only the challenge dog Kildare and North Blyth for my own private shooting. It will be remembered that Mr. Bishop purchased from me a short time since the well-known challenge dog Beau Brummell, a son of champion Elcho Jr. and a litter brother to Kildare, together with Belle Aurea, and in this connection it may be mentioned that Belle Aurea has just whelped fourteen beautiful puppies sired by Beau Brummell. With this string of dogs Mr. Bishop no doubt owns the grandest collection of Irish setters that have ever been brought together in this country, and his claim to now owning the "Champion Irish Setter Kennel of America" is based on fact and not on bombast, for the Kildare Kennels which were formerly composed of these dogs have for the past two years reigned supreme on the American show bench, having never suffered a defeat as a kennel and met in competition all kennels of Irish setters under any and all judges. They have never been defeated in the challenge bitch class, in the puppy class, or for the brace prize, and they have won over three-fourths of the open class first prizes for which they have competed, they have won the challenge, open, brace and kennel prizes at New York 1890 and 1891, and it may be further added that the field merit of these dogs will compare favorably with any Irish setters in America.

Mr. Bishop will, as soon as he has recovered from a recent accident, remove to his farm near Los Angeles, California, where he will locate the Glenmore Kennels, but he will send his string through the Eastern circuit the coming season in charge of Joe Lewis, and I am confident that they will lose none of their well-earned prestige.

I will also mention that I am assisting Mr. Bishop in further strengthening his kennels, and you may look out for a big surprise in the near future. The Glenmore Kennels, as have the Kildare Kennels, stand now at the top, and they will maintain that position at any cost. Arrangements will be made with one of our leading field trial handlers and kennemen to take entire charge of the Glenmore Kennels' Irish setters at Los Angeles, which country I am informed is full of quail, and they will be regularly represented at the leading field trials as well as on the bench. It will also be arranged for draughts of the young stock to be sent East each season for disposal. In a word Mr. Bishop will leave nothing undone to further the true interests of the breed and to maintain his position as the owner of such a good kennel.

As for myself, I shall not lose any of the interest I have always had in the Irish setter and shall never be without a few good specimens, and as soon as my health and business will permit, shall again take a prominent part in breeding them.

W. L. WASHINGTON.

PITTSBURGH, Pa., July 20.

ECZEMA.

[Continued from page 433.]

IN some cases the disease is more or less all over the body. One part of the skin may be dry and scaly, another part moist and discharging, due to the breaking of the vesicles or pustules, while, perhaps, all along the back the skin is red, inflamed and covered with pimples.

In such cases a dog would have to be kept in a bath of lotion for it to be of much service, for lotions are not of much use without they are frequently applied and the skin kept damped with it. Therefore, it is my practice, when the disorder is spread over a large surface to dress the patient all over every other day during the first week, and then twice during the following week with some such mixture as the following:

- | | |
|----------------------------------|-----------------------|
| 1. Castor oil..... | In equal proportions. |
| 2. Vegetable oil..... | |
| 3. Kerosene (best paraffin)..... | |
| 4. Coconut oil..... | |

This dressing should be mixed as follows: One, two, and three should be well mixed together; No. 4 should be melted, and then added and well shaken up with the others. If there is a difficulty in getting the vegetable oil, olive oil may be substituted, but the former oil is much cheaper. When applying this dressing it is not necessary to rub it hard into the skin, for by so doing the irritation is often increased, but it should be gently smeared over the parts. At the end of the second week the dressing may be removed by washing, using a plain non-irritating soap, as curd soap, and plenty of warm water. It is not often necessary to repeat this dressing after a fortnight, but, in cases where there is much loss of hair, it is a good plan to apply it all over the dog once or twice a week for another fortnight or so, as it is a capital preparation for stimulating the growth of coat. The above mixture is also a very good and clean remedy for mange; therefore, for amateurs, who are unable to decide between a case of the latter disease and eczema, it is very useful.

It is not necessary to give aperient medicines while these oils are being used, as the dog is sure to lick himself, and therefore will be sufficiently purged, but the arsenic, as recommended in my previous article, may be given, and if the dog seems weakly from three to ten drops of dialyzed iron may be added to each dose.

Chronic eczema generally assumes the dry or squamous form of the disease, and the parts most frequently affected in these cases is the skin around the eyes, the outside of the flaps of the ears, the elbows, outside of the hock joints, and the lower part of the back. The skin is very irritable and the scratching pretty constant.

Treatment: The four oils in most instances is a specific in these cases, and it should be applied as previously recommended for general eczema, but it is not always necessary to use it all over the body, though when this form of the disease extends over a large surface it is a good plan to do so. Sometimes, especially for house dogs, this dressing is objected to. In such cases the fixed oil of petroleum may be used. This preparation has not quite such an unpleasant smell as the four oils; at the same time, it is not so effectual in its action.

Another useful remedy in chronic dry eczema is the balsam of Peru. It should be applied once a day to all the affected parts. This is a nice, clean, pleasant-smelling dressing, and is particularly suitable for toy dogs, but the principal obstacle to its general use is its cost. Chemists generally charge one shilling an ounce for it.

In some cases of a very chronic nature a mercurial dressing is absolutely necessary. In such I have found the following ointment useful:

- | | |
|------------------------------------|---------|
| Red oxide of mercury ointment..... | 1dr. |
| Oil of tar..... | 10mins. |
| Vaseline..... | 6dtrs. |

Well mixed. To be applied twice a day. In all cases of chronic eczema, arsenic should be given for a lengthened

period, but if in the course of a month or so the patient does not make good progress under this treatment, phosphorus should be tried. I have found the following prescription for pills answer well:

- | | |
|---------------------------------|--------|
| Phosphorated suet..... | 3grs. |
| Reduced iron..... | 1dr. |
| Compound tragacanth powder..... | 6grs. |
| Powdered nux vomica..... | 10grs. |
| Chloroform..... | 8mins. |

Well mix, and add sufficient mucilage of gum acacia, and divide into thirty pills. Cover with sandarach solution.

Doses: Fox-terriers, etc., one pill twice a day; collies, etc., one pill in the morning, two at night; St. Bernards, etc., two pills twice a day. Always given after feeding.

The pills are also very useful for simple irritation of the skin when a dog keeps constantly scratching and where there is nothing to be found on the skin to account for the irritation—a common complaint among dogs.

A. J. SEWELL, M.R.C.V.S.

DOG CHAT.

THE following is a copy of the "Conclusions of Law" in the Gallup vs. Belmont *et al.* Demurrer case: "New York Supreme Court, Albany County.—George D. Gallup, plaintiff, against August Belmont, Oliver H. P. Belmont, Alfred P. Vredenburg, Thomas H. Terry, W. Stewart Diefenderfer, Samuel B. Duryea, H. B. Duryea, Mitchell Harrison, J. Otto Donner, Frederick E. Lewis, Frederick R. Halsey, John S. Hoey, Pierre Lorillard, Jr., Winthrop Rutherford, Frank R. Hitchcock, Joseph D. Shotwell, A. Clinton Wilmerding, James L. Anthony and William C. Rogers, defendants. The issues of law raised by the demurrer of the defendants herein, coming on to be heard by the Court at a Special Term held by the undersigned at the City Hall, in the city of Albany, New York, on the 26th day of May, 1891, and after hearing Joseph M. Keating, of counsel for the said defendants, in support of said demurrer, and J. Newton Fiero, of counsel for the plaintiff, in opposition thereto, and due deliberation being had thereon, I decide and find as follows: 1. That the said complaint states facts sufficient to constitute a cause of action. 2. That the plaintiff is entitled to an interlocutory judgment which shall adjudge that the demurrer is overruled, with costs to be adjusted by the clerk of the county of Albany, and included in the said interlocutory judgment, and shall direct that in case the said defendants do not within twenty days after the service of a copy of such interlocutory judgment on their attorneys, with notice of the entry thereof, answer the complaint and pay said costs to the plaintiff or his attorneys, then the said plaintiff may enter final judgment against the said defendants for the relief demanded in the complaint, and for that purpose that the plaintiff's damages be assessed by a jury and that a writ of inquiry issue to the Sheriff of the county of Albany. 3. And I hereby direct judgment to be entered as aforesaid. Dated Albany, N. Y., July 6, 1891.—S. I. MAYHAM, Justice Supreme Court, State of New York."

The premium lists of the Industrial Exhibition Association's third annual international bench show of dogs, to be held in the city of Toronto, Canada, Sept. 14 to 18, are now ready and can be procured by writing the secretary, Mr. C. A. Stone, who will be pleased to send a copy to any address. Miss A. H. Whitney, of Lancaster, Mass., will judge St. Bernards, great Danes and pugs; Mr. A. Clinton Wilmerding, of New York city, will have charge of all the spaniel classes; Mr. C. H. Mason, of New York, mastiffs, bloodhounds, Newfoundland, Russian wolfhounds or Barzoi, greyhounds, deerhounds, bulldogs, bull-terriers, poodles, whippets, terriers and the miscellaneous classes; while Mr. John Davidson, of Monroe, Mich., will have the foxhounds, pointers, setters, collies, harriers, dachshunds and beagles. The list is a very liberal one and should draw a large entry, especially as there is a good circuit of Canadian shows following each other, comprising Kingston, Hamilton, Toronto, Montreal and Ottawa. Exhibitors from the United States will have no trouble at the lines, as satisfactory arrangements have been made with the customs authorities. The premium list contains 175 regular classes and 59 special classes, the first being the industrial exhibition sweepstakes for greyhounds for a silver medal, value \$20, the winner to be known as the "Champion Runner;" \$5 entrance, to be divided as follows, 60 per cent. to first and 40 per cent. to second. Greyhound race (open), \$15 to first, \$7 to second and \$3 to third. Whippet race (open), \$15 to first, \$7 to second and \$3 to third. A purse of \$25 is also offered to the person making the largest number of entries at the show and \$15 to second largest. There are kennel prizes for mastiffs, rough-coated St. Bernards, smooth-coated St. Bernards, great Danes, deerhounds, greyhounds, English and American foxhounds, pointers, English, Irish and Gordon setters, collies, bulldogs, bull-terriers, poodles, spaniels (other than cocker and field), field spaniels, cockers, beagles, fox-terriers, Skye terriers, black and tan terriers, Yorkshire terriers and pugs. Also extra kennel prizes for the following Canadian kennels: St. Bernards, mastiffs, great Danes, greyhounds, pointers, English, Irish and Gordon setters, collies and fox-terriers. Bronze medals are offered for the mastiffs, rough-coated St. Bernards, great Danes and fox-terriers. In addition to the above specials the American Spaniel Club offers a silver cup, value \$100, for the best cocker in the show. The American Collie Club offers a silver medal for the best collie dog and a bronze medal for the best collie bitch. The National Beagle Club offers \$5 in cash for the best beagle, and the National Greyhound Club offers bronze medals for the best greyhound, deerhound and Barzoi. There are forty-seven challenge classes besides a large number of novice classes. Four cash prizes are offered in most of the more important breeds in the open classes, \$20, \$10, \$5 and \$3, while three are offered in the sporting classes, \$15, \$7, \$3 and diploma; in the other breeds \$10, \$5 and diploma are offered in the majority of classes, and in a few of the small breeds \$7, \$3 and diploma are offered.

Lady—"I wish to buy a pet dog." Dealer—"Live in the city, mum?" Lady—"Yes, I live in a flat." Dealer—"Then I should advise an Italian greyhound, for no matter what you feeds a greyhound he allers stays barrer."—*Ex.*

A lady writes us from Brooklyn, N.Y.: "When our FOREST AND STREAM comes, I always turn to 'The Kennel' first and always find instruction and amusement."

A MEANS TO AN END.—"What do you suppose Thompson did when the flat he lives in caught afire the other day?" "Sent in an alarm?" "No; he became wildly excited, apparently, and threw his wife's pug out of the third story window. Killed the brute, of course; and now she is wondering if Thompson didn't know just what he was doing all the time."—*Indianapolis Journal.*

Mr. A. P. Vredenburg we hear took a jaunt to Chicago in the interests of the club in regard to its action toward the World's Fair dog show. At the same time, to kill two birds with one stone, he is doing detective work in Little Rock, Ark., where the A.K.C. *déte noir*, Mr. Pesball, lived along in the sixties. Such means to an end are, however, hardly calculated to inspire one with an exalted idea of the way in which the present campaign is being conducted.

Mr. John A. Logan, Jr., sailed on the 15th for New York from Liverpool, bringing one fox-terrier with him.

The field trials of the Manitoba Field Trials Club will be

held at Morris, Sept. 23 and following days. Mr. J. M. Avent, of Hickory Valley, Tenn., has been chosen as judge. The entries for the Derby closed July 21, the All-Aged closing Sept. 10.

At the meeting of the National Greyhound Club held at Mr. Page's office, July 15, it was decided, after much discussion, to abolish the list of judges and work for the good of the greyhound in general at shows, irrespective of who is down to judge. It is, we hear, about decided that the A. K. C. shall publish a greyhound stud book, which will be issued as a supplement to the regular stud book, but in separate form. The National Greyhound Club to have full control of the publication in regard to verifying and admitting pedigrees. The fee proposed is, or rather the N. G. C. wishes it to be, fifty cents. This arrangement should meet all points and relieve the club of the bother and risk of publishing the book. We also hear that it is the intention of several members of the club to go out to the coursing meeting at Great Bend this fall, and to that end it is proposed to charter a special car, for which arrangements are now being made, so that the fares will come much cheaper than by the ordinary way, the car being provisioned and used as a hotel during the meeting as well. This is a good idea, and will no doubt be well patronized by those who would like to see some real coursing and enjoy a pleasant trip as well. Mr. Watson has sent his Drytime on to England to be mated with a good coursing dog. She will have to wait there some time, as she unfortunately arrived too late, her season having passed.

A movement is on foot to arrange for a substantial trophy to be competed for at shows by American-bred St. Bernards. The number of good dogs of this breed of both sexes now in the country makes such a trophy more than necessary, as it will lead to competition that must result in improvement to the native stock. Mr. Rieck is active in promoting it and already has secured the promise of about \$350; Col. Ruppert, the Westminster Kennel Club and himself promising \$100 each, and other lovers of the breed will no doubt soon chip in the rest. The St. Bernard Club has already gone to considerable expense in the matter of medals, so this proposed trophy will be raised by individual subscription. It is proposed to have it competed for by St. Bernards whelped after January, 1890. This will afford a good start for everybody.

To put a dog to death expeditiously, a Mr. Esquilant advises using chloroform on a piece of cotton wool applied to the nostrils and mouth. Let the wool remain, covering the head over with a heavy cloth to exclude fresh air, and the animal at once dropping insensible, does not recover.

The pack of hounds which has been used for drag hunts at Newport, R. I., in past seasons, has, we hear, been attached for debt. There were some good hounds in this pack, several of them having won prizes at different dog shows, Roseville Rover, Major Warlock and Clonmel Rakish being the best known of the pack.

Mr. Gustave G. Pabst, of the noted brewing company of that name in Milwaukee, has, we are told, purchased a third interest in the Blue Ridge Kennels, of which Gath's Mark is the head, and Messrs. Herman Hallman, Jr., and P. T. O'Bannon are also owners.

A little bird whispers that puppy classes are to be abolished at the next Westminster Kennel Club show, not, we believe, from any feeling of consideration for the puppies, but that their room is more valuable than their company. This is a wise move and one that will set a much-wished for example to other clubs. At the same time, American kennel clubs cannot claim the honor of abolishing puppy classes, for to Canadians, and the Ottawa show committee in particular, is the honor due. In the case of the W. K. C. the increased number of entries and the decreased accommodation at the Garden makes such an arrangement imperative in view of the dissatisfaction expressed by those unlucky enough to be quartered in the "cellar" last February. Whatever the cause, true lovers of dogs will hail with delight the confirmation of the report. Puppy classes are of no benefit anyhow, and but for them we should have had many more good ones of every breed to show than we have now, for it is not too much to say that 60 per cent. of puppies shown during the circuit go home to die and drag down others in their wake.

At the Kilkenny (Ireland) show, after winning first in her class, Mr. Geo. H. K. H.'s Irish terrier, bitch Blue Stocking was claimed at her catalogue price, \$325, by the Earl of Shannon. The Earl also purchased Glen Boy, giving \$300 for him. These purchases make this gentleman's kennel about the best in the world. There was quite a scene over the claiming of Blue Stocking, several gentlemen claiming priority, but the nobleman got the verdict.

Vero Shaw's allusion in *Stock-Keeper* to Satan, Mr. Adcock's great Dane, reminds us of times when our knee joints were not quite so stiff and a day on foot after the hounds was an ordinary experience. We well remember Satan at Hull show of 1876, for we were particularly fascinated with the dog. Great Danes were scarce then in England, and especially such a "whopper" as he was. He was certainly a most savage brute, as Mr. Shaw remarks, though somehow we struck up a great friendship during the show, which led a stranger to ask us if we had anything to do with training wild beasts.

We regret to hear of the death of the good smooth-coated St. Bernard Duke of Sparta, owned by Mr. Thos. Burke, of Bridgeport, Conn. This dog was one of champion Hector's best get, was out of Spiranza and was whelped in 1888. He had won numerous prizes, although not in any sense a circuit trotter. His dam, Spiranza, died in parturition, and Duke was the only pup saved out of a litter of seventeen. Mr. Burke feels his loss very keenly, and everything was done for him that Dr. Hair, of Bridgeport, could advise. Gastric fever, from a chronic derangement of the liver, was the immediate cause of death.

The premium list of the Ottawa show, to be held Sept. 29 to Oct. 1, is out with 68 classes provided. In the challenge classes a prize of \$5 is given for most of the principal breeds. In open classes the prizes are \$7 and \$3, with a certificate for third prize. It is expected that numerous special prizes will be given which will add considerably to the value of the regular wins. The judges have already been announced. The entries close Sept. 22, the first day of the Montreal show, which will take place the week before. We find a handy reference after the list of premiums, in the list of shows to occur, following out Mr. Stewart's happy suggestion. Mr. Alfred Geddes, the superintendent, 26 Spark's street, Ottawa, Canada, is prepared to answer all questions regarding the show.

Mr. Harrison has arranged for exhibitions of the new pack of harriers he has brought over for the Pennbrook Hunt, on the evenings of July 25 and 28, and the friends of the hunt can arrange for the hounds to meet on their lawns during the month of August. The opening meet for the fall season's hunting, an appropriate term by the way, will be about Sept. 15 if the weather is cool enough. Drag hunts will be held throughout the White Marsh Valley, and those who are fond of this mimic fox hunting expect to have fine times before snow flies.

The Toronto Kennel Club has decided to hold a club show of the following breeds, spaniels, poodles and setters, and their points will be explained by the judge or judges selected.

From a letter we have received from Rochester we gather that it is the intention of the Rochester Kennel Club to hold a show the same week as Montreal, beginning Sept. 22. This will be unfortunate for both, but more especially for Montreal, as a show in New York State is sure to command a good entry.

Irish setter men will welcome to their ranks Mr. E. B. Bishop, and judging from Mr. Washington's letter in another column he will be no luke warm partisan, but will do all he can to further the interests of the breed. Mr. Bishop met with a painful accident the other day while riding in Eden Park, in Cincinnati. His horse bolted and banded him against a post, breaking his leg, but luckily throwing him on to a soft grass plot. The fall was a bad one, but he is, we are glad to say, now out of danger and on the road to recovery.

Mr. R. B. Morgan, of Akron, Ohio, sends us a fine picture of a good-looking pointer bitch, Naso Belle, by Tory White out of Nan of Naso. She looks as if she had had a good home since Cleveland show, where she was nothing but skin and bone.

In accordance with a recent decision of the English Kennel Club affecting the St. Bernard Club's wins to count for championship, Sir Bedivere is entitled to the title of champion in England.

We are indebted to Mr. W. L. Washington for a very fine picture of a group of his Irish setters with himself in the background. The grouping is excellent and the camera shows these good dogs just as they are.

Mr. F. S. Webster, who will be remembered for his many acts of kindness to those who exhibited at the Washington show last spring, is now located in New York city, at 738 Broadway, where, he writes us, he will be pleased to meet any of his friends who are doggily inclined. He still, however, retains the secretaryship of the Washington Kennel Club and also represents their interests as a delegate to the A. K. C. He tells us the club has claimed dates for their next show, and they expect to have a good one, as it is well known that this club made a big profit on their first venture.

Mr. A. R. Crowell ("Namquoit") sends us a copy of the first issue of the new monthly, *Forest, Field and Farm*, the kennel department of which is under his especial charge. The number before us is replete with articles on yachting, fishing, shooting and all kindred sports, including of course our friend the dog. The increasing interest now taken in canine matters on the Pacific coast, is excuse enough for the excellent kennel department which this well-known writer has arranged, and we sincerely trust he will have the success his many friends think he deserves.

We hear that now that Mr. Paul Hacke has purchased one of the best kennels of Barzoi in Russia, that belonging to the Grand Duke George of Michaelovitch, in which are included five stud dogs alone, he contemplates building one of the finest kennels in America to house them in appropriately. They are not to be kept in idleness, we are told, for it is the intention of those interested in the breed to inaugurate some meeting where the cowardly wolf will have a chance to show how fast he can run. The capabilities for sport that this vast country of ours affords seems unlimited, and the element of danger to be found in wolf coursing will constitute an added charm to many who may think the coursing of the wily jack a comparatively tame sport.

We hear that Mr. Edward Booth, who brought Sir Bedivere over from England in such good shape for Mr. Sears, has taken the position as manager of the Cloverdell Stock Farm Kennel of St. Bernards, at Colmar, Pa.

Mr. F. W. Chapman, the energetic secretary of the National Beagle Club, paid us a pleasant visit on Friday last. He came down from Boston to inspect the country round Nanuet, Rockland county, N. Y., with a view to its adaptability for the coming beagle trials. Mr. H. L. Kreuder, who owns the Rockland Kennel of beagles at that place, felt convinced that the club would do well to think seriously of his suggestion, and now that Mr. Chapman has seen the country he is enchanted with it, and thinks it the best he has ever seen for the purpose. The country is open and the cover not so dense as round Salem, N. H., and hares are plentiful. To have a proper display of speed and scent-lifting powers, a more open country is necessary than that of last year, for we doubt if judges can be found who would be willing to undergo the quite unnecessary amount of hard work that the two who officiated last year had to undergo. Running in comparatively open ground with the beagles well in sight is a pleasure to all, but making ten yards in two minutes through heavy brush, and scarred and bleeding from sundry affectionate briers, is hard work of the most dispensable kind. At Nanuet there are ample accommodations for visitors, and free quarters for the dogs are promised at Mr. Kreuder's place. It is intended, we believe, to hold the trials toward the end of November, and the entries promised will make them an assured success. A meeting of the club will be held this week to take final action in the matter.

The lucky winners of the English Kennel Club medals have received them at last. The medals were told, is silver and of good size, and the design an ingenious one. It would of course have been invidious on the part of the club to engrave certain breeds of dogs on them, as the design would have to be a permanent one. The design adopted, however, is a very happy one. The three shields of England, Scotland and Ireland are surmounted by the royal crown, with an ornamental panel below on which are embossed whips and leashes, making a handsome trophy well worth winning. When shall we be able to describe our A. K. C. medals. If these libel suits don't drain the cup, breeders should soon hear of them, with the stud book in such a prosperous condition.

Among the new advertisements we notice this week that G. Aceaowr offers two foxhound pups for sale; C. A. Houck, St. Bernard dog Kinglimgour; M. T. Mason, pointer pups; A. H. Cashen, Irish setter pups; Moorefield Kennels, choice English setter pups; P. O. Box 310, Easton, Md., Chesapeake Bay puppies; J. H. Ten Eyck Burr, St. Bernard pups, and Connolly, Newfoundland pups.

Mr. A. B. Truman, of San Francisco, Cal., has purchased a couple of good pointer puppies; one from Mr. W. T. Hunter, of Wheatland, N. Dak., by King of Kent out of Lass of Bloomo, and thus a half brother to the noted field dog Rip Rap. The other is from Mr. Thomas Johnson, of Winnipeg, Manitoba, and is named Upton Blithe. He is by Ighfield Upton out of Ighfield Blithe, both field trial winners. These will be run at future trials at Bakersfield, Cal.

Mr. C. C. M. Hunt complained to the Gordon Setter Club that he had not received the prize donated by the Philadelphia Item and won by his dog Bendigo at the late trials. The gun editor of that paper explains the reason. He says:

"Mr. Hunt's reference to the prize donated by *The Item* is not sufficiently explanatory. This prize was donated through Dr. Meyer, with the understanding that it was to be held by the Gordon Setter Club, in a manner similar to the prize donated by *The Item* to the Philadelphia Kennel Club. This was agreeable to Mr. Meyer, but he failed to see that the Gordon Setter Club took proper action in the matter. The gun editor of *The Item* wrote to Mr. Hunt to this effect, and also stated that *The Item* was still willing to donate the prize, provided that it was recognized by the Gordon Setter Club. Mr. Hunt claimed that the prize was his property on a single win; if Mr. Hunt will write to Mr. Connell, secretary of the Philadelphia Kennel Club, he will discover that the prize donated to that organization by *The Item* is club property, until won three times by a member of the club (but not necessarily in succession), and is to be competed for annually in the Members' Stake at the field trials of the club."

Two small rusties were overheard discussing a dog which had lately come into their possession, says the *Fanciers' Gazette*, and which they held in joint proprietorship. "Noo, Wullie," said Tam, "ye ken ae hauf's yours, the ither's mine. Ye ken ha' ony end ye like. Ye can hae the front end (persuasively), wi' the een, the lugs, the mou', the collar and the teeth, or ye can hae the ither end wi' naething but the tail." "I'll hae the front end," said Wullie promptly. "Aweel, mind ye'll hae to feed him then," rejoined the other triumphantly.

The mother of Mr. Parnell was bitten the other day while fondling a strange dog at her residence at Bordentown, N. J. The dog was killed, though we are not informed that it showed any symptoms of madness, and Mrs. Parnell had the wound canterized.

The former owner of the greyhound Gem of the Season has been disconsolate since he sold the dog and has at last, says *Canine World*, secured that beautiful bitch Annie Laurie. As she was bought from a man who did not want to sell, a very stiff price had to be paid for her.

"Peto" handles the English Kennel Club and its governing body without gloves this week in *Canine World*. It must indeed feel queer to these self-satisfied and elected gentlemen to bear some straight-from-the-shoulder truths and to find a paper that has the grit to say what it thinks upon their competence or incompetence to manage canine affairs in England. The question of late entries is now a burning one on the other side, and several suggestions have been thrown out to overcome the difficulty. In such a country as England, where shows are so numerous, we should think the suggestion made by "Peto" a good one, that show committees employ a paid secretary, who would be compelled to adhere to rules, and be under the control of the Kennel Club in so far that from that club he should receive a license to act as secretary. Only men who were known to be capable and fit for such positions would be licensed, and therefore the clubs and exhibition would all gain by some such arrangement. If it was found that late entries had been accepted, then the secretary would either be fined or his license be jeopardized.

We hear that the Seminole Kennels, of Philadelphia, have sold the pug dog Hayseed (1897) to Mr. James Bowden, New York city, where he will be placed at the stud.

We hear that Mr. Whitney is very well pleased with the mastiff Cardinal Beaufort that Mr. Moore bought for him in England and thinks with age—he is only about 18 mos.—that Beaufort's firm position will be assailed, as they count him better than champion Ilford Chancellor in the same kennel. They are also importing a mastiff bitch, Exeter Diree, from Mr. James Hutchings, Exeter, England. She is by Beaumaris out of Ovie, by Titus, he by Gwalior, a litter brother to champion Pontiff; so she is grandly bred, and Mr. Hutchings expects her to give a good account of herself in the ring. All lovers of mastiffs will be pleased to hear that Mr. Whitney is doing his best to make the Flour City Kennels stronger even than last spring. Such action will do much to revive the public interest in this noble breed.

The Gordon setter field trials this year will be held by the Gordon Setter Club of America, at High Point, N. C., commencing Monday, Nov. 23. Entries will close Oct. 15, and entry blanks can be had on application to James B. Blossom, 938 Prospect Avenue, N. Y., or Dr. J. H. Meyer, 159 West 34th Street, N. Y. These trials are open to all Gordon setters, whether owned by club members or others, and winnings will be recognized by the American Kennel Club. The entry fee is \$10, and \$20 additional to start. It is hoped that owners of Gordons will respond liberally with entries and donations; and it is requested that names be sent in as early as possible, so that early announcement can be made of the prizes, which are expected to be liberal in money and cups. For the honor of the Gordon and in view of the anything but meritorious performances they made last year, it is to be hoped that owners will, especially in the case of dogs that have not been accustomed to field work, put them early in the hands of trainers so that they may have a proper chance to show that they are really good field dogs.

Messrs. Hudspeth and Collier have brought suit in the Supreme Court of the State of New York, and served complaints last Monday on behalf of Mr. C. J. Peshall for libel against the following members of the A. K. C.: Washington E. Connor, Sidney Dillon Ripley, Lewis DeJonge, Jr., Francis R. Hitchcock, John E. Condon, F. Frank Chevalier, August Belmont, Eugene W. Durkee, W. C. Rogers, A. R. Vredenburg, James L. Anthony, Lumberson Sherwood, Howard Willets and John S. Hoey, on the grounds that they published in the *Kennel Gazette* an account of the resolution of the Committee of the Whole, when Mr. Winslow reported that the committee recommends the disqualification of Mr. C. J. Peshall by the American Kennel Club, and Mr. Cook's motion that the action of the Committee of the Whole in reference to Mr. Peshall be accepted and approved by the meeting and that Mr. C. J. Peshall be permanently disqualified. Motion seconded and carried. The other count in the complaint is that the *Kennel Gazette* published a list of disqualified members in which Mr. Peshall's name appears. This he claims injured him to the extent of \$100,000, which is the amount of damages asked for. Summons were also served in another suit against August Belmont, Alfred Purdy Vredenburg, James Louis Anthony, Thomas H. Terry, A. Clinton Wilmerding, Joseph D. Shotwell and William C. Rogers in which Mr. Peshall demands \$100,000 as damages for false arrest and the trouble, expense and annoyance of body and mind that he was put to in the late trial in which he was acquitted by the jury. Complaints in two of the suits will be served by the same firm against other associate members next Monday. In these there will be about 31 defendants. Albany suits numbering five will be brought as soon as Gen. Parker returns to Albany, which will be in the course of a couple of weeks.

We have long been itching to chronicle the purchase of the St. Bernard Lord Bute by an American kennel, and now our wish is fulfilled, when we hear that the Menthon Kennels, of Phonixville, Pa., have secured a dog that has a world wide reputation. This dog is a favorite with breeders on both sides of the water on account of his immense size

and his faculty for getting good and well marked stock, though he himself has little marking. He is, however, a handsome dog and at the same time a giant even in this large breed. Lord Bute is by Champion Save, one of the pillars of the St. Bernard stud book, out of Sabrina. He was bred by Mrs. A. G. Stacey and whelped June 10, 1887. A very good picture of Lord Bute appeared in the *Canine World* of Oct. 17, 1890, and the coloring shows him to have a rich orange tawny body, white collar and fore legs, and some white on muzzle. It is as a sire that Lord Bute has been so successful, although he has won twenty-eight first prizes and cups. He is the sire of Sir Hereward, about whom so much has been said lately, Marquis and Marchioness of Bute, Lord Dunlo and many other winners. The owner of the Menthon Kennels must be congratulated on his purchase, and we trust that the St. Bernard breeders will appreciate his pluck and enterprise, for we know at what price this dog was held, and this gentleman must have dipped into his pocket to the tune of about \$4,000 to get him. The dog will sail August 8 and it goes without saying that St. Bernard breeders will be anxious to see one of the best advertised dogs in the world, for his late owner, Mr. Shillcock, knows when he has a good thing and does not believe in biding his lights under a bushel.

The dogs now in England owned by Americans are keeping well to the front. The black and tan Prince Regent was in the money at Boston, Lincolnshire, against such dogs as Streatham Monarch, the bull-terrier, and Bonnet, the noted Irish terrier bitch. At the same show the Anglo-American Kennel had a Clumber dog, Endcliffe Don, that took first. Joe Lewis's Nia was out of coat. Mr. Purbeck's greyhound, Lily of Ganisha, was in season and out of coat and only took second. The Friday following George Thomas took the dogs to Ripon and won first with the greyhound, first with Beaconsfield and second with Endcliffe Don. Mr. Toon traveling the same day to Winterton with the greyhound Onatus, took first with him and the setter Nia, second in fox-terriers, and with Prince Regent second in a variety class. At Bradford, Onatus, the greyhound, won first in a class of fourteen, thus out of fourteen entries during the week, twelve prizes were won. Joe Lewis and George Thomas went to South and from there will show at Wakefield. At Belper, Beaconsfield took challenge, Prince Regent second in open class, though all papers agree he should have been first, Endcliffe Don third in spaniels, Onatus first in greyhounds and Nix second in a mixed class of setters. The Yankee element is, therefore, quite holding its own in the north country shows. Messrs. Boggs and Lewis are staying with Mr. Toon in Sheffield, and from all accounts enjoying themselves immensely, and wondering meanwhile when America will arrive at such a state of doggy enthusiasm that dog shows will be held in every town. The new importations which we spoke of a week or two since started last Monday for the Salem Kennels.

Mr. Edward Dexter writes a chatty letter, in which he tells us he has imported two pointers, and we presume they will come on with Mr. Buckle, who was expected at Charlottesville last Monday. Mr. Dexter remarks, "I meant to get out, but my love for the thing I believe is getting deeper," and we hope it will never touch bottom.

IRISH SETTER FIELD TRIALS.

Editor Forest and Stream:

Irish setter affairs have been progressing of late and the time has now come for every one to act. That such action may be taken intelligently I have, as secretary, the pleasure of submitting the following facts. The inaugural trials of the Irish Setter Club, open to the world, will be held at High Point, N. C., beginning on Monday, Nov. 23, with the Derby Stake. There are two stakes, the Derby, for puppies whelped on or after Jan. 1, 1890, and the All-Aged. Entries for the Derby close Aug. 15, and for the All-Aged Oct. 1. Those who desire entry blanks should apply at once to the secretary, whose address is appended. They should be properly filled in and returned to him with the forfeit money inclosed. The entrance fees for each stake are \$10 forfeit, which must accompany each entry, and \$10 additional to fill, to be paid before 9 o'clock of the evening before starting. The purses offered will be liberal, but it is impossible at present to state their exact amount, as it will depend on the amount of money received. The trials will be run under the rules of the Eastern Field Trials Club, which are the same as those of the United States Field Trials Club, and almost the same as those of the Philadelphia Kennel Club. There will be three judges, Mr. J. Otto Donner and Mr. Luke White have kindly consented to act, but the acceptance of the third has not yet been received.

There still remain two things to do; first, to get all the entries possible, and secondly, to get all the money possible. To accomplish both these things in a creditable manner will require the cooperation of every one. Now is the time to do something, let us all help. If one has no dogs of his own to enter, he may be able to induce one of his friends to enter one. I shall be pleased to have the names and addresses of any one at all interested forwarded to me and I will communicate with them and solicit their aid and send them blanks. The club wants money more particularly, that suitable purses may be given, and as this is a subject that handlers are interested in as well as owners, the field trial committee will assure them that they intend to have the stakes as large as possible. For the sake of "doubting Thomases," if there be such, we would say that money enough has been promised to insure the running of the trials, and the money we want now is mostly for the stakes. We want to make our first trials a success in every way, and to do this we want to see six or eight hundred dollars at least raised, and it can be done. I can get two hundred or more right here at home, and surely New York will not be content to play second fiddle to Philadelphia? The enterprising West is going to be given a chance, too. Chicago, after gobbling up the World's Fair, is not going to strain at a field trial. Her own self-respect demands that she head the list of contributors. There are lots of other places that can all furnish some contributors, and we want to hear from them, too, and the sooner the better.

Last year a one dollar subscription list was started. I did not contribute because I felt that it was time wasted; the amount was too small. No, if you want to help send from five to twenty-five dollars, and if you can afford it a hundred. If we Irish setter men want to have decent trials we must work hard and make sacrifices for them. Every lover of the breed will be willing to give at least five dollars, even if he has to economize in other directions to do it, and there ought to be many ten and twenty-five dollar subscriptions. I am poor myself but will give twenty-five dollars. Mr. W. H. Child has promised fifty. There is the pace, now start off. Subscriptions should be forwarded to me as treasurer of the club, and checks made payable to G. G. Davis, treasurer. Any one who desires information, or can give me any as to likely contributors, should communicate with your humble servant,

G. G. DAVIS,
Sec'y and Treas. Irish Setter Club.

1638 WALNUT STREET, Philadelphia, Pa.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Queen Lucifer. Bv F. B. Farnsworth, Washington, D. C., for blue belton English setter bitch, whelped May, 1890, by Prince Lucifer (King Noble—Elsie Belton) out of Gypsy Countess (Allen's Ruby—Martha Lane).

March. Bv G. W. Amory, Bourne, Mass., for black and white pointer bitch, whelped April 11, 1891, by Joe (Beppo II.—Sal) out of Pappoose (Tammany—Lucia).

BRED.

Prepared Blanks sent free on application.

Isabella—Ben Hill. E. Huidkeoper's (Meadville, Pa.) English setter bitch Isabella (Roke—Clara Dale) to J. Shelley Hudson's Ben Hill (Dale—Ruby), July 15.

Nellie—Lancashire. Ben. R. J. McLaughlin's (Cleveland, O.) Yorkshire terrier bitch Nellie (champion Bradford Harry—Trixie) to P. H. Coombs's Lancashire Ben (Old Prince—Absworth's Lady), June 27.

Barnaby's Nell—Premier IV. C. H. Koback's (San Francisco, Cal.) bloodhound bitch Barnaby's Nell (champion Barnab—Ripple Boxton) to his Premier IV (Premier III.—Duchess of Ripple), July 8.

Chesapeake Nell—Lord Bute. F. E. Lamb's (Baltimore, Md.) rough St. Bernard bitch Chesapeake Nell (Monarch—Lady Flois) to Thos. St. B. Woodcock's Lord Bute (champion Saver—Sabrina), June 3.

Riga—Woodcock Sultan. F. E. Lamb's (Baltimore, Md.) rough St. Bernard bitch Riga (Othello—Bessie Bayard) to his Woodcock Sultan (champion Noble—Gordon's Ruby), July 15.

Dolly Dale—Mark Noble. G. W. Lamb's (Baltimore, Md.) English setter bitch Dolly Dale (Breeze—Bessie Dale) to J. L. Wells's Mark Noble (champion Gath's Mark—Fleety Noble), June 23.

Mollie Dale—Mark Noble. Gordondale Kennels' (Attleboro, Mass.) English setter bitch Mollie Dale (Gath's Mark, Jr.—Belle Dale) to J. L. Wells's Mark Noble (champion Gath's Mark—Fleety Noble), July 7.

Lanny Dale—Mark Noble. Gordondale Kennels' (Attleboro, Mass.) English setter bitch Lanny Dale (Gath's Mark, Jr.—Belle Dale) to J. L. Wells's Mark Noble (champion Gath's Mark—Fleety Noble), July 7.

Dolly Dale—Bow Bondhu. Gordondale Kennels' (Attleboro, Mass.) English setter bitch Dolly Dale (Gath's Mark, Jr.—Belle Dale) to J. L. Wells's Bow Bondhu (Gus Bondhu—Bo-Peep), July 8.

Cosby—Bow Bondhu. Gordondale Kennels' (Attleboro, Mass.) English setter bitch Cosby (Boswell's Nod—Gordon's Gyp) to J. L. Wells's Bow Bondhu (Gus Bondhu—Bo-Peep), June 30.

Gypsy Belle—Bow Bondhu. Gordondale Kennels' (Attleboro, Mass.) English setter bitch Gypsy Belle (Boswell's Nod—Gordon's Gyp) to J. L. Wells's Bow Bondhu (Gus Bondhu—Bo-Peep), June 30.

Dolly Dale—Mark Noble. Gordondale Kennels' (Attleboro, Mass.) English setter bitch Dolly Dale (Gath's Mark, Jr.—Belle Dale) to J. L. Wells's Mark Noble (champion Gath's Mark—Fleety Noble), July 8.

Queen of Kent—Mark Noble. Noves Billings's (Dodgeville, Mass.) English setter bitch Queen of Kent (Roy Kent—Lady Kendall) to J. L. Wells's Mark Noble (champion Gath's Mark—Fleety Noble), May 8.

Loumont Kit—Roscoe. F. W. Moulton's (Washington, D. C.) bull-terrier bitch Loumont Kit (Gully the Great—Kit) to his Roscoe (Bennie—Starlight), July 6.

Golden Fairy—Nalley. C. A. Koback's (San Francisco, Cal.) fox-terrier bitch Golden Fairy (Golden Fairy—Be-Fine) to G. W. Deckerham's Nalley (Bleaton Shiner—Yum Yum), July 8.

Cosbie—Bradford Ruby II. Ren. Hey's (Cincinnati, O.) pug bitch Cosbie to "Bernart Pug Kennel's" Bradford Ruby II (champion Bradford Ruby—Puss B), July 10.

Miss—Ruby Mixer. Mr. Hoyt's (Sharon, Pa.) fox-terrier bitch Miss to Hillside Kennels' Ruby Mixer, July 17.

Belle of Sharon—Suffolk Risk. W. F. Porter's (Sharon, Pa.) fox-terrier bitch Belle of Sharon to Hillside Kennels' Suffolk Risk, July 15.

Princess—Pitcher. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Princess to their Pitcher, July 14.

Pretty Pickle—Russley Joker. R. T. Ryan's (Baltimore, Md.) fox-terrier bitch Pretty Pickle (Rogent Vox—Dudley Rag), to Hillside Kennels' Russley Joker, July 12.

Hillside Heather—Chieftrain. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Hillside Heather to their champion Chieftrain, July 12.

Mint—Ruby Mixer. P. Lorillard's (Jersey City, N. J.) fox-terrier bitch Mint (Bachanal—Luplet) to Hillside Kennels' Ruby Mixer, July 8.

Wanda—Bran. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Wanda to their champion Bran, July 14.

Highland Lassie—Chieftrain. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Highland Lassie to their champion Chieftrain, July 5.

Brazen—Clansman. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Brazen to their champion Clansman, July 2.

Tennis—Pitcher. Mr. McAlees's (Philadelphia, Pa.) fox-terrier bitch Tennis to Hillside Kennels' Pitcher, June 30.

Ebor Tatters—Pitcher. Geo. Bell's (Toronto, Ont.) fox-terrier bitch Ebor Tatters (Valkel—Village Belle) to Hillside Kennels' Pitcher, June 26.

Phyllis—Robber Chieftrain. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Phyllis to their champion Robber Chieftrain, June 25.

Harvey Jiffy—Pitcher. W. Rutherford's (New York) fox-terrier bitch Harvey Jiffy to Hillside Kennels' Pitcher, June 12.

Special—Russley Joker. J. W. Bowers's fox-terrier bitch Special to Hillside Kennels' Russley Joker, June 7.

Brockenhurst Belle—Ruby Mixer. J. I. Patterson's fox-terrier bitch Brockenhurst Belle to Hillside Kennels' Ruby Mixer, May 30.

Democracy—Russley Joker. G. M. Carnochan's (New York) fox-terrier bitch Democracy to Hillside Kennels' Russley Joker, May 24.

Russley Joker. Clarence Rathbone's (Lancaster, Mass.) fox-terrier bitch — to Hillside Kennels' Russley Joker, May 10.

Hillside Ruth—Bran. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Hillside Ruth to their champion Bran, May 11.

Hillside Ruby—Suffolk Risk. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Ruby to their Suffolk Risk, May 5.

Warren Lady—Russley Joker. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Warren Lady to their Russley Joker, May 5.

Ruby Mixer. P. Lorillard's (Jersey City, N. J.) fox-terrier bitch — to Hillside Kennels' Ruby Mixer, May 4.

WHELPS.

Prepared Blanks sent free on application.

Freda. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Freda, May 9, five (three d. g.), by their Russley Joker.

Brora. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Brora, May 9, one dog, by their Russley Joker.

Hillside Freda. Hillside Kennels' fox-terrier bitch Hillside Freda, May 9, five (one dog), by their Suffolk Risk.

Richmond Dazzle. Hillside Kennels' fox-terrier bitch Richmond Dazzle, June 14, two dogs, by their Russley Joker.

Theodora. Hillside Kennels' deerhound bitch Theodora, June 13, three (one dog), by their champion Bran.

Hillside Ramona. Hillside Kennels' deerhound bitch Hillside Ramona, June 13, seven (four dogs), by their champion Bran.

Hillside Syren. Hillside Kennels' fox-terrier bitch Hillside Syren, June 28, two (one dog), by their Reckoner.

Lady Reckon. Hillside Kennels' fox-terrier bitch Lady Reckon, June 29, four (two dogs), by their Suffolk Risk.

Hillside Sapphire. Hillside Kennels' fox-terrier bitch Hillside Sapphire, June 28, one dog, by their Pitcher.

Hillside Ruby. Hillside Kennels' fox-terrier bitch Hillside Ruby, July 16, six (one dog), by their champion Bran.

Nady of Naso. G. H. Holtham's (Bangor, Me.) pointer bitch Nady of Naso (champion Nick of Naso—Templation), July 13, eleven (five dogs), by Robt. Leslie's Spot Dash (Sir Phillip Sydney—Topsy).

PRESENTATION.

Queen Lucifer. Blue belton English setter bitch, whelped May, 1890, by Prince Lucifer out of Gypsy Countess, by J. N. Branson, Calender, Ia., to F. B. Farnsworth, Washington, D. C.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

R. H. C.—Answered by mail.

C. F. McC. Amsterdam, N. Y.—Will you please give me through your columns the pedigree of M. Thos. Marher's English setter dog Dan, winner in the puppy class of W. K. C. show of 1884 or 1885? Ans. The dog won second in the puppy class, but no pedigree is given in the catalogue.

C. M. R., Chicago, Ill.—Have you any books on beagle hounds? I want to know all about them, their raising or breeding, training and best breeds, etc. Ans. There is no book devoted especially to beagles, but I have a few on the subject. One is "The Book of the Dog," by W. H. Shaw, which we can supply you with. Price \$8 and \$5 respectively.

F. H. G., Ansonia, Conn.—Will you kindly send me the pedigree of Bob Gates? Can you also inform me how the dog came to be named Bob Gates? My father raised dogs not many years ago, and I always have wanted to know if the name came from our war or how it started. Ans. Bob Gates, by Count Rapier out of Belle of H. whelped April, 1881. Breeder, Dr. Cannon, Somerville, Tenn. It is more likely that the dog was called after Mr. Gates, who was a partner in the Memphis & Arent Kennels, Hickory Valley, Tenn.

H. McF., New York City.—Acting on your prescription as given on page 41 in issue of June 18, the canker in my pup's ear is about well, but she still shows want of condition, as coat is still stary, and he has thrown up his breakfast quite often recently. Blood evidently out of order, as I notice a few small eruptions about the neck. Ans. Better try a bottle of Glover's blood purifier, at 123 Broadway, New York city. The coat will come all right in time, and give a teaspoonful of calomel in milk. Rub a little balsam of Peru on the sores.

F. C. M., Philadelphia, Pa.—Please send me a cure for canker in the ear of a collie dog. Ans. Cleanse the ear of any matter that may have accumulated by syringing with tepid water in which rub a little castile soap. Then dry carefully with a soft cloth and drop in the ear morning and night a little of the following mixture: Goulard's extract of lead 10, glycerine and carbolic acid 1/2, (of the strength of one part) carbolic acid to five parts pure vasoline, and finest olive oil 4/10. Shake well before using and knead the roots of the ear well so that the mixture will reach every part. Rub a little on the ear flap if inflamed.

T. C., Rome, N. Y.—I have a fine red Irish setter dog not quite two years old. He has had an attack of distemper, from which he has recovered, except that the disease has left him with chorea. His appetite is good, and he is in fairly good flesh. Symptoms: A twitching of the extremities, with restless sleep and occasionally a few spasms. These symptoms have continued for some time. Ans. Take sulphate of zinc, 24 grs.; extract of gentian, 18 grs.; powdered gum acacia, 18 grs.; make into 12 pills and give one pill twice a day. Feed the dog on good nourishing food and keep in dry quarters. You must have patience, as the cure of chorea is a matter of time.

H. H. P., New York City.—Please diagnose and prescribe for the following case: Spaniel puppy, five months old, has an eruption on muzzle, neck, belly and inside of legs. It appears in small, round nodules, which are hard to the touch and feel like split peas or shot, remaining this way for a few days then they break and exude a thin serous pus. The puppy seems healthy and lively and is in very good flesh, but his constant scratching worries him. I have used Glover's mange cure and soap (which I swear by), but they do not fit the case. Ans. Worms may cause this eruption. Use one of the vermifuges advertised in our business columns. Also apply a little balsam of Peru to the sores.

St. Bernard, Ogdensburg, N. Y.—I have a St. Bernard which is troubled with mange, I think the result of injudicious feeding, he has been fed almost entirely on meat and will eat nothing else. He has large sores on back and fresh ones are breaking out on his legs. I have stopped feeding with meat, forcing him to eat bread and milk and corn meal, have been treating sores with Glover's mange remedy and dosing him with mild aperients. Kindly tell me what else is necessary to bring him back to condition and stop the sores breaking out. Ans. Continue treatment but avoid corn meal. It is not doing this time of the year. Give plenty of exercise. Give him also some of Glover's blood purifier.

L. C. C., Four Mile, N. Y.—I. Will you please give the open season in this State for grouse, woodcock, rabbit, squirrel, etc.? 2. I wish to register my dog, shall I send pedigree to you? 3. Within the past four days my dog's head has been covered with hard pimples about the size of No. 2 shot. They are mostly on top of his head. There seems to be a sort of scab on them. The dog is a lemon and white pointer. Can you tell me what it is from this meager description? Ans. 1. Grouse, Sept. 1 to Jan. 1; woodcock, Sept. 1 to Jan. 1; rabbits, Nov. 1 to Feb. 1; squirrel, Aug. 1 to Feb. 1. 2. No. Inclose pedigree and one dollar to A. P. Vredenburg, 41 Broadway, New York city, for registration in the American Kennel Club stud book 3. Eczema, very likely; follow the directions given in the article on eczema in our issue of June 18.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE CREEDMOOR MEETING.

PROGRAMME for the nineteenth annual fall meeting at Creedmoor are out, and give the programme of competitions. The meet will be open on Sept. 1 this year, in hope of fine weather, and the matches will run through five days. The rules in the competitions include the following general ones:

Spirit levels may be used upon the rear sights of all special military rifles, and also upon those of other military rifles, where permitted by the authorities issuing them.

In any match of the Association full scores cannot be beaten. The term "State model" includes the Remington .50cal. quick twist rifles.

Front sight covers of such patterns as may be easily detached, also the Piffard heelpad, will be allowed in these matches. Ammunition for military and special military rifles must be brought to the firing point ready for use. Particular attention is called to the rules relating to the minimum pull of triggers.

No shooter is allowed to place the butt of the rifle, when aiming, under his coat, vest or suspender.

There are fifteen regular matches on the list, as follows:

No. 1. Directors' Match—200yds., open only to directors of the N. R. A., 5 rounds, any military rifle, one prize.

No. 2. Junior Match—Open to all comers, Remington .50cal. State model or the United States, Springfield .30yds., 7 rounds, entries and re-entries \$1 each, the aggregate of two scores to count for the first five prizes, match to be open two days, 24 prizes.

No. 3. Wimbledon Cup Match—Open to all citizens and residents of the United States, 1,000yds., 30 shots, one prize, the Wimbledon Cup. Won in 1875 by Maj. Fulton, 1876 by I. L. Allen, 1877 by Dudley Selph, 1878 by Frank Hyde, 1879 by C. B. Hyde, 1880 by W. M. Farrow, 1881 by J. F. Kabbeth, 1882 by W. Woodworth, 1883 by H. R. Eckwell, 1884, 1885 and 1886 by J. W. Todd, 1887 by T. J. Dolan, 1888 by W. M. Merrill, 1889 and 1890 by C. H. Gaus.

No. 4. President's Match—First stage—200 and 500yds., 7 shots at each, open to all members of the Army, Navy or National Guard. Second stage—Open to all prize winners in the first stage, 600yds., 10 shots.

No. 5. Governor's Match—Seven shots, 500yds., Remington .50cal. State model, or the United States, Springfield. Open to all comers.

No. 6. The Tiffany Match—All Comers' Continuous Match—200yds., 5 shots, American standard target, any weight rifle, with any trigger pull, but no palm or other rest allowed, allowance for military rifles 3 points on each string. The first prize will be a silver vase presented by Messrs. Tiffany & Co., and cash \$50. The aggregate of three scores to count for all prizes. Extra prizes of \$5, \$3 and \$2 will be awarded each day to the three competitors making the greatest number of bullseyes.

No. 7. All Comers' Military Match—Open to everybody, 200 and 500yds., 5 shots at each, Remington .50cal. State model or the U. S. Springfield, 26 prizes, total \$215. The firing at both ranges must be done on the same day.

No. 8. Hilton Trophy Match—Open to military teams of 12 from United States or foreign countries, 200, 500 and 600 yds., 7 rounds at each, any military rifle which has been adopted, authorized or issued as an official arm by any State or government. Hilton trophy, value \$3,000, also a medal to each member of the winning team. Won in 1878 and 1879 by New York, 1880 by Division of Missouri, U.S.A., 1881 by New York, 1882 by Pennsylvania, 1883 by Michigan, 1884 and 1885 by Division of Atlantic, U.S.A., 1886, 1887, 1888 and 1889 by Massachusetts, 1890 by District of Columbia.

No. 9. National Military Match—Open to one militia team from each State or Territory. Any military rifle which has been adopted, authorized or issued as an official arm of any State or government. Round, 10 at each distance. Prize, a large bronze "Soldier of Marathon," presented on behalf of the State of New York, to be shot for annually at Creedmoor, value \$350. Also a medal to each member of the winning team. Won 1875 by New York, 1876 by Connecticut, 1877 by California, 1878 and 1879 by New York, 1880 by New Jersey, 1881 by New York, 1882 by New York, 1883 by Michigan, 1884 and 1885 by Pennsylvania, 1886, 1887, 1888 and 1889 by Massachusetts, 1890 by New York.

No. 10. New York State National Guard Match—Open to teams of 12 from each regiment or separate company of the State of New York, 200 and 500yds., the Remington rifle, State model, .50cal. Rounds, 5 at each distance. Prize, a trophy, presented by the State of New York, value \$300.

No. 11. First Brigade National Guard Match—Open to teams of 12 men from each regiment, battalion or separate company of infantry in the First Brigade of the State of New York, the Remington rifle, State model, .50cal., 200 and 500yds., 5 shots at each distance. First prize, a trophy, presented by the State of New York, value \$100. Second prize, cash, \$25, presented by the First Brigade, New York, N. G., S. N. Y.

No. 12. Second Brigade National Guard Match—Same as No. 11 for Second Brigade N. G., S. N. Y.

No. 13. Revolver Match—Fifty yards, 5 shots on the American standard target, position standing off-hand, use of one arm only allowed, revolver not to exceed 24lb. in weight, maximum length of barrel (exclusive of chamber) 7 1/2 in., minimum trigger pull 3lb., plunger sight sufficiently strong for service purposes, any ammunition, cleaning allowed between shots, one pair of revolvers with 3lb. trigger pull and using service ammunition will be allowed 10 points on 3 scores, aggregate for 3 scores to count for all prizes, entries 50 cents, or three for \$1 when taken at one time. Sixty dollars divided into 3 prizes, viz.: \$20, \$10 and six of \$3 each.

No. 14. Steward Match—Open to all comers, 200yds., Creedmoor count, number of shots 5, position sitting, kneeling or standing, the Remington .50 cal. State model or the United States Springfield, all prizes to be won by the aggregate of 3 scores. Eight prizes, aggregate \$30.

No. 15. The Barney Walther Team Match—Open to teams of 5 from any rifle club, association or military organization, no limit to number of teams from one organization, but no competitor can shoot in two teams, 200yds., 5 shots on the American standard target, standing, any rifle, any trigger pull, without palm or other rest, cleaning allowed between shots, entrance fee \$10, re-entries \$5 for each team, but limited to two, and only the highest score to count. Seventy-five per cent. of the entrance fee will be divided into three prizes, viz.: First, 35 per cent., second 25 per cent., third 15 per cent. Also a medal to each of the winning team, presented by Mr. Barney Walther, of the New York and Putnam Rifle Club, of New York city. Match to be open to 6 days.

The matches will be shot as nearly as possible upon the following days, though the right is reserved after entries are made to change the order of shooting: Tuesday, Nos. 2 and 3; Wednesday, Nos. 2 and 15; Thursday, Nos. 4 and 16; Friday, Nos. 10, 11, 12 and 13; Saturday, Nos. 8, 9 and 13. Nos. 1, 5, 6, 7 and 14 will be open every day.

THE BISLEY MEETING.

LONDON, July 13.—The Rifle Association opened its annual meeting at Bisley to-day. A marked decrease in attendance is noticeable since the meetings were transferred from Wimbledon. The Canadians won a match against Cambridge to-day by 28 points.

July 15.—The sensation of the Bisley meeting has been the target shooting of a lady. This competition is open to all comers, and so afforded the lady in question an opportunity to show her skill. To-day's shooting was for the Graphic rapid firing competition, 7 shots at 200yds. in two minutes, with one sighting. The heroine of the occasion was Miss Leale, who was the only woman to win the National Rifle Association and of the Guernsey Shooting Club. Miss Leale is a charming specimen of English young womanhood, tall, graceful and decidedly pretty. With her sighting shot she scored a bullseye, and then, loading and unloading with great rapidity, she sent 7 shots down the range in the remarkable good time of 1 minute 35 1/2 seconds. The target was then lowered, and when the announcement went up that the pretty young marksman had made two bullseyes, two inners and three magpies, a loud cheer went up as the reward of her skill and as a mark of appreciation on the part of the delighted spectators. Miss Leale is not the winner of the prize, but her good score carries her high up on the list. At 500yds. 7 shots, Miss Leale adopted the prone posture. Her sighting shot, made the center, and her second shot was a bullseye. The third shot counted 4. Miss Leale's first shot toward the negroes was a bullseye. This was quickly followed by two others. Miss Leale then made a magpie and an outer, finishing her score with two bullseyes, making a total score of 32 out of a possible 35. The Canadian team is doing some good shooting in the first stage of the Queen's Cup contest. Although the Canadians have not scored the highest points in the first stage, they are well up in the following scores show: Lieut. Davis has 85 points to his credit, Pvt. Ellis 87, Lieut. McAvity 83, Sergt. Horsey 83, Sergt. Henderson 83, Sergt. Armstrong 81, Pvt. Kamberg 81, Sergt. McVittie 80, and Sergt. Mitchell 80.

July 18.—McMeeking, a Canadian, won the Prince of Wales's prize by a score of 97. The Canadians won all of the prizes in the London Corporation match save one. Davidson won the Corporation Cup.

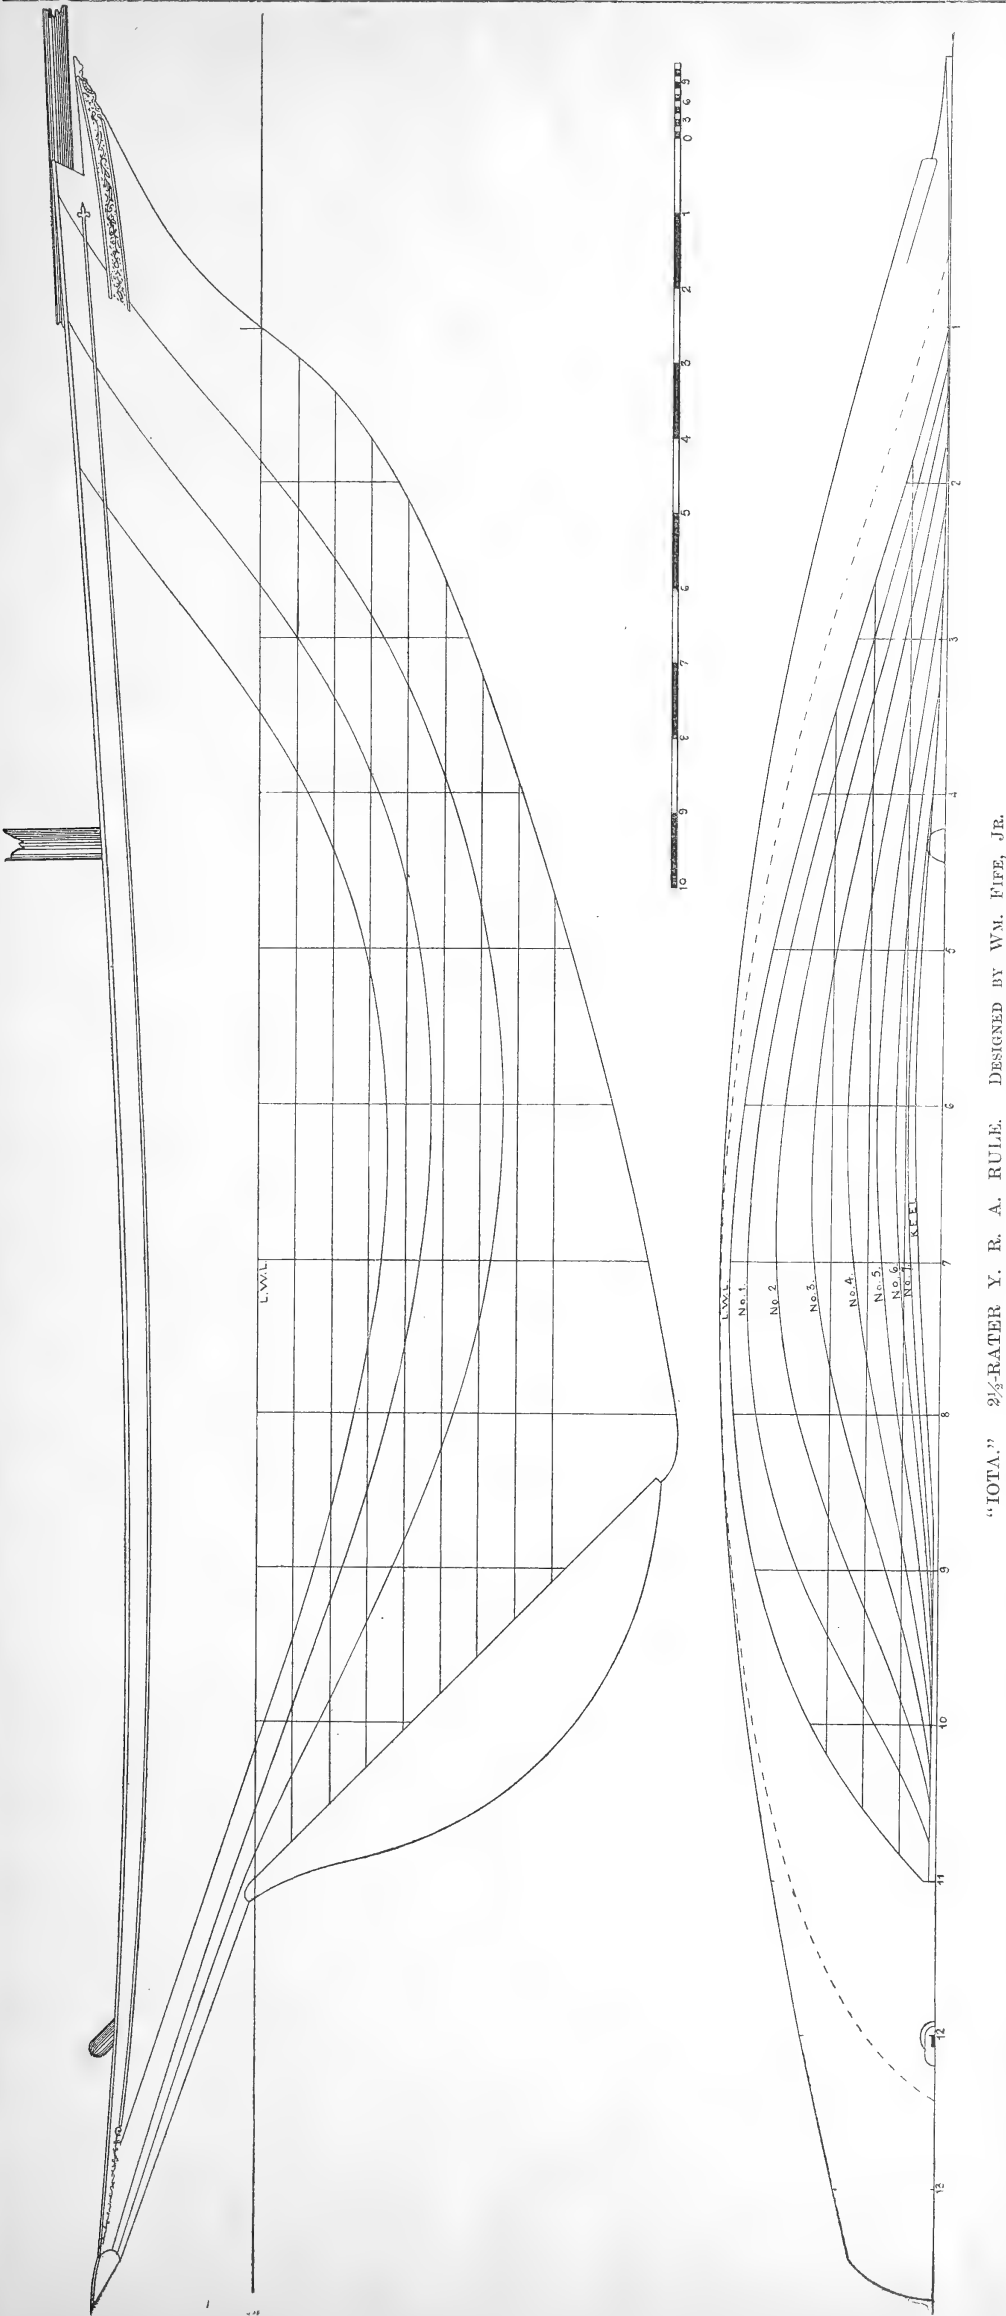

July 21.—Private Dear, of the Queen's Edinburgh regiment, won the Queen's prize to-day at the meeting of the National Rifle Association at Bisley. Dear scored 239 points. Toward the end of the competition Davidson, one of the Canadian team, led the competitors; he dropped from the lead soon after gaining it. Davidson took fourth place with 264 points, winning 230. Henderson won 215. Davidson also won the Corporation cup and other Canadians won a number of money prizes.

PHILADELPHIA, July 18.—One of the most interesting, closely-contested and exciting rifle matches that has been shot since the late war, was the match for the B. & O. Station, just across from the Breeze Gas Works, between Capt. William Kirshner and Mr. James Stocks. Captain Kirshner is an American, and is a member of Post 5, G. A. R. Mr. Stocks is an Englishman, and shoots with tenacious exactness. The day was most unpropitious for rifle shooting; both contestants suffered from the soaking rain. The score was 100 yds., 50 shots, range, 50 shots were made on American targets. Capt. Kirshner shot 40 cal. military rifle, while Mr. Stocks handled a .40cal. sporting Winchester. Capt. Kirshner shot very evenly throughout, his weakest round being the third, when he only scored 82, while his lowest "figure" was in the closing round, when a drop of rain obscured his glasses, and a 5 was the result. Mr. Stocks was somewhat rattled in the first round and made the only clean miss of the day, while the round closed for the exceedingly low total of 48:

Kirshner..... 0 7 9 8 7 10 8 10 10 8 8—86
7 7 10 10 9 9 9 8 8—85
9 7 8 6 10 8 10 7 10—82
10 6 8 10 7 9 9 8 7—84
9 9 5 10 10 6 10 9 9—83
4 6 8 4 5 7 5 5 5 7—48

Mr. Stocks..... 10 10 9 8 10 10 9 8—91
9 10 10 9 8 10 10 10 9—93
10 9 9 10 8 8 10 10—91
10 9 9 10 9 9 7 9 9—85—110

Marblehead.

"Two more days were spent in harbor, and with a light S.E. wind, a pleasant sail brought Lundy light in view about 10 o'clock. The fine weather did not last long, and soon the trysail had to be set. After a very wet passage Padstow harbor was reached. Here she remained two days.

"In the afternoon of June 6 she drifted down the coast until a pleasant southeaster sprang up; in the evening the breeze came strong from E.N.E., and storm sails were set, with a nasty sea running. The night was very dark, so she was laid to after drifting fourteen hours, with the foresheet to windward. She was got under way again, but at 10 P. M. it was necessary to lay to once more.

"Next morning M. Boyn, being anxious about his whereabouts, after so much drifting, hailed a steamer and got his position, twenty-seven miles from Roscoff, bearing S. 20° E.

"After a splendid sail of four hours, the coast of France was reached, and in two days more Iota reached Douarnenez."

The lines of the new Fife boats Barbara, Minerva, Uvira and Yama are entirely unknown to the majority of American yachtsmen, though two examples of Mr. Fife's work have already appeared in our pages, the well-known Clara in the issues of Nov. 1-8, 1888, and a design, never built to, of a widened Clara in those of Dec. 2 and 9, 1886. The present design is sufficiently near to those of Barbara and Minerva to give a very correct idea of each, bearing in mind the greater proportionate displacement, draft and freeboard that would be given to a 30-footer as compared with a yacht of double the length. The following table of dimensions gives the actual measurements of Iota, with those of the same design enlarged to 40 and 46ft., together with some corresponding dimensions of Minerva and Barbara. The measurements for freeboard and sheer are taken to under side of rail in all cases, and not to top of planksheer.

	Iota.			Minerva.	Barbara.
Length, stem head to archboard.	21ft. 30ft. 34	40ft. 58.01	46ft. 66.11	55.6	46-
L.W.L.	20.10	40.	46.	40.	40.
Beam, extreme.	5.11	11.4	13.1	10.6	12.10
L.W.L.	5.8	10.11	12.6	10.	11.6
Draft extreme.	5.8	10.11	12.6	9.	11.8
Freeboard, least.	1.8 1/2	3.3	3.9	2.11	3.4
Sheer, bow.	1.0 1/2	2.	2.4	2.	2.
stern.	4 1/2	.9	10 1/2	.5

Though Minerva is considerably shoaler and narrower than Iota, the rake of sternpost and contour of keel are very nearly the same, the forefoot being cut away to an extent before unheard of in America. In Barbara, the line of keel is still straighter and the forefoot less prominent, the whole lateral plane, though not quite so deep at its lowest point as in Iota, being still nearer to a triangle. The midship section of the latter boat also shows much more flare at the deck than in any previous design, quite different from the easily rounded sides of Minerva and Iota. The sail plan will appear next week.

NEW YORK Y. C.

THE fourth meeting of the year was held on July 16, Mr. James D. Smith, the senior captain present, presiding in the absence of the flag officers. The following letter was read and referred to a committee to draft suitable resolutions:

FLAGSHIP ELECTRA.
HARBOR New York, July 14, 1891.
To the Captains and Members of the New York Y. C.:
It is my painful duty to announce the sudden and unexpected death of Edward Burgess, a man of brilliant genius, untiring industry and unexceptional purity of character. He applied his talents and devoted the best years of his life to the development and advancement of American yachting. Original in his conception, quick to profit by experience, and sound in his judgment, his skill as a designer was unequalled on either side of the Atlantic, and his reputation literally was worldwide. In the three recent contests for the America's Cup the victorious Puritan, Mayflower and Volunteer were successive illustrations of his unexcelled skill and ability in construction.
Charming and gentle in his manner, modest and retiring when his own praises were sounded, he won the hearts of all who knew him. Called away in the prime of manhood, his death leaves a vacancy not to be filled.

The squadron of the club not having yet commenced its annual cruise, I deem it proper, instead of issuing a formal order as commodore, to submit this communication to you as a privileged one at the ensuing general meeting, leaving you on its reception to take appropriate action as a club expressive of your appreciation of his merits and of sorrow for his loss, to the honor to remain,
ELBRIDGE T. GERRY, Commodore.

The following members were elected: Geo. M. Hutton, Wm. A. Abbe, Frank Work, Geo. P. Work, Henry May, Joseph T. Thompson, Obed Wheeler, A. Forget, Alfred Kayne, Horace S. Bloodgood, Eugene Higgins, James Walter Myer, Newton Dexter, Robt. Morrow, Ogden D. Wilkinson, Newton Earle, Lewis M. Rutherford, Jr., Samuel B. Sexton and A. B. Turner.
A \$500 cup has been offered by the Oak Bluffs Club for a race of the 40ft. class on the cruise.

SIPPICAN Y. C., 13th Open Sweepstakes Regatta, Marion, July 11.—Courses, from judge's yacht, leaving Nyes Ledge and S.E. Ledge buoys on port, 15 miles for first and second classes, third and fourth class from judge's yacht, leaving Bow Bells and S.E. Ledge buoys on port, to judge's yacht, 8 miles; fifth class, leaving stake boat off Plantin Island, Seal Rock Buoy, judge's yacht, stake boat, Seal Rock Buoy on starboard, to judge's yacht, 7 miles. Weather fair, wind light S.S.W., tide ebb.

FIRST CLASS—CATS.			
Mattie, L. M. Stockton.	Length. 23.10	Elapsed. 2 30 53	Corrected. 2 30 53
Hector, E. C. Stetson.	23.10	2 33 30	2 21 22

Cat, Bruce Clarke.	19.02	2 03 41	1 48 05
Squall, J. G. Palfrey.	19.09	2 07 39	1 52 45
Edith, G. G. Van Rensselaer.	19.04	2 10 42	1 55 18
Mattie, J. M. D. Parker.			Withdrew.
FIFTH CLASS—CATS.			
Wide Awake, J. C. Pegram.	16.06	1 57 50	1 40 57
Rana, H. N. Daniels.	15.09	2 02 18	1 44 23
Worry, H. W. and R. P. Bellows.	16.04	2 10 17	1 53 19
Trana, J. Crane, Jr.		2 11 09	

First class, Mattie won; second class, Mist and Anonyma; third class, Eina, Tycoon and Puzzle; fourth class, Cat and Squall; fifth class, Wide Awake and Rana. Mattie protested for cutting buoy not yet decided. Tycoon's measurement protested, but remeasurement can hardly change her position. Regatta committee, G. G. Van Rensselaer, W. H. Davis and J. G. Palfrey, chairman Judges, Messrs. Whiting, Clark and Andrews.

LLOYD'S YACHT REGISTER.—The new volume of this useful book shows a slight decrease in size, but this is due only to the use of a thinner but finer paper in order to keep the size within convenient limits. The list of yachts proper has been increased by about 20 pages since last year. The total number of yachts listed, both sail and steam, including American vessels is 6,179. The list of abbreviations has this year been rearranged and very much extended, so that the most complete and definite information as to a yacht's character and condition can be given in a condensed form in the same line with her name and dimensions. The list of yacht clubs gives the flags of 124 clubs, while a separate list of 24 sailing clubs appears for the first time. American yachts and yacht owners are well represented, there being a large number of the latter among the list of subscribers.

VOLUNTEER.—The work on Volunteer is being hurried at Lawley's, and she was launched on Tuesday. There is little time now left, but it is expected that she will join the New York Y. C. fleet on the cruise before the Goelet cup race.

NOKOMIS, schr., once the Nettie, for two years past a pilot boat, has been sold to E. W. Halsey by Thos. Conley.

VIDETTE, steam yacht, has been sold by F. W. Vanderbilt to C. D. Borden.

LAKE YACHT RACING ASSOCIATION, 1891.

ROYAL HAMILTON Y. C., JULY 14.

The first regatta of the Lake Y. R. A., at Hamilton, Ont., under the management of the Royal Hamilton Y. C., was partly spoiled by the very unfavorable weather, the day being rainy with squalls and light winds, so that the start was delayed and the course was shortened to two rounds in place of three. A large fleet was present from Oswego, Toronto, Rochester and other lake ports, and the entry list was very good, the classes and yachts being:

First Class—Vreda, Aileen and Oriole, of Toronto; Verve No. 2, Hamilton; Yama, Oswego; White Wings, Hamilton. Forty-foot Class—Verve No. 1, Toronto, and Psyche, Hamilton. Thirty-five-foot Class—Majel, Rochester; Dinah, Hamilton; Gracie, Kingston; Alert, Hamilton.

Thirty-foot Class—Fanny Jutten and Nadia, Hamilton; Erma and Samoa, Toronto; Wave, Volante, Echo, Lotus and Latona, Hamilton, and Velnetto, Rochester. Twenty-five-foot Class—Alden, Maud B., Nadgy, Heatherbell and Katie Hall, Hamilton; Ariel, Florie B., Kelpie, Quickstep and Nellie G., Toronto, and White Wings, Hamilton. Twenty-foot Class—Kustler, Eclipse, Caruli, Ellida, Spray, Gwendoline and Xantho, Hamilton, and Caprice, Elsie, Java, Widgeon and Enid, Toronto.

Yama, having no close competitors, has this year gone up into the 40ft. class.

Merle, Yama's old rival, was not with the fleet. Dinah is a new yacht, designed and built by Thos. G. Hamilton, designer of the yawl Molly and the cutter Yancy, for Mr. F. S. Mallock, of the same place. The prizes were: First class, over 40ft. corrected length, \$30, 40ft. class, \$20, 30ft. class, \$10, 20ft. class, \$5; 20ft. class, \$3, 15ft. class, \$2, 10ft. class, \$1. The course was an 8½-mile triangle on the lake, three rounds for the two larger classes, two rounds for the 30, 35 and 40ft. classes, one and one-third for the 25ft. and one for the smaller boats.

The Kelpie, ranged ashore on Monday, but was towed off without damage. On Tuesday morning at about 9 o'clock a very heavy thunder storm swept over the lake and Burlington Bay, raising a bad sea, the wind being very violent. During the squall White Wings was caught with her mainsail up and was driven ashore in spite of the efforts of her crew, her cabin being partly filled. An attempt was made to tow her off, but it was unsuccessful. She was hauled ashore and fouled and cut the cable of a new boat, the Florie B., of Toronto, which also went ashore and was out of the race.

After the squall the wind was very light, from the west, and the start was postponed for an hour, the gun for the larger boats being fired at noon for a one gun start. It was decided to shorten the course to two rounds in place of three. Verve No. 3 was the first over, after the gun, with Yama on the even minute. Then came Vreda, Oriole, Aggie and Condor. Spinners were set and the fleet ran off in a thick fog. Vreda soon took the lead but overtook the first mark in the fog, Oriole being first and Vreda second, then Yama, Verve No. 2, Aggie and Condor, the latter soon after losing her topmast. The first round was timed as follows, Yama having taken first place in the windward work:

Yama.....1 49 41 Verve.....1 58 34
Aggie.....2 07 21 Condor.....2 11 46

Near the end of the second leg of the second and last round Oriole passed Yama. The race was timed:

Yama.....1 49 41 Verve.....1 58 34
Aggie.....2 07 21 Condor.....2 11 46

Yama.....1 49 41 Verve.....1 58 34

Enid	4 08 57	2 03 57	2 02 50

Widgeon.....Sunk by steamer.
Caprice.....Gave up.
Elsie.....Gave up.

Vreda, the Watson 20-rater, beats the schooner Oriole. Yama led her class by a long distance but was protested by Verve for being in tow when the preparatory signal was given. Vision was protested, and the protest sustained, for being over her class measurement. While racing inside the bay the 21ft. boat Widgeon was run down and cut in two by the steamer Eurydice, her crew having a very narrow escape. They were picked up by Caprice and Elsie, second and third boats, and the race in the class was ordered resailed. In the evening a dinner was given by the Royal Canadian Y. C., Com. Boswell presiding.

QUEEN CITY Y. C., JULY 17.

The race of Friday was the first circuit regatta given by the young Queen City Y. C., none being held last year. The courses were: For 45, 40 and 35ft. classes from line between the club house and Buoy No. 1, moored S.E. 500yds., then southwesterly 2 miles to Buoy No. 2, moored 1,000yds. to the southward of exhibition wharf, thence 3 miles S.W. by W. ½ W. to Buoy No. 3 in Hunter Bay; thence S.E. 5 miles to Buoy No. 4 in the lake; thence N. by W. 5 miles to Buoy No. 2, repeating the triangle formed by Buoy 2, 3 and 4, and finishing between Buoy No. 1 and the club house—30 miles. The 30ft. class had to make a single circuit of the above course, going round triangle formed by Buoy 2, 3 and 4 once only—17 miles. For the 25 and 21ft. classes the course lay from the club house buoy out into the lake to a spar buoy at the point of the island near the bell buoy, thence back to a buoy at the eastern gap, finishing at the starting point.

The race was sailed in a fresh east wind, the times being:

45 AND 40FT. CLASS, START AT 11 A. M.			
	Finish.	Elapsed.	Corrected.
Yama	4 30 17	5 30 17	5 21 10

Meteor	4 06 56	4 06 56	3 53 49
Enid	4 11 50	4 11 50	3 55 51

Off the wind White Wings led Yama, but when the windward work began the little cutter asserted her superiority and won without her allowance, though 6ft. shorter. Dinah won very handsomely in her class. Samoa led her class at the line, but by a mistake of her helmsman she left the buoy on the wrong side, and thus was not timed. Volante grounded and did not finish. Caprice protested Alliance for fouling a buoy. In the evening the club entertained its guests at a smoking concert.

HULL Y. C., JULY 17-18.—The 193d regatta of the Hull Y. C. was sailed on Friday in a fresh S.W. wind, the times being:

In the Stud.

The New York St. Bernard Kennels

Place these famous stud dogs at the service of the public.

PRINCE REGENT.

The most successful rough-coated stud dog of modern times. Among his progeny are Scottish Prince, Princess Florence, Earl Roseberry, Duke of Armadale, Lady Gladwin, Kingston Regent and King Regent. He is the best son of Champion Plinlimmon; he stands 35in. at the shoulder; he has great bone, weighs over 200 lbs., and his color is a deep orange with correct markings.

The most phenomenal stud dog that has yet been known. "Pioneer" Gazette (London).
"The sire of sires."—Forest and Stream.

Fee, \$75.

Champion Hector,

(Smooth-coated). Winner of sixty-six first and special prizes and numerous stud cups. He is the sire of Champion Cleopatra, Duke of Sparta, Lord Hector and many others.

Fee, \$40.

ROUGH AND SMOOTH PUPPIES FOR SALE.

New York St. Bernard Kennels,
138th st. and Hudson River, New York.

CONNEMARA KENNELS.—FINE IRISH setters. At stud—KATE RIVER GLENCHO, fine field dog and first prize bench winner. Fee \$20. Puppies—A beautiful litter, strong and healthy from prize stock. Testimonial says, "Irish pup purchased of you, now 8mos. old, points and retrieves like old dog. It is natural for him to hunt." R. H. BURR, Middletown, Conn.

At Stud.—English greyhounds. Gem of the Season, winner of over 50 st. and specials. Pious Pembroke, winner of over 20 firsts and special; Dexter, corded coat poodle. Pups from the above for sale. GREYHOUND AND POODLE KENNELS, Salem, Mass.

In the Stud.

WYOMING KENNELS.

The LARGEST and BEST kennel of ROUGH-COATED SAINT BERNARDS in the world, comprising the following noted STUD DOGS:

Champ. SIR BEDIVERE (19451).

Acknowledged by the best Judges to be the most typical and perfect St. Bernard living. Winner of 33 first and special prizes, all in the best of company. Prizes include The One Hundred Guinea Challenge Cup four times, the Halsey Trophy twice, and the Deacon Challenge Cup twice. Stud fee.....\$150.00

Champ. PLINLIMMON, JR. (6864).

This grand young dog is a son of the world-renowned Ch. PLINLIMMON, and although only a little over three years old, is the winner of 27 first and special prizes, and sire of some good stock. Stud fee.....\$50.00

LOTHARIO (18271).

This grand headed young dog is by the famous Ch. VALENTINE out of that well known bitch SAFFRON. He is the only son of Ch. Valentine at stud in America, and from his breeding, and low stud fee, should be much sought after by St. Bernard breeders. Stud fee.....\$25.00

St. Bernard Puppies For Sale.

LANDLOCKED SALMON IN BISBY LAKES.

IN February, 1889, the Bisby Club obtained from Fish Commissioner McDonald 17,000 eggs of landlocked salmon, and in April the fry, which were developed in the Bisby hatchery, were planted in First Bisby and the two spring ponds above. In April, 1891, a second deposit of 17,000 fry was made in the same waters. The results as announced by the president of the club, Gen. R. U. Sherman, to Commissioner McDonald, are so remarkable that we have obtained permission from the Commissioner to publish them. No better return from artificial introduction has appeared anywhere outside of the natural habitat of this salmon.

The township of Wilmurt embraces 5,000 or more square miles, almost all wilderness, containing many lakes and streams of cold water, in which several of the *Salmonidae* are native. Dace and other minnows are also present in abundance and serve as food for the game fishes. The First Bisby, into which the landlocked salmon was introduced, is known to be 100ft. deep in some places, with a bottom generally of compact sand, in which certain water plants thrive. Insects and crustaceans suitable as fish food abound. The lake trout (*Salvelinus namaycush*) is indigenous and rarely exceeds 1lb. in weight, but a few of 4lbs. to 6lbs. have been taken. In color they differ somewhat from the trout of the Great Lakes and their flesh is always white, but no specific differences have been observed between the two. During the last twelve years the brook trout, brown trout, rainbow trout and frost fish (*Coregonus quadrialatus*) have been introduced into Bisby Lake, and all of them are doing well. The frostfish is excellent for food and is a favorite with the lake trout. The brook trout has not made the showing naturally to be expected from the large number (nearly 1,000,000) planted, for the

landlocked salmon already makes a greater display in the lakes, proving that it is peculiarly suited to these waters.

The first plant, as stated above, was made in 1889. In 1890 the result appeared in salmon measuring uniformly 8in. This season they are 11in. long, present everywhere in larger numbers and take cut bait, the fly and trolling-gear with eagerness. They are especially abundant in the evening, breaching a foot above the surface of the water and gleaming like shafts of burnished silver. Other *Salmonidae* retire to deep water on the approach of warm weather, but the landlocked variety play and feed at the surface.

General Sherman finds that this fish has the habit of working down stream during the spawning season and, in order to prevent its escape into the second lake, the outlet from First Bisby will be closed by a screen. It may be that one thing more can be done to increase the growth of the salmon in these lakes, the landlocked smelt might be introduced from Maine or New Hampshire, where it forms the very best food of salmon and trout.

RESTOCKING LAKE ONTARIO.

IN our issues of Feb. 26 and March 19, 1891, we gave an account of the popular movement for increasing the supply of food fish in Lake Ontario and of the resulting appropriation for a great hatchery in the St. Lawrence basin, to be installed and directed by the Commissioner of Fisheries.

Commissioner McDonald has just gone over the region in which it is proposed to locate the hatchery and will decide which of the locations is most suitable for the undertaking. It will doubtless be remembered that the establishment is intended to accommodate 100,000,000 whitefish eggs and 1,000,000 salmon fry during a season, which would give it rank as one of the largest hatcheries in the world.

Contemplating operations of so great extent, it is not surprising that the Commissioner intends to protect the Government's interests by refusing to begin until New York assumes and performs the duty of protecting the spawning grounds of the fishes and regulating the fishery. It is certain that the depleted waters of Lake Ontario can be made to swarm with valuable fishes by the means of artificial culture, provided that these are allowed to reach adult life and reproduce in safety. Now let public sentiment gain the strength to enforce wholesome law and we shall see Ontario coming back to its old place as a productive lake.

THE MERRIMAC SALMON.

NOT only the Penobscot, but also the Merrimac has had a greatly increased salmon run this year. The obstruction at Amoskeag Falls has been partially overcome by means of a fishway into which the salmon enter with or without the assistance of agents of the New Hampshire Fish Commission. While the mills are shut down, from Saturday night to Monday morning, there is enough water passing through the fishway to make it accessible to salmon, but when they are in operation the channel becomes inadequate and the fish collect in rock pools, from which they must be helped into the fishway.

Below Livermore Falls, near the Plymouth hatchery, Commissioner Hodge nets salmon during the season and places them in a large pool, where they remain until ready to spawn in October. Here the large males become very restless at times and show their quarrelsome disposition, while the females sulk and starve in silence. The eggs are taken and fertilized in October and the fish are then returned to the Pemigewasset. In the spring the fry are deposited at Woodstock, and remain in the brooks until the sea-going instinct leads them into the Merrimac and off into undiscovered tracts of ocean, from whence some persons think they will never again return to falter at Amoskeag and fall at Livermore.

It is true that the migratory instinct of the salmon involves the fish in many dangers from savage enemies and deadly pollutions; but their decimation begins and progresses most rapidly in those innocent-looking little brooks in which the salmon passes its babyhood. Every salmon stream observed by us is inhabited by an insignificant but destructive little fish, whose special mission is the extermination of salmon and trout. At Plymouth this pest has been detected in the act of climbing up the outflow from the hatchery. The name of this salmon

destroyer is sculpin, miller's thumb, or blob, and its work in a stream means desolation. If then, adult salmon are wanted in the Merrimac, let the authorities rear the fry apart from natural enemies until their size will insure a safe journey seaward. It will cost something, but the result will amply justify the outlay.

SNAP SHOTS.

THAT comforting tenet of the angler's philosophy, that it is not all of fishing to fish, is of ancient origin and worthy of respect because of its age. Here it is in the treatise of Dame Juliana Berners, as written four hundred years ago:

For he maye not lese at the moost, but a lyne or an hoke, of whiche he maye haue store plentie of his owne makynge, as this symple treatyse shall teche hym. Soo thenne his losse is not greuous, and other greiffes maye he not haue saynge, but yf ony fysshe breke away after that he is take on the hoke; or elles that he cathe nought; whyche ben not greuous. For yf he faylle of one he maye not faylle of a nother, yf he dooth as this treatyse techyth; but yf there be nought in the water. And yet atte the leest he hath his holsom walk and mery at his ease. A swete ayre of the swete sauoure of the meede floures: that makyth hym hungry. He hereth the melodious armony of fowles. He seeth the yonge swannes: heeron: duckes: cotes and many foules wyth theyr brodes, whyche he semyth better than alle the noyse of houndys: the blastes of hornys and the scrye of foulis that hunters: fawkeners and fowlers can mak. And yf the angler take fysshe: surely thenne is there no man merie than he is in his spyryte.

We have improved on the spelling since the Dame's "Treatyse" was printed in 1486, and our fishing tackle is finer nowadays, but the sentiment is there; and who shall say that it will not hold good for another four centuries?

It appears from the interesting little story told in our "Chicago and the West" letter this week that that city is not a whit behind New York in the illegal sale of game by restaurants and hotels. In fact, all over this beautiful country the same traffic in game out of season is carried on. In Chicago they serve July prairie chickens at Kern's, in New York Delmonico dishes up woodcock in the spring, at Narragansett Pier and Bar Harbor the summer hotels provide immature quail and grouse; in staid New England villages where college girls lunch, as at Barr's in Northampton, Mass., the June bill of fare includes quail on toast. It always has been so and the remedy is difficult of discovery. If the Illinois Association shall press the case against its whilom President Kern, the moral effect cannot fail of proving salutary; but in Chicago as in New York efforts to suppress this disgraceful game traffic are at the best spasmodic and ineffectual.

In a New Jersey shore town the other day a man died of hydrophobia, it was said, caused by the bite of a pet cat. Thereupon the people of the town began an unreasoning war of extermination against all cats, the entire feline tribe being held as accursed because of the one that inflicted the bite. As the New Jersey townspeople with cats, so the human race with snakes; because a few reptiles are venomous and deadly, mankind wages war on the entire ophidian species; and harmless and beautiful and graceful and useful creatures are crushed beneath the heel, victims of an antipathy founded on ignorance and misconception.

And now they say that the prestige of lawn tennis is beginning to fade; that the game has become so scientific that the less experts are losing interest in it, the fad is declining, and tennis will take its place with croquet, archery and Newport fox hunting and the dead political booms of the past. Meanwhile angling is growing in popularity, and the ranks of the fishermen are increasing. There are two recreations—fishing and shooting—which never grow old; they have a sure lease of life; they will last so long as nature herself shall have a charm for man.

A curious instance of the clashing of diverse industries is afforded in the impending ruin of the fisheries of Saginaw Bay, Mich., where the famous fish supply is being destroyed by sawmills and salt block refuse. In the winter the salt factories deposit their refuse on the ice; in the process of time this waste has been deposited over the spawning beds.

Mrs. Stagg's biggest-on-record tarpon has been mounted and will be exhibited at the World's Fair. Do the tarpon fishermen propose thus to permit a woman to carry off the honors in sight of the nations of the earth?

The Sportsman Tourist.

THE RANSACKER'S VISION.

Editor Forest and Stream:

When you know that I pass much time in the least frequented parts of some of the mountains in northern California, miles from railroad and steamboat, and, indeed, some distance from the nearest representatives of my race, you will not wonder that I meet with singular and often remarkable adventures. The particular region I affect is between an old and historic mining town and the Pacific Coast, a locality only accessible by roundabout mountain trails and seldom explored. The metal gold, so esteemed by mankind, although found at every point of the compass from my cabin, has never been found within a rifle shot of my boundaries, so that no adventurous miners or prospectors have disturbed my domain. In fact, sir, I have passed many days without seeing or hearing anything connected with the fabric civilization. I have a sort of isolated realm of my own which is densely populated and contains many thousands of natives; but, with the exception of the feathered tribes, I never meet with any of my subjects that walk upon less than four legs.

I have constituted myself a sort of Ransacker and esteem it a part of my business to inquire into and investigate certain mountains, forests and cañons. I have theories, sir, and like to investigate some of the causes of effects. In my domain, which is varied and vast enough for any one Ransacker to essay, I think, who will competently investigate thoroughly, there are about a thousand hills, some mountains and several streams. The hills and mountains are covered with forests and the streams are kept in continued freshness and health by the melting snows on my highest summits. There are bears and deer, squirrels, quail, lizards, snakes and other hundreds of creatures on the lands, while the streams seem to contain only a fair number of rainbow trout, a few waterdogs, frogs and some several minnows, otters and coons. I knew of a turtle, about the size of a saucer, but I have not seen him this year and am not sure but the coons may have got him.

In a recent ransacking expedition I followed an old Indian trail (abandoned since about 1850) to a remote corner of my domain, and met with a most notable adventure. The trail was out of its old-time repair, steep and rocky, and when I had come to the crossing of one of my streams, what seemed to have been a large slide from one of the mountains had piled it with granite boulders, tree trunks and other obstructions, so that the gorge was impassable to an easy-going, deliberate Ransacker. I have a habit of sitting upon a log, a rock, or even the ground, when confronted by obstacles that I am not afraid of, especially if I am tired, and of contemplating. I now found this my simplest recourse, and having obtained a satisfactory reclining attitude, I proceeded to contemplate the blockade of the trail and my tumultuous surroundings. I observed that the spot was particularly rough, picturesque, remote and natural. There was a big circular hole in the granite bed of the stream into which the water fell from a shelf, perhaps 10ft., and made a great roar; and splashing over the speckled granite and mossy boulders as large as my house, sent showers of crystal flashing through the checkered shade to where I was; but away from the immediate descent the clear, cold water widened into a pool, reflecting its surroundings with all exactness imaginable. The place was closely hemmed with sugar-pines, cedars and firs, while so dense a growth of ferns and spicewood intervened that I thought it much the nature of a jungle. A few moments' climb would, however, give me a view of a hundred miles over forests and plains. A lizard having become too presuming for my scant acquaintance with him, I flipped him into the pool. Although his plunge was to him entirely unexpected and severely cold, he swam to the opposite bank safely, oblivious of the trout, almost large enough to encompass him, that glided just beneath making close estimate of the lizard's dimensions. The simile of an alligator having achieved a landing on the moss was trying to locate and dry himself when my contemplation of him ended. I thought I saw in the waters the reflection of something behind me; and, as I am adverse to approaches of unknown creatures from that quarter in jungles, I always change front.

I looked for some moments before I descried a dark object about as large as my hand back of a point of rock. Familiar with most creatures in my domains, I was not long in determining that the object was, although an unusually large one, a deer's nose. Just back of the nose I could now make out long lines of antlers, though the buck held his head in so level a line I could see little of his face. I guessed his face a wide one by the width of nose and spread of antlers. I eat as motionless as possible for many moments, but the black nose maintained its altitude and the antlers were rigidly stationary. Finally, half in soliloquy, I muttered, "Well, my fine fellow, you are safe enough, but I wish you would step out and show yourself." To my astonishment the deer sprang to the top of the ridge and stood defiantly upon my own level, and not beyond ten steps from me. And what a deer he was! With the eye of a sportsman I guessed him at 500lbs. as he stood; ten prongs, but a hundred small, thornlike points; his back straight as a line; every limb ready to leave the ground at the turn of a leaf; every muscle strung for action. His eyes big, bright and round as a dollar, but a dark green, in the intensity of their gaze caught every object; his pointed ears shifted with every chirp of bird or insect—in all he was so formidable a specimen of instinct and power that to lack reason made him the more wondrous. His head, black except a silvery crescent above his ebony nose, mounted with his wonderful antlers, was a picture of such exceptional majesty as to be indescribable; his whole coat glistened as if bronzed, while his limbs tapered in unmatched proportions to his polished, dart-shaped hoofs.

Ah! here was the Big Buck; I knew the tracks made by those hoofs. Every old hunter has seen them, and many a shot had been fired at his ever-vanishing form. Many an eye has been fired with anticipation at a glimpse of those mighty antlers! While many a foot has sped at dawn or dusk in vain pursuit of the intangible shape and followed like shadows in quest of a phantom. Having so fair an opportunity I inspected his majesty minutely and was trying to calculate the distance those polished hoofs must have covered in the course of his life, when, to my further wonderment, the Big Buck spoke! In a

matter of fact air his buckship, regardless of my start of surprise at his fluent English, remarked, "But for the fact, sir, that I am scarcely the intruder, I should ask pardon for my unannounced appearance. It is becoming so nowadays, however, that I come upon your people in every quarter; there must be a vast number of your kind, for the woods seem full of them."

The Big Deer had assumed an attitude aggressive, and spoke as though, having me at a disadvantage, he would revenge on me some of the wrongs his race had long suffered.

I replied in as bland a tone as I could that I asked pardon for intruding if I was doing so, that I was peaceably disposed, and wasn't anybody especially, myself; I further added that I was on the point of retracing my tracks down the stream.

"Oh," he interposed, "I know you. You are well enough in your way, but you are but a pioneer of others less harmless! Sir, you are probably aware that you are making tracks in one of the last undisturbed nooks of refuge we deer have on your continent—one of the last of our favorite places of refuge in the world! From every direction there comes the reports of your rifles and the villainous smell of gunpowder! The ruin and devastation of forests follow your rifles, axes and mills and towns! Why, sir, what do you think is to become of us? Where shall we look in a few years for pasture, range or refuge?"

He paused for my reply; but not having yet recovered my astonishment at hearing him speak, I could form no answer, besides the question would require a diplomatic answer.

"The world," resumed the Big Buck, "seems not properly made up for your race, and you are constantly striving at improvement! I fear you will never pause until the last plain is fenced and plowed, the last stream drained and muddied, the forests felled and destroyed, and possibly the mountains leveled. But, sir, and my observation extends over the world, I believe it little improved by your transformations. And if it were, does it not seem to you as selfishness and ingratitude that man should take all creation for himself? We deer have been so long accustomed to persecution yet never have complained! We have never asked for quarter until it is become so sadly evident that if some concession is not made us we will become extinct."

Here he stamped his sharp feet and shook his great antlers until I could not refrain from looking about for some quick way of exit from the ravine. If I had had my rifle in hand I should have felt more composed, but, on reflection, I could not recall to mind any instance of deer being dangerously vicious, so I suggested mildly that we had provided to protect his kind and other game.

"Ah," he continued fluently, "so you have. We are deluded for a few months to make our destruction more complete. Of what benefit to us will be your laws when we have no place of refuge or habitation? I say, sir, there is no gratitude or mercy evident in man when he offers no better return for benefits derived. We have been, sir, at the cost of our lives, from times lost in the obscurity of the past, sport, diversion and food for kings and noblemen, for all the best of the race of men down to this day; we have furnished food and raiment to your hardy pioneers—for your Robin Hoods, Davy Crocketts and Daniel Boones—food, sport, the very clothes they wore! Ah," sighed the Big Deer, and he looked very sad, "the brightest days have gone. It was glorious, even fleeing for life, to lead kings and nobles a gallant and dangerous chase! There was some glory when we baffled their best breed of hounds or horses! There was something heroic, too, in being on guard for your daring pioneers in past days; how softly they trod, and how unerring their long rifles were! Even in those days safety was not found in their vicinity. And to think we fed and clothed them, furnished the moccasins they wore, even the patches for their leaden bullets to such effect as we now complain of!"

I again glanced about uneasily as the Big Buck commenced a tale of the present troubles of deer and the many fatal abuses of them. He fiercely denounced the deadly modern arms, saying a deer never knew himself out of range, and that a party of our modern hunters could so fill the air with bullets that there was little chance of escape without serious injury. He claimed that more of his fellows were crippled and limped away to die in far thickets than were obtained by enthusiastic but reckless nimrods. His main complaint, however, was that all his haunts were being intruded upon, his forests destroyed, that he had now but few places of refuge, rendering hopeless his single defense of evading multiplying foes. I had begun to feel much sympathy for the big fellow when he told of the great herds of his kindred that have forever gone, or when he described the beauties of his natural haunts before the advent of his mighty enemy, man. I was on the point of informing him of the recent law in California to prohibit the killing of his friends for two years (it should have been for five), when there came to our ears the distant baying of a hound and the rapid reports of rifles. With a mighty bound the buck sprang up the ridge, evidently to lead some troop of his kind from danger, the fawns being yet so young as to require careful hiding to tremble in the deepest thickets.

I was so surprised at his tremendous leap and the activity with which he ascended the mountain that I awoke from a slight doze I had gone into. I would have thought the entire interview with the Big Buck a dream, but that I saw the tips of antlers disappear beyond the ridge and in the soft sand near the water found tracks of sharp hoofs.

I must, however, have been greatly absorbed with my adventure, for it had grown late and past my time to make my lair by dark.

On my returning over the old trail I thought with how much justice the Indian could complain, and next him perhaps the deer; and of what a benefit it would be if parts of our magnificent country could be preserved forever in their natural state, not only as refuge for deer, but the thousand smaller animals and birds that so quickly vanish from our populated centers. And then, too, what pleasure can be derived by some people by resorting to obscure and natural regions filled with the wonders of creation. Why should not each of our greater States have a reservation of some miles in extent given over to natural wilderness and forest to remain forever unmolested? Why could not enough sportsmen, in our more favored States, unite in an effort to this end?

Future generations will certainly have cause to feel the utmost gratitude toward those making so beneficial an effort for after times, and a true sportsman could ask no more than that his name should be among the number to descend to posterity as one of the patrons or originators of — State Natural Reserve or Park. His fame, I am inclined to believe, would live longer than that of most statesmen, and the benefits resulting be fully as great to posterity.

C. L. P.

NORTHERN CALIFORNIA, 1891.

A LONELY PILGRIM IN THE ROCKIES.—I.

FROM my earliest boyhood a desire to go to the Rockies and hunt for gold and game has been the one predominant above all others. Eleven years' confinement in a dental room, with but one month's vacation worth mentioning, has only had a tendency to increase that desire.

But to begin my subject. July 15 found me aboard the cars in Buffalo, ticketed for Helena, Montana, with necessary outfit for fishing and hunting; a lonely pilgrim bound for a strange land.

Nothing worth mentioning happened till we reached Indiana. Two men boarded the train equipped for bass fishing. They were the hearty, happy type of hospitable Hoosiers that no sportsman could resist scraping acquaintance with, and a good visit and urgent invitation to stop off and go fishing was the result. I shall not forget the following remarks that Mr. G. W. Whitaker, of Huntington, made on trolling for bass. He said: "The old mother bass first clears away the debris from a circle on the bottom about 2ft. in diameter, deposits her spawn, and with a mother's care guards it until the little ones come forth and are able to feed themselves, and woe be unto the fish that dares intrude. Seeing the spoon of the festive angler she makes a dash to kill it or drive it away, and is snaked into the boat and the little ones are left to perish. It is much more sport to take a Henshall rod and good reel and cast a lively frog about 50ft. and give your bass a chance to get mad after getting his mouthful."

My fishermen friends arrived at their stopping place, bade me good-bye and a good time, and nothing more happened until I reached Chicago. After changing cars I began getting ready for a good night's sleep. One of Chicago's 10,000 confidence men scraped acquaintance and claimed to be bound for Helena. Entertained me with a very plausible story and wanted to borrow \$50, offering me a \$1,000 Government bond for security until the train got outside the city limits, so that he could get into his baggage and get his money. I requested him to bring in the conductor and identify himself as a *bona fide* passenger; and he must be still hunting for the conductor, for I saw no more of him.

On arriving at St. Paul a very bad cold was considered an indication that it was best to stop over a few days. Visiting several brother dentists, I was advised to go fishing in White Bear Lake; but as W. B. Anderson, a friend of my boyhood, lived at Minneapolis, I concluded to spend my time there and look him up. Arriving in Minneapolis, I had no trouble in finding him enjoying health and prosperity in a very pleasant part of that most beautiful of all Western cities. He was the same boy grown older that had waded the old spring brook with me in pursuit of trout so many times in our boyhood days, and his merry songs and calls to his flock of ducks came floating over the old swamp to the ears of my recollection as gayly as ever on seeing his face again.

Several days were happily spent in driving to the beautiful resorts and points of interest around the bustling city, then a trip was planned to Zumbro Heights, up Lake Minnetonka, bass fishing. It was gratifying to see his good wife hustle around packing a most substantial lunch and assisting in every way possible to get us ready to enjoy the trip. We boarded a street car and arrived at the station just in time for the grand rush of fishermen and campers for the smoker. I have never seen anything to compare with a Minnesota crowd for health and "git there." If an Eastern man ever gets into one he can make up his mind to tread lively or get trod on, but we got there and got a good seat. Will fished some fragrant Havanas from a box in the lunch basket and we were soon enjoying a good smoke and the charming scenery along the beautiful Lake Minnetonka. What a place for a vacation. Everybody told the same story without saying a word. All along the road at every station were groups of people, pictures of manly vigor and happiness. The shore along the lake is dotted with pleasant cottages, grand summer hotels, beautiful grounds, picturesque groves and hills that look like paradise. Arriving at Zumbro Station, we found a three-seated wagon in waiting from the hotel, packed ourselves in with a load of passengers and were driven at a Minnesota gait to mine host Palmer's. The hotel was capable of accommodating about 75 guests, and was full of people, some of whom seemed to have an unlimited capacity for lemonade, pop and crabapple cider, and they kept Mr. Palmer so busy that it was a difficult matter to introduce the subject of frogs for bait and a place to sleep. Frogs were scarce, but we succeeded in getting a dozen, and tumbled ourselves into a bed in a cottage and slept like "pigs in clover" till morning.

Early dawn found us in the boat rowing for an arm of the lake south of the hotel. Anchoring among some lily-pads near shore the temptation was about as strong to gather the beautiful water lilies as to fish. We had hardly got our hooks in, however, before a strike was felt and a big bass was soon landed. How they did bite!

We floated along the edge of the lake and caught bass, pickerel and sunfish till our frogs were gone, ate our lunch, went ashore and caught more frogs in the landing net, then went back and fished again until 11 o'clock.

We had thrown back all the sunfish and all the bass and pickerel under 1lb. in weight and found we had sixteen bass and thirteen pickerel, and a finer lot of big-mouth bass I never saw. We lugged them up to the hotel, put them on ice, ate our dinner and lolled around a while in the shade. Mine host came out and told us there was a good croppie bed at a point north of the hotel, so we got a pail of minnows and started again. We anchored our boat in front of a cottage a few rods from shore and found we were in the right place, for we were soon landing the beauties fast enough. But the fishing was not all the interest there was in the scene. About half a mile to the north was Crane Island. All the noises I ever heard made by waterfowl, the herons on that island could discount. There seemed to be thous-

ands squalling all kinds of crane music, flying to and from the island in all directions.

On the lawn in front of the cottage were several romping, rollicking young ladies, pictures of health and happiness, as women always are in Minnesota, discoursing music from an old guitar. Considering the surroundings we had extra good luck catching croppies, for at the end of an hour we returned to the hotel with 16 croppies, weighing from 1lb. to 1½lbs. each. I felt considerably elated over our success, but Will did not consider it much of a catch, said they sometimes brought home three gunny sacks full. We went home, passed the fish around among the neighbors and saved what we wanted at home.

Mrs. Anderson would not trust a servant to cook fish, so she took the matter in hand herself, and the consequence we had as much pleasure in eating them as we did in catching them. Misfortunes are sometimes blessings in disguise. The cold I had caused me to stop and the consequence was that stopping over had given me five of the happiest days of a lifetime and the cold was gone, so I bade my friends good-bye and started on for Helena, over the Great Northern R. R., believing Minnesota people the healthiest and happiest people in America. Minnesota with its fields of waving grain and endless number of little lakes is a pleasant country to travel through. The country is interesting until you leave the Red River Valley and pass Devil's Lake, North Dakota, the great goose heaven of the Northwest. After leaving Devil's Lake the wheat fields begin to dwindle down and grow poorer until wheat fields should be turned into pastures, the only redemption for parts of the supposed wheat country of North Dakota. After leaving the wheat belt the country looks barren and desolate to an Eastern man.

The opinion of most of the passengers was forcibly expressed by an old gentleman from one of the garden spots of Michigan. He had ridden for miles over the dusty, sun-scorched, barren-looking plains. Taking off his blue glasses and wiping the dust from his eyes, he said: "This is a worthless lookin' kentry, I wouldn't give two shillin' for the whole on 't." Viewed from the car window this country looks like a vast barren waste. You cannot see the short rich grasses that cover the vast plains from the car window. Yet here vast herds of buffalo once roamed and grew fat, their bones now bleaching at the stations along the road, awaiting shipment to Eastern sugar refineries. "But all's well that ends well." Their place is now occupied by herds of horses, cattle and sheep, that are a greater source of profit to man. Yet it is sad to think of the wanton destruction of this noble animal for his pelt alone, and the lesson taught us should be emphatic enough to cause us to enforce our game laws for the protection of the balance of the noble game of this country.

We experience relief in the monotonous plain on reaching the Missouri River, and travel begins to be more interesting on reaching the foothills of the Rockies. After leaving Great Falls, Montana, the road winds along the Missouri toward Helena, among mountains of rock that furnish an ever varying scene of nature's majestic handiwork, and one realizes that he is among the grand old Rockies as he views the ever-changing panorama of ragged and precipitous grandeur around him. We finally arrived at Helena, and the first thing looked for is a bath room, for our hair fairly stands on end from the effect of dust and dry air.

Helena is built on Last Chance placer mine and is a cross between a mining camp and a model Western city. Although Helena is the richest city of its size in the world, yet one is struck more forcibly with the shiftless condition of things in general than with the beauty of the town.

Old Mt. St. Helena stands like a grim sentinel to the west of the town and the summit looked like a half hour's walk from the hotel. I left at 6 A. M. for the buttressed peak of this mountain, supposing it to be a half hour's walk, but found the distance could not be judged by a tenderfoot in that clear air, for it was three long hours before I got back to the hotel, tired and hungry. But the first view of the Rockies from the summit amply repaid me for the exertion. One gets a very fine view of the city and surrounding mountains from its crest. If Minneapolis had such a mountain they would build an elevator to the top of it and put a grand hotel there. Then they would terrace the sides and sell it for building lots, scoop a hole out of the inside for a theater, take the dirt from the hole to cover up and grade the piles of tailings along the old placer mine on Main street for more building lots, and all the visitors would be taken up in the elevator by enterprising real estate men to see the city. But Helena people are not "built that way." They have money enough, and with but few exceptions are willing to let the city take care of itself. Yet the Broadwater baths and hotel are a monument to the energy of one of its citizens and make the finest place in the State to spend a few weeks at in the summer. Mother Nature made most of the streams in Montana too cold to bathe in. She put a hot spring and a cold spring near Helena that Broadwater has utilized for his monster bath house that the people of Montana appreciate, for they now have an opportunity to wash their dusty bodies in a big swimming hole warm enough and large enough to suit the most fastidious schoolboy.

There is no fishing or hunting nor much else of interest to a sportsman in the near vicinity of Helena, so I took a train for Marysville and took up my abode at the Bon Ton restaurant.

Marysville is a mining camp of about 1,500 inhabitants. The town is built of yellow pine, sawmill finish principally. Some of the store fronts and a few dwelling houses are decorated with a coat of paint. The Drum-lennon mine and stamp mills, running 120 stamps in all, furnish employment to 300 men and yield \$100,000 worth of bullion per month.

I staid at this camp until the hunting season opened, and became so familiar with the country that the sun rose in the east and I then dared trust myself alone in the mountains. Blue mountain grouse are the game bird most sought after among the five kinds of grouse in Montana, and are called chickens there.

One beautiful morning I started alone for the top of the divide, with my gun and plenty of shells loaded with No. 8 shot, in pursuit of chickens and Neenan Bros.' mine just over the divide on Bald Butte Mountain. I was not loaded for bear, and I will say right here that I did not see any; for I know by experience that a tenderfoot always expects to meet a grizzly when traveling alone among the Rockies, and I don't want you to worry all

the time you are reading this about a bear that I did not see.

I found Bald Butte Mountain all right, and roamed around until noon without seeing anything except grand and beautiful mountain scenery. Hearing a blast fired near the top of the mountain, I turned my steps in that direction, and found a miner on his way to his cabin to dinner. The way of the world there is (thanks to my lucky stars about that time) to always invite a stranger to dinner, and his first question was, "Have you been to dinner?" I replied I had not, so we went in to the cabin. The cabin was built of logs, roofed with dirt. The floor was the surface of the earth. The furniture was sufficient for the necessities of man. He soon had a dinner cooked, and I never enjoyed a dinner any more thoroughly than I did there.

After chatting a while he showed me the way to the mine I was looking for, and told me to look for chickens in a huckleberry patch about half way to the mine. I found the huckleberries and enjoyed eating them, but found no chickens. After eating my fill (a tenderfoot's stomach is a thing of unlimited capacity) I started for the mine. Looking ahead among the scattering trees, I saw the gray back of an animal about the size of a setter dog running away from me. Not having shot my gun, I made up my mind to shoot that animal if he didn't get a gait on him, so I took after him as still as possible. I soon got near enough to shoot, and the fourth shot ended him, and I found I had killed a badger. I found Neenan's Mine, went through it, had a good visit, and went back to Marysville without a chicken.

A few days after this I went out and found five chickens and shot four out of the five. I can compare mountain grouse shooting to nothing but shooting Plymouth Rock hens in your own dooryard, only they are harder to locate.

JOHN V. COLE.

[TO BE CONCLUDED.]

CAMPERS AND CAMPERS.

AN "unfortunate concatenation of circumstances" has prevented me this year from taking my usual spring outing, and just now a flourishing crop of "Job's comforters" has laid me by the heels. These facts, in conjunction with a plentiful absence of reading matter, have given memory a chance to get in her work, and my mind has been running upon some of the "fellows I have camped with," in "days of auld lang syne."

The born camper is scarce. To be in perfection he needs a dash of Gipsy blood in his veins, mixed with that of the Indian, the Negro, the Aryan, the Gentleman and the Scholar.

The Gipsy—that he may be able to live luxuriously, not only upon the fat of the land but upon the lean as well—so that if he cannot get venison and trout, hedgehog and water-puppies will serve his turn; if fresh vegetables and canned goods fail him he can concoct healthful, if not toothsome, dishes out of roots and yarbs and the berries that grow in the hedge.

An Indian—that he may possess the "sixth sense," that of "direction," so the most trackless forest or pathless prairie shall be to him as familiar as the home farm to a country boy—that he may be so skilled in nature's language that all signs of wind and weather, all tricks of fur and feather, are better known to him than the multiplication table to a Newton; with a body so trained that he can stand heat and cold, hunger and thirst, fatigue and sleeplessness, and storms and black flies and mosquitoes, as though such things were not.

The Negro—that his cheerful jollity may never desert him in the most adverse surroundings—that he may take the goods the Gods provide and vex not his soul by thought of the morrow; and that sunshine and storm, good or bad luck, may find and leave him in the same cheery, equitable frame of mind.

The Aryan—that he may have tenacity of purpose and fixity of soul, courage undaunted by fate's worst frown, inventive genius that can build a cantilever bridge out of saplings and bark or make a fresh-water condenser from an old tin can and a gun-barrel; and adaptability to circumstances that makes him equally at home on a desert island or in kings' palaces.

A Gentleman—not in the Old World sense of one who has no business in this world, and spends his life in doing it, but one who recognizes others' rights, and respects them, their prejudices, and regards them, their frailties and pardons them—who is clean of tongue and pure of heart, and in all things and under all conditions keeps his own self-respect and gains the respect of others.

A Scholar—that, in moments of loneliness or enforced idleness, on rainy days in camp, or long waitings on an empty runway, he may have kindred spirits—David and Shakespeare, Homer and Browning, Descartes or Darwin—with whom to hold converse—may find new beauties in a vagrant bumble-bee, or fresh instruction from the busy ant—that he may be sufficient company unto himself, and not dependent upon other for mental rest and refreshment. If he have also a touch of the poet, the artist, the musician and the scientist, he will be none the less charming as a companion—none the less fitted for a genuine camper.

But, alas! such spirits be rare! "Nessmuk," I imagine, was as near such as any one, though I had not the pleasure of knowing him. As to the opposite class, "the woods are full of 'em"—his name is legion. He appears under various aliases, and numerous disguises—but he is always of the same species, *Boreus gigantissimus*. Every body knows him—except himself. Not the least pestiferous variety is

THE EARLY RISER.

I don't mean the man who rises in the fresh dewiness of a woodland morning, and goes off quietly about his own business of fishing, hunting, rowing or bathing, leaving you to do as best pleases you, but the egotistical idiot who seems to act upon the theory that he is the mainspring of the universe, a sort of telluric God of Day, and that, when he has once risen, all the rest of the world must be up and doing. No matter if your system demands eight hours of sleep, while his is content with six—no matter if you are physically run down and have come to the woods to build up and rest—no matter if you tramped twenty miles the day before or were out half the night, while he loafed around the camp all day and went to bed at dark, like other geese—in short, no matter how strong and cogent the reasons why your rest should not be disturbed, they are all ignored by him. No sooner does a torpid liver or a guilty con—no, such a beast has no conscience—arouse him, than he enters upon his self-consti-

tuted mission of diabolism; sometimes by banging things around, sometimes by whistling or singing (and it is a noteworthy fact that his whistling is like unto that of a cracked fife, and his singing as raucous as the wheeze of an asthmatic jackass); sometimes by jerking the blankets off you and yelling, "Hi! get up!" or, more aggressively, by beating a tin pail, or blowing a blast from the dinner horn in your ear. Whether his conduct arises from sheer "cussedness," or from that fatuous egotism of which I spoke, for him there is but one cure; all others have been tried and have failed; lead him beyond the confines of the camp and mildly, but firmly, mash his head with a club. If this is done judiciously and thoroughly, then will "the wicked (he) cease from troubling, and the weary (you) be at rest." To insure his staying cured, it might be as well to cremate the remains on a log heap, but this is not absolutely essential.

Another commonly occurring variety of this species is

THE MAN-WHO-IS-NEVER-FIXED.

Needless to say, he is generally a neophyte, who, generally late in life, has conceived a desire to "go camping." In some way, and this is "one of them things no feller can find out," he becomes attached to your party. In talking over matters before you start, you, in the kindness of your heart and because he is a neophyte, volunteer some friendly hints as to camp outfit, hints based upon the garnered lore of a score of years of practical experience. But he will none of them; he knows it all. He has read Thoreau and the "Annals of Brook Farm," has heroic ideas in regard to "roughing it," looks with scorn upon such effeminate trifles as mosquito bars, fly "dope" and the like, laughs scornfully at the idea of any cooking utensils save a tin cup and plate, and talks loftily about "living near to nature's heart," "leaving behind conventional wants," and "reverting to savage simplicity." And "revert" he does with a vengeance! The first night he ostentatiously spreads his one blanket upon the ground—"the bosom of Mother Earth is bed enough for him!"—wraps himself therein, and kicks and squirms and wriggles and grunts and groans and mayhap swears all night, keeping everybody awake, and showing up in the morning pale, dishevelled and haggard for want of sleep. As he is either, in some way, semi-attached to you, or is your senior in years, generally the latter, for "the older the donkey the longer the ears"—you are forced to take him thereafter as a bedfellow, and as of course you have taken only bedding enough for yourself, you are both uncomfortable the rest of the trip. And so it is in everything else. He brings but one rod, smashes that to flinders the first day, and you have to loan him your spare one. He has brought no change of clothing, and so the first time you are both caught in a shower you have to divide with him when you return to camp, and you shiver, half clad, while your old enemy, the rheumatism, gets in his work on you again. He melts the bottom out of his one tin cup by trying to make coffee over an amateur's camp-fire, and thenceforward he uses yours.

Sometimes his lunacy takes the opposite turn, and he comes provided with everything he doesn't need, and nothing which he does. If going a-fishing where there is no game larger than a chipmunk, he lugs along a .44 Winchester and a thousand rounds of cartridges. If to a country where you are liable to "jump" a grizzly any minute, he takes a Flobert rifle or a light 12-gauge loaded with bird shot. If to the woods, he carries 20lbs. of iron tent pins, but nothing in the shape of an axe; if to the marshes, blankets galore, but no wading boots, or "fly-ile;" if his traveling is to be by canoe, he wears hob-nailed boots, but has no slippers nor moccasins; and so on, *ad infinitum*. I'm not sure that he isn't worse than the other fellow just described, because, besides having to borrow everything he needs, the party is burdened with a lot of useless duff which, as Sam Weller says, "Hain't no visible use to nobody." Neither of these, however, is as hopeless a case as the "early riser." The first seldom goes a second time; he finds "conventional wants" more satisfying than "savage simplicity," and the second gradually learns by experience, unless he dies too young—say at a hundred or thereabouts.

But why continue the list? Do we not all—especially we of the grizzled locks and the gray beards, who have encamped from Dan unto Beersheba, and from the waters of Gilgal to the fountains of Shinar—do not we, I say, know the whole tribe of them? The "Practical Joker"—on whose head be Anathema Maranatha—who finds no pleasure in life so exquisite as that of rendering other people miserable, and whose sole standard of humor in a "joke" is the pain or mortification inflicted upon the recipient. The "Shirk," who fudges off all the irksome camp drudgery upon the shoulders of others, sometimes upon the plea that he is "tired," or "don't know how," sometimes with the more insolent averment that "he goes camping for pleasure, and not to work." The "Sponge," who borrows any and everything you are weak enough to loan him, from a minnow hook to a \$20 bill, breaking, spoiling, losing everything, but never paying back. The "Kicker," whom nothing satisfies; who growls when it rains, and when it is dry; because the fish bite too freely, and because they don't bite at all; because they are so big, or because they are so little; because you answer him, and because you don't answer; in short, who kicks at everything, and would kick if he was being hanged (though nobody else would). The "Demijohn," whose idea of a "good time" is an unlimited consumption of whisky, and whose sole gleaming from the field of history is what "the gov'nor of Nawth Callany said to the gov'nor of South Callany." The "Mule," who is always pulling contrariwise to the rest of the party; who wants to go down stream when they want to go up; to fish, when they propose to hunt; who wants to go home before the outing is half through, and wants to stay when the breaking-up day has come. Are not the names of all these written in the chronicles of the Sons of Izaak?

But when we do strike upon the right kind of man (and, of course, none of us are included in the above category), how our heart goes out to him; how we cherish the memories of past outings together; how we long for the time to come when we may share the same blanket, lounge before the same camp-fire, cast from the same boat, or face the same storm together again. Two such have I known in my twenty and more years of outdoor life. One has "crossed over the river, to rest in the shade of the trees;" the other—well, Mandan and Calcasieu are far apart, and no man owns the future; but the memory of the past is mine, and though Camp Comfort is no more, yet have I faith that some day we shall again clasp hands and try the bass once more.

H. P. U.

Natural History.

FROM THE ALASKA SEAL ISLANDS.

WE are indebted to Dr. W. S. Hereford, returned from a long service on St. Paul Island, Bering Sea, for interesting notes on the animals and the natives of that distant province of the United States.

It has been stated that polar bears sometimes come down on the ice to St. Paul, but the Doctor did not see any during his protracted stay, and thinks they do not occur now. The flesh of this bear is said to be palatable unless the creature has recently been feeding on walrus, or the decayed meat of whales. H. W. Elliott has just informed us that he really liked the polar bear steaks which he ate on St. Matthew's Island in 1874. According to Mr. Elliott the last of this species seen on St. Paul was shot at Bogaslow in 1848.

Walrus Island, lying six miles east of St. Paul, is still inhabited by walrus, but solely by males.

The red fox is occasionally brought to the island by ice and does not long escape the vigilance of the hunters. The blue fox is very common.

Among the winter birds are the common migratory robin of the East, and the beautiful snow bunting (*Plectrophenax nivalis*). Cormorants, gulls and harlequin ducks are present in ordinary winters, but in severely cold weather none except the first remain. The chief gull of the hunters is the great burgomaster. A small wren occurs on St. George Island, but not on St. Paul. Ducks are excessively abundant in the open water along shore in spring, and vast numbers of them are shot.

Cod and halibut are not common until in the fall when sea lions are not numerous. The natives catch some very large halibut on hooks; the small ones are greatly persecuted and almost entirely destroyed by seals and sea lions. Sculpins are always around in abundance. The people catch them around the rocks, and especially at the boat landings. They use a very short line and bait the hooks with seal meat or any animal substance that is handy. Among the sculpins there is a scaly species, called the *kah-log*, which is very palatable.

The natives have invented a new intoxicating drink which they have, in a spirit of fun, styled *sos'kie*. *Sos'kie* means a sucking bottle and furnishes a very appropriate name for the new tipple. The beverage is made from condensed milk with the addition of jellies, sweet crackers, or some other materials containing sugar, and a ferment. The stringent regulations preventing the sale of coarse sugar in quantities sufficient for the moonshiner's purpose, he resorts to all sorts of expedients to outwit his white brethren and prolong his spree. *Sos'kie* is the latest and one of the most insinuating products of his craft.

The practice of medicine among these Aleuts has brought to Dr. Hereford many surprises. He finds that opiates are nearly inert in their circulation and enormous doses of castor oil can be taken with only slight effect. A native will dispose of ten times as much Epsom salts as a white man and be none the worse for the wear. So-called dropsy and heart disease are very common after prolonged tarrying at the quass bowl, the heart being generally located almost anywhere in the trunk, but free use of salts is always a specific in these forms of disease.

The natives trap foxes in winter and hunt the sea lion and hair seal; they also kill the birds mentioned in a preceding paragraph.

T. H. B.

WHAT THE PORCUPINE EATS.

Editor Forest and Stream:

Dr. Gibbs seems to be a close observer as well as a scientist, and has evidently given the porcupine considerable attention. If you will visit any old logging camp in the upper Chippewa region a month after the men have left, you will find abundant evidence that the porcupine has a strong relish for anything in the shape of leather, salt or grease. I have seen one eating a piece of pork; and all barrels, boxes, etc., having contained pork, lard or the like are sure to be well gnawed. Land lookers have to be extremely careful or their pack straps and shoes will be eaten up.

As to its numbers. Two years ago while camped near the Flambeau River I saw six at one time, and on the tote road there were at least twenty seen in going a mile. Three of them at one time were scratching at the door and window of the little shanty where I slept. This was in the morning, and they seemed to be early risers, unlike myself, and anathemas and even more substantial missiles were of small account in inducing them to stop their applications for admittance.

The meat of a small-sized one is fairly palatable, but I once had the same experience as did Dr. Gibbs in trying to eat the flesh of an old patriarch which I had shot out of the top of a pine tree.

I seldom molest them; in fact, my principle is not to hurt anything that leaves me alone unless I want its meat. This rule of ethics may not be exactly logical, but it is the best I have.

BACKWOODSMAN.

EAU CLAIRE, Wis.

A CASE OF RATTLESNAKE BITE.—The Detroit Free Press reports the cure of a case of massasauga bite at the State military encampment: "Probably not more than four minutes had elapsed since the accident, but the examination showed two tiny punctures, surrounded by a circular elevation more than three inches in diameter. This was quickly incised through the punctures and a considerable quantity of a yellowish serum escaped. Next a hypodermic syringe was introduced into the adjacent parts and a 50 per cent. solution of carbolic acid injected. Washing with ammonia water followed, and the boy was placed on a cot. In a short time numbness of the extremities and drowsiness supervened. This was met by doses of whisky and aromatic spirits of ammonia. At this writing, twenty-four hours after the accident, the boy is out of danger. This case is of special value to the medical department, as it demonstrates that prompt treatment will neutralize the poisonous effects of the rattlesnake bite. This is probably the first opportunity ever offered for intelligent and scientific application of remedies immediately after the wound was inflicted, the combination of circumstances being ordinarily impossible."

A HOMING PIGEON, whose number on bangle was T. H. 91 458, was killed by a cat in Roxbury, Mass., one day last week; and our correspondent "Reignolds," of Boston, asks through this note for the owner.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

SMALL BORES AND BIG BAGS.

PORTLAND, Oregon.—Editor Forest and Stream: In the issue of July 9 I find "Gun Gossip," by L. I. Flower. How I wish I could meet and shake with him on the question of 12-bores. Here in Portland we have lots of old fogies who laugh at any one who carries a "boy's" gun, as they call a 12-gauge shotgun. It may seem strange, but these men that pack a young cannon of 10-gauge never get any more ducks or other birds than we of the "boy's" grade do. I have killed canvasback ducks and, in fact, all of the various species of the duck family with a 7½lb. 12-bore and have always thought that for an all-round gun the 12 was the best made. I also like his idea about the American hammerless gun.

I have a friend who does not live more than a hundred miles from here who still holds to the idea of a 10lbs. 10-bore hammer gun, and he is a lighter man by 35lbs. than I am. One day we went down to the famous Green Lake for a canvas shoot. We made a fine bag, and had it not been for that enormous cannon of his I should have enjoyed the trip very much; but the Judge was so worn out from carrying his big gun that I had to carry all of the birds, my own gun and traps, and then stop and wait for him to rest.

Now, for Mr. Flower again. He says in his article that he spent four nights out of each week for three seasons on a famous flyway for ducks. Out here in Oregon and Washington we would as soon think of killing a hen mallard on her nest as to shoot ducks in the night. In fact there is a law for the prevention of such cruelty in this country, and I think there should be such a law in every State in the Union. Night, as I understand duck nature, is their protector while feeding, and a true sportsman should at least recognize this fact.

SAND HILL.

WILD TURKEY HUNTING.

Editor Forest and Stream:

Persons visiting in the vicinity of the haunts of that game usually have dogs trained to run and tree them, and to bark, calling the attention of the hunter; and while the attention of the turkey is directed to the dog, the hunter stealthily approaches within rifle range.

Such hunters usually have a call made from a bone of the wing of the turkey, cut off at one end so as to expose the hollow. Placing the open end of the hollow to the lips so as not entirely to close the opening, and by a jerky, sucking operation a very good call can be made. Any small hollow cylinder, closed at one end, for example a large goose quill, will operate as well. One of our party was a very successful caller, using a fresh brier leaf; but the party abandoned all calls for the one described by me in FOREST AND STREAM, excepting myself and one other, who could call well with mouth and lips alone, which many times was very convenient, especially so when the finger was on the trigger of the gun ready for a snap shot and I desired to call gently a few times more.

In my turkey hunting I used one of my bird dogs. They were so trained that, if I desired it, they would walk a few steps in advance, keeping pace with me. They took to hunting turkey as naturally as to quail and prairie chickens.

When the dog struck the trail of a gang of turkeys he would thus slow-trail it, sometimes for miles, and when the turkeys were in sight, in response to a wave of my hand in the direction of the game, would rush, with all the speed he possessed, without giving tongue, among the gang, scattering them in every direction, but not chasing them. On such occasions they take to the wing. Then taking a position near where the turkeys were flushed, in about fifteen minutes I would commence to call, my dog in the meantime lying on the ground near me as motionless as an inanimate object.

Most hunters do, and I used to, prepare a screen or "blind" as we call it, so as to be out of sight of an approaching turkey. Such method compels the hunter to assume a cramped, uncomfortable position, and when he was trying to recover from it to obtain a shot, many times the game would see the effort and leave before the hunter could get a shot.

In hunting deer and turkeys in the timber, I have my clothing of such a hue that it will well blend with the color of the surroundings. I adopted the practice of seeking an open space where I could see well around about, and sitting with my back against a large tree, I would then call. I soon found I could call up turkeys in that position as readily as in a blind, if I kept perfectly motionless, not even moving my head. I finally adopted the plan of taking a seat on a log where I could well see round about, with my gun cocked and in a position to quickly bring to the shoulder for a snap shot, being careful that the motion of the calling hand could not be seen by the turkey. I have thus called old gobblers within fifteen steps of me, and have had them stand and look at me. But make the least motion and they will be away unless you shoot quick. When they say *quit quit*, look out, for they will quit very sudden.

Judging from experience, I conclude that the sense of smell is not one of the safeguards of the turkey, but sight and hearing are. On one occasion when I was thus calling, a turkey answered a few times in the distance in front of me, but I heard nothing further from it although I continued to call occasionally.

I noticed that my dog, which was lying down partly facing me, was looking very sharply behind me and occasionally turning his eyes toward me, but without any other motion. I turned my eyes so I could partly look over my shoulder. There, standing stock still, not fifteen steps away, was a large turkey looking at the dog. The dog had been watching the turkey, and informed me of the presence of it by casting his eyes at the turkey and then at me. I recall to mind many similar instances. On another occasion, when I was sitting on a log calling, a turkey answered, but I heard nothing further, excepting

in a short time I heard a slight tread in the dry leaves partly behind me, and turning my eyes so I could look partly ever my left shoulder, there stood an old gobbler, not twenty steps away, looking at me.

On another occasion, when thus calling, the turkeys came within twenty steps before stopping. I killed them both with one barrel. In shooting turkeys with small shot, shoot at the neck three or four inches below the head, and you will have neck and head filled with shot.

I have observed that when turkeys have not been disturbed much they will answer the call freely until within shot, but when they have been hunted much with the aid of the call they will answer but a few times and then approach stealthily. I remember two occasions when calling without having flushed a flock, the flock without answering came up within a few steps of me.

Once two old gobblers put in an appearance after answering a few times, and when within about ninety steps of me stopped and looked at me, but would approach no nearer, and after looking at me a few moments commenced to move right and left, occasionally picking at something on the earth and at the same time evidently keeping an eye on me. Being satisfied they would come no nearer I took the opportunity, when a large tree intervened, to bring my gun to the shoulder, and when they came into view killed one with the rifle.

On another occasion, just at night, the dog struck the trail of a gang while on their way from their feeding ground to their roost. Following rapidly until I could hear their gobbling I tried to halt them by the call, but could not succeed. It being so near night I knew it would be of no use to flush them, for by the time I could call them it would be so dark I could not see to shoot, so I imitated the call of a stray young turkey several times rapidly, and before I had time, or rather thought, to be on the alert back came the old mother turkey like a streak, almost running against me. She was so alarmed that she flew into a tall cypress and I killed her with the rifle. If in the same territory deer were as plenty as turkey the hunter could kill more deer than turkey.

I recall to mind many amusing incidents connected with hunting turkey. In the Southwest the term "hurricane" is applied to certain conditions of timberland. In many places heavy timber has been prostrated by fierce winds, and the earth covered with a dense growth of second growth small trees, vines, etc., which together with the fallen timber, makes the "hurricane" almost impenetrable. I was hunting deer once in such cover, and when at the northeast corner of the hurricane, I took the call to see if I could obtain an answer from the hurricane. Soon I received an answer from the southeast corner and one from the west end. The hurricane was of five or six acres in extent. I continued to call, the turkeys would answer but would not come. Thinking the answers were from some of our party, I made a false call, and it was answered by a false call from the southeast, but the answer from the west end continued regular. Soon one of our party who had been calling at the southeast corner came up, and we started for camp, the west end of the hurricane being in the line to camp. On arriving at the west end we found a native calling with a turkey bone. He said to us, "the hurricane is full of turkey." He had heard us calling. We did not enlighten him, but left him still calling.

The gun I hunt deer and turkey with is a double-barreled breechloader, one barrel .40-70 rifle, the other 12-gauge shot, made to order fifteen years or more ago by D. M. Lefever, of Syracuse, N. Y. I have a pair of shot barrels for same stock.

In 1853 I had a like gun made to order, excepting that it was a muzzleloader, made by Billingshurst, Rochester, N. Y., which I used until I obtained the one made by Lefever.

I presume that Lefever thinks that now after fifteen or more years of experience he can make a better shooting gun, but I doubt if he or any other person can do it. For many years I used an ordinary peep sight, broad disc, hinged at the post so I could turn the disc down quickly and use the croch sight if desired. For the last few years I have used entirely the Lyman rear sight. The party that I now hunt deer with use the Lyman sight on their Winchesters.

A person who has never used a well-trained bird dog in hunting turkey cannot realize the pleasure and ease in thus hunting. Many times a turkey, when fatally wounded, will be able to hide in the brush, and then your dog comes into play as a retriever.

In some settlements turkeys will frequent cornfields after the corn has matured. Then your dog comes in play. Skirting along the field, having the wind of it, your dog will soon tell you whether game is in the field. Take a position where your judgment tells you the turkey will leave the field, and give your dog the signal, and he will rush through the field flushing the game and you can take it on the wing.

In some portions of the country where turkeys are found there are glades in the timber grown up to tall grass, and the grass sometimes is infested with grasshoppers. After the dew is off turkeys will be found in the glades after grasshoppers.

A turkey will not sit before the dog, but will skulk away. Your dog will trail the game as fast as you walk with a quick step, and when he flushes the game you take it on the wing. A double shotgun is the arm for the two latter occasions.

My last dog was a more than ordinarily intelligent setter; seemed intuitively to understand what I wanted. Poor old, affectionate Hector, trusty in the open and covert, and watchful at home; you served me faithfully fourteen or fifteen years; you were the embodiment of fidelity. There ought to be a dog heaven for such as you.

H. L.

A COLORADO BEAR.—Berthoud, Col., July 20.—Bob Lang returned a few days ago from a trip to the west of Estes Park, where he killed a fine black-tailed buck and a large cinnamon bear. The bear was a large one. He sold the hide to a Loveland man for \$22. Bob said his ball hit the bear in the end of the nose, passing through his head and into the body, killing it dead on the spot. Bears are reported quite numerous in the foothills just now, coming down out of the higher mountains to eat berries.—A. A. K.

MR. M. R. HOBART has joined the house of Von Lenkerke & Detmold, and will henceforth take an active interest in the gun trade. Mr. Hobart has long been known to New Jersey shooters as an enthusiastic gun man.

CHICAGO AND THE WEST.

CHICAGO, Ill., July 25.—Some more talk about game protection, this time not dull, but of a highly interesting and indeed semi-sensational sort. In the first place, about Mr. Chas. Kern.

Mr. Chas. Kern is the county treasurer of Cook county, in which county the city of Chicago is situated. He must be at least a politician to gain that honor. Mr. Kern is president of the Audubon Shooting Club, one of the oldest organizations of the sort in Chicago. He must be at least a man with friends to attain that position. Mr. Kern in 1886 was president of the Illinois State Sportsmen's Association. He must at least have been thought a sportsman of worth to attain that honorable position. Mr. Kern at the banquet of the State Sportsmen's Association last June spoke upon the toast "The True Sportsman." He must at least have been thought sincere before being chosen for that theme. Mr. Kern has been prominent in the deliberations of the Illinois State Sportsmen's Association. His voice was ever ready. He was what is popularly known as a "prominent sportsman." We will make him even a little more prominent, temporarily.

Mr. Kern retains as one string to his bow the basement restaurant and liquid dispensary at 110 La Salle street, where he got his start. A very decent place to get a supper. A great many sportsmen drop in there at times. But I still think that this subterranean resort, with the name "Kern's" blazoned on the pavement in front, charges too much for July prairie chicken; \$1.25 is pretty steep for a bird the size of a quail.

Last Tuesday evening, July 21, a certain gentleman of this city, whose name at this juncture need not be given, went into Kern's restaurant for supper. He hesitated, and the manager, Herman, helped him out.

"You want something nize, don't you, Mr. —? Go sit you down and I bring it. Don't say a word!"

And so the gentleman didn't say a word, and Herman brought him a bird, which was eaten, at least partially, with some suspicions. Herman, when asked what the bird was, replied: "It magues no difference; it was good, hein?"

"But I want to know what that bird is, and to be sure of it."

"Vell, say notings; it was a brairie schigen."

For certain reasons which I will not take time to give, the gentleman did not wish to push this case. He, however, imparted this information, in the strictest confidence, to a well-known attorney of this city. The secret got out in some way, and yesterday, July 24, Billy Mussey told it to me. I saw the gentleman above referred to, and learned the facts as above given. I then saw the attorney to whom the secret was imparted. He said he "knew nothing except on hearsay," though wishing he knew more. I told him more.

Day before yesterday evening, Thursday, July 23, Mr. W. P. Mussey and Mr. Geo. Andrews went down to Kern's place for supper. The manager made the same proposition to Mr. Mussey that he made to the first gentleman above. Mr. Mussey asked what the bird was and was told it was prairie chicken. He then told the man to bring him one, and ate it, or part of it, and paid for it. Mr. Mussey has eaten young prairie chicken before. He will swear that this was nothing else. Mr. Mussey said he would prosecute this case if the State Sportsmen's Association would back the movement. Finally he said he would prosecute in any event, backing or no backing. That was yesterday, and at that time Mr. Abner Price, president of the Association, had not been seen.

We wanted a little more proof. Yesterday evening, July 24, Mr. Mussey and I went down to Kern's for supper, leaving word for two of our friends to follow. We met a waiter near the show case where viands were displayed. No prairie chicken was shown publicly. Billy ordered a broiled steak of salmon. "Haven't you got any game of any kind?" I asked of the waiter. The latter looked straight into Billy's eyes and then into mine, and was satisfied it was all right.

"Yes, some nice prairie chickens. Do you want an old bird?" he asked.

"No, bring me a nice young bird, broiled," said I; and then we walked in to the tables.

In due course the bird arrived. It was a young prairie chicken. I have killed and eaten hundreds of them, and I will duly swear that this was a prairie chicken. I slipped half of it into a newspaper and put it in my pocket. At this writing it is safe on ice against its time of production in court. I took the piece which showed a broken leg. There were two or three shot marks in the almost cartilaginous backbone. No. 9 shot I should think. The fellow who smashed this cheeping bird knew it would not stand No. 8s.

Mr. Mussey tasted of the bird I ordered and said it was prairie chicken. Mr. Wolfred N. Low came in and sat at our table. He tasted of the same bird and said it was prairie chicken. Mr. C. B. Dicks came in and sat at our table and tasted of the same bird. He said it was prairie chicken.

We went up to Mr. Mussey's place of business and found there Mr. Abner Price, president of the State Association. In reply to a direct question, he replied, "Will we prosecute? Of course we will, Charlie Kern or anybody else. I would prosecute my own brother for selling illegal game." This further clinched the matter, though action would be or will be brought, no matter what the Association does. Thus the Illinois State Sportsmen's Association is pledged to prosecute for a common offense against the game laws a man who was once in its presidential chair. We will reserve comment on that.

It was now suggested that visits should be quietly made to other places in the city known or suspected to be selling illegal game upon the table. This was late last night, and I regret that to-day I cannot say much as to further cases, as sufficient time has not elapsed for action. Mr. Price requested Mr. W. N. Low and myself to visit Kinsley's well known place and try for prairie chicken, but at the hour appointed, noon to-day, Mr. Low could not get off. Mr. F. C. Donald and Mr. C. S. Burton will probably visit the Richelieu Hotel this evening. Mr. C. D. Gammon and Mr. H. D. Nichols will try one or two places to-day. By to-night or by Monday it is probable that evidence for other cases will be obtained. A general raid is contemplated. The publication of these facts should not interfere with that work, as it will have been prosecuted by the time of their appearance here,

The work should be done at once before the news gets in the wind. Last night at 8 P. M. Kern's restaurant did not have any prairie chickens for sale. "I can give you some nice quail on toast," said the waiter to Mr. C. D. Gammon. "Well, bring me some quail on toast, then," said Mr. Gammon. The waiter looked at him a moment and then said: "No, we haven't got any quail on toast." I think the waiter saw the gentlemen as they were taking portions of the bird from my plate, and this made him suspicious. He thought the demand for game was getting too heavy. I paid \$1.25 for my prairie chicken. It is now in order for some brilliant genius to arise and say that Mr. Mussey and I and all of us are liable to a fine for buying the birds. We will stand on that or any further "violations" of the game laws we may make.

It now remained necessary, for journalistic reasons, to be clear as to Mr. Kern's connection with the restaurant at 110 La Salle street, and for reasons of fairness to hear what he had to say. I called on him at the county treasurer's office at 12:30 to-day and asked him plainly if he knew that prairie chickens were being sold at his restaurant.

"Gracious, no!" said Mr. Kern.

"We have three cases against you, Mr. Kern, and two will be prosecuted. These cover from Tuesday till Friday of this week."

Mr. Kern said that this selling was entirely without his consent or knowledge. He said that his former steward, Anton Bader, knew better than to do such a thing. The present steward, Busch, was a new man. Mr. Kern said that his official duties of late had kept him away from the restaurant and he did not really manage it. He then called up an employee and ordered him to go over to the restaurant.

"Tell them that I forbid the sale of prairie chickens on the tables and that their sale must be stopped at once. This is my strict injunction," said Mr. Kern, and the employee vanished. "I would not permit such a thing a moment," he said, turning to me.

"Mr. Kern, we want to bring a lot more cases," said I, "not only against restaurant men, but against dealers in illegal game. Now, of course you don't know where those prairie chickens were bought, but your steward does. In view of your prominent position as a true sportsman, couldn't you secure the name of the dealer who sold those birds? We want to prosecute him, too."

"Well, I might do that, I might do that," said Mr. Kern, rolling a reflective corner of his eye toward the back of his head.

Few men more affable than Mr. Kern. To-day I doubt if he believes any prosecution will be made against him on these cases. At the same time I know of no reason why such prosecution should not be brought against him and any others in whose cases such evidence can be obtained, and I hope next week to have further news about all this. I do not know of any earlier attempt, systematic or otherwise, to follow up this sort of violations of the game laws in this city, though for long years the offenses have been open, flagrant and well known. If the Kern cases can not be made to stick it would seem useless to try any others of similar nature. Evidence will be collected during the week just the same.

July 26.—Two natives killed 40 young ducks, illegal of course, on Mak-saw-ba Marsh one day lately. The club offers \$25 reward for evidence to convict.

Dick Turtle got 18 woodcock on his last hunt near Water Valley, on the Kankakee.

Perhaps the most valuable duck shooting privileges near Chicago are those belonging to the Diana Shooting Club, of Horicon, Wis., membership largely in Chicago. These grounds are on the famous Horicon Marsh, which breeds more ducks than any marsh within hundreds of miles of this point. No spring shooting is allowed there. Opening day, Sept. 1, is a great event, and this year a strong Chicago contingent will be present. Mr. Percy Stone asks me to be present, and to refuse would be discourteous. At that time I hope to find something of interest to duck shooters in the story of the marsh.

Capt. A. C. Anson, at this date chief of the chief base ball team, is inquiring for gentlemen who would like to shoot him some pigeon races next fall. He also requests the gentleman who took his cotton umbrella at the last meeting of the Possum Club to return the same to him at New York and receive a suitable reward. E. HUGH.

THE PENNSYLVANIA GAME CROP.—Pittsburgh, July 20.

—Thanks to a winter more or less mild in its nature, the game crop this year promises most gratifying results. Messages from various parts of Pennsylvania are unanimous in their prophecy that quail and pheasant will be not only plentiful, but in many places abundant. Rabbits are a nuisance in a few adjoining counties. Woodcock are scarce, however, and that nimble little fellow, the gray squirrel, so much esteemed and sought after by western Pennsylvania sportsmen, has had such an impression made upon him by powder and shot that in this county he is all but exterminated. Reports from Ohio, however, say gray squirrels are abundant, and that rare sport is anticipated. On a jaunt through the fields of Butler county on July 4 I received a grateful surprise, which has never before been my lot to such an extent. Upon every side the shrill, whistle "bob white" was heard, the hillsides, the valleys, even the forests had it, and this multitude of nature's choristers produced a music to which no pen has ever done justice. I have never found them so numerous before.—C. A. R.

CALIFORNIA'S COYOTE BOUNTY LAW, which was passed last winter for the benefit of the sheep owners, and which went into operation on May 29, is operating in a manner that is filling the taxpayers and fruitgrowers of the State with dismay. It provides that for each coyote killed five dollars shall be paid out of the State Treasury to the person presenting the scalp to the Clerk of the Board of Supervisors of each county. Although only eleven of fifty-four counties in the State have been heard from the claims for bounty aggregated on July 11 \$10,890. A banking firm in Tulare county, which has not yet reported, has notified the State Comptroller that it holds claims for \$4,000. Were all these claims based on the scalps of coyotes killed in California the case would not be so scandalous. But it has been learned that enterprising Californians are importing scalps from Arizona, New Mexico and Lower California. A customs inspector on the lookout for Chinese on the Mexican frontier seized a package of fifty coyote skins that the owner was trying

to smuggle into the State. It is learned furthermore that the bounty has called into existence a new and profitable industry—that of breeding coyotes. As a female coyote can produce three litters of seven pups each year, she is worth something like \$100 to her owner. But this is not all the evil of this ridiculous piece of legislation. One of the most serious pests the California fruit-grower has to contend against is the rabbit, which is a particularly fine tid-bit for a hungry coyote. Consequently the extermination of the coyote for the benefit of the sheep-owners of half a dozen counties will be followed by such an increase of rabbits that the fruit interests will suffer seriously. This, with thousands and thousands of dollars that will be paid out for bounties during the two years that the law has to run, has aroused the press of the State, and there is a universal demand that an end shall be put to the evil at the earliest possible moment.—*New York Evening Post.*

CONNECTICUT BIRDS.—I passed a few days recently in Windham county, Conn., and was gratified to find how splendidly the birds had wintered. Quail are everywhere and they will afford good shooting in October if the chicks escape the foxes and skunks, both of which are unusually numerous. A Sunday afternoon stroll along the edge of one of our tangled wood patches started to flight three woodcock. Despite the close season these birds are now being shot in small numbers by pot-hunters. Before many weeks, also, the woods will be fenced with partridge snares, and then one wonders why a covey is not found entire in the opening of the season. I know some of these evil doers, but I am tongue-tied, for they are the very ones I enjoy talking with on my little vacations, about birds and kindred subjects, and they are the ones who always welcome me to their pastures and woods in the autumn to shoot when and what I please; they are my friends. A Hartford game protector could do considerable good in this locality.—F. LIN.

A TRUNK AND A BED.—The modern city flat has its grandfather's clock which conceals a stove and a wardrobe which is converted into a folding bed. Now comes a trunk which is also a 6ft. bed—the invention of Geo. W. Snaman, Jr., of Allegheny, Pa. The trunk has ample provision for clothes, gun and other articles, and when set up as a bed it invites to repose.

Camp-Fire Flickerings.

"That reminds me."

LANGDON and myself had discovered, in Becker county, Minn., a small lake, which, from its general weird appearance, hemmed in by tamarack swamps, and from certain mysterious things seen and noises heard in the dusky twilight, we had named Witch Lake. It was swarming with fish, and when, on our return thence to Detroit City, we found a party of home friends from Dakota there, we returned to the lake to give them some sport. In the evening as we sat upon the shore, N., who has a slight impediment in his speech, turned to me:

"Wh-wh-wh-at do you call this lake?"

"Witch Lake."

"Wh-wh-wh-y, th-th-th is one."

"Witch Lake."

"Th-th-th is one, I say, r-r-r-ight here."

"And I say, Witch Lake."

"C-c-c-c-confound it, th-th-th-th is one, where we've b-b-b-been fishing."

"W-i-t-c-h, witch, l-a-k-e, lake, Witch Lake."

"Oh!" as Langdon's suppressed laugh broke forth, and he realized "which was witch." H. P. U.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

"ROCKY MOUNTAIN GRAYLING."

IN the issue of FOREST AND STREAM of July 16, "Big Horn" says, with an expression of doubt, that he has met with the Rocky Mountain grayling in the streams of the Big Horn Basin in Wyoming and in both forks of the White River in northwestern Colorado. I have never been in the Big Horn Basin, but I have fished many miles of the White River, even its source, Trapper's Lake, in the heart of the Roan Range. I judge that the fish he refers to is the same variety in the streams of the Big Horn Basin and in the waters of Colorado. The identity of this fish was for some time in doubt, but the authorities at the Smithsonian settled the question some four years since. The proper name, as I am informed by those whose dictum may be received as good law, is the Rocky Mountain whitefish (*Coregonus williamsoni*). The dorsal fin, which you would consider a distinguishing feature, does not resemble that of the grayling; the odor of the fish, however, is very similar when first caught, I am advised by those who are familiar with both, to that of the grayling.

The whitefish is an excellent food fish, rises readily to the fly and makes a good fight, although it keeps below the surface as long as possible when hooked. They are quite plentiful in the White River, reaching in weight, I may say from observation, 3lbs. Of course I have heard of heavier ones, but they were lost as usual. I have caught them weighing 2lbs. and over in the Yampa, and the specimen sent to Washington for identification was from the last named stream. They spawn in the fall, and I have never heard of them or seen them in any of the streams of Colorado except the Yampa and its tributaries and in the White River. L. B. FRANCE.

DENVER, Colorado.

NEW LONDON, N. H., July 20.—Mr. R. F. Sargent caught an eel the other day in Pleasant Lake, near here, that measured 43in. in length, 11in. in circumference and weighing 7½lbs. He played the monster an hour before he could get it into the boat. New Hampshire is getting a reputation for big fish and plenty of them.—L. H. B.

FISH AND FISHING IN THE PIONEER WEST.

I REMEMBER when a boy that a neighbor made a journey into Illinois, and being of an adventurous turn he sold his horse and came home by the way of the Illinois, Mississippi and Ohio rivers. By his envious neighbors he was regarded as a much-traveled man, and his store of information gathered on his voyages made him a welcome visitor at all the firesides for many a day thereafter. This, you must know, occurred a good many years ago, away back in the forties, when there was as yet but about twenty-five miles of railroad in all of Indiana, and not an iron rail west of that.

One of the stories told by the returned traveler was of a catfish caught by a fellow traveler in the Mississippi. According to his tale the fellow traveler shot a blackbird, and baiting an immense hook he waited for the boat to land at the first woodyard, where he flung hook and bait out into the stream and secured his prize. The fish was of monstrous size in the eyes of our traveled neighbor, and I think it altogether probable that it lost nothing by his telling. I remember that he gave feet and inches and pounds and ounces, for the captain had measured with the "boat yard-stick," and weighed with the "boat steelyards" and our traveler had a good memory, and he invariably emphasized this part of his story by a solemn declaration that "the fish was as big as a nigger boy."

Notwithstanding our traveled neighbor was reputed to be a man of truth, boy as I was, and always keen on the scent of the marvelous, I couldn't help doubting the truth of his fish story. A fish as big as a "nigger boy," when the only boy of the kind I had ever seen would kick the beam at 140lbs., was too great a demand on my credulity, and so, without making my doubts known, I set that man down as unworthy of belief when it came to catfish.

But I have changed my mind since then, and to the descendants of the traveled man I hereby make all the amends it is possible for me to make for doubting their ancestor's word. The catfish he saw captured with the blackbird bait was a very possible fish. There were "nigger boys" bigger than the "black George" known to me in my youthful days, and there are catfish as big, and bigger, no doubt, than the biggest of them.

One of the noticeable things to the reader of literature relating to the West of fifty and one hundred years ago, is the paucity of reference to the fish of its rivers and lakes. A few of the French explorers occasionally refer to the ichthyological monsters now and then encountered by them, and notably among these stands Father Hennepin; but the good Father's reputation for truth and veracity among the historians has been shaken to such an extent that it is hardly to be wondered at if the stories he tells of Mississippi monsters are taken nowadays *cum grano*.

I not only find that those who wrote about the pioneer West had comparatively little to say about its fish, but even the pioneers themselves were largely indifferent to the wonderful development of fish life in the waters around them. I account for this indifference on the part of writer and pioneer, from the fact of the great abundance of wild animals in the woods. We have heard much of the wonderful abundance of game that Boone and his first settler companions met with in Kentucky. Well, the first Indians went into a forest no less swarming with game than were the Kentucky woods, and among the active and vigorous men of that day (and all were such) the only sport worthy of the name was found in the chase. Men might fish, but for the same reason they picked berries, that they might furnish their tables. I have made quite a study of the settlement of Indiana, and have examined numerous county histories and biographies of pioneer settlers, and other writings relating to the time, and while I have my note book crammed with pioneer's reminiscences and tales of adventure with bears, wolves, wildcats and deer, it is only now and then one finds a word about the fish.

I turned to "Ashe's Travel," the other day, thinking that I would surely find something concerning the pioneer fish in his book. He was an Englishman who "came West" a little over eighty years ago, and who wrote a book about the country. His book abounds with anecdotes of wild beasts. No story was too improbable for his pen. Accounts of snakes and lions and buffaloes, and nightingales and turkeys, and I know not what all, except fish, fill his pages. In all his travels he found occasion to make but one allusion to the subject, and I must say his one story is by no means a remarkable one, as compared with some of his snake and wild beast stories.

There are no waters of a like latitude anywhere more prolific in fish life than the waters of the northern three-fourths part of the State of Indiana. All this region is covered by what the geologists denominate drift, and for reasons not necessary to be suggested here, the waters running through the drift are peculiarly well adapted to the support of fish life. Not less than 150 species of fish have been found in the waters of the State, and in that part of White River lying between Indianapolis and Gosport, which are about forty miles asunder by railroad, eighty species have been found, a larger number, I have heard it said, than have been found in any other one river in like distance in the world.

The truth is, but for the illegal fishing and the pollution of the streams, the Indiana creeks and rivers flowing through the drift would stand at the head of the bass streams of the country.

It is remarkable how firmly the fishes and the very best of the game and food fishes at that, have maintained their foothold in our streams. All the game that once roamed the woods is gone. Even the little gray squirrel, that in the beginning was not considered as game and not even as fit for food, but which were so numerous as to contest grain by grain the corn raised by the pioneer farmers, have disappeared, and all the legislation in the world cannot bring them back again. The conditions of the country have so changed, and the shotguns are so numerous, that it is not possible for the gray squirrels ever to thrive in Indiana again. Nor will it be any better with the fox squirrels. It was about the time of the election of President Pierce that these rodents began to move in, and there was a time when they were far more numerous than they are now. They are by no means as abundant as they were fifteen years ago.

And so of all other animals of the woods that have not

disappeared altogether. With the most, as the pioneer stepped in at the front door they went out at the back. But the fishes are still here, though in greatly reduced numbers. Some of the larger varieties, it is true, have disappeared. The sturgeon and the drum went with the Indians and the bears, but the best are here yet, and if the streams could be kept clear from the pollution of the cities and the manufactures, and if the dynamiters and seiners would let them alone, the Indiana waters would yet be a paradise for fishermen.

But I sat down to recount the story of what must have been the excellence of the fishing in the early days, and while as stated above, the writers of those days made comparatively few references to the subject, nevertheless one now and then catches a glimpse through the few references they do make, which leads to the incomparable sport there is to be had.

I have found in no writer of the pioneer times so frequent and satisfactory reference to the fish and fishing in the West, as in the journal kept by Col. John May, who came from Boston to the Marietta settlement of Ohio in 1788 and again in 1789. The writer does not seem to have been a fisherman himself, but he showed great interest in the fish he saw in the Ohio River, and from what he says of them one can gain an idea of their great abundance as well as size in that river, and from that a more or less correct conclusion as to the number and size of the inhabitants of other Western streams.

The fish that engaged Col. May's attention were the pike, buffalo, sturgeon, cat, perch, bass, herring and "other sorts." The bass were of "two sorts," he says, and likewise the sturgeon. From the time he struck the river at Pittsburgh, his observations began. The fame of the Ohio for its fish seems to have reached him in his Boston home before he left it, for in a letter written to his wife shortly after reaching Pittsburgh he says, "What has been said of the fish in these quarters I am certain must be true from what I have seen and experienced in the short time I have been here—only twenty-four hours. Within fifteen rods of where I now sit they are all day catching fish of various kinds. Some do not weigh more than 1lb., but I have seen others that weighed 11lbs. Within ten minutes after I put up at this house a little boy ten years old fetched a perch alive that weighed 5½lbs. These are things I have seen, and I have dwelt on the subject somewhat because it strikes me agreeably."

Col. May stopped at Pittsburgh fourteen days, and nearly every day he had something to say about fish. One day it is, that "two lads brought to my quarters a number of fine fish just caught. Among them were two perch weighing 40lbs. together. They have been caught weighing 24lbs." At another time he says "there has been a fish caught here which weighed 125lbs., and the story goes," naively adds the writer, "that he drowned the men who caught him."

After Col. May reached Marietta he continues his notices of the fish. He is inclined to find fault with their size, for he says: "There are seven stout, hearty men of us and we have not been able to eat more than one fish at a meal." The supply was evidently greater than the demand. At another time he throws some light on this: "Dined on buffalo fish, the weight of which when caught was 14½lbs. We also had a pike weighing 7½lbs. The men and I ate the whole," 22lbs. in all.

If the seven men consumed the 22lbs. of fish at one meal they must have been stout, hearty fellows sure enough, for that gave an average of 3½lbs. to each man, which was certainly big eating. But Mr. Bailly-Grohman, who wrote "Camps in the Rockies," a very entertaining book of sport indeed, tells, all things considered, a bigger story in regard to the eating of fish than does Col. May: "Three times a day," writes he, "did six big frying pans appear on our primitive greensward dinner table, and never did fish taste nicer, and never did four men and two dogs eat more of them. Hardly credible as it sounds, 30lbs. a day was hardly sufficient to feed our six hungry mouths; and when toward the end of my short stay in the basin great economy in flour became imperative, 40lbs. vanished in a similar wonderful manner." Two pounds and three ounces per meal for man and dog, day in and day out, was big fish eating for certain!

Pike weighing 18, 24 and even 29½lbs., a cat 50lbs. and a sturgeon 4½ft. long fell to Col. May's lot. And "almost every evening" he writes "there can be seen large schools of fish playing around the boat—I dare say twenty or thirty barrels to a school." Indeed, he found the fish of the Ohio so large, numerous and impudent that, compelled as he was to sleep in his boat until he could get his house in readiness, the catfish and perch made such a noise under the boat that they "frequently keep me awake half the night."

The editor of Col. May's journal appends one or two foot notes corroborative of the testimony given by Col. May. One is an extract from "Cranmer's Navigator," published at Pittsburgh in 1821. "The fish of the Ohio," says the author, "are numerous and of various kinds—the black and yellow cat weighing from 8 to 100lbs.; the buffalo from 5 to 30lbs.; the sturgeon from 4 to 40lbs., and the perch from 3 to 12lbs."

"I wish you were here to view the beauties of Fort McIntosh," writes Gen. Harmer to a friend, "what think you of pike of 25lbs., perch of 15 to 25lbs., catfish of 40lbs., bass, pickerel, sturgeon, etc.?"

Independence Day was celebrated at Marietta while Col. May was there, and after the ovation the settlers and the soldiers sat down to a dinner at which, according to Hildreth's history, "they had venison, bear and buffalo meat, and a pike (spear) in the Muskingum by Judge Devall and his son Gilbert" which weighed 100lb."

The age of big fish in the Ohio River lasted till long after Col. May's visit. An anecdote related by Sol. Smith, an actor of the last generation, is evidence of this. The "Chapman Family," of which he was at one time a member, made the descent of the Ohio in a "floating theater," playing at the towns along the shore, about 1832 or 1833. The players were all very fond of fishing and would pursue this fascinating pastime on occasion, even during a performance. "On one occasion," says the writer, "while playing the 'Stranger' (Act IV., Scene 1) there was a long wait for Francis, the servant of the misanthropic Count Walborough."

"Francis! Francis!" called the Stranger. No reply.

"Francis! Francis! (a pause) Francis!" rather angrily called the Stranger again. A very distant voice, "Coming

Sir! A considerable pause, during which the Stranger walks up and down à la Macready, in a great rage. 'Francis!'

"Francis (entering)—'Here I am, Sir!'

"Stranger—'Why did you not come when I called?'

"Francis—'Why, Sir, I was just hauling in one of the d—est big catfish you ever saw!'

"The curtain had to be rung down."

The big fish and the "multitudes of fish" were not confined to the Ohio. They were in all the Western streams. In 1816 David Thomas made a tour to the western country, passing through southern Indiana, along what was then known as the "Cincinnati Trail" to the Wabash, and in his book of travels he gives a list of the most notable fish in that river, and the size to which some of them attained. Three kinds of catfish he mentions, the Mississippi cat, the mud cat and the bullhead. The first attains to the weight of 120lbs., he says, and the second to 100. The sturgeon was another of the Wabash fishes, and weighed from 20 to 60lbs. The drum would run to 30lbs., and the black bass from 1lb. to 7lbs. Buffalo fish were taken weighing as high as 30lbs., the rock mullet from 5 to 15lbs., the red horse the same, and the river pike and jack pike from 6 to 20lbs.

Let us turn to one more book relating to the period, entitled "Old Settlers," by S. C. Cox, a Hoosier pedagogue of the last generation. The following is his yarn about the fish in Sugar River, a small stream in the neighborhood of Crawfordville: "At John Still's mill, below town on Sugar River, there is a fish trap, and in one night we caught 900 fish, the first spring we were in the county, most of them pike, salmon, bass and perch. Some of the largest pike and salmon measured from 2 to 4ft. in length, and weighed from 12 to 20lbs. We carried them by skiff loads and threw them alive into the mill-pond hard by, which was fed by springs, and thus we had fresh fish the year round. When a customer wished to purchase a few fish, Still took him to the pond and the fish were selected and the price agreed upon before the salmon was lifted from the water."

Additional historical evidence of the great abundance and large size of the fishes of these Ohio and Wabash waters, including their tributaries, might be given did space permit. But enough has been said for my purpose.

INDIANA UNIVERSITY, 1891.

D. D. BANTA.

BOSTON ANGLERS.

FULLY as many of the vacationists are taking their fishing rods with them this season as ever, and sport in that way is fully up to the average, though the last reports from Maine and New Hampshire indicate rather low water in some of the streams. Mr. Harry Brown, son of the late Walter Brown, both well known in the wool trade of Boston, is planning a fly-fishing trip to Richardson Lake. The fly-fishing he got there last year revived all the old love for the sport. His father was a trout artist as well as a fisherman, and his piece representing the last struggle of the trout hooked upon the fly, has been much commended. Mr. Eldridge, of the wool trade, left for Maine, fish rods in hand, on Monday morning.

Mr. and Mrs. F. K. Dexter, of Boston, have just returned from a nine months' trip round the world. Mr. Dexter is well known in the paint and oil trade of the Hub. He retired from business last year, and proposed to spend a year or two in traveling. Soon after he sailed for Europe, to return in a year or more. But July, 1891, has brought them both back, and they have just started for Dixfield, Maine. There they will remain a few days, at the expiration of which they will leave for Kennebago, one of the Rangeleys, there to spend the months of August and September. Mr. and Mrs. Dexter have spent the same months at the same lake about every year for nearly ten years. The remarkable feature is that lovers of trout fishing in the wilds of Maine should hurry a trip around the world for the sake of being at the old camping grounds again. At Dixfield Mr. and Mrs. Dexter will be joined by Mr. and Mrs. F. E. Stanley, of the Stanley Dry Plate Co., of Newton, Mass., and together they will make a camping and fishing trip to Weld Pond, the guests of Fish Commissioner Henry O. Stanley, at his camp there. Mr. and Mrs. Stanley take their own team to Bath, Me., by steamer, and thence they drive across the country to Dixfield. They will probably be joined at Hebron by Mrs. W. K. Moody and Mrs. J. F. Moody, for a carriage trip part of the way.

Mr. W. T. Farley, of the Boston dry goods firm of Farley, Harvey & Co., is just back from a trip up the Hudson, where he was obliged to take his vacation rather too soon, instead of to the Adirondacks, as on previous years. Mrs. Farley almost always goes with him, being with him last year when he shot a deer under the jack from a canoe. They will go to the Adirondacks later, if business permits, together with the foot that Mr. Farley has been up the Hudson to nurse. He ran a rusty nail into it some time in the winter, and lockjaw was very nearly the result. He says that it is not yet quite well enough for a long woods tramp. Mr. G. D. Harvey, one of the senior members of the same firm, has just returned from a two weeks' trip to the Upper Saranac, where he has been with his wife and his two boys. They were camped at Rustic Lodge. Mr. Harvey returns more in love with the Adirondack wilderness than ever. Pickerel fishing was good, with some trout, and the boys enjoyed it to the overflow. Mrs. Harvey gained six pounds in flesh and the boys "grew" about a foot apiece. The worst drawback to what should have been a most pleasing outing of pleasant memories was to find their residence at Auburndale broken open when they returned, and silver, clothing and precious keepsakes stolen to the extent of about \$500. Mr. Harvey says that money cannot replace some of the articles taken. Among other things was the magazine shotgun of Mr. Will Farley, which he had kindly loaned Mr. Harvey, but which, for some unaccountable reason, was left behind in the house.

I have just received the card of Mr. Henry C. Litchfield, so well known in the fishing tackle trade, formerly of the firm of Appleton & Litchfield, and later alone in the business. His new card says, "With Dame, Stoddard & Kendall," who, it will be remembered, are the successors of the old firm of Bradford & Anthony, where both Mr. Litchfield and Mr. Geo. B. Appleton, of Geo. B. Appleton & Co., were trained in the tackle business under the much-beloved and lamented Prouty.

SPECIAL.

CHICAGO AND THE WEST.

MUKWANAGO, Wis., July 17.—The Story of the Phantom Lake. Once upon a time there was an Indian chieftain, of ancient lineage and proud and haughty mien. His name was Muk-a-wan-i-go, which being interpreted from the Ojibway means the "Catcher-of-the-frog," or "Dweller-by-the-place-where-a-fellow-can-catch-frogs-easily." Muk-a-wa-gua means frog in Indian. This noble chieftain had a daughter, an Indian maiden, who, like all Indian maidens, was beautiful and good. In course of time she would fall heiress to all the frog preserves of her noble father. Hence her hand was sought far and wide among the young warriors of the Wis-cont-si. Her hand was not really any wider than any other maiden's hand, but proper description necessitates saying that it was sought far and wide.

Muk-a-wan-i-go, or Mukwanago, as brutal Saxon has curtailed the flowing Indian speech, loved his daughter, and gratified her every wish except when that gave him any trouble; but he was a man of stern and unyielding principle. He could not help this, on account of his lineage. His intellect was acute, and in natural ability and foresight he surpassed his tribe. When his eye fell upon the lovely sheet of water which, walled in by noble wooded bluffs, lay clear and sparkling in the natural amphitheater situated about two or three miles from the Indian village, he realized at once its magnificent fitness for legendary purposes. "If I am not mistaken, and I never am," said Mukwanago, "this place will eventually be a great summer resort, and the price of frogs will double. The water is clear, the climate healthful, and the fishing excellent. There is the necessary sulphur spring at the other side of the lake, and the usual iron spring not far from that, and there are no mosquitoes, not to speak of. They never trouble us. Really, it would seem that nature had lavished all her charms, or something of the kind. Indeed, so far as I am able to tell, and I know I am, we stand in need of only two things. We need a legend and a Lover's Leap."

Mukwanago pondered long and deeply, and at length called his daughter up to him.

"Pride-of-my-heart," said he—for sometimes he called her Pride-of-my-heart and sometimes Susan—"Pride-of-my-heart, we are shy a legend, and we've got to have it. This lake will never go until we have a name for it, and a Lover's Leap and a legend. Pride-of-my-heart, listen to your father. Haven't you got a lover or two lying around in the woods here?"

Pride-of-my-heart—or perhaps we may call her just Pride for short, the more especially because pride goes before a fall, and where there is a lover's leap there must be a fall of course—Pride reluctantly admitted that her father's surmises were correct.

"Then, daughter," said Mukwanago, "we are saved. I wish that you and your Sunday lover would please go up to the top of the bluff on the east side of the lake and leap off into the water. You might chant a song, or something or other, but I'll fix up the legend part. It'll be the making of the place."

"Pshaw, pa," said Pride. "Me jump off that place! You're only bluffing!"

"I'm not. I'm in dead earnest, so help me!" said Mukwanago, "and if you don't jump at sunset to-night you'll have to settle with your parent, now you hear me!"

"Very well," said Pride, firmly; "I don't jump, now you hear me. It's too blame rocky on that point, and more than one hundred feet above the water. You must be crazy."

"Then you refuse!" said Mukwanago, bitterly.

"I do, pa," said Pride. "If you want any legend you'll have to do the jumping yourself. As for me, I jump the camp to-night."

So Pride and her Sunday lover packed their canoe and went north, up into the Wolf River country, that night, and were never heard of any more. They crossed the lake to the outlet, went down the creek to the Fox River, and ascended that stream at about 10 o'clock in the evening. Mukwanago often pointed out to the older citizens of this country the place where the lovers jumped the camp, and even tried to evolve from the plain story of their boat ride down to the Fox a legend of a phantom Indian maiden and a phantom canoe. His efforts met with some success, and to-day the lake, which is really a beautiful one, is known as Phantom Lake, instead of Stockman Lake, as it is mapped, though certain skeptics say there never was any phantom about it, except a little cholera infantum on the west side, where the children of a camping party got into a watermelon patch.

I don't know just how it was that we came to camp on Phantom Lake. J. B. H. and myself first intended to spend a week exploring the wilds of the Kankakee River, but that stream being too high and muddy when the time came we determined to run the Fox River instead. Ordering our boat shipped by freight to Vernon, near the Fox, we learned, by accident, just before we started for Vernon, that the firm making the boat had sent it by express. The express company agreed to send it, billed it to Vernon and delivered it at the nearest express station, which happened to be at Mukwanago, about 12 miles from where we wished to go. Sent in the wrong way, to the wrong place, we found when we got to it that it was the wrong boat which had been sent. At least, it seemed to my older companion rather cramped for a river trip with full camp luggage. Already he had been charmed with glimpses of wide waters as we passed through the beautiful lake country of lower Wisconsin, and when we blundered in our search for a temporary camping ground upon the delightful spot overlooking this pleasant little lake he issued a fiat that we should go no further, should make no river trip, but should camp here for the week of perfect rest and leisure which he sought. Therefore up went our tent that night, directly upon the good eminence which might have been called the Lovers' Leap, and Phantom Lake has been our territory since then. A lovelier bit of country than that which lies in front of us it would be hard to find, and a quarter of a mile from camp we can catch all the bass we want. The stones hereabout are of the size convenient in making a fireplace, and out of a forgotten fence board, cut with an axe into four equal lengths, a fine table has been made, whose top can be cleaned admirably by turning over the loose boards after each meal. It would seem that nothing further could be desired in life.

Mukwanago village is not a bad point to strike for a trip of several days. The summer resort fever has not yet taken hold here as it has on the lower lakes of the

Fox River system, though the Phantom Lake Improvement Co. is trying to bud out into maturity. Phantom Lake is only two miles from the village by water, via the outlet, and the "mill pond." Below town, by the river which runs out of and forms the mill pond, it is only a mile and a half to Fox River, so that for a boating trip such as we proposed, this would be a good point from which to start. Crooked Lake, now known as Beulah Lake, Stuart Lake and other waters of this wonderfully prolific lake country, lie close about. The fishing in all these lakes would be good but for the ice fishing in winter, which is carried on to a simply abominable extent by market fishers and others all through Waukesha county. Phantom Lake is fished to death in this way. We can always go out and catch bass by casting bait, but the fish run very small. We have caught our best bass exploring the Mukwanago River, picking out the channel through the marsh back of the mill pond. The fish in these hidden and unknown waters are very large. Yesterday J. B. H. caught a bass which was the largest I ever personally saw taken. There is only one mounted specimen in Chicago which is larger. This fish made no worse fight than many others smaller, but was a veritable monster of a bass. We never had opportunity to weigh it, and could only guess it to run between six and eight pounds. We put it on a heavy manila stringer and it swam beside the boat for an hour and a half. Then we looked and found our big fish and all the others gone. The serrated rim of the old fellow's lower jaw had worn the stout cord in two and he had escaped. He was strung through the lower lip, and not through both lips, as he should have been. This calamity taught us what I had thought impossible, that the nearly toothless jaws of a bass have a very considerable cutting power. The manila cord was strong and nearly new.

Seven miles west of the village is Eagle Lake, out of which trickles the little rivulet called Mukwanago River. This stream crooks along through a pretty country, marsh and motte and wood, fed continually by big boiling springs, until two miles west of here, where the old mill dam was washed out thirty years ago, it runs about 10 ft. on the bends and is a magnificent bass stream. Its mouth is concealed among a hundred islands of grass and rushes at the upper end of the mill pond, and it took us hours of patient effort to worm it out. We were well repaid for the labor by the fishing we found. For any who might wish to fish here I would advise taking a boat by team around the head of the mill pond to the bridge by the schoolhouse, then floating down about two miles to the mill pond. The channel can be kept more easily in that way and thus the fisher can avoid the danger of being pocketed permanently in the fastnesses of the impenetrable swamp. If any future angler of that stream shall be fortunate enough to take a monster bass, a very king of the bass, let him examine well his mouth, and if his lower lip be slit he may therein see the proof of our prior occupancy of this stream, and will, I trust, return the fish to the elderly gentleman who caught, admired and lost him, and then generously forgave him for getting away, wishing him luck and a still longer life.

CHICAGO, Ill., July 25.—The very best of the fishing season seems to be over, though bass are still being taken. During the week's fishing at Phantom Lake, Wis., in camp with J. B. H., fishing only part of days and some days not at all, we took 54 bass, mostly to his rod, as I fished but little. Last Saturday three anglers fishing at the lake near Mukwanago, known indifferently as Potter's Lake, Crooked Lake or Beulah Lake, caught 17 fine bass, three running over 4 lbs. A 4 lbs. bass, weighed, is a larger fish than most think, and usually passes for a 6 lbs. fish. Crooked Lake is about two miles from Phantom Lake, the latter is a spring-fed lake. The bass we took were all big-mouths and those in the lake ran small, but they were very gamy. Repeatedly we thought we had hooked small-mouths. I should say they were about as gamy as small-mouths, more especially the smaller ones.

Last Sunday Mr. Mussey caught 15 small-mouth bass on Mak-saw-ba club grounds, all on the frog. Mr. J. P. Card caught 13. Mr. Mussey had three bass whose total weight was 10 lbs. For small-mouths this is very heavy. It seems singular that these small-mouth bass should be so plentiful in that part of the Kankakee. I do not believe there is any locality so near Chicago where one could expect 15 small-mouths to one rod in one day at this season, and to think of that makes me pretty uneasy.

Mr. Oscar Blomgren is back from a three weeks' trip with his family at Chicago Lake, forty miles east of St. Paul, Minn., and thinks he has found the ideal summer resort spot, where everything is cheap and the fishing good. Including Green Lake, these waters have 183 miles of shore line. Pickerel were plenty and bass at least numerous. The St. Croix River was only eight miles distant, and several trout streams were near, all leased, however. Mr. Blomgren leased a cottage at Center City, and here his family and friends, nine persons in all, lived at a total cost of \$18 a week! Fine cedar boat, clinkers, with spoon oars, rented at \$6 per month. Frogs and minnows were abundant. This must be the lost Atlantis bobbed up in Minnesota.

The Kankakee Association at its last meeting of the board of directors, audited and approved State Warden Buck's report and bills, covering his fishway work on the lower Kankakee, placed \$100 to credit of the committee on fishways, and \$300 for the committee on protection. Mr. Organ reported that Mak-saw-ba Club sent in \$50 as an unsolicited donation. The secretary wrote Mr. W. T. Dennis, Fish Commissioner of Indiana, at Richmond, of that State, stating that Mr. Nicholls of the Association's committee would call upon him for conference as to action along that portion of the Kankakee which lies in Indiana. The Nickel Plate Club, grounds between Mak-saw-ba and English Lake clubs, wrote the Kankakee Association, assuring early financial support. It would seem that everything is doing well along the Kankakee.

E. HOUGH.

MOISIE RIVER SALMON.—Bethlehem, Pa., July 25.—In your last issue I noticed a salmon-catch average. The next day after reading this I met Mr. R. L. Myers, of our place, who, with four other gentlemen, had just returned from their leased river, Moisie River, Quebec. The five rods killed 165 salmon, which weighed 3,748 lbs., and the average ran 23 $\frac{1}{2}$ lbs. Largest fish 33 lbs. All caught from June 20 to July 8.—M. C. L.

SUSQUEHANNA FISHING NOTES.

BASS and "salmon" fishing opened favorably this season. During the first and second week in June some fine strings of fish were caught in this locality, and it began to look as if that "old plague," high water, had ended and the good old times were with us once more. Since the great flood, June 2, 1889, the Susquehanna has been subjected to sudden rises, which have followed one another so closely as to practically ruin the season's fishing as a whole; of course, occasionally, during the intervals of high water, some fortunate anglers have made good catches, but the majority have been disappointed. As the water was constantly getting lower the fishing continued to improve during the latter part of June. The water still being about 18 in. above low water mark, the majority of the bass taken were caught near the edges of the grass and few in deep water. The most successful method of taking fish at that stage of water was by still-fishing, it not being low and clear enough for trolling.

About July 1 heavy rains caused the water to rise and become roily, thus again seriously interfering with the fishing and practically ending it for about ten days, the catches made during this interval being small. By the 11th the water had fallen and cleared, and the fish began biting vigorously, good catches being reported each day since. A continuation of the fine weather we are now having will undoubtedly help to make the fishing the best that we have had for several years. Very few large bass have been taken this season; a large majority of those caught weigh about one pound and under. The old "mossbacks" seem to bite more readily in the latter part of the season and are taken most frequently by trolling.

The bright silver-finned minnow (*Noltronis megalops*), commonly known as the "shiner" or "silver fin," has been principally used this season, and is a killing bait in this locality.

This small fish is abundant during the early part of the season, and may easily be obtained with a dip-net in the small patches of grass in the shallow parts of the river and near the grass fringing the shores. During the latter part of the season this bait becomes scarce, and then the angler is obliged to make up the deficiency by using the lamprey eel, stone catfish, helgramite, etc. I have been told by an old fisherman that at times the common frog is preferred to all other baits. He says that on certain occasions, when everything else was favorable for good fishing, much difficulty was experienced in finding a bait suitable to the taste of the wily bass. After trying all the various kinds of bait to be had, in the extremity the frog was tried and found to be just the thing. The foregoing instance shows that fish, as well as persons, desire at certain times a change of diet, and this is a fact that is well worth remembering.

Among the catches made this season at various points in this locality I record the following:

June 3—Bernard Doyle, 4 wall-eyed pike, one weighing 5 $\frac{1}{2}$ lbs.

June 3—David Davidson, of Harrisburg, Pa., at Collins Station, 40 wall-eyed pike, the largest weighing 9 lbs., the remainder ranging to 3 lbs. and under.

June 10—Master Harrison Hipple, a juvenile angler ten years of age, landed a bass weighing nearly 3 lbs. This fish was taken at Bainbridge, and was a fine one.

June 15—Master Will Kuntzelman, 2 pickerel measuring 16 and 17 in respectively.

From the 10th to the 20th Squire Bare caught 150 bass, an average of fifteen per day. On June 22, while the Squire was returning from across the river, he noticed a number of bass jumping and sporting about in the water near a small seining battery. Having neither tackle nor bait he went home and soon returned with his rod and a supply of bait. Then the fight began; in two hours time he landed twenty-two bass, the largest weighing about 2 lbs.

On June 24 Bernard Doyle took eleven bass, the largest weighing 1 lb.

June 27 Messrs. Fred Ebel and John Bracken, of Harrisburg, caught thirty-one bass, ranging from $\frac{1}{2}$ to 2 $\frac{1}{2}$ lbs. each.

July 1 Messrs. Melie Russ and Jerome Long, of Harrisburg, took in one day thirty-three bass, the largest weighing 3 lbs. The last two catches were made on the grounds of the Red House Gunning and Fishing Club, of Harrisburg, and the latter was the largest catch made in the vicinity of Harrisburg up to the above date.

July 1, Frank Doyle, twelve bass, Frank McNeil twelve fine bass, the smallest weighing $\frac{1}{2}$ lb.

July 6, Frank McNeil, eleven bass, running about the same in size as the above.

July 11, Squire Bare, nineteen bass, the largest weighing 1 $\frac{1}{2}$ lbs., Mr. McNeil thirteen bass.

The prospects for a good fishing season are very encouraging; the fish seem to be plentiful enough, and all we want is suitable weather in which to catch them.

Persons desiring information concerning the fishing at this locality can obtain it at any time by addressing either of the following parties: Frank Doyle, Frank McNeil, or J. T. Bare. These are reliable persons and will cheerfully furnish any information desired.

STEHRMAN.

BAINBRIDGE, Pa., July 13.

HANDY POCKET MAPS.—One of the first and most pressing needs of the traveler who goes into a region which is new to him is a good map, and no traveler requires this so much as a sportsman, because, whether he is a gunner or an angler, he carries on his pursuit alone, and usually at a distance from people of whom he can make inquiries. All general maps are, as a rule, too large to be of much use to the sportsman; they do not give the details which he is anxious to know. For this reason the county road maps, published by G. W. & C. B. Colton & Co., of this city, several of which are now before us, seem to especially commend themselves to our readers. They are drawn on a uniform scale of two miles to the inch, and are printed in colors; the roads in red, water courses and ponds and their names in blue, other geography and names—towns, villages, post offices, hotels, railroads, etc.—in black. The maps are finely executed, are accurate, are of a convenient size for the pocket, and cost only 50 cents each. They cannot fail to be useful to those who desire to acquaint themselves with the roads, streams, hotels, or fishing and shooting resorts in the regions which they cover. The maps which we have seen are those of Orange and Rockland, Sullivan and Ulster counties—at least two of which are great resorts for sportsmen, who will be glad to avail themselves of these handy and cheap maps.

ANGLING NOTES.

It is quite evident that the introduction of landlocked salmon to the Maine lakes is going to be a success, and of great value to the anglers who visit that region. Quite a number of these fish have been caught this season; the latest on record being taken by Dr. Chas. Carrington in Rangeley Lake. The doctor writes that his salmon made a grand fight, jumping several times clean out of the water and in every way showed more pluck than a speckled trout. It was killed on a fly known as the "yellow-moose" and was in excellent condition, weight 4lbs. 5oz.

About fifty of the guests of the Edgewood Park Hotel (St. Lawrence River) made up a fishing match the other day; twenty-five on a side led by a captain. The result was that a very large number of fish were killed in this silly contest. Such contests, whether for the killing of fish or game, should not be indulged in by sportsmen, in fact I may say no true angler or sportsman would take part in any such destructive work. The St. Lawrence Anglers' Association ought to use their influence to put a stop to the wholesale destruction of fish that takes place every season on that river, and if possible, get a law passed limiting the number of fish per day. It is the custom, and has been for many years, for the fishermen when they return in the evening to display their catches to an admiring crowd, and their names and number of victories are duly recorded in the local papers. They cannot possibly use these fish and many of them are wasted.

Dr. Howard, a well-known angler of this city, had a curious experience not long ago while fishing for trout in the Adirondacks. He was casting over a large pool one evening, using very delicate tackle and small flies, when he had a rise from a very large fish. He hooked him securely as he supposed, and the big trout made for deep water, where he sulked. The Doctor put a little pressure on the line, the fish gave two or three ugly jerks and back came the cast with a 6in. trout hooked through the tail and partly digested. The big one had swallowed his smaller brother and his tail must have been in the way of the fly into which hooked it when he struck the fish. I had a curious experience in Pennsylvania once somewhat similar to the above. I had enjoyed a good day's fishing and was coming down stream on my way home when I stopped to make a cast over a likely looking pool. My tail fly was taken by a fingerling, and I reeled him in slowly, hoping it would get off before I had to land it. Suddenly a large trout darted for the little chap. Caught him sideways; gave him a twist and swallowed him head first. Then he lay there perfectly still, fanning his big fins. As he started to swim off, I struck him smartly and hooked the rascal and saved him. He was an ugly lantern-jawed looking cannibal, very dark in color, and I have no doubt got into the habit of preying on little trout and had been a terror to the stream for a long time. Such fish will not take a fly and are very destructive.

A large-mouth bass weighing 9lbs. 15oz. two hours after being caught, is now being mounted at Sauter's. It was killed on a 6oz. greenheart rod in Greenwood Lake a few days ago. SCARLET-IBIS.

AMERICAN ANGLERS IN CANADA.

THE members of the Restigouche Salmon Club are reported as overflowing with indignation at the action of the Dominion government in netting the fish, for reproductive purposes, at the mouth of their river. It is claimed that these nets are so placed as to prevent most of the salmon from running up the river, and report has it that a very heavy action for damages will be entered by the club against Her Majesty the Queen as represented by the government of Canada.

Sport has been very poor, however, this year upon all the rivers flowing into the Baie des Chaleurs. Mr. Henry Hogan, of Montreal, failed to kill a single salmon in the St. Anne River this season, though he fished it for a good part of a week.

The members of the Penn Fishing Club are going out to their Metabetchouan preserve early in August.

Mr. Eugene McCarthy, of Syracuse and Mr. Geo. B. Greenway returned by rail from Lake St. John on Thursday. These gentlemen spent nearly three weeks in the lake country, having not only enjoyed some excellent sport among the ouananiche at the Grande Discharge, but having been away up the Ouitchouaniche, several days' journey back from Roberval, to the height of land which forms the watershed between the feeders of the lake and La Croche, the headquarters of the St. Maurice. They speak of the trout in all the waters that they fished as having been very large and abundant.

Descriptions of the country north of Lake St. John from the pen of Mr. McCarthy have been accepted for publication in early numbers of *Outing*.

Some really marvellous sport with rod and line is reported from this country this week. Mr. E. J. Myers and Mr. Arnold W. Koehler, both of New York city, returned to the Hotel Roberval from their trip up the Peribonca on Sunday, after an absence of three weeks. The accounts given by them of their success in fishing up the river and in particular in Lake Tshotagama, read almost like fiction. Mr. Myers caught a pike weighing 47lbs. It was 52in. long and 17in. in girth. Its mouth was 11in. wide and its tail 9in. broad. Mr. Koehler caught two ouananiche of 8lbs. each. They measured 27in. long. Mr. Myers brought with him the skin of an 8lb. trout caught in the lake. He mentions as a specimen of the fishing at the lake, catching three ouananiche weighing 21lbs., three trout weighing 17lbs., and two pike weighing 23lbs., all in an hour and a half. Upon the river these gentlemen speak of the wonderful leaps of the ouananiche at First Chute, Frazier's Falls and other rapids and chutes.

Mr. Koehler has returned home to New York, but Mr. Myers has started off on another ten days' trip up the Ashuapmouchouan and down the Mistassini River.

Mr. Hurlburt of New York and Dr. Smith of Brooklyn passed through here to-day on their way to the lake, and intend to ascend the Peribonca as far as they can go in two weeks.

An Upper Canada journalist, Mr. Young, editor of the *Cornwall Freeholder*, killed no less than 26 ouananiche on Tuesday last at the Grand Discharge of Lake St. John. An American gentleman killed 23 on the previous day.

Recent rains have done much to improve the fishing at the Discharge, for during the first fortnight of this month the water was so clear sport fell off considerably.

QUEBEC, July 25.

E. T. D. CHAMBERS.

BLUEFISH AT PERTH AMBOY.

NEW YORK, July 20.—One day last week I met two old followers of Izaak Walton, Mr. Wm. Pitman and Mr. Wm. Barnett, who have a most enviable reputation in their neighborhood of catching fish when others cannot; and receiving an invitation to go with them on one of their trips, and with an understanding that they would show me how to catch them and would give me an occasional "show," I accepted the invitation. We started on the 5:50 A. M. train, N. J. C. R. R., ticketed to Perth Amboy. John Davison, our boatman, met us on arrival of train, and soon had us on board his skiff and on the fishing grounds ready for fishing. I very quickly learned the way my instructors rigged their tackle, baited hooks with shedder crabs, and cast. The casting part I am no stranger to, as they soon found out. I was watching every move on their part for a new wrinkle, and with our lines overboard we were wondering what would be our luck. Would it be the old story? Boys, you know what I mean. Weakfish were what we were fishing for. In a very short time I had a bite, and what a bite it was. I commenced to reel in, and when I got the fish near the boat he objected to being landed without a fight; and as my experience in fishing has been that when fishing with light tackle for heavy fish you had better not attempt to be too much in a hurry, I gave him the line, and when I thought he had enough of that kind of business commenced to reel him in, and again got the fish near the boat. I was lifting him in when my snell parted. Well, I lost the fish, and got a cold blast of "I told you so" and "That was no way to haul in bluefish." The proper way to do was, I must keep reeling in until I got the fish near the boat, and with a one great, grand effort—yank him in regardless of tackle or anything else.

I accepted the advice, put on my leader a genuine bluefish hook, cast again and got another bite. I commenced reeling in just the same as I did the last fish, got him near the boat, he objected just the same as the one I lost. I gave him the line when he wanted it and took it when I wanted it. Oh, what a grand time I was having! Talk about game and sport! I was just happy fishing in my old-time glory, giving and taking. Finally I was told to take him in, and I did so. "That is the way to do it," came in chorus from three of a kind. They forgot about the giving and taking, and I was just as well satisfied. Every one to their own taste.

The fish finally stopped biting, and for an excuse, I suppose, our boatman said sharks were around. We counted our fish. Novice had 16, Mr. Pitman and Mr. Barnett together had 34. This closed a day of grand sport to me, and I write to my brother sportsmen telling them all I know, and trusting if they go to Amboy they will have the same good luck catching bluefish with rod and reel as I did. I would like to ask a question. Can a fisherman drown a bluefish? Salt-water fishermen tell me you cannot. H. C. W.

OUR BOATS.

Dear Forest and Stream:

I wish somebody would invent a boat that would answer all the requirements of our fishing camp. At present, to serve all our purposes, we have only one large log driver's boat, 30ft. long by 5ft. wide, and that weighs a ton; a punt 12ft. by 3ft., one bark canoe that will carry six persons and baggage, one ditto to carry three and at a pinch four, a wooden dugout not fit to carry anybody, but immensely useful, and a cedar skiff that two careful persons can keep right side up by giving close attention. All I require is a boat that will carry eighteen or twenty persons and go ahead under sail 2ft. for every one that she falls off to leeward, instead of *vice versa*, as the barge does, handy for a nice little *partie carrée* besides the two boatmen, like the large canoe, light to paddle like the smaller one, that can be hauled over no end of sharp rocks without damage like the dugout, perfectly safe for children to fool round with like the punt, and light enough to be carried over long portages like the skiff.

Do you know, Mr. Editor, of anybody who makes a craft combining all these qualities? I have looked all through the FOREST AND STREAM in vain for an advertisement of it. I want to buy one.

Each of the boats has some peculiarity that I would dispense with if necessary, especially if we leave her where she bumps against the rocks for a day or two. The large canoe objects to being paddled in less than four or five inches of water, and the small one has seen such varied experiences that her bow is twisted one way and her stern the other, while her bottom is corrugated with ribs and protuberances without number. When the wind blows a bit one man alone in her has a good many calculations to make before he can be certain where he will arrive.

I don't know that I have anything to say against the punt. She does sit a little low in the water, and when the lake is very rough people get splashed, but that is not of much consequence. Neither can I complain much about the dugout. Maybe she is a wee bit cranky, so that it is prudent, if one would be perfectly comfortable in paddling her, to kneel down in the bottom, which, however, usually has two or three inches of water on it, for she is never bailed out except with a paddle. Otherwise she does very well. She isn't handsome, not the least little mite in the world, and we don't use her when we are in a hurry to get anywhere, for she isn't naturally a fast traveler. I have no objections to the skiff either, except the propensity she has to tip over and the possibility that, being made so light, we may sometime put our feet through the bottom and get left in the wet. So I want a boat that will combine all the good qualities of all these and have none of the objectionable ones. If you cannot tell me, Mr. Editor, where to find it I shall despair of ever getting one.

Meanwhile we must get on the best we can, which perhaps is not so very badly after all. If everybody wants to go cruising at once they pile into the barge, which is big enough to take the whole lot. If there are only four or five or six they go in the punt. The small canoe answers for women and boys who want to amuse themselves along the shore, for since a tree fell on her when she was hibernating in the woods one winter and

crushed her down to about four inches in height she has never entirely recovered her original shape and is nearly as flat-bottomed as the punt. I am afraid that her rheumatism will be so bad that she will have to be retired emeritus. I shall be sorry, for she has been my companion a long time and never attempted to part company with me but once. It was all her fault, the little disagreement we had on that occasion. I wanted her to go in the middle of the stream, but she took a notion to go under some alder bushes where the current was stronger, although there was not room for both of us. The consequence was that I didn't go; and when I picked her up further down the river she looked as if she wished she hadn't gone either. I wasn't much acquainted with her in those days, but after I learned more of her disposition we got along very well together. G. DE MONTAUBAN.

QUEBEC.

COLORADO TROUT.—Berthoud, Col., July 20.—I returned a few days ago from my annual trout fishing trip in the Big Thompson cañon. Frank Rhodes, Will Chapman, my son Frank and myself broke loose from our work on the ranch, and took to the hills for a few days' sport with the trout, and to spend the glorious Fourth in the shady dells of the grand old Rockies. We went into camp in a beautiful grove on the banks of the Big Thompson on the evening of July 2, and while Rhodes and Will pitched the tent and made camp comfortable, Frank and I joined our rods and made a short trip up the roaring Thompson for trout for supper. Our success was very good, as we returned in a short time with twenty-five nice fish, which made the party a fine mess for supper and breakfast. We remained in camp here until the afternoon of the 5th, having grand sport, catching enough trout to keep the camp well supplied, and a nice mess to bring home where we put them on ice in the ice house, keeping nice and fresh until used up. The trout caught on this trip were the nicest I ever caught in the Thompson, most all of them measuring 8 to 12in. in length, a great many of them being 11 and 12in. On the second evening as Frank and I were returning to camp, Frank came near stepping on a large rattlesnake; he soon spoiled the head of the snake and pulled off the eight rattles. We saw considerable game signs while on our trip. A number of other parties from Berthoud and vicinity have been up fishing at different points with moderate success. —A. A. K.

ONEIDA LAKE FISHING.—Syracuse, N. Y.—Inclosed herein is a clipping from one of our city papers. This shows what protection is doing. I myself caught 54 pike and 6 perch in three and one-half hours. Others have the same results when fishing on Oneida Lake.—HENRY LOFTIE. Report reads: A stranger in town might have taken the Amos Hotel for Fulton Market last night. On three tables, extending from one end of a room to the other, were spread 159 pike, 17 perch and 1 pickerel. This display of fish represented the largest one-day's catch that has been made in this vicinity in many a day. A party consisting of ex-Police Commissioner Nicholas Laterner, Henry C. Peters, Gus Bloom, Wm. L. Baumer, Peter Pfohl and Adolph Keller were the fishermen, and the fishing was done in Oneida Lake. The party trolled from 10 A. M. until 5:30 P. M. yesterday. The largest fish, a pike weighing 5lbs., was caught by Mr. Laterner. The oarsmen were Elisha A. Smith, Nelson Smith and Hiram Carter, who are connected with the hotel at South Bay. Three boats were used.

ST. LOUIS, July 25.—A party of fishermen recently returned from a trip to the Gasconade River report good success and a fine catch of croppies and bass, the latter averaging 13lbs. Joe Gettes, just returned from Lake Minnetonka, shows a photograph of 103 fish, bass and croppies, caught by himself and partner in three hours' fishing just before a storm. It was the largest string caught on the lake up to date. Jake Shriner spent three days at King's Lake last week and caught twelve small fish. David Hailman tried his skill at Gilead Slough and reports nothing but gar pike. In upper Creve Coeur Lake the bass and croppies have been biting freely the past week.—ABERDEEN.

BLUEFISH are in great supply in the Great South Bay, Long Island. One boat last Saturday took sixty-three to three lines in a half day's fishing. The luck was good among all the boats that day.

Fishculture.

CALIFORNIA SALMON IN EUROPE.*

CHAMBERLAIN VON DEM BORNE, after giving a brief sketch of the salmon and the meagre returns from the efforts to acclimate it in various countries, presents the following record of failures in the attempts to introduce it into France and Germany:

In Europe also the result is small. It was possible to keep the fish alive several years at Radolfzell, Hünningen, Starnberg and Pöls Castle, and at Hünningen about 1,000 eggs and at Radolfzell 20,000 eggs were fertilized, but after three or four years the California salmon died out. In a lake at Obragörz in 1883 a 5lbs. salmon was taken, which Herr von Kalkreuth had bought three years previously at the International Fishery Exposition at Berlin from Chief Burgomaster Schuster. The California salmon hatched out in the hatchery of the Schleswig-Holstein Fishery Association in 1879 were planted in ponds and in small brooks tributary to the Eider River. From the ponds 200 fish of about ½lb. each were deposited in the Wehran, which flows into the Eider. The fish were very vigorous and active. There is no information up to this time that a fish of this kind has been taken in the Eider.

A more satisfactory result was expected in the great aquarium of the Trocadéro in Paris. From 1,000 eggs which the National Acclimatization Society delivered in 1878 were obtained; in 1886, fish of 4 to 5lbs., which yielded 80,000 eggs. From a letter of M. Raveret-Wattel we learned that the embryos from the Aquarium were deposited in various rivers of France, but as it seems without apparent result. From the river Aude only, which rises in the Pyrenees and empties into the Mediterranean, it is reported that a small California salmon was captured at its mouth.

In a small pond at Reims, California salmon have been kept seven to eight years, but they have yielded no eggs.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Sept. 1 to 4.—Second Annual Dog Show of the Kingston Kennel Club, at Kingston, Ont. H. C. Corbett, Secretary.
Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.
Sept. 8 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.
Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.
Sept. 22 to 25.—Inaugural Dog Show of the Montreal Exposition Company, at Montreal, Canada. Entries close Sept. 8. J. S. Robertson, Secretary.
Sept. 29 to Oct. 1.—Third Annual Dog Show, in connection with the Central Canada Fair, at Ottawa, Ont. Alfred Geddes, Supt.
1892.

Jan. 13 to 14.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. F. Capers, Secretary, Greenville, S. C.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Secretary.
Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.
Nov. 23.—Irish Setter Club's Field Trials, at High Point, N. C. G. G. Davis, Secretary, Philadelphia, Pa.
Nov. 23.—Gordon Setter Club's Field Trials, at High Point, N. C. L. A. Van Zandt, Secretary, Yonkers, N. Y.
Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.
Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

AMERICAN KENNELS.—III.

SWISS MOUNTAIN KENNELS.

A JOURNEY from New York to the City of Brotherly Love is far from an unpleasant experience, and especially if it travel over the smooth road bed and in the comfortable cars of the Pennsylvania road. The powerful engine whirled you through pastoral scenes of beauty, where in these warm July days the ripening ears of rye and golden wheat are bending in billowy waves to the breeze, and the farmer's two-horse scythe may be seen cutting wide swathes through fields of timothy and clover. The ninety miles which separate Gotham from Quakerdom seem a mere cauter, and the brakeman's cry of "Broad street" arouses you from the reverie that the quiet scenes through which you have passed are apt to inveigle you into. It is a gentle awakening though, for somehow the quietness of the Quaker City seems to have a soothing effect, and not until you reach the North River on your journey home do you begin to experience again that feeling of unrest that seems to pervade everybody and everything in this cosmopolitan city of ours. However, when I say that I retained this placid feeling all the time, I am hardly adhering to the strict lines of truth, as on my arrival at Philadelphia I jumped into the wrong train, for in utter ignorance of Philadelphia suburbs I fondly imagined one road as good as another as long they both went to Germantown. I found out my mistake when I learned that Walnut Lane from a Pennsylvania railroad point of view is widely different, on a hot day, from that of the Philadelphia & Reading road—about half an hour's good walk. But I did not begrudge it, as it gave me an opportunity to view some of the finest villa residences that even this neighborhood of handsome homes can boast.

All the time I kept one eye open for a stray St. Bernard or two, for by them I expected to get my bearings as to my ultimate destination, the residence of Mrs. Smyth, and the Swiss Mountain Kennels. However, a friendly dicker with a passing Jehu soon resulted in my being seated on the pretty porch of Mrs. Smyth's home after a pleasant welcome. Such a pretty old place it is, too, old, as houses go now-a-days, for on one part of the house can be found a stone which tells that it was placed in position in 1793, though the comforts and requirements of a handsome dwelling of the year 1891 are to be seen within and without. This is just such a cosy retreat as one would wish to return to after a business day in the city. Around the house are paddocks and orchards comprising about seven acres, covered with ample shade and where almost any number of dogs could feel happy and contented. Before we looked at the kennels the order was given to the kennelman to give the dogs a run in the paddock in front of the house, and as we sat on the porch we had ample opportunity to note the health and activity of these big dogs as they gambled like terriers from one end of the field to the other.

They were soon sent back and we turned to the sultan of the barem—King Regent. Although his pedigree and description appeared as a matter of news in FOREST AND STREAM on his arrival from England recently, I may as well make my story complete by mentioning that he is a son of a noted sire, Prince Regent, out of Duchess of Kent. As his picture on this page shows, he is a handsomely marked dog, with an excellent skull, massive bone, great depth of chest and good length of body. Had he had proper care in his puppyhood he would certainly have made his mark in the records of St. Bernarddom, as it is he will be cherished for the good blood that runs in his veins, the excellent disposition that he shows and the careful training he has had, for he is without doubt one of the best mannered and easily controlled dogs I ever saw of the breed. He stands 33in. high and weighs 184lbs. I may here remark that Mrs. Smyth, the owner of the kennel, though a woman, has a full appreciation of authority and discipline, and allows no unruly behavior on the part of the inmates of the kennel. They acknowledge her as mistress voluntarily after a short acquaintance, and an interesting sight is when she walks along the lanes with half a dozen of these large dogs trooping behind her, not one being allowed to range at will. After taking a couple of shots at King Regent with the "Hawkeye" for future reference, the man is instructed to bring out the ladies of the kennel in turn, reminding us very forcibly of the story of the English lord who was asked at a garden party if he would be introduced to a certain young lady. He answered, "Oh, yes! Don't mind; trot her out." Fortunately the lady overheard the remark, and when Milord was introduced to her, remarked

as she scanned him from head to foot, "Ah! Trot him back again."

First to come bounding out was Harmony, who in every-day life is called Lassie. She is an excellently formed bitch, roomy and showing lots of bone, her limbs are well formed, and though out of coat her coloring is rich; a bit long in head perhaps, but she is young yet, only 13 months old, and it will look shorter as the muzzle deepens, head markings and collar are all *au fait*, though the blaze is a trifle broad. She is by Alton out of Duchess of Roseberry, and was imported a couple of months since from Mr. Sidney W. Smith's kennel. She stands exactly 32½ in., and weighs about 150lbs. at present in summer condition. Harmony, belying her name, is the black sheep of the flock, for in the exuberance of youth she is apt to create discord when at exercise, especially with Lady Castlereagh, till brought to her senses with the whip.

The next one was Sunray, her litter sister, who usually answers to the call of Maggie. I like her head better, a trifle shorter and deeper in muzzle, she is also well off for bone and height, a very roomy, broad-hipped bitch, and better if anything in markings than her sister. Though hardly so tall as Harmony, she weighed 158lbs. at one year old, in nice, healthy condition.

After looking her over thoroughly and arguing the pros and cons of her future about which Mrs. Smyth is very sanguine, Florette was turned out for inspection. This is a bitch of excellent breeding, as she is by Alton out of Florian, a full sister of Prince Regent. She was whelped June 30, 1890, and though not so large as the other two, she is shorter and deeper in head. She has lots of bone too, has a nice roomy body and is a promising bitch all around. She was to visit King Regent and was consequently in retirement at the cottage, of which more anon.

Then came another nice one, Lady Castlereagh, also imported recently. In fact, all these have come either from Mr. Sidney Smith's or Mr. Shillcock's kennels. Lady Castlereagh is by Puritan out of Ravine, is now 4 yrs. old, weighs 110lbs. and stands about 30in. She shows a dash of nice quality, is well marked and active enough. She was imported as in whelp to Lord Bute, but like many others who are sent over that way she failed to have pups.

The heat of the sun and the pangs of hunger now made an adjournment to the cool dining room and an appetizing lunch an agreeable interlude. This pleasant duty ended, the kennels next claimed our attention. These are all arranged at the back of the house, and while not in any way elaborate, they answer just the same purpose, for they are dry, light and clean, three essential points in a well-conducted kennel that no amount of fancy trimmings can take the place of. The first kennel is a neat-looking frame building in four compartments, with wire divisions reaching

long and 3ft. deep, into which fresh water is continually running, forming at once an ideal place for dogs, for when the weather is wet and the cottage not in use, the doors are thrown open and the dogs allowed the range of the cottage and orchard. I was loath to leave this cool retreat, and carried a memento away in the "Hawkeye" of Mrs. Smyth and a group of her dogs surrounding her.

Coming down to the garden again we passed a whitewashed stone outhouse, a most cool retreat, where Blush was secluded suckling, five week-old pups, by Archduke. Blush is a peculiarly colored bitch, but has a nice blaze and collar. She is a half sister to Hecla, but they have the failing of a good many human relations, they are deadly enemies and are necessarily kept far apart. Round the house and into the house, the only privileged pets of the family, ran Snowball and Chip K., black cocker spaniels. The former was whelped Aug. 30, 1888, and is by Dandy out of Chip K. He has won several prizes. Chip K. is by Obo II. out of Black Bess III., and consequently well bred. She was whelped February, 1884. The other two cockers of the kennel are better show spaniels and are at present boarding at the Chestnut Hill Kennels under the care of Mr. Jarrett. One is Eva May, by Jersey out of Ruby Cricket, a nicely made little bitch, and another nice one is Sunol, by Obo II. Her dam's name I failed to catch.

After a short rest Mrs. Smyth touched the button and a comfortable turnout appeared, in which we drove over to Chestnut Hill, a distance of about three miles, to see friend Jarrett and the harriers, but of these I shall speak another time. The scenery around this part of the country is extremely pretty, and at times may be termed grand, especially the view down the White Marsh Valley, where the Pennbrook harriers are expected to have many exciting runs before snow flies. A pleasant hour was spent strolling through the elegant kennels at Chestnut Hill, and taking a few snap shots at the barriers at the farm above, and then a drive back to the Swiss Mountain Kennels was not the least pleasurable part of the day's enjoyment. Of course I had to look at the Alderneys in the other paddocks, and the horses and the pony that was the result of a "swap" between Mrs. Smyth and Jarrett. After a pleasant dinner, at which I met Mrs. Meeham, Mr. Smyth and General Huidekoper, a lover of dogs too, and whose brother is quite a breeder of dogs in Ohio, we adjourned to the piazza and talked St. Bernard till we could almost fancy we heard the ring of the cloister bells. Then Mr. Jarrett dropped in, and Mr. James Watson's advent about 9 o'clock was the signal for a renewal, for every one knows J. W. can talk dog with any one, and it is through his judicious selection and mentorship Mrs. Smyth has succeeded in getting together a kennel that, judging from the lines of good producing blood, ought to be able to show in future years some excellent stock, for they will have every advantage necessary in proper rearing and exercise.

Mr. Smyth's cigars and the pleasant company I found myself in made the time pass all too quickly, and another day was commencing its round when we lit our candles and trooped off to bed tired out. Next morning we all drove over to the Seminole Kennels, but, as Rudyard Kipling would say, "that's another story"—and nothing remained now but to catch the train and tender my thanks to Mrs. Smyth for her kind hospitality and the pleasant trip the visit to her kennels had afforded.

H. W. L.

ROUGH-COATED ST. BERNARD KING REGENT.

Owned by the Swiss Mountain Kennels, Germantown, Pa.

to the ceiling and boarded half way up. In this house King Regent, Harmony, Sunray and Florette, the aristocrats of the kennel, make their home, each compartment being about 10x12. Two large, well-shaded yards, about 30x30ft., afford them ample space to roll round in. To the left of this building, across the pathway, are two large yards, fenced with wire, in which are two kennel houses where puppies are raised. These were unoccupied. Crossing the lawn again, and at the other side of the large kennel and yards, we came to another kennel and cooking outhouse. The latter is quite an elaborate kitchen, and is kept as neat and clean as the most scrupulous housewife could desire, and judging from the appearance of the dogs it is made good use of, too, for they all showed signs of competent care.

Passing on into the kennel, in one compartment we found Hecla, the pet of the family, and, as is generally the case, loved for her winning ways rather than for her good looks, for as a St. Bernard she is a failure as far as markings go, but she can breed some prettily marked stock nevertheless. One peculiarity she possesses, or rather does not possess, and that is teeth; they look as if they had started to grow and then stopped short as soon as they broke cover. As Mrs. Smyth has owned Hecla since she was seven weeks old there is no deception in the matter. I mention this particularly as I never saw a similar case before. At the time I saw her she was nursing four nicely marked pups by Archduke, the dog that Mrs. Smyth sold recently.

In another compartment Lady Castlereagh took things easy, her I have already described. Opening the next door we saw Dart, by Duke of Wellington out of Tiptop, a nice bitch and mother of the three two-months-old pups that we had noticed running about, and that were very nicely marked and of good size; these were by Archduke, too. Dart is of excellent color, dark tawny, with collar and slight blaze, and stands 31in. high.

"Now, I want to show you my orchard, and tell me if you don't think it is the finest place in the world for big dogs." So we walked up the path past the aristocrats' kennels and another range of what will be nice kennels very soon, they having been used as poultry pens heretofore, but Mrs. Smyth having found that it is a choice of one or the other, decided in favor of her four-legged pets. The compartments are about 9x12, opening into nice wire-inclosed runs. Leaving them, we came to the orchard gate, by the side of which stands a neat little four-room cottage that would make a capital fancy kennel with very little expenditure. The windows are barred, and this is used as a safe retreat for the matrons in season. Passing through the gate into the orchard I thought to myself what lucky dogs, even on such a hot July day as this to have so cool a retreat. Crowded with fruit trees over its full two acres, the dogs can be turned in here for a romp any time, and when tired and thirsty they will find by the gate a large tank, about 8ft.

HOW IS THIS?—Toronto, Ont. —*Editor Forest and Stream:* Some amusement is created here by a paragraph in last week's FOREST AND STREAM to the effect that Mr. "Amazement" Bell, i. e., George Bell, of the Walker House here, who owns some fairly good cocker spaniels, claims that he owned White Wings, the finest greyhound bitch ever bred on this continent. I give below what I had to say about the matter of her being poisoned in to-day's GLOBE, and if you look into the Empire of to-day you will see how sarcastically they take the quotation from you. Let me premise that Mr. Bell was employed by Mr. Ireson last year to assist in attending to his dogs at the various kennel club shows at which he exhibited them. The dam of White Wings, Madge Wildfire, was imported from Scotland by Mr. John Gilmour for Mr. Ireson. White Wings was by Magician, he by Memnon. Madge Wildfire by Border Reeve. Jolly Ranger beat Gem of the Season last year at Cleveland, and took first in his class here last fall. White Wings was only shown once, and that was at the Kennel Club show here last fall, when she won first over twenty competitors. As I am an old journal ist I am not afraid to sign my own name to all I write for the press.—J. MACKELCAN. Extract from Toronto GLOBE: "Mr. C. E. Ireson, of this city, has lost his fine greyhound White Wings by poisoning. Examination showed that some scoundrel had administered a large dose of strychnine. White Wings and Jolly Ranger had run 40yds. at Woodbine on Dominion Day in 25½ sec. and 25½ sec., beating Why Not's record of last March. Mr. Ireson still has two full brothers of White Wings in Jolly Ranger and Good Friday, but he feels his loss greatly, and offers \$50 reward for the conviction of the poisoner." [It was just the other way about, and the Cleveland show was held in April last. At Toronto last fall, Scavenger was first, Jolly Ranger second. Second Sight won at Toronto last fall in a class of six. The Toronto Kennel Club Members' show was held in May, 1891, where Jolly Ranger and White Wings won in their respective classes. We had no reason to doubt Mr. Bell's word when he sent us the news of his bitch White Wings' death, and so chronicled it.]

A GOOD FOX-TERRIER LOST.—*Editor Forest and Stream:* My fox-terrier dog Warren Tripper strayed from Elm Park, Staten Island, on Saturday, July 11, and was seen the following Monday running with some dogs at Port Richmond. He had won third, novice, New York, and first, puppy, at Washington this year, when but 10 months old, and the only times shown. The following is his description: Tan markings (uneven) on each side of head, white body, through which on careful examination some tan could be seen, nice small, well-shaped ears, very straight, narrow front, abundant coat, tail cut a bit long for the breed, and answered to name of Trip. Had the habit of grinning and showing his teeth when called. Should any of your readers meet with a terrier of this description they would confer a great favor by communicating with C. L. WILTON (44 S. Washington Square, New York city).

A comical sketch appears in Judge (Buckshot and old Luke, two dogs in one corner of a yard are pointing to another active looking East side pup with an abnormal head). Buckshot (paying a visit)—"Who's that?" Old Luke—"That's one of Mulford's pups. He flushed his first woodcock yesterday and hasn't got his head contracted yet."

DOG CHAT.

SATURDAY is a sort of an off day with us, but if we are going to miss our friends in this way we shall have to stick to the desk. Messrs. S. L. Boggs and Joe Lewis called at this office on their arrival in New York, and if only to get a few nibs of news we should like to have welcomed them home again. Mr. Boggs, however, left us full particulars of the purchases he made, and which have now once more made his kennel a strong one, and one that from all accounts will hold its own in the field this fall. We will give his letter in full:

"Mr. Joe Lewis and myself arrived in New York, Saturday, July 25, on the S.S. Normanna, from Southampton, after a pleasant voyage and a short stay in England. We brought a few dogs with us, among them five English setters, four of which are from Mr. R. W. Purcell Llewellyn's kennel, viz.: Viscount, by Moss—Nora III.; Moss is by Count Wind'em (E. 1,169)—Novel (E. 7,219); Nora III. is by Dashing Bondhu (E. 10,136)—Nora II., she is by Count Wind'em—Nora I. (E. 7,173). Color, black, white and tan, head evenly marked, with black ears and tan shadings, white blaze up the center of forehead, and a few tan ticks on muzzle and legs, black spot on loin and at root of tail, and a few ticks on body. Date of birth, Sept. 15, 1889. He is a large, racy, upstanding dog, with good head, neck, legs, shoulders and feet, with a superb body built on the right lines to go and stand plenty of work in the field, with a fast, merry, slashing gait. He was worked all last season on the moors in Scotland, and Mr. Llewellyn considers him one of the best young dogs that he ever bred; he was the dog of all dogs that I saw while in England that pleased me most, so brought him home for a stock dog. I think he is just what is wanted in America to breed from, now that Count Noble is dead. Victress, litter sister to Viscount, is a large, racy, upstanding bitch, with plenty of quality, bone and substance, and is well formed. In color she is black and white, black ears, white blaze up forehead, body ticked. Nora III., dam of Viscount and Victress, by Dashing Bondhu (E. 10,136)—Nora II., she is by Count Wind'em (E. 8,169)—Nora I. (E. 7,173). Color, lemon and white, evenly marked. Whelped June 2, 1887. She is in whelp to Moss, by Count Wind'em (E. 8,169)—Novel (E. 7,219). Moll Llewellyn, sister to Nora III., is quite a nice, large, handy bitch, showing much quality, bone and substance. Color, lemon and white, evenly marked. She is in whelp to Mr. Llewellyn's Jet, a large, handsome, black and white dog, showing much quality, and a rare good one; he is by Moss—Blossom. This bitch is by Duke—Placid, Duke is by Dash II.—Riffo, by Dan—Ruby; Placid is by Duke—Phantom. These four dogs are all thoroughly broken, are grand field dogs, and were purchased from Mr. Llewellyn only after much trouble; for he was loath to part with them, as he has about given up breeding and now only breeds on an average one bitch a year, consequently his kennel has decreased in numbers and is now very small, containing chiefly old dogs with very few young ones. It is very difficult to obtain any of his blood, so I consider myself very fortunate in obtaining what I did, and trust that these dogs may do some good for the breed here. Another English setter in the lot is Nia, purchased from Mr. Joseph Taylor. She is quite a handsome black, white and tan bitch of the right sort, by Blue Peter II.—Dora, whelped Feb. 8, 1886. Her winnings are: Firsts, Mardie, Morsley, Great Harwood, Clitheroe, Todmorden, and special Oldham, Stackstead, and second, Haslingden in 1890, and in 1891 first Darwin, second London (Cruffs), first and cup Poulton-le-Fyde, second Thorne, first Bristol, third Boston, first Winterton, third Bradford, second Belper, and third Wakefield.

"I must apologize right here for having an Irish setter in the lot; but when I saw the Rev. Robt. O'Callaghan's kennel I just thought I would like to try one of his dogs and see how I got on with him. So, after looking them all over carefully, I selected Finglas (E. 28,950), by champion Fingal III. (E. 24,600)—champion Aveline (E. 18,469), a noted field trial winner also; color dark red; whelped April 13, 1890. He is a very handsome, large, upstanding dog of the right sort, with lots of quality, and one that will stand some beating. In speaking of him, the reverend gentleman stated that he was the best dog that he ever sold to go to America. He is a litter brother to Coleraine, winner of Puppy Stakes at Newport, 1891, and Kennel Club Derby, and third, All-Aged Stake, 1891, when only twelve months old. The Rev. O'Callaghan considers him equally as good as his sister and had him entered in the same stake, but he could not start him, owing to his having a severe case of distemper; this dog will be heard from. All the setters will be run in the field trials and shown at the shows, while the fox-terriers that I purchased from Mr. Edwin Powell will also be shown. They are: Diver III., by Dugdale Jack out of Sarree II., weight 16lbs., markings black and tan on head and white body. Whelped Oct. 24, 1871. Breeder, Mr. J. Edwards. He has won first and second, West Bromwich, second, Abergavenny; second, Shrewsbury, 1885; first, Liverpool, second, Hanley, first, Royal Aquarium, London, first and two cups, Sheffield, second, Birmingham, first and cup, Wems, first, Ryde, third, Stockton, second, York, first, West Bromwich, first, Newtown, first, Shrewsbury, second, Darlington, 1886; first, Ebbw Vale, first, Halifax, first, Newport, first, Market Drayton, first, Bangor, and special, Shrewsbury, 1887; third Pontypridd; first, Oswestry, second, Shrewsbury, 1888; third, Bridgnorth, first, Welshpool, third, Carnock Chase, first, Shrewsbury, 1889; first, Newtown, and first, Newport, 1890. Diver III. is the sire of Rowton Ransom, winner of three first prizes, and many other winners. Rowton Safety, by Stipendiary out of Hatfield Pansy. Whelped Oct. 27, 1890. Color, black head and white body. Breeder, Mr. Rowland Green. Winnings: First in novice and second in puppy at Darwin, 1891. Rowton Flirt, color white with black and tan markings, whelped, August, 1890, by Rowton Darkie out of Desirée. These dogs, with champion Paul Gladstone and the balance of the Mount Washington Kennels' dogs, will, I think, give me quite a strong kennel."

S. L. BOGGS.

In writing of the Peterborough hound show held recently in England, "Peto," in *Canine World*, who is a great lover of hounds and hunting, makes mention of two hounds. He says: "I cannot help but mention here two hounds, one exhibited by Tom Whitmore—the Oakley Dancer, and the other Hermit, from the Warwickshire. One can hardly tire looking at either of these hounds. When I saw Hermit I thought I saw absolute perfection. He has legs and feet (unless you have good legs and feet you may throw aside every other property; they form the very basis of a hound, and must come first in the opinion of breeders) as if made to order, and upon them a body deep in girth, of beautiful outline, powerful, yet graceful. He is a good one to follow, and his neck and shoulders it would be a positive sin to ever forget, for one may never have an opportunity of gazing upon such perfection again. Not less admirable is the charming expression of this hound. I think he has got the most honest, most intelligent, most dare-devil look I ever saw in any other animal of any description. How came Oakley Dancer to beat him, then? I am loath to pick a fault in Hermit, but he has one. So attractive is the hound, and he takes hold of you so suddenly, that you fail to discern even so much as a suspicion of a fault in him. It was some time before I could believe him to be wanting in that very important place—just where the ribs end; between there and his hips Hermit is slack, not much, but it is just sufficient to make a fault; but for that one point the stylish and elegant hound Dancer could not have beaten him. Dancer has a splendidly-built frame, and that he did beat Hermit

says more for him than any words of mine can, though even in Dancer we must needs have a fault, and his is in the neck; it is barely long enough." It is rather curious that after reading this and making a note of it for future reference we should receive a letter from Mr. H. C. Lowe, the noted greyhound breeder of Lawrence, Kan., in which he says: "You know how strongly I advocate a greyhound being well ribbed up, and how very much you admired my greyhounds at the Chicago bench show for having this good point in such a marked degree, and as there have been some letters of late in your paper as to how a greyhound should be built I want you to carefully read the Peterborough hound show report. You will notice the hound Hermit was considered to be almost faultless and a perfect specimen of a hound, yet he failed in one important particular and was beaten, he was not ribbed up so perfectly as he might be, and consequently was just a trifle slack in loin. Now there is no dog living that has been brought to such perfection as the English foxhound. The greatest wealth and experience has been bestowed on them to increase their speed and staying powers. They simply fly now with a good scent, as a man soon finds out unless he is very well mounted and a good rider. The finest judges judged the hounds at Peterborough, and you see what they thought of a hound not being well ribbed up. This in their eyes was the most important point, for this hound was faultless in every other particular. Yet he was beaten because he was not well ribbed up, and he was not so bad as some of the greyhounds one sees at some of the bench shows in this country who show their long slack loin a mile off, for it took the judges at Peterborough some time it appears to find out that Hermit was not well ribbed up. This is a rare pointer for those like myself who so strongly advocate and breed the greyhound well ribbed up, with a strong loin, for we have the greatest authority on this subject at our back.—H. C. LOWE."

Mr. Eberhart, who takes as his motto both in cigars and dogs, "A square deal," has changed his kennel office to 3 East Fourth street, Cincinnati. O. He has just made a notable sale, having sold Lady Thurman to Mr. L. J. Buell, Neenah, Wis., who is now going into the breed. Mr. Eberhart has been having a busy time fighting the dog catchers (dog thieves) through the papers in Cincinnati, and has succeeded in getting several arrests for cruelty to animals, with fines as high as \$50 and costs. At the bottom of his letter, written on his business paper, we note a characteristic notice printed in one corner: "Remember, silk is never sold for the price of calico."

We learn that the wonderfully-coated collie Maney Trefoil has been sold to the Chestnut Hill Kennels to Mrs. Rand, Denver, Col. Thus another of the noted collies that has brought Mr. Harrison's name so well to the front in this breed, has been dispersed.

Mr. J. O. Smith, of Wheeling, W. Va., has on the way from England a setter that he expects great things of in the field. Mr. Smith is enthusiastic on his purchase, but unfortunately omits to mention the dog's name.

A clipping from the New Haven, Conn., *Register*, informs us that Mr. C. C. Chambers, of Waterbury, Conn., received from Switzerland, July 18, what he claims to be the largest St. Bernard dog in the United States. The measurements as given are, however, a little mixed, we should imagine. According to the *Register* "the animal measures 8ft. from the tip of his nose to the tip of his tail and 19in. around his head. He weighed 235lbs. when shipped and lost 30lbs. on the voyage, which lasted 14 days. The dog is own son to the St. Bernard which was the pet of the late J. K. Emmett. His kennel name was Victor, but in the pedigree book he is called Lord Malcolm. He is about a year old."

It is always a pleasure to receive a letter from Capt. McMurdo, the well-known manager of the Charlottesville Kennels. There is usually something of general interest in them and for that reason we do not think he will be offended if we make an extract from his last. Speaking of Mr. Dexter's increasing interest in the kennel, he says: "As regards field qualities, he undoubtedly has more good pointers than any man in this or perhaps any other country. He has a bitch called Kentish Lass that is as near being a perfect specimen of the type of pointer we are trying to breed as we shall probably ever get. She is off in color, being a sort of iron gray, but for size, form and coat she is perfection. She also has a nice head and beautiful stern, and her action and style are just what one would expect her to have. She is by Kent ex Hops, and is to run in the Derbys at High Point and Lexington. We have several others more or less like her, so I suppose it is only a matter of time—the establishment of the style we want—and let me impress upon your mind that we won't sacrifice working qualities even for the sake of carrying out our plans in this respect. Every dog Mr. Dexter keeps has got to have speed, endurance, good action, courage, the right sort of style of hunting, and everything else that a first-class field dog requires. I would not say so much, only I feel certain now that we shall succeed in our plans. Mainspring was the first pointer of right type that I ever saw run at the trials, and only a very few men seemed to appreciate him, because he was very unlike the bench show winners, I suppose."

Mr. Huber, of San Francisco, writes that his new purchase, Sally Brass II., which he bought from Mr. Heath, whelped July 18 six dogs, by Beppo III., and remarks that they are fine-looking pups. With stock of this sort on the Slope we shall soon hear of Californian dogs coming East to compete both in the field and in the ring.

Mr. H. C. Corbett writes us that the premium list for the Kingston show is now in the printer's hands and will be out in a few days. He is very well pleased with the interest that is being taken in the show judging by the numerous inquiries he has received. He is also busy getting a good list of specials.

Those who have met Mr. Babbitts, of Spratts Co., at the dog shows know that he is a merry soul and fond of a joke, but we were rather startled, we must confess, to see in an Omaha paper that he had arrived in that city without a cent. The last time he was in Omaha he had with him a roll of \$500 in crisp, new bills. The morning after he arrived he saw a pair of shoes that struck his fancy, and tendering one of the bills of large denomination in payment, the storekeeper was so frightened at the unfamiliar sight that he refused to take it and sent word to the police, who in their wisdom hauled him off in the patrol wagon to the police station as a counterfeiter. It took Mr. Babbitts some hours to establish his innocence, and he has since then steered clear of a city that evidently "wants but little here below, but wants that little good." Still, if Mr. Babbitts is without a cent, we respectfully call the attention of Spratts Co. to the fact, or their representative may get into further trouble.

Stock-Keeper, England, says: "Mr. Fellows having been taken to task in the American press for giving a prize to a greyhound with prick ears, replied that it 'did not have prick ears when in the ring.' To this Mr. Chas. Mason, in the course of a reply, says a 'prick-eared dog is a prick-eared dog in the ring or out.' Collie judges in this country could tell Mr. Mason of some curious instances which flatly contradict his dictum. We know of one case of a dog that carried its ears *à merveille* in the ring, but when the judge

went down the benches to make his notes after the judging he nearly fainted to see the card over a dog that looked him in the face, consciously unabashed, while it boisted one ear up as rigidly perpendicular as a shipperke's, and modestly folded over the other like a good setter's. Our collie readers (if they wanted to) could give Mr. Mason the names of several dogs not unknown to fame whose ears have the regulation semi-erect carriage in the ring where their entertaining owners point out various objects on the ground for their amusement and attention, but when they get back on the bench carry their ears quite erect."

Mr. Edwin H. Morris has given up his farm at West Farms, New York, and is now located in Red Bank, N. J., where he is going into pigeons and intends devoting considerable attention to these aerial messengers. His greyhound bitch Lady Clare has been bred to Gem of the Season and his Gordon, Talmont, to Zango.

The Chestnut Hills' English kennel of collies, of which Christopher is the bright particular star, have been shipped by the American Express Co. in company with six more harriers for the Pennbrook pack. The collies number twenty-one in all. The St. Bernard bitch Lady Blanca was shipped at the same time to Mr. James Watson, of Philadelphia, she having been purchased by him from Mr. Shillcock. The bitch is in whelp to Salvador Rosa.

Dog shows seem to pay in Ireland notwithstanding her troubles. At the Cork dog show \$3,075 were taken in during the two days. The proverbial Irish honesty was shown in the fact that though there was no deposit required on the dogs to take them out at night they all turned up in the morning.

It is not often we hear of bulldogs doing anything particularly heroic nowadays, but it seems Mr. Corbett's Rognish is an exception. *Fanciers' Gazette* tells us she has earned a great local reputation for saving a child from drowning in the river Lea. This bitch is a sister to the well known The Graven Image.

Dr. O. Stewart Bamber sends us a few items from Rochester, and we wish others of our friends would bestir themselves now and then and drop us a line when they hear of anything interesting to the kennel community. The Doctor writes: "Mr. Whitney, owner of the Flour City Kennels, has purchased a pony, and, I understand, is having a wagon rigged up, and the combination will be used to exercise the dogs. The plan is to have a pole with crossbars extend from the rear of wagon and lead several of the dogs at a time by chaining them to the ends of the crossbars. The idea is certainly novel, and promises to be effectual. Dog show matters here are about at a standstill, after interviewing several parties I was no wiser than before, except as to the approximate terms offered the club by the fair association. Perhaps you know that the dates the club expects to claim were selected so the show could be held in connection with the fair here. The fair association offer to furnish a tent and a certain sum of money for prizes if the club will hold the show there, no extra admission to be charged. Now, just how this will benefit the club financially I am unable to see, as they would certainly have to solicit outside subscriptions to add to the fair bonus to pay the prizes. The matter may come to a head this week, if so, will notify you. A young man in this city was caught stealing a cocker spaniel belonging to Mr. Frank Hughes, he was fined \$50, or fifty days, and as he did not have the former, took the latter. The foregoing is one of the signs of the times, and we need more of them."

Englishmen are ever on the lookout for something new, and now that the stringent laws that prevented the exportation of dogs out of Morocco have been relaxed, their dogs, which are said to be very fine, will soon cross the Mediterranean, and a Taunton or some one will soon have one on the bench.

The St. Bernard Club show will be on this week at Bingley Hall, Birmingham. All the cracks are to be present, that is, those that American dollars have left to the English kennels. The specials are very fine, and now that several of the cracks are over here competition for them will be more open.

Messrs. Dole and Comstock, according to their plan sketched out some time since in *FOREST AND STREAM*, came back to London about the middle of this month, and they are now most likely on the water with their faces toward "little Rhodie." *Stock-Keeper* has caught on to Frank's familiar wink, and how that eye will go when telling us all about it when we meet. This paper's paragraph relating to their experiences is too good to be lost, so we repeat it: "They are full of their trip on the Continent, and Mr. Dole's mobile features twist up into a smile on one side, while his eye on the offside clicks with the swiftness of a photographic shutter, as he indicates the 'no end of a good time they have had, yes sir!' Mr. Comstock plays Sphinx; he can see and he can hear, but he does not affect talk; still if ever he opens his lips, they may tell of other sights at Naples besides Vesuvius, of more amusing pictures at Pompeii than the 1800-year-old leaden pipe which interested his friend, of prettier pictures in the streets of Rome than in the dusty galleries of—but 'nuff said. Both gentlemen live up, and try to tell the tale together of how they went to the top of a mountain to see some monks, not the Hospice, and bought a bottle of fire-water to bring back as a travelers' gift to us. The way they dodged the customs of the different lands they have passed through would do credit to a smuggler hero in a yellow-cover romance." We can quite believe this, for Friend Dole's dog show experiences and his encounters with the festive baggage master have taught him a thing or two in this respect. In regard to the report that the Gloucester show was badly managed Mr. Dole disagrees with the American critic and says that no American show could have done as well under the conditions.

With all due respect to our Boston contemporary we must remark that the only correspondence or discussion on beagle training has been going on recently in the *FOREST AND STREAM*. We do not for one instant wish to usurp any paper's rights, but in this instance, whether Mr. Brooking alluded by name to the *FOREST AND STREAM* or not, he must have had it in his mind as the words he used in his speech fully tend to show. The expression of one man is not a correspondence or discussion, and surely our contemporary will admit that it was "Quester's" questions in *FOREST AND STREAM* that gave rise to the discussion which has been so interesting.

Last February, dog fanciers will remember that Allen Trebilcock of Toronto, Can., lost at the Westminster Kennel Club's show at New York his beautiful little King Charles Toronto Charlie, who was wont to win all hearts and prizes at the Canadian bench shows, says the *Empire*. The dog was valued at \$275. Although the Westminster Kennel Club was released by the conditions of the show from making good any loss, it took great pains to recover the dog, which had been stolen out of his kennel. Skilled detectives, however, failed to find any trace of the missing spaniel. Mr. Trebilcock was agreeably surprised July 25, when he received a check for \$75 from Mr. Jas. Mortimer, superintendent of the Westminster Kennel Club. It was a generous act and one which makes up to a degree for the loss which Mr. Trebilcock sustained.

Mr. M. Flynn, Jr.'s Irish setter bitch Sedan is in trainer S. C. Bradley's hands to prepare for the fall campaign. In a letter from Mr. Bradley he speaks very highly of her.

We fancy Mr. Boggs will bring a shower of protestations when he apologizes for having bought an Irish setter. The possession of a good Irish setter is a matter for congratulation and not apology, and we only wish others would be guilty of a few more *faux pas* of the same sort.

"Oh, yes, my pug is very finely trained. When I say 'Wade! Will you leave here or not?' he immediately leaves or he does not."—*Philadelphia Times*.

It was decided at a special meeting of the field trial committee of the Philadelphia Kennel Club to let the judges who officiated at their trials last year to do the same at the trials next December.

We learn that Mr. William Reiter, of Philadelphia, has imported from Germany a St. Bernard dog and a great Dane bitch. The great Dane is said to be a good specimen and a winner on the other side.

It is not generally known that the genial Colonel Leach, the boniface at High Point, N. C., who ministers to the material comforts of the visitor to the Eastern Field Trials and is an enthusiastic member of the club, is also fond of a horse race. He is now staying in New York and has two horses in training; one, Bellevue, has well earned its oats by winning several times recently.

We have often remarked that there is hardly enough attention paid to the increasing need of qualified canine "vets" in this country. The practice of canine pathology has only been in the hands of a few, but from England there came, a couple of weeks since, a gentleman who has had a thorough training in a practical school. This is Mr. Sherwood, who has been sole assistant for several years to Mr. A. J. Sewell, England's noted canine veterinarian. Mr. Sherwood is a Member of the Royal College of Veterinary Surgeons, and from what we hear from those who know him, is fully qualified for the duties he expects to incur.

The Toon-Symonds dogs were shown at Wakefield according to the current English papers, Prince Regent taking third in black and tans to Mr. Lucy's Rhodes Oban and one of Mr. Ellis's dogs and Mr. Purbeck's greyhound taking equal first with the noted Jenny Jones, is as good as any ordinary win, as the well known Park Lane Beauty came third. Joe Lewis's Nia took second in setters and Toon & Symonds's spaniel Endcliffe Don won in the spaniel class. At Pickering Prince Regent and Onatus and Endcliffe Don had to be content with thirds.

In the issue of *Canine World* received this week appears on the frontispiece a picture of Messrs. Toon & Symonds's black and tan terrier Beaconsfield, now in England. It is, however, hardly up to the usual standard of portraits in this bright journal.

We are requested to state that the Gordon setter field trials at High Point, N. C., will not conflict in any way with the Irish setter trials, although they will be held during the same week, commencing Nov. 23.

An important meeting of the executive committee of the National Beagle Club was held at 266 Washington street, Boston, Mass., July 25, at 8:30 P. M., and was called to order by the president, Mr. Brooking. After reading the minutes of the last meeting, which were accepted, the subject of the location for the coming field trials was discussed after hearing the report of the committee appointed for that purpose. It was voted to hold the second annual meeting at Nanuet, Rockland county, N. Y., Nov. 23. This is, from what we hear of the nature of the country, an excellent choice, and one that is sure to be acceptable to a majority of the members. It was also voted to have a sufficient quantity of amendment slips printed, and also that the club correspond with all available parties in relation to judging. The judges will then be announced.

Just as we go to press we receive the premium list of the Hamilton Kennel Club's inaugural dog show, to be held Sept. 8 to 11. We have not time for more than a glance, but we see that kennel prizes of \$10 are offered for almost every breed. Challenge classes in all the important breeds have \$7, \$5 and a diploma. The premiums in the open classes are \$7, \$5 and a diploma. Seventy-two classes are provided, and the arrangement seems a liberal one. A feature is made for the local exhibitors of a separate prize list, the dogs to be owned in the city of Hamilton at the time of closing of entries, which close positively Aug. 24. The best local dog in each breed will win \$5 donated by friends of the club. The usual arrangements have been made with the express companies, and the customs difficulty having been overcome there will be no trouble at the lines. The show building is said to be an excellent one for the purpose. The judges are Mr. J. F. Kirk, of Toronto, for all spaniels; Miss Anna H. Whitney, of Lancaster, Mass., for Newfoundland, St. Bernards, great Danes and pugs; and Mr. H. W. Lacey, of New York, for the remaining classes.

Mayor Rankin, of Elizabeth, N. J., has had a taste of his own medicine and will look at home before he issues another decree. One of the first victims of the police, under the recent order to shoot indiscriminately all unmuzzled dogs, was the Mayor's own pet pug.

Among the kennel advertisements we notice this week that Connemara Kennels have for sale five Irish setters, puppies and old dogs; Mount Pleasant Kennels offer Gordon setters; C. A. Houck a St. Bernard bitch and Wm. H. Pierce puts Marchioness, an English setter, on the market. Attention is also drawn to Dr. T. G. Sherwood's advertisement.

On account of the pressure on our columns this week, a number of kennel registry notices were crowded out.

Mr. Vredenburgh's visit to Chicago was productive of no definite result in regard to the World's Fair dog show, but we understand that the show will be held in connection with the World's Fair if a larger appropriation can be made, as the \$2,500 voted for the purpose is not enough for such a show as this should be. The Mascoutah Kennel Club may take the matter up, and failing this the A. K. C. will be asked to run the show.

BEAGLE TRAINING.

Editor Forest and Stream:

I have read with interest the different writings on beagle training and the different ideas expressed. I am no ink slinger, but I wish to drop in my bark.

"Quaster" wishes to know if a beagle should be under control. Certainly he should. He should know his master's voice and come to him when spoken to if he has not a rabbit started. When reaching the hunting grounds a beagle should be left to his own free will to hunt for his trail and to follow it until his game is started or lost entirely. If not able to find a track in that piece of timber he should swing in to you.

Such a beagle will generally give you six days' hunting in a week and not be jumping around your heels one-half of

the time waiting for orders. If the man is going to do the starting and the beagle the trailing only, at the field trials, why a beagle that is broken to charge, to heel and to go on, will be a nice little dog for some hunters to have around until a better dog or the man starts a rabbit.

I have broken a great many beagles, and own to-day as good as the next man, or I think I do, but I do not own one that I can call from a hot trail and I don't want to own that kind, for they are apt to be no good, and my advice to beginners is this: Teach your dog all you are a mind to, but don't try to break a good working beagle, one from hunting stock, to leave his hot trail when you speak to him.

My old Skip, the dam of Frank Forrest and Tare and lots of other good ones, is well broken and will mind at most times, but it will take more than a brass band to make her leave a hot trail.

I break my beagles to do all the work and not to expect any help from me whatever happens. I don't go out for that part of it, and if you own the right strain you will not have to do anything unless the dogs when near the game and catch up your dogs or leave them running if you want to when done hunting. In answer to "Namquoit" of June 19, when he asks which was the best dog, I say the little bitch that had the nose, head and sand to pick up her cold trail and start her game, the others were slayers.

My ideas of a good beagle are these: He should be a good starter, for that is when the fun commences, a good steady driver, not too fast, a fast barker and a stayer. With that kind of a dog, new beginner, don't give him all you can stuff into him for breakfast the day you are going to run him at the field trials, for, my word for it, you will get left if you do.

BARTON, VI.

THAT GORDON SETTER FIELD TRIAL TROPHY.

Editor Forest and Stream:

In your last issue you stated that the Philadelphia *Item* explains the reason why they did not give the prize they offered at the Central Field Trials last fall.

The *Item* stated that "Mr. Hunt claimed the prize as his property on a single win," which is untrue, and that the prize was "donated through Dr. Meyer with the understanding that it be held by the Gordon Setter Club," which I deny as far as my personal knowledge of the matter goes. The only claims I made upon the prize are those I made in my letter to the *Item* of April 28, a copy of which I inclose as follows:

PALMYRA, N. Y., April 28, 1891.—*Hildebrand Fitzgerald, Philadelphia, Pa.*: Dear Sir—Your letter of the 8th inst. duly received. I considered the matter at length, and must say that I cannot see why the Gordon Setter Club's failure to recognize the trophy should deprive me of what I competed for and honestly won; for I am ready, willing and anxious to enter my dogs in the trials this fall, and in fact I have entered one Gordon for the Derby this fall. I say that I do not see why the Gordon Setter Club should do with the case, in fact they are like the flowers of spring. Before the Gordon Setter Stake was run they virtually refused to recognize it, or rather Mr. Malcolm, the president, did, and, moreover, I did not run my dog under the auspices of the Gordon Setter Club, but at the trials of the Central Field Trial Club, between which two organizations there is no connection that I am aware of. I have written to Col. Odell, secretary of the Central Club, and also to the Gordon Setter Club, according to your suggestion, asking for their advice and action in the matter, though I hardly thought an appeal to the latter club necessary, it being a specialty club and having no connection with the field trials of the Central Club. Moreover, I wish your people would take in consideration the fact that I have waited more than five months for the trophy, and though I hope to be able to hold it again the coming year, yet I may not be fortunate enough to do so, and if such is to be the case I should prefer to be able to display it to my friends before some more fortunate competitor should wrest it from my grasp, and I wish to say here, that had it not been that you offered the trophy I should not have gone to the trouble and expense of training and running my dogs in the trial, as the cash prize offered was no object to me. Now, I have tried to express my views through your paper, and I cannot see why, after winning the trophy, I should not receive it and hold it until it is won by a more fortunate competitor. I think the trophy should have been placed in Col. Odell's hands, and have been handed to the winner immediately after the trials were decided. Patience has ceased to be a virtue with me, so hoping to hear from you, I am, Yours very truly, C. C. M. HUNT.

I did claim, however, and do still, that I have a right to hold the cup until it is won again, though I do not and can not claim it as my absolute property until I have won it three times. As to referring me to Mr. Connell, of the Philadelphia Kennel Club, all I can say is that the only conditions imposed by the donors of the cup as far as I know are those published in the sporting papers last fall, as follows: "LEXINGTON, N. C., Dec. 11, 1890.—The Gordon Setter Stake.—The Central Field Trial Club donates \$100, and \$75 is donated by private subscriptions, of which \$100 to first, \$50 to second and \$25 to third. Philadelphia *Item* Field Trial Trophy, value \$100, to become the property of the owner of any contestant when he has had his name inscribed on it three times. The Van Zandt Cup, value \$50, awarded to winner of second." And these are the only conditions I knew of at the time I ran my dogs.

Now, I submit it to you, does this say anything about the Gordon Setter Club being in any way connected with this prize, and under these conditions have I not the right to demand the cup and hold it until won again? I think I have.

I have been unable to get any satisfaction from the donors of this prize or from any one connected with it, and I think I have a right to be heard on the subject, and no one would be more pleased than myself to see the matter adjusted to the satisfaction of all concerned. CARLTON C. M. HUNT.

PALMYRA, N. Y., July 25.

THE INFLUENCE OF A PREVIOUS SIRE.

Editor Forest and Stream:

In yours of the 16th inst. "F. R.," Danville, Pa., asks whether the third litter of a greyhound bitch, got by a greyhound dog, will be likely to show any effects of her second litter being by a collie, and you answer that some pups will probably exhibit some traces of the collie cross of the second litter. With all deference to your opinion, allow me to dissent most positively from any such conclusion. The chances are nine to one that the litter following the bastard one will exhibit no trace of mongrelizing. In an experience of nearly forty years I have had a good many "accidents" happen and never saw a single instance of any ill-effects resulting. I have collected instances of both virgin bitches and mothers, victims of "accidents" with no harm resulting. Unquestionably this bastardizing influence does sometimes show itself, but I maintain that such cases are only the most insignificant minority. It is the very oddness itself of such cases that causes them to be remembered, while the vast majority the other way are accepted as a matter of course and cause no comment.

The course for "F. R." to pursue is very evident. Let him rear the thoroughbred litter until old enough to positively demonstrate their character, let him dismiss all rubbish of bastardizing from his mind. If they do show signs of mongrelizing let him retire the bitch from maternal duties, for the mongrelizing effect is likely to follow through many subsequent litters. As a physiological experiment, I wish somebody who has a case of this mongrelizing, where he is sure that the actual paternity is thoroughbred, and where the offspring show unmistakable signs of the previous mongrel cross, would rear the mongrel-looking animal (a bitch, of course) and use it as a breeder, and advise of the result. I hope "F. R." will advise of the litter he inquires about. W. WADE.

HUTTON, Pa., July 17.

MASTIFFS AT NEW YORK.

Editor Forest and Stream:

There has been a good deal written about the defects of the judging and the judge of this breed at the last New York show, and I am surprised that no one has spoken a word in defense of a judge who, whatever his other errors, and I do not now assert anything whatever about that subject, was in my opinion quite right in regard to placing Beaufort back—the award which has provoked so much censure.

When looking generally around on the mastiffs in the ring, one attracted my attention. I did not quite know whether he was rheumatic, partially paralyzed, recovering from some illness, very aged or what exactly was the matter, but that the dog stood with head low and looking as if he would very much like to lie down was clear enough. When he moved he tottered about in a most curious manner for a show dog. A little closer observation and I recognized fallen greatness in Beaufort. How any man who believes in judging a dog as he actually presents himself before him could place such a specimen as Beaufort in *præsentia* at the head of the class I cannot understand. If Beaufort had been sent to his stall as a dog unfit for exhibition, the judgment would not have been detrimental, but beneficial, as it would have taught a useful lesson. Instead of blaming the judge he should be commended for having the courage of his convictions. It is to be feared that too many dogs are judged on their reputation in the past. MEDICUS.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (turned free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Pastang, Dandy Boy, Lady Desmond and Virgie E. By Eberhart Pug Kennels, Cincinnati, O. for pugs, two dogs and two bitches, whelped June 8, 1891, by Spokane out of Lalla Rookh.

Golden Rose, Golden Gate and Golden Dell. By J. B. Martin, San Francisco, Cal., for fox-terrier bitches, whelped May 14, 1891, by Blemton Shiner (Blemton Rubicon—Blemton Brilliant) out of Beatrice (Bacchanal—Blemton Arrow).

Golden Dawn. By J. B. Martin, San Francisco, Cal., for white and black fox-terrier bitch, whelped April 23, 1891, by Blemton Shiner (Blemton Rubicon—Blemton Brilliant) out of Vixen (Searsdale—Delta).

Handsome. By John H. Miller, Harrisburg, Pa., for dark orange rough St. Bernard pup, whelped Jan. 20, 1891, by Prince Bellevue (Sir Redivore—Princess Louise) out of Lady Muriel (Hackney Monk—Minka).

BRED.

Prepared Blanks sent free on application.

Lina K.—Hundesport Bergmann. Wm. Loeffler's (Milwaukee, Wis.) English setter bitch Lina K. (Feldmann K.—Lina L.) to his Hundesport Bergmann, July 23.

Sunol—Roger. L. Gardner's (Mount Vernon, N. Y.) English setter bitch Sunol (Gladstone's Boy—Flame) to his Roger (Count Noble—Queen Meg), July 13.

Mystic II—Chubb. E. H. Bragg's (North Sidney, Me.) beagle bitch Mystic II. (Hosse—Spot) to his Chubb (imported Blue Boy—Mystic), June 12.

Bessie Eberhart's Cashier. G. H. Deck's (Cincinnati, O.) pug bitch Bess to Eberhart Pug Kennels' Eberhart's Cashier (champion Kash—Lady Thora), July 23.

Isabella—Ben Hill. E. Hudekoper's English setter bitch Isabella (Kake—Clara Dale) to J. Shelley Hudson's Ben Hill, July 15.

Bessie Marshall—Dad Wilson. J. Shelley Hudson's (Covington, Ky.) English setter bitch Bessie Marshall (Ben Hill—Tempest) to Dad Wilson, Jr., July 12.

Bessie Roy—Dad Wilson. J. R. Rufe's English setter bitch Bessie Roy (Dick Roy—Light's Girl) to J. Shelley Hudson's Dad Wilson, Jr., July 8.

Fayette Nellie Bly—Ben Hill. Chas. T. Hyde's English setter bitch Fayette Nellie Bly (Lark P.—Killbuck Vic) to J. Shelley Hudson's Ben Hill, June 29.

WHELPS.

Prepared Blanks sent free on application.

Meersbrook Maiden. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch champion Meersbrook Maiden (Meersbrook Chance—Meersbrook Empress), July 8, six (three dogs), by their Broomfield Sultan (Broomfield Turk—Broomfield Belle).

Broomfield Midge. Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch Broomfield Midge (Patrick—Queen), July 1, six (two dogs), by their Broomfield Sultan (Broomfield Turk—Broomfield Belle).

Beatrice. J. B. Martin's (San Francisco, Cal.) fox-terrier bitch Beatrice (Bacchanal—Blemton Arrow), May 4, seven (two dogs), by his Blemton Shiner (champion Blemton Rubicon—champion Blemton Brilliant).

Lady Melville. W. Moulton's (Washington, D. C.) bull-terrier bitch Lady Melville (Trentham Dutch—Old Lill), July 19, seven (three dogs), by his Roscoe (Bendigo—Starlight).

Tube Rose. J. Shelley Hudson's (Covington, Ky.) English setter bitch Tube Rose (Count Noble—Lit), July 19, nine (seven dogs), by his Ben Hill.

Sally Brass II. Henry Huber's (San Francisco, Cal.) pointer bitch Sally Brass II., July 18, six dogs, by Charles Heath's Beppo II.

Bohemian Girl. J. Shelley Hudson's (Covington, Ky.) English setter bitch Bohemian Girl (Count Noble—Mollie Belton), June 29, eleven (five dogs), by his champion Dad Wilson.

SALES.

Prepared Blanks sent free on application.

Golden Queen. White fox-terrier bitch, whelped May 14, 1891, by Belmont Shiner out of Beatrice, by J. B. Martin, San Francisco, Cal., to C. McIntosh, Tacoma, Wash.

Golden Dell. White, black and tan fox-terrier bitch, whelped May 14, 1891, by Blemton Shiner out of Beatrice, by J. B. Martin, San Francisco, Cal., to M. Kerr, same place.

Golden Tip. White, black and tan fox-terrier dog, whelped May 14, 1891, by Belmont Shiner out of Beatrice, by J. B. Martin, San Francisco, Cal., to H. Bamber, Hollister, Cal.

Golden Rose. White, black and tan fox-terrier bitch, whelped May 14, 1891, by Blemton Shiner out of Beatrice, by J. B. Martin, San Francisco, Cal., to Wm. Jost, same place.

Monseur Dotsero. Silver fawn pug dog, whelped July 27, 1889, by champion Kash out of Fair Inez, by Eberhart Pug Kennels, Cincinnati, O., to Mrs. Henry Lee, Loper, Mich.

Lady Thurman. Silver fawn pug bitch, whelped March 15, 1888, by Dixie out of Silver Shoe, by Eberhart Pug Kennels, Cincinnati, O., to Mrs. Henry Lee, Loper, Mich.

Rufus. Black and tan dachshund dog, whelped April 10, 1891, by Hundesport Zaenker out of Alice, by Wm. Loeffler, Milwaukee, Wis., to Gustave Pabst, same place.

Edgemoor Baguette. Liver and white pointer bitch, whelped June 18, 1890, by Tribulation out of Bloome II., by Graphic Kennels, to F. S. Webster, New York.

Blaze—Gladys B. whelps Red Irish setter dogs, whelped April 12, 1891, by Connemara Kennels, Middletown, Conn., one each to Jas. G. Marshall, Fairview, W. Va., and Alfred Neff, Higganum, Conn.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

F. B. Danville, Pa.—An advertisement in our business columns would very likely bring you the desired information. We cannot advise you in the matter.

J. C. S. Willimantic, Conn.—Can you give me the breeding of Irish setter Barney, by Sarsfield, or tell me what copy of register I can find it in? Ans. There is a dog by the name of Barney Sarsfield (16,350, Vol. VII., A.K.C.S.B.), whelped Feb. 22, 1887, by Sarsfield (10,351, Vol. V.) out of Red Flash, by Glencho out of Daisy.

J. C. C. A. Montreal, Can.—I have a black cocker spaniel about 18 mos. old. There is a hard round lump about the size of a small peach growing underneath the skin over the ribs on his right side. Can you inform me what it is, the cause and cure? Ans. Probably a tumor forming, in which case removal is the only cure. Consult a veterinarian. You might first try painting twice a week with liniment of iodine, taking care to remove the hair from lump first.

H. N. Corryton, Tenn.—Will you please inform me if you have for sale a book or essay on the treatment and handling of sporting dogs? If you have published on such work, will you kindly advise me what book to procure? I want information as to raising of pups and feeding and general treatment of dogs in kennel. The latest ideas as to training and handling of dogs in the field, pointers more especially. A "The Scientific Education of Dogs for the Gun" covers all these points. We can supply it, price \$2.50.

E. C. C.—I have an Irish setter dog about 8 yrs. old that for the past few weeks has had more or less trouble with his back passages. There seems to be an occasional discharge which is offensive and of a bloody nature and causes him to lick himself frequently. Ans. The result of an abscess due to constipation or injury to the parts by a bone during its passage. Bathe the parts twice a day and apply a little zinc ointment; also use the following injection: Ext. of rhubarb 1 dr.; water 1 pint; oil of turp. 1 dr.; water 6oz.; 1oz. to be injected into the bowels twice a day. Injury may end in a fistula.

J. P. D., Charleston, S. C.—Kindly prescribe for following disease of dogs through your columns. Symptoms: First, looseness of bowels and diarrhoea, with offensive breath, followed by aropy saliva and then gradual loss of use of limbs, beginning with the hindquarters; in one case a dog lived eight days walking on front legs, dragging his hindquarters, followed by death. Attacks on young dogs and puppies. Ans. The symptoms point to some irritant poison. Try the following: Give to each dog or puppy five grains of sub-nitrate of bismuth shaken on the tongue every three or four hours; feed on minced raw meat given in small quantities at intervals of four hours. Do not let the dogs drink much water.

A. M. Nutley, N. J.—I have a pug dog, 2 years old, who keeps so thin that one can see his ribs. His appetite has always been very poor, he will eat whole days without touching food, his entrails at these times will make the most peculiar noise, have treated him repeatedly for worms, and still he remains in the same condition. Of late his hair falls out very badly, and his coat seems to be poor, although he does not seem to be a bit mangy. His eyes are watery and seem to itch, as he rubs them on the floor so much that the hair is very thin about them. Ans. Try for worms again. Give one of Spratts worm pills after the dog has fasted and repeat again in a week. Apply the following lotion to the eyes four times a day with a piece of sponge: Goulard's extract of lead 1 dr., water 6oz.; also give the dog once a week a bath in soluble phenyle (1 part phenyle to 80 water). Give dog 2 or 3oz. of meat a day.

NED OBER.—My black cocker spaniel, male, four years old, has become very weak in his hind parts; legs give way and at times he drags them along. Has been coming on about four months. Ans. This may arise from constipation, worms or kidney trouble. If you detect any difficulty in passing urine, the bladder must be emptied by catheter. If the dog is very constipated it will in time cause a partial paralysis of the hind parts. The bowels must be opened, and if they do not operate after giving c-stor oil or syrup of buckthorn, inject warm soap suds or sweet oil with a syringe. Feed nutritious and strengthening food with plenty of vegetables boiled up and given in soups, etc. If worms are indicated, rid the dog of them by using one of the vermifuges advertised in *FOREST AND STREAM*. Also give in any case a pill three times a day for some weeks made up of two grains of sulphate of zinc with extract of quassia, administering now and then a mild laxative. Exercise often but not violently.

A. D. S., Hamilton, Ont.—Kindly advise me in the following case. I have a valuable fox-terrier bitch, 12 mos. old. About a month ago a small spot appeared on the root of her tail and another on her left leg. The sores were not inflamed, but consisted of small white holes as if made by a dog's tooth. Thinking they were bites I dressed them with camellia oil, but in a few days the sores spread until one half the length of the tail was covered with a raw red sore. I have clipped the hair and dressed with iodine, but no improvement seems to follow. A veterinary surgeon tells me it is ringworm. What shall I do to heal the sores and make the hair grow at once, as I want to have the bitch ready for the fall bench show? I might also say that she was treated in April by a dog bite, missing a paw, but her teeth (especially the lower) were so sore that she could not eat, and very hard, feeling as if they were full of hard strings and knots. What is the matter? Ans. Apply some balsam of Peru on the sores; keep the bowels open. Rub the teeth with camphorated oil two or three times a day.

W. C. C., Bar Harbor, Me.—Two of my puppies (three weeks old) have developed some round spots or sores covered with a scab of matted hair, etc. They only get food from the mother yet, and except for this they are in splendid condition. Will you tell me what I had better do for them? The mother of the pups has been bleeding from the womb for the past two or three days, and is very much run down and will not eat. I know of no cause for this, for she whelped very easily and apparently recovered entirely and was very well until three days ago. She has abundance of milk. Ans. Rub the sores with balsam of Peru, keep the bitch away for a while after rubbing it on the pups, simplify the bitch's food, feeding milk as much as possible, and keep the bowels open. Give this once:

Ext. gentian. 3 ss.
Ext. conii. 3 ss.
Make into thirty pills and give one three times a day.

G. R. P., Manchester, N. H.—My eight-months bound pup has a phase of distemper not mentioned in "Landseer's" book, and as there is no vet. here who knows any more about it than I do, I take the liberty of asking your advice. Besides the running of eyes and nose, and foul breath, though he has not the usual lung trouble, his ears discharge freely and are most offensive. He tries to scratch his head just below the ears and in front along the nose mouth and right ear, and does not eat, except for a slight looseness yesterday. Sits away back on his haunches with back arched and pot belly. Am giving "Landseer's" regular first dose, which I have found most effective heretofore; but have never seen a case just like this. First symptoms a week ago. Head trouble, except eyes, began Sunday. Very poor, but can still walk. Appetite fair, no fits, and improvement in eyes as far as redness goes. What do you advise? Ans. Clean the ears daily with warm water and dry with soft cloth. Pour a little of the following lotion into the ears and also apply to the sores on face twice a day: Wright's sol. of coal tar, 1/2 drachm; Goulard's extract of lead, 3 drachms; water, 3 ounces. Bathe the eye with a solution of boric acid (1 in 20) five or six times a day. Give 5 grains of citrate of iron and quinine three times a day. Allow a generous diet.

J. W. G. D., Chestnut Hill, Pa.—I have two spaniels about a year old; when they came last May they had an eruption on their stomachs which I took for mange. The skin was red, but not excessively so, there were red pimples, some of which contained a yellowish matter and which did not scratch when I rubbed in pieces; in these swollen places the skin was not much inflamed and there was intense itching. Otherwise the pups seemed O.K., had good appetites and were full of life and spirits. I began to wash them with a mange solution, containing carbolic acid, potas, bicarbonate and laudanum. After keeping this up for two weeks I found it did no good and the disease seemed to be spreading. I then began to give arsenic, 3 to 4 drops twice a day, and tried a new wash. Little's soluble phenyle. In about a week they began to improve, the disease left the stomach and went to the shoulders and neck; in about three weeks more it stopped spreading and began to leave. When a place began to heal up it became very dry and you could scrape off the skin easily with the finger nail, first as a sort of scab and then in a white powder, which when all off the skin was normal and the hair began to grow again. Most of the hair on the neck and head had fallen out, and on a few parts they have a few pimples which are not inflamed but have a dry scab for a head; when this comes off it sometimes bleeds a little, but mostly it does not and the skin seems normal, but the scab forms again in a day or so. The rest of the skin seems normal, except some days after having a wash a white dandruff appears and the skin looks as if it was peeling off in small pieces. The pimples appear now and then on the crown of the head, the edge of the ears and where the legs join the bodies on the sides. Since the article on eczema in *FOREST AND STREAM*, a few weeks ago, I have been giving the tonic recommended in the last of the article and have given them one bottle full, the amount called for in the prescription. They seem very well otherwise and have tremendous appetites. I give them about a cubic inch of meat once a day, and once in a while I put some soup with their food. Now do you think they have the mange or the eczema? As we have had neither before nor any of our dogs I can't determine myself which it is. I want to take them away Sept. 1 shooting, and as I go with another friend who has a cocker I don't want the dogs to have anything the matter with them, if

possible, especially if it is catching. Ans. This is so intelligently described, and may be of benefit to others, that we give the letter in full. It is mange. Use the following dressing: Sublimed sulphur, 8 ounces; best kerosene, one pint; vegetable (cotton seed) oil, three pints; to be well rubbed all over the dogs every other day for a fortnight, then wash off, using any good dog soap. Repeat again in a few days if necessary. Allow each dog about 1oz. of meat a day.

Rifle and Trap Shooting.

RANGE AND GALLERY.

A TWENTY-YARD TARGET.

We have received from Messrs. Smith & Wesson copy of a target made by Mr. Walter Winans, of which this diagram is

an exact reproduction. The score was made on June 20, with a Smith & Wesson .30cal. English regulation sights and 477lb. trigger pull, British army ammunition, at 20yds. Score, 7777—35.

THE BISLEY RIFLE MEETING.

[From a Special Correspondent.]

BISLEY, Saturday evening, July 11.—All is prepared to begin at "gun fire" Monday morning. The bank at the "running deer" has been cut down still lower, so there will be an uninterrupted view of the "deer," and bad shots will not be able, as formerly, to put down misses to the deer being partly hidden by the bank.

The revolver competitions, which last all through the meeting, may be entered for at any time, so nobody has troubled yet to enter for them. There are usually some thousand or more entries; but for the Smith & Wesson revolver aggregate all entries close before 9 o'clock Monday morning. Of course, none except those in the front rank of revolver shooting enter for this prize. There may be one or two entries Monday morning, but practically all who are likely to enter have already done so. There are only six at present known to have entered. They include Major MacKerrell (Colb.), Mr. Day, Mr. Walter Winans (Smith & Wesson), Mr. East (Smith & Wesson), Major Hallett (Colb.), and one other whose name has not transpired. Between these there is going to be the fight for the revolver championship of England.

July 13.—The meeting opened in fine weather but later in the day it came in very wet. The revolver range was not quite in working order, owing to the timing clock breaking down. The best score made in revolver during the day was a 39 made in series No. 2 of the revolver series by Mr. Walter Winans. Mr. Haig being second with 31. For the Smith & Wesson revolver aggregate there are 12 entries, several competitors having waited till the last moment to enter; these include Mr. Haig and C. F. Lowe.

July 14.—It has been fine but windy all day, except for a short time in the early morning and late in the evening. Mr. Walter Winans took these opportunities to shoot and made a 40 out of a 42 in the near San Rafael. The San Francisco Turner Shooting Club was the first to announce its results. The shooting was made, Daniels, Eastman, Pope and Hussey lending with different kinds of shooting. Following are the scores made to-day, distance 200yds., standard American target, re-entry allowed:

All-Comers' Off-hand Match.
H M Pope.....87 C B Browne.....72 O Moore.....65
84 A S Hunt.....71 D Martin.....61
M T Day.....77 D Bayley.....68 D N Winn.....60

All-Comers' Rest Match.
F Daniels.....112 I B Thomas.....102 E E Patridge.....88
J R Munroe.....110 D N Winn.....99 S Johnson.....87
W P Thompson.....108 H Willard.....96 A H Ballard.....85
M R Barter.....106 W I Getchell.....95 H W Wood.....84
J N Eames.....105 W Conway.....92

Pistol Match, 50yds.
J F Bellows.....88 H W Gill.....81 D Martin.....76
C Williams.....85 A L Greene.....78 A G Stevens.....74

SAN FRANCISCO, July 19.—The regular monthly shooting of three prominent Schuetzen clubs took place to-day at Schuetzen Park near San Rafael. The San Francisco Turner Shooting Club was the first to announce its results. The shooting was for five classes and medals, for which there were 13 contestants, each of whom shot 20 times for a possible 500 rings each. They were as follows: Joe Straub 530, F. Acker 392, L. Bang 294, L. Brune 322, Captain Zimmer dropped out, R. Finkling, Jr., 333, B. Thierbach 374, O. Hauser 210, Herman Kleber 138, A. Eiermann 215, Geo. Heitzmann 277, F. Kommer 144, Gus Schwartzmann 275, John Utschig 427, F. Attinger 387 and Jacob Schabarum 330. The medals were awarded as follows: Champion class, John Utschig, Jr., 427 rings; first class, F. Attinger 387; second, L. Thierbach 374; third, Jacob Schabarum 330. The Jacob medal for the first best shot was won by H. R. Brown, who made 23 rings. The contest with the California Schuetzen Club took longer to decide who were the winners, as the method was more arduous. The shoot was at bullseyes, and no less than a score of persons shot at 10 each on an average. Fifteen of these scored less than 1,000 points, which is the dividing point between a good shooter and an indifferent one. The prizes were small cash sums of from 25 cents to \$5. A. Strecker, first prize, 262 points; F. O. Young 315, Capt. J. Klein 332, A. Reubold 414, Von der Heide 416, A. Johnson 430, J. A. Burmeister 735, E. A. Huber 781, A. G. Hehr 783, L. Babin 800, L. Simon 919, A. Polak 947, Mr. Waller 958, Mr. Rumotte 960, E. Hoyer 1,073, C. Helm 1,031, H. Walther 1,100, G. Rogers 1,153.

Considerable interest was shown by the veterans in the shoot of the California Schuetzen Club of Cadets. They, like their sires, shot at bullseyes and scored well. They were awarded cash prizes and medals by the old club. The scores were as follows: First class, G. Glindemann 832 points; second, L. Reubold 376. Their Jacoby medal for the last best shot went to L. Reubold, 23 rings. The first best bullseye was won by Glindemann, second by Reubold, third by J. Utschig and fourth by R. Finkling, Jr.

LONDON, July 24.—At the end of the rifle tournament at Bisley to-day the Marchioness of Salisbury presented the prizes to the winners. The Canadians received an ovation, taking prizes to the amount of £881.

CREEDMOOR, July 24.—The second sharpshooters' match of the season was shot to-day at Creedmoor. The weather was fair, with a light six o'clock wind blowing across the range. Some excellent scores were made, as follows, 5 shots each at 200 and 500yds., possible 60: Cavalry, George R. Kelley, 41, Infantry, Frank Stuart, N.C.S., 69th 47, J. Gormly, Co. 9, 69th, and W. H. Truman, Co. H, 9th 46. H. M. Field, Co. F, 23d; G. L. Hoffman, Co. H, 7th; J. A. McKinnon, Co. K, 23d; W. H. Palmer, staff, 7th; R. Findlay, Co. G, 23d, and McC. Butt, staff, 12th, 45. J. T. Kirby, Co. A, 7th; H. Coburn, Co. C, 7th; M. Osborn, Co. I, 7th; J. Wright, Jr., N.C.S., 7th, and A. Stein, Co. C, 7th, 44. J. B. Frothingham, staff, 2d brigade; E. P. Sands, Co. B, 7th; J. Hale, supernumerary; J. V. Cochran, Co. D, 7th; R. M. Kallach, Co. H, 7th; J. Fox, Jr., Co. I, 7th, 43. J. W. Halstead, Co. C, 7th; W. M. Bower, Co. C, 7th; John Comé, Co. B, 12th; W. J. Underwood, Co. H, 7th; J. H. Nozigh, Co. H, 12th; C. W. Simmons, Co. A, 23d; F. W. Perkins, Co. F, 7th, and H. F. Richers, Co. B, 12th, 42.

THE EXCELSIOR RIFLE CLUB of Jersey City, has arranged to hold their annual prize shoot on Friday and Saturday, Aug. 21 and 22, at Armbruster's Schutzen Park, Greenville (Jersey City, N. J.). Three hundred and fifty dollars will be distributed in cash prizes on the bullseye and ring targets. Elegant prizes also have been contributed, to be given to the members of the club on the target of honor. These prizes are easily reached from all trains running into Jersey City. Marksmen from Newark should come by way of Central R. of N. J., stopping at Greenville Station. The prizes are at the corner of Bergen and Seaview avenues.—F. G. KITTEDGE.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the *Forest and Stream*, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

July 29-31.—M. H. Rapell's Tournament, Milford, N. J.
Aug. 6-7.—Second Annual Tournament of the Island Gun Club, of Wheeling, W. Va. R. B. Burri, Sec'y.
Aug. 11-14.—Fourth Annual Tournament of the Standard Keystone Target Company, New London, Conn.
Aug. 12-14.—The Missouri State Amateur Shooting Association Annual Tournament, at Lexington, Mo. G. A. Sturges, Sec'y.
Aug. 25-27.—Buffalo Tournament, assisted by the Inter-State Manufacturers' and Dealers' Association, \$1,000 guaranteed.
Aug. 30-Sept. 1.—Hackettstown Gun Club. Two days at targets. For programmes address James L. Smith, Hackettstown N. J.
Sept. 8-11.—Grand International Tournament at Detroit. Live birds and standard Keystone targets.
Sept. 15-17.—Knoxville, Tenn., Inter-State Manufacturers' and Dealers' Association.
Nov. 3-5.—Staunton, Va., Inter-State Manufacturers' and Dealers' Association.
Nov. 17-19.—Savannah, Ga., Inter-State Manufacturers' and Dealers' Association.

PENNSYLVANIA ASSOCIATION.

WILLIAMSPORT, Pa., July 25.—The Pennsylvania State Sportsman's Association was organized at Corry, Pa., in August, 1890, during the tournament held by the Keystone Target Company.

A number of the Pennsylvania shooters got together through the efforts of Mr. H. A. Penrose, and an organization was effected and the following officers elected: President, H. A. Penrose, of Corry, Pa.; Vice-President, Joseph Thumma, Jr., of Germantown; Treasurer, Jas. Wolstencroft, of Frankfort; Secretary, F. F. Davidson, of Pittsburgh; Directors—W. H. Wolstencroft, F. F. Davidson, C. E. H. Brelsford, W. H. Starbird and F. E. Mallory.

Nothing further was done until May last, when, during the interstate shoot held at Harrisburg, a meeting was called at the Commonwealth Hotel, and after a little work was done, such as appointing a place, officers, etc., it adjourned to meet at the same place on Wednesday, July 23, 1891, the object of selecting a place and date for holding the first State shoot.

At this meeting quite a number of clubs were represented by delegates, but through the unfortunate but unavoidable absence of the treasurer and his books, it was impossible to determine the number of clubs that were in good standing. It was, therefore, decided that all clubs were present, and the delegates at the meeting could only be recognized as qualified members.

Mr. H. A. Penrose presided. The secretary, Mr. E. E. Shaner, of Pittsburgh, was present and took the minutes of the meeting. A very spirited discussion was had as to where the first State shoot should be held. Williamsport, Harrisburg, Reading and Pittsburgh each had delegates present who set forth the advantages of their place, possession of which was unanimously decided to hold the first shoot at Williamsport, and the date, Sept. 25, 1891, and Oct. 1 and 2 were selected, two days at targets and two days at live birds.

Williamsport undoubtedly is a wise selection, as it is very centrally located; with its 35,000 population of good live inhabitants, it is a thriving city. It also has first-class railroad accommodations. The Pennsylvania, Reading, Beach Creek and Pine Creek railroads terminate at Williamsport. The Williamsport Gun Club grounds are undoubtedly among the finest in the United States, costing the neat sum of \$15,000, complete, and containing eight acres of land, enclosed with a 10ft. fence, nicely painted. The grounds are adapted to all kinds of athletic sports, such as bicycle riding, tennis, base ball, shooting, etc. The shooting grounds are as hard as a house floor with a hard bed of sand, and the entrance to the grounds is very pretty and artistic, comprising a covered gateway for both carriages and pedestrians and offices combined. To the left of this is a shooting house for the rifle contingent, and directly east of this and facing the shooting grounds is a beautiful grand stand, capable of seating twelve or fifteen hundred people, which cost complete nearly \$4,000. In the grand stand are 1,000 seats, a place for dining, a bar, a kitchen, with a kitchen, all of which will be very convenient for this meeting.

This large room will be partitioned off during this shoot, and convenient booths erected on one side for the accommodation of manufacturers of guns, ammunition, etc., to display their goods, and in case of bad weather it will be found much more desirable than tents.

Pennsylvania is the second State in the Union in number of gun clubs and shooters, and if each club does her duty and sends a team or two or three representatives, this will undoubtedly be the largest meeting of the year. The location, so central to New York State, New Jersey, Maryland, each of which will undoubtedly send large delegations, will tend to swell the crowd to large proportions.

Special railroad rates will be furnished all shooters, and special hotel rates will also be obtained at one of the finest hotels in the State. Everything will be done by the Williamsport Gun Club for the pleasure and convenience of all present.

New York and Illinois each have had very successful meetings, and it is to be hoped that the shooters of the State of Pennsylvania will come forward and show to their neighbors that they can hold an equally successful meeting. The shoot will be under the management of the Williamsport Gun Club, which will insure to all present fair treatment and a hearty welcome, as many can testify who have attended their annual tournaments.

The sportsmen of Pennsylvania extend to the sportsmen of other States a cordial invitation to be present at their first State shoot. Two sets of traps will be in constant operation for sweepstake shooting, and ample opportunity will be given everybody present to get all the shooting they wish. A royal good time awaits all comers, and it is hoped that this invitation will be largely accepted, and that we will see in Williamsport on this occasion the largest number of shooters ever congregated together at a single tournament.

The programmes will be out about the middle of August, and can be had by addressing Mr. N. A. Hughes, 343 Pine street, Williamsport, Pa. Ample opportunity will be cheerfully given by him. It will be well for visiting sportsmen to engage their hotel accommodations early, in order to give the management as little trouble as possible.

H.

ATLANTIC CITY, N. J., July 28.—At the Atlantic City Gun Club A. C. Griscom won the Delissa medal, breaking 88 out of his 100 birds. The following is the score of this week's shoot, each man shooting at 25: Capt. Marrie 22, A. C. Griscom 21, J. Young 21, C. Minner 19, C. Marsden 19, Ed Plum 19, A. Adams 16, C. Sanders 14, M. Duncan 11, Sweepstakes of 10 birds each. First event: A. C. Griscom 9, C. Sanders 9, C. Minner 9, C. Marsden 9, C. Marsden 6, M. Duncan 5. Second event: A. C. Griscom 9, C. Minner 8, C. Marsden 8, C. Sanders 7, J. Minner 6, Capt. Marrie 5, J. Mitts 2. Third event: Capt. Marrie 8, C. Minner 8, C. Sanders 7, A. C. Griscom 7, C. Marsden 5. Fourth event: C. Minner 10, Capt. Marrie 10, C. Sanders 7.

INDIAN HARBOR Y. C.—The third annual regatta of the Indian Harbor Y. C. will be sailed off Greenwich on Saturday, the 24th, being classified on racing length as follows: A, cabin boats and cutters over 8 ft.; B, 32 and under 8 ft.; C, 27 and under 2 ft.; D, under 2 ft.; E, cabin cats; 1, open scoops 23 ft. or over; 2, under 23 ft.; 3, open cats 23 and under 3 ft.; 4, of 20 and under 23 ft.; 5, under 23 ft. The course for classes A, B, C and D will be 15 miles and for the others 10 miles.

A DESERTED PIER.

A GRAY, time-stranded mariner,
Left where some trade's fair bubble sank;
These are not golden streams that stir
Its gaunt piles' palsied rank,
As shell fleets ride
The lipping tide,
Launched as it climbs some white bar's bank.

And as old tombstones sink in graves,
The worn spiles topple toward the slope
Of rank green, spray-bloom crested waves,
As these vast mounds, o'er love and hope,
Are shaped by storms,
When shrouded forms
With poniards drawn through heaven grope.

And at flood tide each windy night
You seem to hear a creaking block,
Or whistle of some boatwain sprite
Across the partly sunken dock.
A phantom barge
Doth there discharge
Green rolls that land with pond'rous shock.

Then rending, plates of silver gleam*
The planks with royal pavement lay,
And clustered gems in radiance stream,
Strewn broadcast on the molten way,
Bursting with light,
Though draped the night,
As though it mourned earth's closing day.

* This refers to the phosphorescence.

E. F. H.

EASTERN Y. C. SPECIAL RACES, JULY 22.

THE programme for the special races of the Eastern Y. C. was very carefully arranged by the committee to attract entries, the regular prizes for yachts in racing trim being supplemented by others for those in cruising trim with handicaps, while the offer was made to arrange either as a sweepstakes race if the owners preferred. The entries, however, were few, the cruisers being entirely unrepresented. The three classes which filled were the schooner class, with Mayflower, W. A. Gardner; Marguerite, R. S. Palmer, and Eneone, Col. Hugh Cochrane; the 46ft. class, Beatrix, Bryant and Prince; Alborak, J. B. Paine; Barbara, C. H. W. Foster; Oweene, A. B. Turner; Sayonara, Bayard Thayer, and Gossoon, 40ft., Adams Bros.; and the 30ft. class, Mildred, W. H. Williams; Hawk, Gordon Dexter, and Chieftain, Aaron Brown. The course for the two larger classes was from off Half Way Rock, past a mark off Nahant, 7 miles, then around a mark off Minot's Ledge, 10½ miles, and home by the same course, 35 nautical miles; the 30ft. class rounding Harding's bell buoy in place of the Minot's mark, 28 miles. The start was set for 11:15, with the usual 5 minutes for crossing. The day was clear and warm, with a smooth sea and light S.E. wind that held about the same through the race.

The starting signal was given exactly on time, the three schooners crossing very deliberately, as the times show, all carrying balloon jibtopsails and maintopmaststaysails. In the 46ft. class there was no play racing, but the six boats went over the line within the same half minute, the last being but 43s. behind the first. Beatrix was almost on the line when the whistle caught her, luffing along to the mark, while Oweene, sailed by Mr. J. B. Paine, and going over at once with a good start. Alborak followed, then Sayonara, Oweene and Gossoon, while Barbara was last. Oweene made a very good start, running to windward of Sayonara and Gossoon. The 30ft. class took a lazy start, Mildred in the lead. The full times of the start were:

SCHOONERS—PREPARED 11:10, START 11:15.			
Eneone.....	11 16 28	Mayflower.....	11 18 44
Marguerite.....	11 17 55		
46FT. CLASS—START 11:25.			
Beatrix.....	11 25 15	Oweene.....	11 25 31
Alborak.....	11 25 20	Gossoon.....	11 25 36
Sayonara.....	11 25 28	Barbara.....	11 25 48
30FT. CLASS—START 11:30.			
Mildred.....	11 31 00	Chieftain.....	11 31 17
Hawk.....	11 31 05		

Balloon jibtopsails were set, with clubtopsails. Beatrix drew away from the start, while Oweene, after a short bout with Sayonara, began to leave her. Alborak lagged astern with Barbara and Gossoon. Mildred led her class from the start. Mayflower made the best showing of the schooners. The times at Nahant mark were:

	Elapsed.
Eneone.....	12 04 48
Mayflower.....	12 05 20
Marguerite.....	12 08 48
Beatrix.....	12 18 02
Oweene.....	12 19 24
Sayonara.....	12 19 52
Alborak.....	12 21 16
Barbara.....	12 22 09
Gossoon.....	12 25 35
Mildred.....	12 30 39
Chieftain.....	12 37 31
Hawk.....	12 40 21

Marguerite and Mayflower luffed short around the mark and stood off shore for the 10-mile beat dead to windward to the outer mark. Eneone, however, held her craft inshore, where she finally profited by a better wind.

The beat to windward was just what those who have been so busy for some time in "drawing lines" to prove that the Eastern boats must beat Gloriaana had been looking for. It was the first performance of Sayonara with the Eastern fleet after her vicissitudes about New York, and so far as the result was at all conclusive it justified Captain Watson's statement that Gloriaana will head her class for the season. Unfortunately, before Sayonara had made more than half the leg her bobsay parted and she was compelled to withdraw, but enough had been seen to show that though she could not hold either Beatrix or Oweene on the wind, at the same time there was not enough difference between her and the other two on the whole that there certainly was between her and Gloriaana when the race came.

Beatrix made a very close fight of it off shore, the difference in 10 miles being almost imperceptible. Alborak and Barbara made another pair, well astern of the leaders but having a close fight together. Sayonara held inshore and gained somewhat by tide and wind, being a good third when she broke down. Gossoon brought up the procession, saving her time on Alborak and Barbara. The 30-footers sailed a freer course, Mildred still leading, having 5m. over Chieftain at the outer mark. The times at Minot's were:

	Elapsed.
Beatrix.....	2 14 45
Oweene.....	2 15 56
Eneone.....	2 16 29
Mayflower.....	2 18 21
Alborak.....	2 22 01
Marguerite.....	2 22 05
Gossoon.....	2 23 00
	2 25 52

The inshore tack had paid both Eneone and Alborak, and the former led her class, while Alborak had passed Barbara. With the wind backing to starboard the fleet ran back to Nahant, the pace being very even in the 46ft. class, while Mayflower made up on both of the shorter schooners. The times at Nahant were:

	Elapsed.
Beatrix.....	3 33 50
Mayflower.....	3 34 05
Oweene.....	3 35 17
Eneone.....	3 37 52
Marguerite.....	3 40 38
Alborak.....	3 40 50
Barbara.....	3 43 10
Gossoon.....	3 43 25

The 30-footers were not timed, but Hawk parted her preventer backstay and withdrew on this leg. The last leg was a reach with a freshening breeze, Mayflower and Beatrix doing the best work. The times for the leg were:

	Elapsed.
Mayflower.....	4 12 25
Eneone.....	4 18 43
Marguerite.....	4 20 15
Beatrix.....	4 20 57
Oweene.....	4 23 39
Alborak.....	4 29 05
Barbara.....	4 32 26
Gossoon.....	4 34 54

The official times for the race were:

	Start.	Finish.	Elapsed.	Corrected.
Mayflower.....	11 18 44	4 12 25	4 53 41	4 53 41
Eneone.....	11 16 28	4 18 43	5 02 15	4 54 53
Marguerite.....	11 17 55	4 20 15	5 02 30	
Beatrix.....	11 25 15	4 20 57	4 55 57	
Oweene.....	11 25 31	4 23 39	4 58 29	
Alborak.....	11 25 20	4 29 05	5 04 05	
Barbara.....	11 25 48	4 32 26	5 07 26	
Gossoon.....	11 25 36	4 34 54	5 18 54	
Sayonara.....	11 25 28	Disab.		
Mildred.....	11 31 00	3 55 10	4 25 10	
Chieftain.....	11 31 17	4 33 25	4 33 25	
Hawk.....	11 31 05	Disab.		

Mayflower wins \$100, Beatrix \$100 and Mildred \$75. The regatta committee included Messrs. W. S. Eaton, Jr., R. D. Sears, P. T. Jackson, Jr., A. N. Rantoul and H. H. Buck.

CORINTHIAN Y. C. SWEEPSTAKES, JULY 23.

FOLLOWING the race of the Eastern Y. C., the Corinthian of Marblehead arranged a sweepstakes for the 46ft. class, \$25 each and \$100 added by the club, which proved one of the best races of the season. Sailed in a fresh S.E. breeze, increasing during the race, and with a moderate sea over the 24-mile triangle of the Eastern Y. C., from Marblehead Rock to Nahant, White Spar and then the Graves, the course and conditions gave as good a test of the fleet as one could desire, and proved that neither Beatrix nor Oweene are so far ahead of Sayonara as to warrant the belief that either can dispose of Gloriaana. The question will be soon settled by actual racing that all speculation amounts to little; the many chances that have been made in all the boats may produce some unexpected results, but the probabilities are that Gloriaana will head the fleet just as decidedly at the end of the season as she does now, though probably by a smaller margin in the cases of Oweene and Beatrix than was shown in the New York races with the rest of the fleet.

The race was started at 11:10 from the gun, the steam yacht Melissa being loaned by Mr. Eaton as judge's boat. Beatrix and Oweene had been chasing each other back of Marblehead Rock before the gun, each figuring for the lead, and when the time was nearly up Cap' Barr started around the north side of the rock, to leeward, for the line, leaving Cap. Crocker behind him. It so happened that the line was only between the judges' boat and a small boat, and not to the rock, a fact that Cap. Crocker had counted on, so he took Beatrix to the south of the rock, then between it and the mark boat and wheeled across the line ahead of Oweene with a lead of nearly half a minute. Gossoon was first over on starboard tack, meeting Barbara and putting her about.

The times of the start were:

Gossoon.....	11 10 17	Sayonara.....	11 10 02
Barbara.....	11 10 25	Oweene.....	11 11 08
Beatrix.....	11 10 40		

The first leg was dead to windward, with wind enough to make a jibtop of doubtful advantage, the boat taking time in as they went toward the outer mark. Beatrix and Oweene naturally clinched very early in the fight, holding a long tack off shore. Cap. Watson took Sayonara along inshore, while Barbara and Gossoon brought up the rear. When the leaders met in cross tacking Sayonara passed between Beatrix and Oweene, there being no great difference in the three from the start. Beatrix did not get a doubt from the start, while Oweene did not in the early part of the race, picking up as the outer mark was neared. She has carried a poor boom in all her races, and sprung it badly on this leg. The times at the E. Y. C. spar buoy were:

	Elapsed.
Beatrix.....	12 49 29
Oweene.....	12 50 59
Sayonara.....	12 51 31
Barbara.....	12 51 54

Gossoon parted the hook on the bowsprit which held her jib tack and was forced to withdraw before the mark was reached. On the free reach to the next mark, the Graves, Beatrix continued to gain, having a sure hold on first place, the fight being now for second between Oweene and Sayonara. The times at the Graves were:

	Elapsed.
Beatrix.....	14 05 58
Oweene.....	14 08 28
Sayonara.....	14 11 02
Barbara.....	14 17 52

Beatrix had made the run under lower sails and clubtopsail, the other two carrying intermediate jibtopsails, while Barbara had a baby set. All jibed around the mark and made for home on a reach under the same canvas, the times over the last leg being:

	Elapsed.
Beatrix.....	2 20 39
Sayonara.....	2 34 43
Oweene.....	2 35 54
Barbara.....	2 40 02

The full times were:

	Start.	Finish.	Elapsed.
Beatrix.....	11 10 40	2 30 39	3 20 39
Sayonara.....	11 11 02	2 33 54	3 23 54
Sayonara.....	11 11 02	2 34 43	3 23 43
Barbara.....	11 10 25	2 40 02	3 30 02
Gossoon.....	11 10 17	Disab.	

Beatrix wins first prize, \$157.50, and Oweene \$67.50. The judges were Daniel Appleton, W. N. Merriam and Lawrence Whitcomb.

LAKE YACHT RACING ASSOCIATION, 1891.

ROCHESTER Y. C., JULY 20.

THE run from Toronto to Rochester was made in good weather and without incident, in fact the circuit this year has been very tame and free from excitement, with nothing like the Kings-ton episode of last year, the Oswego race of 1884 or the storm of a year later to enliven the ordinary round of racing. The course, laid out on the lake off Charlotte at the mouth of the Genesee River, proved to be but 8½ miles instead of 12, so the first and 46ft. classes sailed three rounds, the 53 and 30ft. two rounds and the 25ft. one round. The wind was northwest moderate, with a little sea. The schooner Oriole was ready but refused to start, leaving Vreda and Onward, the Boston sloop lately bought in Rochester. In the 46ft. class were Yama, Verve No. 2, White Wings, Aggie and Vera. The 40ft. class had no starters, but in the 35ft. were Katie Gray, Dinah, Alert, Modjeska and Gracie. In the 30ft. class were Samoa, Amelia, Lotus, Nadia and Erma; in the 25ft. class Maud B., Odie, Kelpie, Romola, Undine, Restless, Alta and Gonza. Onward lost her topmast shortly after the start but still finished the round before giving up. Yama had a very easy victory in her class, while Verve beat White Wings in a way that she could not do two years since. Katie Gray, the old Oswego racer, made good work in her class, but her chief rival, Dinah, was disabled by the loss of a cross-tree. Samoa led her class at first but was caught by Nadia on the second round, the two finally tying on elapsed time, which made Nadia first on allowance. Erma in the same class lost her mast when leading on the first round and was towed in. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Vreda.....	11 10	4 35 30	5 25 30	5 25 30
Onward.....	11 10	Disab.

Gonza.....	12 00

In the evening a supper was given to the yachtsmen, followed by the usual toasts.

OSWEGO Y. C., JULY 23.

The fleet was small in numbers by the time that Oswego, the end of the circuit, was reached, and the entry lists were very slim, no Toronto yachts, save Samoa, starting. The race was sailed in a strong wind. Laura, the old Kingston boat, was alone in the 40ft. class, with Yama alone in the 46ft. Erma was on hand again after her mishap. Samoa and Dinah were unfortunate in parting halliards. The times were:

	46FT. CLASS.
Yama.....	10 00 00
Laura.....	10 00 00
Katie Gray.....	10 00 00
Gracie.....	10 00 00
Dinah.....	10 00 00

	40FT. CLASS.
Samoa.....	10 00 00
Erma.....	10 00 00
Nadia.....	10 00 00
Lotus.....	10 00 00

	35FT. CLASS.
Maud B.....	10 00 00
Kelpie.....	10 00 00
Grace L.....	10 00 00

This ended the racing and next day the yachts started for their home ports. The round was shorter than usual, the weather being so fine that the runs from port to port were quickly made with little detention from calms or calms, while the races but five in number, were sailed without a postponement. The one-gun start was used in all classes, and with good results, though some who are used to the old go-as-you-please, get-over-when-you-can style are not yet in favor of the new method. The experiment of one official time keeper, tried for the first time, has proved a success, Mr. Ambrose performing his duties in a way satisfactory to all.

DORCHESTER Y. C.

THE Dorchester Y. C. sailed its second annual open race on Saturday, with a good list of starters and plenty of wind, light at the start but blowing very fresh at times during the race. Its direction was W.S.W. The race was open to yachts of 28ft. and under from all clubs in Boston Harbor, the courses and classes being:

First class—From the starting line to Cow Pasture bar buoy No. 6, leaving it to port, to black can buoy No. 7 off Castle Island, leaving it to starboard, to Sculpin Ledge buoy No. 2, leaving it to port, to red can buoy No. 6 on the lower middle, leaving it to port, to Cow Pasture bar buoy No. 6, leaving it to starboard, to the starting line, 10 miles. Limit of time, four hours.

Second, third and fourth classes—From the starting line to spar buoy on Half-Tide Rock, leaving it to port, to Old Harbor buoy No. 4, leaving it to port, to flagboat at judges' line, leaving it to port, to spar buoy on Half-Tide Rock, leaving it to port, to Old Harbor buoy No. 4, leaving it to port, to starting line. Distance, 7 miles. Limit of time, three hours.

The classification was as follows: Class 1, 21 to 28ft.; second class, all jib and mainsail yachts less than 21ft. sailing length; third class, all cat-rig yachts 18ft. and under 21ft. sailing length; fourth class, all cat-rig yachts under 18ft. sailing length. Three new Cape boats were present, City of Chicago, Gypsy and Harold E. The times were:

SAIL PLAN, 2 1/2-RATER "IOTA."

2 1/2-RATING—25FT. CORRECTED LENGTH.

OF the many great changes of recent date in yachting, none perhaps is more marked than that in the formation of racing classes; both in the process of growth and in the variety and at the same time uniformity of the yachts which constitute them. The growth or formation of a class under the old conditions was a matter of years; yachts of various odd lengths and measurements were added one at a time, by building, altering, or purchasing from another locality, the result being a collection of craft varying so greatly in size that no allowance table could make the racing fair and equitable under all conditions of weather. Up to ten years back in this country and half as long in Great Britain, there was little difference in type between the boats in any one class; just as all American boats were shoal centerboard sloops, so were all British yachts cutters of little or no beam. Of late years, however, there has been an intermixture of types, especially on this side, where centerboards both shoal and deep, with inside and outside ballast, have raced with wide and narrow cutters, under all possible modification of both sloop and cutter rig.

The 70ft. class offers an excellent example of the former diversity in size and type, including Wenonah, Hildegard and Mischief of 61ft., Vision 62, Huron 63, Thetis 64, Stranger 65, Ileen 65, Fanny 66, Shamrock 68, Gracie 69, Katrina 70, and Bedouin and Titania both over 70ft. These yachts, which have constituted the 70ft. class from 1880 to 1890, and have raced together many times, include almost every variety of model, from the flat-iron Fanny through the deeper centerboards and compromises and the moderate cutters to the extreme "plank-on-edge" Ileen. The other American classes were much the same in composition, while the British classes differed in being confined exclusively to keel craft of from 4 1/2 beams in the older to 7 beams in the newer boats.

The vast change between such a state of affairs and that existing to-day is clearly shown in the class which is now monopolizing the attention of American yachtsmen, the new 46ft. This class, composed of ten fine racing craft, representing a total outlay up to the present time of at least \$150,000, has been built since the close of the last yachting season, being at that time hardly more than a matter of gossip and speculation. Up to last fall, though there were half a dozen boats old and new of 46ft. l.w.l. or under, the class was not known in racing, and it may be said that the entire fleet has been built to order at the shortest possible notice.

The characteristics of the old classes were, as we have noted, uniformity of model up to a comparatively recent date, and diversity of size; in the new classes the exact reverse is found, a uniformity of size and diversity of model. In the matter of size, the prevailing rules in this country are still such as to permit vessels of different racing measurements in the same class; this difference is confined to the sail plans, the waterline lengths in all cases being the same or nearly so; the advantage of building to the class limit being generally appreciated. On the other side a still higher degree of uniformity has been reached by means of the classification as well as the measurement being by length and sail area combined, each boat being built to the maximum limit of the class, which is at the same time her racing measurement, so that she neither gives nor takes time from her opponents.

In the matter of model, while the old extremes of sloop and cutter have disappeared entirely from British as well as American racing, each class still includes a wide range of types, and for the present at least there is no tendency toward the production of a single type which shall monopolize all the racing and bar all experiments, as was once the case on both sides. Just now a very wholesome type of keel cutter is in the majority in America, but there is still every opportunity for competition by centerboard boats, the rule favoring one type as much as the other. In Great Britain the keel cutter of 4 1/2 beams or less has rapidly driven out the old boats of 6 to 7 beams, but at the same time the centerboards are now making a successful fight with the best of the keel craft.

While it is only too true that the improvement of racing yachts has in a great measure put a stop to general racing, it is still very plain that such a class as the 46 or 40ft. offers opportunities for

comparison and study such as were never met with under the old conditions in the racing of all lengths and sizes of boats together.

The main cause for the disappearance of extreme types and the production of moderate craft of uniform size in each class is easily discovered, as its influence has been the same on both sides of the Atlantic. On this side the improvement in type has been coincident with the adoption and extension of the Seawanhaka rule, based on the two factors of length and sail area; and in Great Britain the corresponding change dates from the end of 1886, when the old tonnage rule was replaced by the same length and sail area rule in another form. Though widely used in this country for some years previous to its complete adoption in Great Britain, the rule, in several different forms originated with Mr. Dixon Kemp, being proposed in the *Field* so long ago as 1880. As the rules stand to-day they are nearly identical in effect, though the measurement of sail is somewhat different in the two countries, while the unit of measurement is quite different, being in one case rating, and in the other feet of corrected or sailing length.

Almost the only class which is sharing the racing with the new 46ft. is another new one, whose limit is 25ft. corrected length. Though small in numbers as yet, it promises to grow rapidly by next season, while its lease of life is likely to be even longer than that of the 46ft. class. The rapid development of modern classes is well shown by the history of this same class in Great Britain, where it is known as the 2 1/2-rating. The growth and changes of this class, which has produced nearly 30 racing yachts within three years, is both interesting and instructive. It dates from the adoption by the Y. R. A. of the rule, $L \times S A = \text{Rating}$, in the

winter of '86-7 after a long discussion. The new classes under the rule were: 2 1/2, 5, 10, 20, 40, 60 and over 60 rating. The allowance of sail for the different lengths of l.w.l. in the 2 1/2-rating class was as follows, the third and fourth columns giving the corresponding figures by the Seawanhaka rule:

L.W.L.	Y.R.A.	Sea.	SAIL AREA.	L.W.L.	Y.R.A.	Sea.	✓
18.....	833	1,024	32	25.....	600	625	25
19.....	789	961	31	26.....	577	576	24
20.....	750	900	30	27.....	555	529	23
21.....	714	841	29	28.....	536	484	22
22.....	691	784	28	29.....	516	441	21
23.....	652	729	27	30.....	500	400	20
24.....	625	676	26				

In the destruction of the old tonnage classes, the smallest, 3 tons, about 29ft. l.w.l. and 1,000ft. sail area, became 5-raters, there being but one or two odd boats as small as 2 1/2-rating. There were, however, the Southampton "lengthers," of which we spoke last week, and in 1887 two boats built for the 21ft. l.w.l. class were so canvassed as to race at times as 2 1/2-raters. One, Madcap, was 21ft. 8in. l.w.l., 7ft. 4in. beam, 5ft. 4in. draft, and carried 693 sq. ft. of sail, and the other, Thalassa, was of nearly the same dimensions. Both were rigged as pole-masted sloops, with masts well forward and mainsail and jib. The racing about Southampton in that year was partly under the length rule, partly by tonnage, and partly by rating, but the following year saw the rating rule fully established to the exclusion of the other two. The first boat really built for the class was the Lady Nan, 23ft. l.w.l., 8ft. 4in. beam and with 632ft. of sail, sloop rigged; designed and built by Mr. Arthur E. Payne, a very successful craft.

In 1890 the class experienced a veritable boom, a dozen boats being built, and by the leading designers, Payne, Watson and Elft, among them being Iota, whose lines appeared last week and whose sail plan is now given, being enlarged from *Le Yacht*, to which paper we are indebted for the sketch of Iota under sail. The new Southampton boats were longer than the old, the Watson boats Queen Mab, Thief and Cosette being about 24ft. 6in. l.w.l. by 5ft. 2in. beam, while the Payne boats Humming Bird and Cock A' Whoop were still longer, just under 26ft., with about 7ft. 6in. beam. The latter two were lug-rigged, as lately shown in the Jack O' Lanthorn, the Watson boats being sloop-rigged. The

class included several centerboards and various rigs, but the best boat when the season closed was Humming Bird, keel.

Next year, 1890, came a new crop, distributed on the Clyde, the Solent and in other places, Babe, Camilla, Janetta, Miss Dolphin, Bandersnatch, Princess Ida and others of less note. On the Solent, where the racing is always hottest, Babe, a Payne boat, 26ft. 9in. l.w.l., with 532ft. of sail, a lug mainsail and jib, led the list with 25 prizes to 30 starts. The present season finds about 15 new 2 1/2-raters afloat, and though it is too soon to pick the winners, the two Watson boats, Elfin, 26ft. l.w.l. x 7ft. 6in. beam, and Oronsay, 25ft. l.w.l. x 7ft. 2in. beam, both centerboard boats, are beating the keels in a most astonishing manner on the Clyde. The rig shown on Iota is the pole-masted cutter, and has been used on a number of the 2 1/2-raters, but this and the Solent sloop rig have been displaced both on the Solent and Clyde by the lug mainsail and jib, the bowsprit being very short and in many cases being dispensed with entirely. The length has expanded from 21ft. in 1887 to 26ft. in 1891, the beam varying from 6ft. 6in. to 7ft. 6in., and the draft being about 5ft. 8in.

The dimensions of Iota's sail plan are:

Mast, abaft fore end of l.w.l.	6ft. 11in.
deck to hounds.....	22ft.
deck to truck.....	27ft. 8in.
diameter at deck.....	5in.
Boom.....	23ft. 6in.
Gaff.....	15ft. 10in.
Bowsprit, beyond l.w.l.....	13ft.
diameter at gammon iron.....	10ft. 4in.
Spinnaker boom.....	21ft. 8in.
Mainsail, sq. ft.....	444
Staysail, sq. ft.....	89
Jib, sq. ft.....	147

To'tal.....670
Y. R. A. rule.....701
Seawanhaka rule.....716

The official measurement gives 714ft. by the Y. R. A. rule, the difference probably being due to a slight error in enlarging the plan. The figures show, however, the results by the two rules on the same sail plan. In the American boats the rig has been simplified by the omission of the staysail and shortening of the bowsprit, so that only a mainsail and small jib are carried. The lug mainsail as shown on the Jack O' Lanthorn a few weeks since, has been tried on one, but was discarded for the conventional boom and gaff sail. From all appearances the class is likely to produce boats of not over 26ft. l.w.l. and about 7ft. 6in. beam, at least there is little probability of a much longer and narrower boat proving successful.

ESSEX Y. C. ANNUAL, JULY 25.—The Essex Y. C., of Newark, sailed its annual open regatta on Newark Bay, off Bayonne, last Saturday, in a moderate S.W. breeze, the times being:

CLASS C.	Length.	Elapsed.	Corrected.
Vision.....	22.01	3 04 12	3 00 58

Three Crabs.....	14.11	2 41 09	2 38 54

Undine, from the Shrewsbury, won the special prize for best elapsed time.

"TOTA."

NEW YORK Y. C. CRUISE.

ON Monday next, Aug. 3, the annual cruise of the New York Y. C. will begin with the rendezvous of the yachts at Glen Cove. The following programme has been issued:

The regatta committee having accepted Com. Gerry's invitation to sail with him on the flagship, the Electra will be the judges' boat for all the racing events of the cruise, and the committee call the attention of members to the following fixtures and suggestions:

The steamboat Myndert Starin has been chartered for members wishing to visit the squadron at Glen Cove, L. I., and see the start to eastward. She will leave the foot of East Twenty-sixth street at 3 A. M.; Glen Island, New Rochelle at 10:30, and make a landing at these points returning. Member's tickets, which will admit two ladies, can be obtained from the superintendent at the clubhouse, also extra tickets, at \$2 each, admitting one person. Yacht owners making the cruise can have their tickets transferred by applying to the regatta committee.

The races for the Golet cups, which were presented to the New York Y. C. by Mr. Ogden Golet, will be sailed off Newport, R. I., Aug. 7. The races will be sailed under the racing rules of the New York Y. C., and with its time allowance, and will be open to schooners, sloops, cutters and yawls of the New York Y. C. that have not hauled out to clean since the commencement of the cruise. Capt. Golet reserves the right of inviting foreign yachts that may be in American waters to participate in the races, but the cup for schooners is valued at \$1,000, while that offered for sloops is valued at \$500. Entries will be received at the clubhouse at Newport or on board the Electra up to 8 A. M. on the morning of the race.

Among the club prizes that will be sailed for—the dates of which events will be determined upon during the cruise and announced by the commodore—will be prizes for class 6 of sloops (40-footers), cutters and yawls that have not hauled out to clean since the beginning of the cruise. The prizes in these races will be as follows: First \$500, cup or money; second \$150, if more than two start; third \$50, if four or more start. The course will be 12 miles to windward or leeward and return.

There will also be races for yacht tenders and cutters, and for steam and naphtha launches. In these races trophies will be given as prizes, and the committee will add \$5 for each man carried in the winning crews. In the steam and naphtha launch race the first prize will be \$20 and the second \$10, if four or more start. The dates of these events will be determined during the cruise.

For the runs from port to port, the committee submit the following proposition: The Electra will establish start and finish lines for each run, and give the corrected time of all yachts crossing with their private signals at the peak and their racing numbers displayed, and in cruising trim; anchors on bow and cabin bent; cruising complement of boats carried; cruising deck, cabin and galley fittings and fixtures in place; topsails extending above the truck, or beyond the end of the gaff, barred.

A "squadron run" prize will be given in each class where two or more start, with a second prize if four or more start. Any yacht alone in her class can sail in the class above. Vessels that do not wish to be timed will not need the one, nor carry their private signals at the peak. They will be at liberty to sail under way, and proceed to the squadron's destination with the gun announcing the harbor start.

Owners whose vessels have not been measured, but who anticipate entering them for any of the races, are requested to procure their measurements. Numbers can be obtained at the clubhouse or on the Electra at Glen Cove, and sailing directions for any race can be obtained on board the flagship up to the time of the harbor start.

ATLANTIC Y. C. CRUISE.

THE fleet of the Atlantic Y. C. lay at anchor in Morris Cove on the following day of July 20, running next day to New London and the following day to Greenvale, where a number of yachts joined the fleet, making the total number as follows: Chase, Com. Lawton; Waterwitch, Vice-Com. Banks; Tigris, Rear Com. Weir; Arab, Edmund Fish; Rival, P. G. Sanford; Kathleen, W. Whitless; Eurybia, Charles Pryer; Concord, Henry C. Roome; Fearless, H. H. Hogan; Cavalier, Jefferson Hogan; Saona, A. P. Ketchum; Hermes, J. C. White; Phantom, Dr. L. A. Smith; Hovey, J. S. Manning; Polly, T. L. Arnold; Beatrice, Mr. Caneany; Daisy, W. H. Nicolls; Surf, W. Boyer; Gem, John Bliss; Grayling, L. A. Fish; Princess, Mr. Seeley; Columbia, J. T. Perkins.

On July 23, Thursday, a race was sailed for a cup presented by Rear Com. Weir, for the 35ft. class, the 30-footer Kathleen sailing with Tigris, Polly and Eurybia. The course was from off the red buoy off Greenvale Point, past the schooner Waterwitch, around Crow Shoal Buoy, and return, with a fresh S. E. wind. Kathleen started in the lead but was caught by Polly, Eurybia and Tigris. The greater part of the race was between Tigris and Polly, the former finally winning; but as her owner gave the cup, it goes over to Polly. The times were:

	Start.	Finish.	Elapsed.
Tigris.....	12 02 30	3 13 21	3 11 01
Polly.....	12 02 25	3 17 54	3 15 29
Eurybia.....	12 02 51	3 29 24	3 26 33
Kathleen.....	12 02 00	3 29 38	3 27 38

After the finish of the race the fleet was formally disbanded after a short but very pleasant cruise. The usual races on the runs from port to port were omitted with good results, the work being diminished and the pleasure of the cruise, especially the social side of it, being greatly increased.

LIGHT MONEY FROM YACHTS.—Com. G. H. B. Hill, of the Seawanhaka Corinthian Y. C., owner of the schooner yacht Miranda, is now making a test case of the new ruling of the Treasury Department in regard to the light dues from foreign-built yachts. On July 18, Miranda arrived at Bay Ridge, New York Harbor, from Vineyard Haven, and a demand was made by the Customs officers for \$42.55 light dues, her tonnage being 81.62. The money Com. Hill declined to pay, and the yacht has been libeled by the Government, which action Com. Hill proposes to contest in the courts.

ST. LAWRENCE Y. C., JULY 11.—The fourth of the St. Lawrence Y. C. series races was sailed on Saturday over the usual club course. There was a fine lower sail breeze from the westward, making it a beat to windward over half the course, and the day was a very lovely one. Only six boats started, however, as follows:

	Length.	Start.
Mollie Bawn, W. Kavanagh.....	25.09	3 56 54
Dream, A. W. Morris and H. M. McIsaac.....	25.09	3 57 11
Lulu, A. Irving.....	25.02	3 57 15
Chaparron, E. S. Clouston.....	29.06	3 57 41
Valda, G. H. Dugan.....	24.01	3 57 50
Black Eagle, C. H. Levin and G. Gabler.....	37.07	3 58 00

Dream and Lulu speedily gained the lead, but Chaparron held down to leeward of a start which carried her well to windward of Valois Bay and got a start which carried her well to windward of everything, and she was the first to round the Chateaugay buoy. By good sail handling and fast running she maintained this lead and crossed the finish line a winner in her class and the leader of the fleet both on elapsed and corrected time. The summary is as follows:

	C.L.	Start.	Finish.	Elapsed.	Corrected.
Lulu.....	29.02	3 57 15	6 01 51	2 04 36	2 04 36
Dream.....	32.06	3 57 11	6 02 40	2 05 29	2 05 29
Black Eagle.....	37.07	3 58 00	Did not finish.		

29ft. CLASS.
Chaparron.....29.06 3 57 41 6 01 36 2 03 57 2 01 40
Valda.....25.01 3 57 50 6 14 23 2 16 33 2 09 01
Mollie Bawn.....25.09 3 58 00 6 19 40 2 16 52 2 12 23
Lulu therefore wins in the A class by 3m. 21s. from Dream, and Chaparron wins in the 29ft. class by 1m. 21s. from Valda.

The St. Lawrence Y. C. series race was this year so arranged that all classes sailed together three times. The best corrected time over the course in the first of these races was made by Thora, a 21ft. class boat, of 19ft. 6in. corrected length, rigged as a yawl, with battened sails. In the second of these races Valda, the winner of the 29ft. trophy, the vice-commodore's cup, beat the fleet by 1m. 50s. In the third, Chaparron, a boat of 29ft. sailing in the 29ft. class, beat the fleet by 20s. Thora is practically a St. Lawrence River skiff, of a little greater beam than usual, and with a light counter, and she depends for her stability entirely upon the ability of her crew to bend their backs over her hanking powers of her crew were tried to the utmost, and the larger boats were either knocked down by the puffs or wallowing in the sea without wind enough to fill their reefed canvas. Valda and Chaparron on the other hand have the greater part of their ballast outside, and they made their records in fair sailing days.

July 13.—The A Class of the St. Lawrence Y. C. sailed the last of the series of races of that club for the season on Saturday. There was a strong and squally east wind blowing, making the course a reaching one, and all the boats went across the line with two reefs in their mainsails. The wind fell lighter after the Valois Light Buoy was passed, and the boats pulled first one and then the second reef, and by the time the Chateaugay Buoy was passed Dream had a good lead on the fleet. At the Pointe Claire Buoy, however, she missed the buoy, got in stays and lost heavily. At the Chateaugay Buoy she was lost heavily by an almost similar mishap, and in consequence of these errors she only finished a few seconds before Lulu. And so ended the race and with it the Commodore's cup for the year. The summary was as follows:

	C.L.	Start.	Finish.	Elapsed.	Corrected.
Lulu.....	29.02	4 30 14	6 29 30	1 59 16	1 53 25
Dream.....	32.06	4 30 00	6 29 14	1 59 14	1 56 00
Black Eagle.....	37.07	4 28 03	6 31 16	2 03 13	2 03 13
White Squal.....	31.1	4 30 47	Withdrew.		

The result of the St. Lawrence Y. C. series of races for the year has been as follows: The Commodore's cup, the A Class trophy, goes to Lulu, who has won 3 firsts and 1 second prize. Dream won 1 first and 1 second prize. The Vice-Commodore's cup, the 29ft. class trophy, has been won by Valda, who took 3 firsts and 1 second prize, Chaparron taking 1 first and 1 second. In the 21ft. class the trophy has been won by Thora, who won 2 first prizes.

LAKE COBOSSECONTE REGATTA.—On July 14 a regatta was sailed on Lake Cobosseconte, near Augusta, Me., the times being:

	Length.	Elapsed.	Corrected.
Undine, H. M. Packard.....	18.03	1 08 15	0 46 29
Lady of the Lake, H. Sprague.....	17.03	1 08 52	0 47 44
Emma Belle, Melville Smith.....	18.06	1 09 25	0 48 29
Alice, M. T. Welch.....	18.10	1 20 25	0 50 19
Comfort, G. A. Bryant.....	22.05	1 31 13	1 13 39

SECOND CLASS.
Florence, Charles Higgins.....18.10 1 29 41 0 59 35
Thorfin, E. T. Whitehouse.....15.02 1 25 55 1 02 26
Josephine, George A. Robertson.....16.03 1 27 12 1 06 18
Lady Hannah, W. J. Sanson.....18.08 1 28 35 1 06 46
Pidgion, D. C. Robinson.....15.10 1 30 13 1 07 50

THIRD CLASS.
Anna S., C. C. Hunt.....15.07 1 23 12 1 00 09
The first prize, a silver cup, was awarded to Undine; second prize, a silk banner, to Lady of the Lake. Florence, Thorfin and Anna S. all won silk banners in their respective classes. The judges were Henry Reverie and J. W. Charwick, of Boston, J. R. Gould and Joseph Bodwell, of Hallowell. Undine has won the prize for three consecutive seasons.

AMERICAN Y. C., 1ST CHAMPIONSHIP, July 25.—The American Y. C., of Newburyport, sailed its first championship race on Saturday in a light S.W. wind, the times being, so far as taken:

	Length.	Elapsed.	Corrected.
Hazard, Pierce.....	14.20	1 42 30	1 42 30

MOSQUITO FLEET Y. C., July 25.—The second cup race of the South Boston Mosquito Fleet was sailed on Saturday in a S.W. wind that freshened considerably as the race went on. The times were:

	Length.	Elapsed.	Corrected.
Tantrum, J. F. Small.....	14.11	1 19 26	1 19 21
Nellie, J. O'Leary.....	14.11	1 29 38	1 29 31
Bessie, W. L. Young.....	12.11	Did not finish.	

The annual cruise of the club will take place on Aug. 2.

JAVELIN.—The new steam yacht Javelin, built by the Herreshoff Manufacturing Co. for Vice-Com. E. D. Morgan, New York Y. C., was launched on July 18, making her trial trip on the following Monday. She is 98ft. over all, 91ft. l.w.l., 10ft. 2in. beam, 4ft. 9in. draft, with three cylinder compound engines, 9, 14 and 22hp., 12 cylinders, and a Thornycroft boiler. The speed expected is 23 miles per hour.

COLUMBIA.—The old New York sloop Columbia struck on July 20 on Scup Rock, Hope Island, Narragansett Bay, and sank immediately, her crew reaching the shore with much difficulty. She was at one time owned by Tweed, and is one of the many yachts in which he is reported to have escaped from New York.

VOLUNTEER.—Gen. Payne's re-modeled schooner was launched from the ways at Lawley's on July 22, her masts being stepped next day and her bowsprit shipped. Her jozier work and rigging is well advanced and she will be with the fleet next week.

MARINE RAILWAY AT MARBLEHEAD.—The firm of H. V. Partelow & Son, of Boston, have purchased the coal sheds next to Tucker's wharf, Marblehead, and will put in a steam marine railway for yachts, and also a free landing float for the use of yachtsmen, two improvements which are greatly needed.

UTOWANA.—The new steam yacht Utawana, Mr. W. W. Durant, designed by Mr. J. Beavor Webb and built by Neale & Levy, Philadelphia, sailed from the yard on July 23 for New York and Bar Harbor. She will leave the coast in September for a cruise around the world.

TIDAL WAVE.—The wreck of the Tidal Wave has been sold where she lies, the hull bringing \$152 and the other material \$321.65.

AN ADVENTURE ON A CATAMARAN.—A party of New Haven yachtsmen had quite an adventure on July 26, being obliged to spend the night on a partly wrecked catamaran at anchor in the Sound. They were taken off safely in the morning in a very wet and exhausted condition.

SILVA.—On July 25 the steam yacht *Silva*, built for Dr. M. H. Forrest, of Philadelphia, by Seabury & Co., was launched at Nyack. She is 80ft. over all, 69ft. l.w.l., 11ft. 6in. beam and 4ft. 6in. draft, with triple expansion engines and water tube boilers.

LAKE CHAMPLAIN Y. C.—The executive committee of the Lake Champlain Y. C. has decided to hold its annual regatta on Aug. 20, in connection with the meeting of the American Canoe Association at Willsboro Point, Vt.

YORKVILLE Y. C., JULY 26.—The race of the Yorkville Y. C. on July 26 failed for lack of wind, only one boat, Florence Tate, completing the course.

NEW HAVEN Y. C.—The fleet of the New Haven Y. C. started on its cruise on July 20 for New London and Greenport.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.
COMMODORE: WALTER U. LAWSON, Boston, Mass.
SECRETARY-TREASURER: RALPH F. BRAZER, 47 Central street, Lowell, Mass.
REGATTA COMMITTEE: J. A. Gage, Lowell, Mass.; W. G. MacKendrick, Toronto; L. B. Palmer, Newark, N. J.

CENTRAL DIVISION. NORTHERN DIVISION.
Officers: Officers:
VICE-COM: C. V. Winne, Albany, N. Y. VICE-COM: W. H. Cotton, Kingston.
REAR-COM: T. P. Gaddis, Dayton, O. REAR-COM: J. C. Edwards, Lindsay.
PURSER: Howard Brown, Albany, N. Y. PURSER: C. E. L. Porteous, Kingston.
EX-COM: J. K. Bakewell and H. M. Stewart. EX-COM: Colin Fraser and F. H. Gisborne.

EASTERN DIVISION. ATLANTIC DIVISION.
Officers: Officers:
VICE-COM: J. W. Cartwright, Jr. VICE-COM: L. V. Dorland, Arlington.
REAR-COM: G. L. Parmelee, Hartford. REAR-COM: E. D. Anderson, Trenton.
PURSER: R. A. Pollonio, Winchester. PURSER: Richard Hobart, Newark, N. J.
EX-COM: Paul Butler, E. S. Towne and Sidney Bishop. EX-COM: H. L. Quick and H. M. Kreamer.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay \$1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—D. H. Crane, Chicago, Ill.
Vice-Commodore—N. B. Cook, Chicago, Ill.
Rear-Commodore—O. A. Woodruff, Dayton, O.
Secretary-Treasurer—J. H. Ware, 139 Rialto Building, Chicago, Ill.
Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by \$2 as initiation fee and dues for the current year.

7. 2 P. M., Ianthe, Ann., Pas-
saic River.

A NEW IDEA FOR A REGATTA COMMITTEE.—The New York C. C. tried a new experiment in its races of Saturday last which is likely to prove a success. The regular male regatta committee not being on hand—in fact, it is stated that nothing has been heard from its members since the spring regatta—the management of the race was given to the ladies present, who started and timed the canoes. One great advantage of this plan is that

all danger from firearms is avoided, the ladies wisely preferring the club foghorn to the club pistol. We call the attention of other clubs, as well as the Commodore of the A. C. A. to this experiment, which may prove well worth imitating.

PASSAIC RIVER REGATTAS.—The Ianthe, Arlington and Orange canoe clubs have arranged a three-day racing meet for the first week in September which promises to attract a number of New York canoeists to the Passaic at Woodside. On Saturday, Sept. 5, the Orange C. C. will hold its annual regatta, open to members of all canoe clubs. On Sunday the visitors will be entertained by the three clubs; on Monday (Labor Day) at 9 A. M. the regatta of the Arlington C. C. will be started, and at 2 P. M. that of the Ianthe C. C. The programme includes plenty of racing, with time for camping and social meetings.

A. C. A. MEET TRANSPORTATION.

To the Members of the Eastern Division, A. C. A.:
We beg to call attention to the inclosed circular giving a list of railroads which will make a rate of one full fare and one-third, as per instructions in same.

Endeavors are being made to obtain the same concession from and other New England roads. In case this concession is not granted, it will be advisable to purchase tickets to the nearest point named in circular, and there obtain ticket to Burlington or Port Kent upon certificate plan.

Attention is called to the day express of the Fitchburg Railroad, through to Port Kent or Burlington direct, leaving Boston at 10:30 A. M., Providence at 9:10 A. M. and Worcester at 11 A. M. Those wishing to travel during the night should take the 7 P. M. sleepers from Boston to Burlington via Fitchburg Railroad.

Referring especially to paragraph No. 4 of passenger committee's circular, we would say that tickets should be purchased between Aug. 3 and Aug. 8, 1891, and return tickets before Aug. 81. (See paragraph No. 8.)

Canoeists from Boston and vicinity should ship their canoes and duffle before Aug. 3, as the car leaves on that day care of J. W. Richards, Fitchburg Railroad, Boston, freight department, where a car will be in readiness to receive them, which will go to Burlington and be side-tracked, and from which they may be taken upon delivery of receipt.

The freight charges per canoe and duffle from Boston to Burlington will be \$2, which sum please remit with letter of advice to Mr. Richards. It is important that Mr. Richards should be advised at the earliest opportunity of any canoes which are to be shipped from Boston, so that he can obtain proper accommodations in time.

Canoeists going to Burlington can reach camp at Willsborough Point by steamer from Burlington via Port Kent, and probably the regular steamers will run to the A. C. A. dock from Burlington direct.

Special letters of inquiry should be addressed to Raymond Apollonio, No. 43 State street, Boston.

J. W. CARTWRIGHT, JR., Vice Commodore,
R. APOLLONIO, Purser,
J. W. RICHARDS, Transportation Com.

CANOEING COSTUMES.—The costumes worn by the crews of sailing canoes when racing are by no means uniform, nor quite ship shape in many cases; though pot hats or tall hats are seldom seen on the sailing canoe, it is quite as unsightly to see twined check coats or caps, braces and 'boiled' or linen shirts. Many good, serviceable dress rigs may be seen at Hendon on a race day, from the man-of-war'sman's working dress, through all sorts of grades and cuts of blue serge and white flannel, down to the rather inappropriate striped flannels—suggestive of lawn tennis. In America, brilliant striped jerseys and stocking caps are much in vogue, and knickerbockers are nearly universal. On the Thames, on the other hand, the fashion of the boat sailor, be he owner or one of the crew, runs as nearly as possible in imitation of the Cowes fit-out of the owner of a 200-tonner. From a practical point of view, many of the costumes worn are utterly inappropriate, no sailor can do his work efficiently with long sleeves, a collar buttoned round his neck, and braces on. Trousers should be loose at the knee and below, so as to be easily rolled up; the sleeves should come but half way below the elbow; and the neck opening should be sufficient to put at least your flat in—that's the place to stow your small gear. Of course every particle should be of wool, and lacings are preferable to buttons where possible to use them. Once try the difference of swimming with a man-of-war frock on versus a yachting jacket, and the jacket will never be put on in a capsizable boat.—Field.

A. C. A. MEMBERSHIP.—Eastern Division: Clarence B. Ashenden, Auburn, Mass.; J. W. Brown, Woburn, Mass. Central Division: Herbert C. Titus, Albany, N. Y.; Bert Sannard, Troy, N. Y. Northern Division: P. B. Taylor, R. W. Haycock, Ottawa, Atlantic Division: Frederick A. Cummings, Belleville, N. J.; V. J. Warburton, New York city; W. F. Campbell, Brooklyn, N. Y.; Alexander Archibald, Albert E. Turner, Newark, N. J.; Thomas Hale, Jr., Yonkers, N. Y.

CANADIAN CANOES AT THE MEET.—Treasury Department, Office of the Secretary, Washington, D. C., July 21.—Collector of Customs: Sir—Referring to the Department's letter to you, under date of July 29, '90, in which you were authorized to pass the canoes and necessary outfits of Canadian canoeists arriving at your port or in your district en route to the annual meet of the American Canoe Association, free of duty and without requiring bond for their return, on production of the usual oath for the free entry of personal effects, you are hereby authorized to extend the same privilege to Canadian canoeists who expect to attend the approaching meet of the American Canoe Association to be held upon Lake Champlain during the month of August next. Respectfully yours, (Signed) O. L. SPAULDING, Assistant Secretary. (To the collectors at Burlington, Vt.; Ogdensburg, N. Y.; Cape Vincent, N. Y.; Plattsburgh, N. Y.; and Suspension Bridge, N. Y.)

NEW YORK C. C. CUP.—The New York C. C. last week received a challenge from Mr. Ford Jones, of Brockville, Canada, who sailed for the New York C. C. International Cup last year in Canuck, and is now desirous of trying again provided the races will be sailed off New York Bay. Mr. Jones named Gravesend Bay, and the club has accepted his challenge, but with the proviso that the courses shall be on neutral waters about New York which shall be satisfactory to both parties. This leaves the question open between Gravesend Bay, Newark Bay, and the part of New York Bay commonly called the "Jersey Flats," off Bayonne, with possibly other localities. The club is desirous of giving as fair a contest as possible to the challenger.

AMERICAN AND ENGLISH CAMPING.—Canoeing ought to go ahead in a country where the sport is handed to man without effort on his part; Lowell, in America, would seem to be a sort of canoeing fairland. "The Eastern Division of the A. C. A. holds a meet at Tyngs Pond, which is two miles long by half a mile wide, it is reached by half-hourly electric cars from Lowell; a dining hall is a quarter of a mile from the camp; meals \$1 a day; transport to and from the camp of all boats and duffle free." Well, a dollar a day at English camp meets would only about suffice to "find" the average amateur canoe cook in methyated spirits for his lamp.—Field.

NEW YORK C. C. OPEN RACES.—The open race of the New York C. C. on July 25 had but four starters, all home boats, the notice being very short. Lielda, Schuyler Schieffelin, won, with Bonnie, C. H. Vaux, second. Aztec, Com. Howard, withdrew, and Toltec, Mr. Barington, capsized. A second open race will be held on Saturday next.

CONNECTICUT RIVER.—A correspondent writes that the Connecticut is canoeable from West Stewartstown.

ANSWERS TO CORRESPONDENTS.

No Notice Taken of Anonymous Correspondents.

WORM FISHERMAN.—Worms may be brought to the surface of the ground by soaking the earth with salt water, or with slaked lime water, made in proportion of three gallons of water to one pound of slaked lime: let it stand four hours before using.

W. W. W., Philadelphia, Pa.—Maine black bass fishing is said to be good in Great Belgrade and Long Ponds, and the chain from Oakland to South Monmouth, among them Cobboscontee, also Maranacook and Annobessacook, reached from Winthrop.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—Adm.

On the 6th inst., as Capt. Freeman was on his way to Chelsea, he noticed some object swimming across the bow of his steamer which proved to be a bear, and about that time the glass registered Capt. Freeman's hunting instinct about two hundred in the shade. But how, oh how, could he kill him? He said if he had the time and the feathers he would make a fly hook of his anchor and land him, as F. B. Wade did the wildcat. But as it was he had to use the pike-pole for a spear. Capt. Freeman altered his course and went for the bear, and when the bear saw that he was to be run down he altered his course, and went for the boat, leading with a left hander upon her bow, while his face wore one of his bearship's broadest smiles. Freeman dealt him a swinging blow upon the shoulder, which caused him to change his tactics, and make for shore, which was quite handy by this time, and Freeman had to leave the steamer and take his rowboat. There was a race. The boat ran upon a rock. Freeman took water, but not back-water, by a good deal, and dealt him a blow that surprised bruin very much, and also broke the oar with which he hit him, and before bruin recovered his surprise the captain recovered a piece of the oar and came to close quarters. At present bruin's pelt is on exhibition at the steamboat wharf.—Gold Hunter, Caledonia Corner, N. S., June 13.

PAWNEE HERO STORIES AND FOLK-TALES.

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price \$2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parallel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—N. Y. Tribune.

AUGUST DAYS.

WITH such unmistakable signs made manifest to the eye and ear the summer signals its fullness and decline, that one awakening now from a sleep that fell upon him months ago might be assured of the season with the first touch of awakening.

To the first aroused sense comes the long-drawn cry of the locust fading into silence with the dry, husky clap of his wings; the changed voice of the song birds, no more caroling the jocund tunes of mating and nesting time, but plaintive with the sadness of farewell.

The bobolink has lost, with his pied coat, the merry lilt that tinkled so continually over the buttercups and daisies of the June meadows; rarely the song sparrow utters the trill that cheered us in the doubtful days of early spring. The bluebird's abbreviated carol floats down from the sky as sweet as then, but mournful as the patter of autumn leaves. The gay goldfinch has but three notes left of his June song as he tilts on the latest blossoms and fluffy seeds of the thistles. The meadow lark charms us no more with his long-drawn melody, but with one sharp, insistent note, he struts in the meadow stubble or skulks among the tussocks of the pasture and challenges the youthful gunner. What an easy shot that even, steady flight offers, and yet it goes onward with unfaltering rapid wing-beats, while the gun thunders and the harmless shot flies behind him. The flicker cackles now no more as when he was a jubilant new comer, with the new-come spring for his comrade, but is silent or only yelps one harsh note as he flashes his golden wings in loping flight from fence stake to ant hill.

The plover chuckles while he lingers at the bounteous feast of grasshoppers, but never pierces the August air with the long wail that proclaimed his springtime arrival. After nightfall, too, is heard his chuckling call fluttering down from the aerial path, where he wends

his southward way, high and distinct above the shrill monotony of crickets and August pipers. The listening sportsman may well imagine that the departing bird is laughing at him as much as signalling his course to companion wayfarers.

The woodland thrushes' flutes and bells have ceased to breathe and chime, only the wood pewee keeps his pensive song of other days, yet best befitting those of declining summer.

The trees are dark with ripened leafage; out of the twilight of the woodside glow the declining disks of wild sunflowers and shine the rising constellations of asters. The meadow sides are gay with unshorn fringes of golden rod and willow herb, and there in the corners of the gray fences droop the heavy clusters of elderberries, with whose purple juice the flocking robins and the young grouse, stealing from the shadowed copses along this belt of shade, dye their bills.

The brook trails its attenuated thread out of the woodland gloom to gild its shallow ripples with sunshine and redden them with the inverted flames of the cardinals that blaze on the sedge brink. Here the brown mink prowls with her lithe cubs, all unworthy yet of the trapper's skill, but tending toward it with growth accelerated by full feasts of pool-impounded minnows.

Here, too, the raccoon sets the print of his footsteps on the muddy shores as he stays his stomach with frogs and sharpens his appetite with the hot sauce of Indian turnip while he awaits the setting of his feast in the cornfields.

The hounds are more impatient than he for the opening of his midnight revel, and tug at their chains and whimper and bay when they hear his querulous call trembling through the twilight. They are even fooled to melodiously mournful protest when their ears catch the shriller quaver of the screech owl's note.

The woodcock skulks in the bordering alders, and when forced to flight does so with a stronger wing than when a month ago his taking off was first legally authorized. Another month will make him worthier game; and then, too, the ruffed grouse need not be spared a shot, as full grown and strong of pinion he bursts from cover; nor the wood duck, now but a vigorous bunch of pin feathers, be let go untried or unscathed, when from his perch on a slanted rock or out of a bower of rushes he breaks into the upper air with startling flutter of wings and startled squeak of alarm.

Summer wanes, flowers fade, bird songs falter to mournful notes of farewell; but while regretfully we mark the decline of these golden days, we remember with a thrill of expectation that they slope to the golden days of autumn, wherein the farmer garners his latest harvest, the sportsman his first worthy harvest, and that to him that waits come all things, and even though he waits long, may come the best.

SNAP SHOTS.

WHEN Mr. Charles F. Franzee, of the Keystone Sportsmen's Association of Pittsburgh, Pa., sent out notices of a trap-shooting tournament the other day, certain newspapers refused to print his card, holding that the offering of prizes in trap-shooting was equivalent to gambling, and to print notices of the same would render the publishers liable under the Anti-Lottery Law. Mr. Franzee referred the question to the Post Office Department, and Assistant Attorney-General Tyner has ruled that trap-shooting for prizes is not a lottery scheme within the meaning of the law. The winning of the prizes, says Judge Tyner, depends not on the element of luck or chance, but on skill. The ruling is undoubtedly sound; trap-shooting is not to be classed as a game of chance. Nevertheless the element of luck has much to do with the sport and can never be wholly eliminated. If trap-shooting were not very much a thing of chance we should never hear of many of the matches for big wagers.

The Massachusetts Legislature this year adopted a resolution directing the Fish Commission to confer with the proper authorities of the States of Maine, New Hampshire, Vermont, Rhode Island and Connecticut, with a view to securing the adoption of uniform laws to protect the food fishes of the States named; and to report the result of their conference to the Legislature of 1892.

The Ontario Game and Fish Commission, appointed last winter to take evidence on which to base a revision

of the game and fish laws of the Province, sent out circulars asking for the views of sportsmen, dealers, hotel proprietors and other classes interested in the subject. Secretary A. D. Stewart advises us that the committee has received several thousand answers, and after classifying them and taking a consensus of the opinions expressed the results have been very satisfactory, and much information has been elicited. The only matter upon which unfavorable comment could be made is that numbers of the papers have been answered by people calling themselves sportsmen, but who evidently look at the subject from a very selfish standpoint; but of course the good and the bad answers must be weighed together, and a balance struck. The intelligent Commission may safely be trusted to use the acquired data as a basis for wise legislation.

A Montana genius, mindful of the number of grizzlies that get away because the tenderfoot's gun wobbles, has invented a little contrivance to overcome the difficulty. It is a gunner's rest, to support the extended left arm when holding a gun in position. The rest consists of a straight bar, at the upper end of which is an U-shaped bow. The shooter's elbow or forearm rests in this bow, and the lower end of the bar is fastened to a waist-belt. This gives a "hip-rest," affording a firm support and permitting the arm which holds the gun to be extended straight from the shoulder. The bar is capable of extension, to give greater or less elevation; and as illustrated in one of the patent journals it appears to be a capital thing, provided the game encountered by the man in harness can be induced to stand still until the intending shooter shall have adjusted the ratchets and spring keys and bar and belt and his elbow into the U-bow.

North Carolina is away ahead this year on the game and fish law tinkering record. The last session of her Legislature passed forty-one separate and distinct bills on the subject. Of these, thirty odd are of merely local application, and relate for the most part to fishing in certain creeks. Amendments of the general laws have been made so often and in such a slipshod style that it is in many cases extremely difficult, if not absolutely impossible, to make out what the law actually means. We trust that a study of the *Book of the Game Laws* may not be without advantage in demonstrating the absurd and unintelligible complexity of the statutes of some States and the simplicity, directness and clearness of others.

Our long-time contributor "H. P. U." suggests that there should be a reunion of the old friends and contributors to FOREST AND STREAM during the World's Fair at Chicago in 1893. A day or a week might be set apart, for such as can do so to register at the Angling Exhibit, where Dr. Henshall will be in charge; and by means of the register one could find the address in the city of those whom he cared to see. It may be quite practicable to carry out this happy thought. What say "Wawayanda," "Podgers," "Awahsoose," "Kingfisher," "Piseco," "Yo," "Reignolds" et al?

Senator Edmunds, who is an enthusiastic sportsman with rod and gun, is declared to be a charming camp comrade. "His unruffled good humor, ready wit and apt repartee, and an inexhaustible fund of anecdotes, grave and gay," says one who has camped with him many seasons, "make him the most companionable of men under broiling sun or lowering skies, by the fitful light of camp-fire or on the long miles of fruitless tramp."

Wills have frequently been made in favor of cats or dogs for which the testators have special affection; and just now the papers are reporting the contesting of a will among whose provisions is a legacy of eight dollars per week for the maintenance of a pet dog. It may be assumed that the brute beneficiary is the least concerned about it of all the parties in interest.

The "Forest and Stream Nursery Rhyme" jingles have caught the eye of half a dozen rhymesters, and bid fair to become popular if not famous.

ANY subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

The Sportsman Tourist.

MINNETONKA, THE QUEEN OF LAKES.

Altho' ye who love the lakes and streams! Have you heard of Minnetonka, queen of Minnesota's resplendent galaxy of lakes, and of Minnehaha, her gentle handmaiden, immortalized by Longfellow?

The poet sang of them as Arcadian vestals, clad in rustic beauty and simplicity, at such time as the red men made high altars in their primeval groves, and the venerable Mudjekewis camped by the waterside and Hiawatha toyed like an ousel with the spray which leapt over the tinkling falls—a halcyon period. It is all different now. Everything is changed. Two hundred pretentious villas encircle the indented shores. Great temples of mammon lift their tall gables from the high points. Pavilions flash with flaring canopies and fluttering pennants. Music fills the resounding air by day and night. Electric lights usurp the franchise of the moon. Steamboats churn the ambient waves and blow their blatant whistles into the very hush of Spirit Island, frightening off the cranes and pelicans which used to brood in the sequestered places, and profaning all the sacred precincts of the vestals. Lake Minnetonka is a veritable Carnival and Vanity Fair from end to end during the fervid summer season. And who shall gainsay it? Shall Mudjekewis interdict?

Mudjekewis was the sportsman's friend. We recall the patriarchal days when, like the ancient Jacob, he would fain have blessed them, when they used to steal down to the lakeside along the errant runways and by-paths which the deer had made, and stake out their white-walled tents where breezy points project into the limpid water, and troll for bass and mascalonge beside the lily pads and rushes, and catch galore of fish. We remember when, no further back than twenty years ago, the points and thoroughfares would swarm with ducks which traded between the ponds at dusk and twilight; and all the adjacent fields, still virgin to the plowshare, would swarm with geese; and it was an easy trick to shine a deer on all the sloughs and bring his antlers home. The Indian Hiawatha had a welcome for knights of the green cloth then, but the sportsmen sold their birthright to the sons of Croesus, and now the rustic beauty and simplicity of Minnetonka has departed. Mudjekewis no longer spreads his blanket beside its margin. Like the sere brown leaf of November, withered and curled up, he has been whisked away into the shades, and all his dusky tribe have followed. And the deer have gone too! and there are comparatively few fish in the lake—a few croppies, perch, sunfish, pickerel and straggling bass—in all that wide and deep expanse of re-entering bays and far-reaching arms which boast an absolute length of seventeen miles and an extended shore line of 120 miles.

So listen once again, ye who love the lakes and streams! They say that Minnetonka is receding; that its springs and fountains are drying up. Ha! Is this a judgment on those who bartered away their fiefs? Is it retribution? And they declare that the outflow of Minnehaha Creek must be stopped in order that the majestic basin may fill again; in a word, that the life of the one must be blotted out that the other may abide a little longer. If this be so, if it indeed be a necessity to accept this vicarious sacrifice, then the limpid stream will gleam no more along the meadow, and the crystal falls, which erst tossed their spangles to the spectrum of the upper air, will vanish like a sprite and be seen no more by man. Only a rocky escarpment will remain to view—a shapeless, burned-out core, like a dead asteroid, in which there is neither brilliancy nor reflection. Then the soul of Hiawatha will wither and the inspiration of the poet's theme take wing forever.

Minnetonka will be a very dead sort of a sea with all its life and sentiment eliminated, its channels turned to sightless shoals, its bold headlands bared by the recession of the waters, and all its fleets of boats and yachts left useless on its muddy margin like hybernating alligators in a bayou. But, all ye nymphs and hamadryads who were wont to attend the vestal priestess in the primal groves, forefend that events so dire should pass! Cannot some mystic method be devised to plug the bottom of the pond? to check evaporation? to introduce new feeders which, like maternal paps, shall stimulate the sources of supply while they expand and nourish the recipient? Any device will be preferable to shutting off the water, à la Catskill, from the Falls. Damming Minnehaha Creek will damn the place and its vicinity, and this the immense pecuniary interests involved in the State cannot permit. Here are all the half dozen different railroads and electric motor lines which center at the Lake; here is the fleet of public steamboats which can carry an aggregation of 1,000 persons at a trip, and the home mosquito fleet of steam and naphtha launches; here is the mammoth Hotel Lafayette, 1,000ft. long and five stories high, with all its adjuncts of pavilions, booths, lunch counters, refreshment stands and side shows. Here are the four other grand hotels, accommodating several hundreds each, and a host of lesser inns and boarding places, with their fleets of rowboats to let; and here are the villages of Excelsior and Wayzata, already large towns, supported by the summer patronage of the lake, with various hamlets springing up. Here are the 200 or more private cottages, worth half a million of dollars, and here are the accessory industries of farming, market gardening, boat building, stabling, livery, etc., all to be squelched or scattered by the destruction or deterioration of Minnetonka Lake. Verily, these interests will not be left to suffer by neglect or foolish shifts. Mudjekewis forbid!

Many a blithesome day and month have I passed on this resplendent sheet of water when it was bank full, and all the frondage of its dozen wooded islands was laved perpetually in the drink. On moonlight nights my boat has drifted wantonly into the mysterious shadow of Spirit Island. When the mid-day sun was hot I have tested the luxury of Breezy Point. Before there was even a public steamboat on its bosom I have trolled along the shores of Big Island, two miles in length, and picked out many a goodly bass and pike; and I have defied the magic circle of Enchanted Island, scanned the tall pines where a pair of our national birds nested on Eagle Island, visited the geese and cranes on their respective islands where they bred habitually, and picnicked among the groves on Shady Island. Into many a cove and bay I have paddled my canoe and caught croppies by the score, and so, indeed, wiled away the lapsing hours of summer in

a manner befitting my own peculiar sense of enjoyment. On stated days there were boat races and club regattas for sailing yachts, and hops and waltzes on the hotel corridors and in the parlors, to music by sole-stirring bands or less pretentious piano and violin.

Let me style my Minnetonka Queen of all the Lakes. Winnipisiogee, in New Hampshire, is its only counterpart, but there is less of fashionable methods there and fewer cottages and fewer people. Perhaps its natural charms are even greater at present than Minnetonka's, and forsooth, it is their lack or waning that I deplore, for I have been on Minnetonka when its limpid water was so pure and palatable and free from flotsam that I could have drank almost incessantly and been refreshed. I have seen it when all its houses were hidden by the clustering foliage and its seclusion was its greatest charm to me. There have been moments, ere the sun had risen, when all the morning lights, which painters find it so difficult to trace, filled the firmament with their transparency. Then not only the rocks and hills and trees along the shore, the moss which grew on the ledges, the gulls on the wing, and the rosy glow in the east, but even the fleecy films of vapor, which in voluptuous summer float high in the upper air like lace embroidered on the blue, were mirrored on the surface of the water, and each individual wavelet upturned by the cleaving prow formed reduplicating mirrors like the facets of a gem, reflecting the consummate picture in each one.

Such, I ween, was a vraisemblance of perfect peace. But alas! this lake in other moods takes the storm to its bosom like a wrestler in the bouts, and all its placid surface is lashed into a lather of foam in an instant. No small boat can live then. In such a squall an entire boat's complement of ladies and gentlemen who had left the shore five minutes before in a steam launch to cross to the opposite point, went to the bottom like a stone, and not one survived. Eight of these belonged to the same family. It was sad. It was unusual, for such accidents are no more frequent on Minnetonka than in other realms where even the most gracious Queen will sometimes frown.

CHAS. HALLOCK.

A LONELY PILGRIM IN THE ROCKIES—II.

[Continued from Page 23.]

WHILE at Marysville I often heard of the Little Blackfoot Valley from old hunters. They all called it the mountain hunter's heaven. The valley was 45 miles away and game and fish were said to be fat and plenty; then I made arrangements several times to go there with hunting parties, but the parties always backed out for lack of sand or other causes. One evening a canvas-covered wagon appeared in town and I proceeded to scrape acquaintance with its owner. To my surprise and satisfaction I found him to be Daniel S. Herrin, of Little Blackfoot Valley, owner of 7,716 Ranch. I asked him several questions about game, and as he gave very satisfactory replies, I made arrangements to go home with him for a two weeks' hunt. The time soon came for his return. All my belongings were deposited in the hay in the bottom of his wagon and we proceeded to wend our way over the main range for the Valley of the Little Blackfoot. We went by the way of Jay Gould Camp, and the first day was a gradual ascent all day long toward the top of the main range.

What a ride! Surrounded on all sides by hills and mountains. The pure, dry, indescribable mountain air, sometimes laden with perfume from pine forests or freighted with aroma from vast fields of buckberries, and so clear that one can see objects distinctly miles away. It gives a charm to life there and makes a man love to live. The 119lbs. that made what there was of me when I came had grown to 125lbs., and I felt like new. The roads were comparatively smooth and the team went slow up the grade, making a spring seat not the worst thing in the world to ride on all day. Not caring to ride in the night, we stopped at a ranch near Jay Gould and stayed till morning, then drove on over the range via Jay Gould and Stemple. Mr. H. said he took the road to get me as near heaven as he could in Montana and to show me the steepest mountain road in the State. Climbing was slow work for the team, so I went on ahead to the top of the range and got out of hearing of the wagon. What a view! Mountains all around, some bald, others timbered with the everlasting evergreen of the Rockies: some crowned with rocks, some blackened by sweeping fires, man's worst enemy in Montana. Stretching out from the foot of the range was the beautiful valley of our destination, looking not three miles away, the willows with their golden foliage along the crystal river contrasting with the dark green of the pines, making it look like the veritable promised land.

The road ahead toward Stemple looked like the final jumping off place, and I sat down and waited for the team, thinking it impossible to get down at all with a team and wagon. Mr. H. finally came up with me, and by chaining the wheels we managed to zigzag down the steep mountain in safety and arrived at Stemple all right. The road the balance of the way ran through Poor Man Gulch, between timbered mountains, along a beautiful trout brook, clear as crystal and alive with trout. It was a pleasure to ride down that gradually-descending road, often crossing that crystal brook, even though the wheels did run over a rock or stump every rod and make your backbone feel as though it had unhinged in several places and your stomach feel like a vacuum capable of holding a bushel; however, man's gastronomic wants are always supplied, or at least mine were among the Rockies. We came to a miner's cabin and had a cup of hot tea and a good lunch and went on past exhausted placer mines and promising quartz prospects until 9 P. M. found us at the ranch house of Mr. Herrin.

The house is built of logs like all other houses in the valley, for there is no sawmill to cut the great trees on the surrounding mountains. It was to be my home for two weeks, and what made it seem to me more pleasant was that Mr. and Mrs. H. were the most like my own father and mother, gone long ago to their eternal home, of any one I ever saw. The family consisted of a son and grandson, two hired men that we Eastern people call cowboys, and little Christie, an adopted daughter, born in the valley. What a delicious feeling of rest came over me as I went to bed that night. No prospect of being called up to cure some sufferer's aching grinder. No prospect of some notional old maid coming on the morrow to have a new set of teeth made to plump out the wrinkles and make her look sweet sixteen again. How many trials man escapes in the solitude of the Rockies.

The morning came bright and clear, as it most always does in the fall of the year there, and we were up with the lark. The valley was surrounded on all sides by grand old mountains, some timbered with evergreens, others covered with dry grass, looking in the distance as though they had been sandpapered. The house was in a meadow, through the meadow a beautiful trout brook with banks grown over with willows and tall grass twisted its way into the Little Blackfoot River two miles below.

Who could long resist the temptation to get behind a clump of willows and drop a fly into that clear brook. I had an 8oz. rod in my hand, and with three flies attached to the leader began to whip the stream. What sport! My flies would no sooner touch a pool than the water would fairly boil, and I would have one of more lively trout fighting for liberty. I would often get half a dozen from 6 to 12in. long from a single pool. How they jumped! It did not seem to make much difference to them what color the fly's tail feathers were or whether it had any tail at all or not; they were not educated as highly in the fly-tyer's art as are their Eastern cousins.

Every now and then my hair would fairly rise as a flock of mallards or teal fluttered out from behind a clump of willows and flew away toward the river. What a paradise for a sportsman! What long anticipated joys were realized in that short morning! I fished two and one-half hours, returned to the water all I caught that were not badly hurt under 7in. long, strung my trout on a crocheted willow and found I had all I could lug home.

Mr. H. was preparing to kill a fatted calf, but we thought we had better eat the trout first. Part of the trout were cooked for dinner. How good they tasted, flanked by a dish of delicious currants, sugar and cream.

As we had trout enough to last as long as they would keep well, I shouldered the shotgun and with one of the boys started down the brook toward the river for ducks. On nearing the river we came to a lagoon hidden among the willows and spruces, and a nice flock of mallards arose from our very feet and a fine pair was quickly bagged. We soon had ducks enough, and being so near the river we went to take a look at it. What a stream! Its waters were clear as the Water of Life. Here and there along its banks were pools 10 to 12ft. deep, with trout enough in them to suit the most hogish poacher living. Its waters coming from the snow-capped mountains and springs along its course, were the most delicious to drink of any beverage on earth; so clear that the smallest pebble is visible at the bottom of the deepest pool, and cold as ice. It runs through the valley, fed and enlarged all along by little mountain streams. Flowing here between banks of evergreen forests, there hemmed in by willows on all sides, there are numerous puddles and lagoons where ducks hold high carnival, muskrats build their houses, and the wise and nearly exterminated beaver finds a safe retreat from man. Here winding its course through a beautiful meadow, to kiss the foot of majestic old mountains below. What prospects for sport for days to come! We stop to take a drink of its crystal waters and notice tracks on the sandy bank where the wild deer has come to drink before us. As it is near sunset, we shoulder our guns and ducks and turn our steps toward home, tired and happy.

That night our dreams are of clear water, big trout and deer with antlers, and early morning finds us rifle in hand looking for the deer that made those tracks, but we could not find him. So the time passed for several days except that most of the fishing was done in the river. The difficulty was the family was too small to eat the fish and ducks fast enough, salt was scarce and neighbors far away. Yet many days were spent traveling down the river, casting over the beautiful pools, often landing a double of 1lb. each, and one of 2lbs. was not uncommon. One afternoon I shouldered the shotgun and started for the river alone, and several things happened. Nearing the river I saw quite a herd of cattle, but thought nothing of it until they began to circle around me and bellow. One big brindle steer, the leader of the herd, would put on a lordly air, march toward me and bellow and strut around, as much as to say he was the biggest steer on earth and intended my destruction, until it began to be a question whether I should climb a tree or stay all day or be whipped by a brindle steer. I thought I could bluff the whole herd by bluffing him, so I took off my hat and started for him. He would turn and run a little at first, but soon saw I was harmless, and kept getting bolder, apparently intending to show the herd that he was boss of all creation. I became disgusted with his conceited proceedings, gave a yell and went for him, discharging my gun in the air as I went. That was too much for him; he, together with the whole herd, cut for cover and left me for good. A man on foot is a great mystery to a ranch steer. It is far safer to ride a horse than go on foot through a cow country.

After the herd left me I proceeded along the bank of the river. In passing a shallow riffle I noticed what I thought was a muskrat swimming up the riffle, and thought I would shoot him and see if he looked like his Eastern relatives. Nearing the riffle I discovered it to be the back of a monster salmon trout. Of course I wanted him badly and became quite excited in deciding how to get him. As there was no other way I decided to shoot and stun him; approaching to within ten feet of him I fired at his head, then jumped in, expecting to pick him up, and four more rushed out from under my feet, hustling for dear life. I was badly rattled, but shot again, only to see the fish scurry for deep water and out of my sight.

I watched this place several times afterward, tried all the tactics I knew of to take one honorably, but failed every time. All the salmon trout I succeed in taking was a little sample of about three-fourths of a pound that I took with a grasshopper.

After the fracas with the steer Mr. H. advised me to take no more chances on foot, and would saddle Old Shave for me to ride; he was a crop eared homely old cow horse that I could trust anywhere. He was a wise old fellow, was afraid of nothing but bears. His only difficulty to me was that every cow we passed he would start for, thinking that I was a green cowboy of a new kind that he had to teach how to herd cattle.

Scattered among the mountains were prospectors and miners living in tents and log cabins, cooking for themselves year after year all alone in their mountain homes. Some were educated Eastern men years ago, and had left their happy homes caught by the gold excitement of the sixties and have been seeking a fortune ever since among the mountains. Frequently one of these men would ride

a pony to the ranch for provisions, a good meal of Mrs. H.'s cooking, and a visit. Little Christie was a pet among them all. One old gentlemanly placer miner would come often, thoughtlessly set his gun cocked and ready to go off in a corner, draw a chair to the stove and sit with Christie. Taken all around these old miners are as open-hearted hospitable sons of toil as live on earth, and are always willing to entertain you with stories of gold and bears, provided they think you an honorable man, but woe be unto the miscreant that falls among them.

One bright morning Fred Hoffman, one of the hired men, suggested that we go over the mountains hunting and prospecting. Fred shouldered a pick and I a .45 75 Winchester, and we started toward a ridge plainly visible from the house, on a mountainside three miles away. I had never seen a deer, and having so good a guide greatly encouraged my hopes of success. The first mile we saw nothing, but as we began to climb the mountain Fred called my attention to a rock that had been turned over, and said it was done by a bear. This mountain was quite well timbered, but last year a fire swept over it, leaving but here and there a patch of green timber. In the track of the fire everything was burned, leaving part of the shorn and blackened trunks of the trees standing and others fallen in all directions over the mellow soil. The higher up the mountain the fresher was the remaining vegetation, and we expected to find deer before we reached the crest. We soon began to find tracks, and things in general became interesting. What a sensation creeps over a man as he begins to feel that he is in the near vicinity of noble game. We began to pick our way carefully, examining the tracks as we went; but what could this be, a track like a deer's, but very much larger?

"Oh," said Fred, "there is a band of elk up here somewhere." Certainly as we ascended the tracks indicated it, for the ground began to be tracked in all directions by both deer and elk. Coming to the ridge we found a well-beaten path made by elk. But hark! from over to leeward came a peculiar musical whistling neigh. "Do you hear that?" whispered Fred; "that is the old bull elk warning the band; they smell us." We made haste carefully toward the sound. Nearing a clump of green timber, crash! went something, and a pair of hams were seen to disappear in the bushes too quick to shoot at with a 10lbs. gun. I lost all consciousness of everything but that elk, and quickly followed him into the bushes, going very carefully. What a sight met my anxious eyes! Standing not ten rods away was a majestic four-pronged elk looking into the bushes where I was standing, the most beautiful picture a hunter ever set eyes on. Those great lustrous eyes, showing fear and curiosity, peering at my motionless form, short black mane erect, nostrils distended and every feature on a *qui vive* of expectancy. What a hat-rack those horns would make! What a trophy that head would be mounted hanging in my office! How fine a steak could be cut from those plump hams. I could almost taste the juicy tendloins. Oh, for a camera to take that picture. I raised the rifle to my shoulder; it did not seem to weigh an ounce, took a steady and deliberate aim for that noble animal's heart and stopped right there, for Montana don't allow a man to shoot an elk under a penalty of \$500 or one year in Deer Lodge State prison. The vision of an iron bunk in a narrow cell with nothing to eat but Chinese hash—What would you do, brother sportsman, under the circumstances? That elk very deliberately walked away, and in a few minutes I saw him again and a younger one with him, standing broadside in full view, their beautiful necks crossed, making a chance to kill them both at a single shot. What a temptation! They looked at me a while and trotted away (they had been disturbed so little that they were tamer than the cows on the ranch), their antlers rattling against the dead branches of the charred pines, disappearing in a cove of bushes. Fred came up, with an expression on his face showing plainly that he thought I had the buck fever, and we started on. As we neared the clump of bushes I saw the motion of a deer raising her head and thoughtlessly said: "Fred, there's a deer." "Fred said, 'Where?'" but before this where was out of his mouth I had sent a ball after her and she hobbled away. We soon found traces of blood, which we easily followed and soon found her breathing her last about 80 rods from where she started. She was a large fat whitetail doe, I was very much excited, as it was

the first live wild live deer I ever saw, and went through with about as many antics as a boy would in his first new pants and made quite a show of my tenderfoot foolishness, that Fred looked on as a circus, for it wasn't much of a trick for him to kill a deer. We dressed her, brought up Old Shave, fastened her to the saddle and went home hungry and happy. Mr. H. gave up the idea of killing the calf and we enjoyed venison steaks, stews and mince pies immensely during the remainder of my stay.

I very much wanted a pair of antlers to take home as a trophy, so the next morning I mounted Old Shave and started again up the mountain. I had ridden about five miles over a lonely track and came to a piece of timber where the ground was strewn with large granite boulders, old logs, etc., making it look rather wild. I had ridden some distance over this ground when Old Shave came to a sudden halt, snorted and reared, nearly upsetting me,

died happy in hope to the last, and a few have been made millionaires out of what look to most of us like worthless prospect holes.

Morning came, I shouldered my gun and started for the deer. I had no trouble in finding the place, tracks were as plenty as though a flock of sheep had lived there. I tramped over the mountain with both eyes strained for a glimpse of a deer all the forenoon. In looking at the tracks I noticed some pieces of good-looking float quartz, traced it up the side of the mountain and made up my mind where the lead was. Being quite tired I sat down and began to meditate on my find and to build air castles, etc. The prospects of gold galore having taken my thoughts from the deer I concluded to go back to the cabin and get a pick and shovel, and got up and started. I had gone about a rod when crash, smash, thud, thud, thud, and four beautiful deer were passing not fifteen rods away. I saw them run at least 30 rods, their white

tails over their backs, bounding zig-zag over the fallen timber, in no very great hurry to get away.

When I recovered my senses enough to know what I was about, the deer had disappeared, and I stood gun in hand, a grin of admiration overspreading my countenance, my mouth open, and what must have been buck fever shaking my whole system. Perhaps I wasn't mad. I swore I would shoot the first deer I saw move, and went stealthily on. Approaching a clump of bushes I heard a thud, thud, and knew they had gone again. I rambled around for at least an hour, hearing that thud, thud, often enough to know that they had me all sized up and knew that they could peak through the bushes and smile at my greenness and then run away in safety, leaving me exasperated. It was growing late. If I got home before dark I had to start. I started up a wooded ravine toward home, and had not gone far before two mule deer does started up, and I sent a ball after them and followed on. They soon showed themselves again and I sent another ball at the disappearing form of the leader, and one stopped and the other went out of hearing, the one I could often hear bounding away, but could not see, I followed her till dark and abandoned her till morning.

In the morning I brought an old, experienced prospector and we located the quartz lode, but could not find a trace of the wounded doe; but I had a gold mine out of the hunt provided it amounts to anything. How valuable it is can only be ascertained by developing the lead, and that we may know in the future to our joy or sorrow. The time for my return home was at hand. The last evening of my stay in Montana was spent with a number of old hunters around the restaurant fire telling stories of grizzly and cinnamon that would make a man's hair stand on end.

On my return home the sight of millions of geese around Devil's Lake was one I shall never forget, and I just ached to get off and make them scatter. I arrived home safely Oct. 14. My wife and boy were overjoyed, and the pleasure of being at home again with them was even greater than the elk hunt. My old setter Bonaparte expressed his gladness in all kinds of dog language, trying no doubt

to tell me of the sport I had lost with grouse and woodcock along the old Cattaraugus. The neighbors came in to hear my yarns and see my trophies, and all I had to show was some quartz rock and the hindleg of a doe; but that hindleg tells me a long story if it don't show off much, and makes me long for a mountain home among the Rockies.

GOWANDA, N. Y.

JOHN V. COLE.

WASHINGTON FEATHERED GAME.—Shoal Water Bay, Wash., July 20.—On July 5 the first gulls of the season arrived on the bay from the north with their young—there was a flock of about eighty. On the 7th small flocks of sandpipers or peep snipe put in an appearance. On the 9th I heard two flocks of yellow-legs go over toward the south, and on the 16th saw a bunch of sprigs going south; and heard of two large flocks of sprigs and one of gray ducks seen on the tide flats in this bay. I guess that these are the first of this season's crop. On Aug. 20 I expect to make one of a party who go to a fresh water lake on the beach between Shoal Water Bay and Gray's Harbor for a week at the south-bound sprigs, gray ducks and mallards, and shall write an account of the trip.—JIM MACK.

AT SIGHT OF SWALLOWS.

Old-fashioned barns with doors swung wide;
The sound of cattle crunching in the stalls,
The sleepy glare of noonday, buzzing flies,
The clucking of a restless hen,
A twittering in the nests above the mow!

All this I conjure from the past
At sight of swallows.

W. TOWNSEND.

turned and run for home. I stopped him after a while, and rode back with my eyes peeled to see what he was afraid of, but I saw nothing nor could I persuade him to go any further, so I let him go home, thinking he knew his business best. Mr. H. said he got too close to a grizzly and knew I had no business with grizzlies. It seemed an impossible thing to get a buck deer, try as often as I would.

The time came for my departure, I called for my board bill and got a good-natured shaking. Mr. H. said I had furnished more meat than the family could consume and had more than earned my board. I left the valley for Marysville feeling as well as I did in the best days of my boyhood. This world is large and there are a great many good places to go, but the Little Blackfoot Valley will see me again if I have life enough left to get there.

On my return to Marysville some of my friends informed me of the location of a herd of deer about 6 miles away in the mountains. I shouldered my rifle and went to Andy Neenan's comfortable cabin near the spot and staid all night. The Neenan Bros. have a good paying galena mine that they are developing and Andy batches it in his cabin near the mine, which is increasing in richness all the time. What a fascination there is in developing a mine. Many a man has been made a pauper and

Natural History.

THE AMERICAN ASSOCIATION.

BY invitation of the several scientific societies in Washington, the fortieth meeting of the American Association for the Advancement of Science will be held in the city of Washington, beginning with the Council meeting on Monday, Aug. 17. As there will be meetings of several affiliated societies about the time of the Association meeting, and as the International Congress of Geologists will hold its first meeting in this country during the last week in August, the official time given for the Association meeting will be from Aug. 17 to Sept. 2. This will give members of the Association an opportunity to attend the meetings of the other societies.

By a special vote of the Council of the Association, foreign members of the International Congress of Geologists are made honorary associates of the Association for this meeting.

The hotel headquarters for the Association will be at the Arlington Hotel, near the buildings of the Columbian University, in which will be the offices, the hall for general sessions and the rooms for the several sections. The register will be opened on Monday, Aug. 18, in Columbian University.

The local committee, of which Mr. Marcus Baker, of the U. S. Geological Survey, Washington, D. C., is secretary, has issued a general circular and programme of the meeting, which gives information as to hotels, railroad rates and the doings of scientific bodies during the meeting. This circular and any other information as to local arrangements can be had by addressing Mr. Baker, while information as to membership and papers may be had of the permanent secretary, Prof. F. W. Putnam, Salem, Mass., up to Aug. 10, after which date his address will be the Arlington, Washington, D. C.

GOOD-NATURED RATTLESNAKES.

SHASTA, Cal., July 26.—*Editor Forest and Stream:* Perhaps the following notes are worthy of recording as instances that rattlesnakes do not always bite. Both occurrences I can vouch for:

About the first of this month three children, the oldest being five years of age, near Whitmore in Shasta county, were found under the house, which was raised somewhat from the ground, having a fine time. They had been there within hearing of their mother for about an hour, shouting and laughing. Curious to know what entertained them, the mother finally looked in to find them playing with a rattlesnake. The snake pleased them greatly by coiling and sounding his string of rattles, twelve in number. The children were taken away unharmed and the snake was killed.

At Paul's Mine, near this place, yesterday, a youngster of five years came down the hill to the mine carrying a rattlesnake with eight rattles in his hand. The boy had carried the snake in view of the workmen, who could not determine what he had, for at least 200 yds. The little fellow held the snake somewhere near its middle, while both extremities of the reptile dangled about his bare feet and legs. The boy was told to drop it, which he did reluctantly, and the men killed it. The snake was 3 ft. in length, seemed active, and in full possession of its faculties.

Now, in the first instance noted here, the snake may not have had sufficient aggravation to cause it to strike; but in the latter instance this reason cannot be advanced.

Perhaps some of your readers can say why rattlesnakes do not always bite. LEROY.

WHAT PORCUPINES EAT.

Editor Forest and Stream:

There has been considerable talk in our paper on the habits of the American porcupine. Now, I was a land appraiser for the Fox and Wisconsin Improvement Company in twenty-eight of the counties of Wisconsin, and trapped in the northern part of that State, and I think I met this wood hog in very many of his habitats and know something about the critter. Why, he will eat anything that any hog will, and more. He is a thief by night around your camp, will carry off your axes and girdle the handles thereof (for the salt of the sweaty hand, presumably); gnaw all the strings from your snowshoes; and if one gets into your cabin in your absence good bye to everything in the soft line—skins, furs, even to greasy overalls. The last one that visited our cabin had a picnic. We proposed to break camp that afternoon, and had got out the remnants of our larder, previous to packing up, when we were called off for an hour or two. When we got back two of the rascals were just emerging from the cabin with plethoric stomachs. Upon entering we discovered that the flour, pork, and about a quarter-pound of coffee were gone, and only a small string of onions left. Innocent! humph, but a perfect nuisance around camp where you have to lock everything up or hang it high and dry.

But as to their habits. In northern Wisconsin we found that almost invariably during the winter they fed on the tender buds of the hemlock and the linden or basswood, sojourning for a week or ten days at a time on one tree and then crossing to the other. Their gullies or beaten tracks through the snow could be found in every direction and they invariably led to and from these trees and to their den or nest under a turned up stump or hole in the rocks. We could always find one of them lying out on a limb of one or the other of these trees. An old Indian that was camped (if his habitat could be called such) near us one winter was too naturally tired to hunt deer, of which there were plenty in that section; but he could easily find the trail of a porcupine; and it is said that he absolutely ate more than sixty of these stinking animals during the season. Eat them! Faugh! Stick your nose once into a porcupine's nest toward spring and it would be enough. They are a species of hog. Scald off the hair and quills and you have a little pig to all appearances. Looks nice, too. A kind of rind and fat before reaching the meat, but of so rank a flavor that none but a starving man could tolerate it for a moment. We have in our experience been driven to great extremities, when crow, hawk and owl made comparatively fair soups; but porcupine flesh, whew! we would starve first. We have tried it, and the meanest, ill flavored flesh in the world is the American porcupine as we found it.

Why, the only thing about them worth a continental is a few of their broken quills for the squaws to work up to sell women or tenderfeet. And these same quills are a big nuisance sometimes, for we had one driven through our moccasin into the sole of the foot. We pulled it out with a pair of bullet-moulds (the whole of it, we supposed), but the foot festered and was very sore for several days, when it got perfectly well. A year afterward a cat boil, as we thought, was found on our thigh. It was quite painful, and our canvas trousers continually caught on it. One evening, after being annoyed considerably during the day from the friction, we made careful examination and discovered a point of something protruding from the apex of our little cat boil. Upon applying the bullet-moulds a good half-inch of porcupine quill was drawn out. A quill, you are aware, has a sharp point, gimlet-like or like the beard of wheat. After the first penetration of the skin every motion of the body will cause it to work its way farther in. We have known dogs to have these quills work through their jaws and neck, and I am informed even through their heads. We had suffered no pain or inconvenience whatever from this piece of quill for more than a year, showing conclusively that in its travels it had confined itself to the easy road of flesh which the doctors say has no feeling, that is, that feeling is confined to the nerves and muscles lying between the skin and flesh, or between the flesh and bone of humanity, and I presume of animals as well. No, sir; we have a very poor opinion of the American porcupine as we found him and don't want any of him in ours. JACOBSTAFF.

THE CAROLINA PAROQUET.

Editor Forest and Stream:

I quote the following remarks on the abundance of the Carolina parakeet in 1869 from Dr. Allen's "Winter Birds and Mammals of East Florida": "Common. Hundreds are captured every winter on the lower St. John's by professional bird-catchers and sent to the Northern cities. Thousands are destroyed wantonly by sportsmen."

Since the above was written the causes which Dr. Allen noted have almost accomplished the result he predicted—the extermination of this beautiful bird. It is true the species is known to exist in greater or less numbers in the wilder, uninhabited parts of the State, and here, protected by the inaccessibility of its haunts, it is hoped a few birds may survive for many years to come.

These twenty-two years so important in the history of the paroquet have added little to our knowledge of its habits, and beyond a few records we have no data bearing on the further causes which have led to the bird's gradual disappearance.

Doubtless many of your correspondents have had experiences with the paroquet, and I beg you will earnestly request them to place even the briefest notes on record in your columns as a contribution to our scant store of information concerning our only representative of the family *Psittacidae*. FRANK M. CHAPMAN.

AMERICAN MUSEUM OF NATURAL HISTORY, New York City.

CURE FOR VIPER BITE.—A Paris (France) despatch announces that the Academy of Medicine has awarded the Arfila prize to Prof. Kaufman, of the Veterinary College, at Alfort, for a lotion for the cure of viper bites, consisting of one part of chromic acid dissolved in one hundred parts of water. This will have an interest for a large class of people in this country who are interested in snakes and snake bite. The viper is the only venomous snake which inhabits England, and while its bite does not cause death, it is extremely painful and very much dreaded. The telegram quoted says nothing as to the method of application of the announced remedy, but if the prize has been awarded as stated, there can be little doubt that the remedy has been sufficiently tested.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

PRAIRIE CHICKENS AND DUCKS.

BEING located in a game country, I am constantly receiving letters asking the question, "Where shall I go for good shooting? What are the prospects for prairie chickens and ducks?" I know of no better way of reaching Eastern sportsmen than through the *FOREST AND STREAM*. The prospects for good shooting this season are very fine, and sportsmen may look forward to Sept. 1 with a great deal of pleasure. I do not think the crop of prairie chickens has ever been much better throughout northwestern Iowa, southwestern Minnesota and South Dakota, and as we have had a large rainfall the lakes and sloughs are well filled with water. Water we must have in this part of the country in order to have good duck shooting. The lakes and sloughs must be full of water or the ducks will not stop on their way South. There must be a great amount of feed, such as wild rice, wild celery, etc. None of these plants grow to perfection in a dry season. We had a great spring flight of ducks and geese, and many of them stayed with us. I have seen several flocks of young ducks, and almost every slough has two or three flocks of young ducks feeding on the green tender grasses that grow all around them.

Now in answer to the question "Where shall we go for our shooting?" The sportsman does not want to go to too large a town for his headquarters. It is better for him to be at or near some small town or a town of moderate size. He can get to the shooting grounds with very much less trouble, and there is usually less shooting and more game. Bancroft, Ia., on the Chicago & Northwestern Railroad, is located in a fine prairie chicken and duck country. The town has good hotels, and any of the local sportsmen in that place take great pleasure in giving Eastern sportsmen all the information they can in regard to the shooting. The town is located in a prairie country, so that the sportsman will have to go but a short distance from town to have good chicken shooting. The view from the town is very fine. Splendid grain fields are on every side, and after the grain is harvested chickens may be found in almost every field.

North of Bancroft the country is settled by people from northern Europe, who have splendid farms and are very

hard-working, industrious people. They seldom do any shooting. And I have never known them to find any fault with sportsmen shooting on their lands, if they behave like gentlemen. Any of the employees of the C. & N. W. R. R. will give sportsmen any information they can in regard to game, and take great delight in doing so. A railroad man is seldom found that does not like a dog and gun.

About fifteen or twenty miles northwest of Bancroft are located the celebrated Chain Lakes, where, in season, fine duck shooting may be had. There are good shooting grounds all the way from Bancroft to the lakes. Sportsmen who like fishing can catch plenty of bass, wall-eyed pike and pickerel in any of the long chain of lakes. Seven miles north of Bancroft is located the new town of Ledyard, where good chicken and duck shooting may be had. There are many small lakes and sloughs in that part of the country, and at times there is as fine mallard duck and teal shooting as the sportsman would wish.

Seven or eight miles north of Ledyard we find a very pretty little town called Elmore. It is situated in the southern edge of Minnesota, where the C. & N. W. and the S. C. & St. P. railroads come together. Many years ago, along in 1857 or 1858, all the land in the north part of Kossuth county, Ia., was put on the market and the consequence was that most of the land fell into the hands of speculators and was not settled upon. As soon as the homestead law was passed the land in the southern part of Minnesota was opened for homestead entry and a settler made a homestead on every quarter section, so that north of Elmore nearly all the land was cultivated, while south of Elmore it was unbroken prairie. This prairie has always been a great breeding ground for prairie chickens, ducks, geese, sandhill and white or whooping cranes. At some seasons of the year it is covered with golden plover. All the snipe family have always been plenty in that part of the country.

I would say to the sportsmen coming West, bring your dogs along, as you may not always be able to get one at or near the shooting grounds. It will do your dogs good to run on the prairie. There is plenty of water for them this season, so that the shooter will not have to take a jug of water with him for the dogs.

In another article I will tell the sportsmen of other locations where I have done a great deal of shooting and always found plenty of birds. I have shot a great deal of game in northwestern Iowa, southern Minnesota and South Dakota during the last twenty-six years. There are to-day some as good prairie chicken grounds as can be found in the country. J. G. S.

[Such information as is here given is very useful; and on behalf of the many sportsmen who would value it we invite other readers to send us similar notes of good shooting grounds.]

CONNECTICUT BIRDS.

Editor Forest and Stream:

Under the above caption in your issue of July 30 a writer, who signs himself "Flin," says he has "passed a few days recently in Windham county, Conn., and was gratified to find how splendidly the birds [presumably 'Flin' meant game birds] had wintered." Again he says: "Despite the close season these birds are now being shot in small numbers by pot-hunters." "Before many weeks, also, the woods will be fenced with partridge snares," and then "Flin" adds: "I know some of these evil doers, but I am *tongue-tied*; * * * they are my friends." [Italics mine.] "Flin" winds up his knitting work by saying: "A Hartford game protector could do considerable good in this locality."

As the writer is evidently the "Hartford game protector," perhaps I can enlighten the "tongue-tied" party whose friends are poachers.

Windham county, Conn., contains 15 towns, and the following officers have been elected to enforce the laws of Connecticut in their county and towns: Windham county, Sheriff Charles P. Pomeroy, Willimantic. Deputy-Sheriffs Frank E. Baker, Brooklyn; Nathaniel P. Thompson, Central Village; Wm. N. Bates, Thompson; Oliver W. Bowen, Danielsonville; E. C. Vinton, Woodstock; Henry A. Braman, Eastford; Dewit C. Park, Putnam; Fred L. Clark, Willimantic. The above officers are supposed to arrest any one found in the act of committing a crime (violations of the game and fish law come under the head of crime) or on speedy information of the offense. The above officers can act anywhere in the county.

Constables who are supposed to enforce the game and fish laws (as well as the other laws) in their towns: Charles A. Gould and William H. Williams, Brooklyn; Robt. D. W. Knowlton and Theodore M. Lyon, Ashford; Elmer E. Richmond and Louis D. Howe, Canterbury; George A. Reed and Wm. N. Smith, Chaplin; G. B. Marcy, C. A. Rice, H. A. Braman, W. A. Stewart, Lee Lyon, Orlo Carpenter and Amos Cheaney, Eastford; Allen Jewett, Geo. H. Kimball and Leroy Pearl, Hampton; Edward S. Carpenter, Chas. E. Young, Marcus Bastow, Frank A. Chase, Edwin A. Chase, Edward Arnold and Melvin E. Fisher, Killingly; Nathaniel P. Thompson, Geo. R. Bliven, Geo. S. Ladd and Stephen S. Wilbur, 2d, Plainfield; Orrin C. Spencer and Edwin T. White, Pomfret; Milo P. Corbin, Frederic E. Franklin, Chas. E. Breault, Geo. Warren, David Beausoliel and Jared B. Talbot, Putnam; Lucian Bass and Leander Cady, Scotland; Geo. W. Stone, Benj. F. Baton and Alex H. Gillis, Sterling; Roscoe Alton, Wm. N. Bates, John Fredegar, Geo. A. Putney and Harvey Ducat, Thompson; Edward T. Grimes, J. Godfrey La Palme, J. Henry Hill, Edward S. Lincoln, Geo. A. Muddock, Andrew W. Loomis and Samuel C. Flint, Windham; Harris L. Sanger, F. Olin Chaffee and Geo. Fox, Woodstock.

In addition to the above officers, each town has from two to five grand jurors whose duties are given and read: "The grand jurors of the several towns shall diligently inquire after and make due complaints of all crimes and misdemeanors" committed in their town. It should be understood by "Flin" and other "tongue-tied" parties that the "Hartford game protector" has no jurisdiction in "Windham county, Conn." When a man shoots or kills game out of season he is a game thief and is far below the level of a chicken thief.

If "Flin" or any other party will write me "confidentially" of any violation of the game and fish laws in this State I will endeavor to put a stop to the practice. I will not use my informant's name in any way, or in other words, will not "give him away." But I prefer statements from men who are not afraid to do right and help

stop the evil. It's the milk-and-water weak-kneed sportsmen that handicap enforcing the game and fish laws.

It should be borne in mind that game warden works for glory and curses. No salary is connected with the office.

What would your readers think of a man who discovered a chicken thief plying his vocation and the party finding the thief becoming "tongue-tied?" The true saying, "Birds of a feather flock together," would apply in this case.

In Chief Justice Peters's charge to the jury (Supreme Judicial Court, Maine) relating to game laws and their enforcements, said: "Now, the great majority of persons, all good people, will observe these laws, and if the violators of the laws are not to be punished, they would be supported in their violation of the laws, and it would be a law really for the benefit of law breakers rather than for law observers; because, while the great majority of the people are obeying the law, the few who are not obeying it, if not punished for their violations, are benefited, as they can more readily capture the game when the great majority are not attempting to capture it. It is the bounden duty of all to obey the laws."

A. C. COLLINS.

HARTFORD, Conn., July 31.

The Hartford Post of July 30 says: "Game wardens were, previous to 1888, appointed by the selectmen who were entitled to appoint two or more. If each town had appointed two or more there would have been over 300 game wardens in the State. But it soon came to be realized that the game wardens appointed by the selectmen were of no earthly use for enforcing the game laws. So in 1888 the General Assembly passed a law giving the county commissioners the power to appoint one game warden for their county. This is how it happens that the reappointment of the present efficient warden, Abbott C. Collins, was made by the county commissioners."

"The New York Tribune had the following pleasant reference to Mr. Collins not long ago:

"A. C. Collins, of Hartford, of the State Game and Fish Association, has done more than all the rest of the people of the State in preserving the remnant of the game and fish in Connecticut."

"The writer of the above knew the situation. Previous to the warden's appointment the game and fish laws were flagrantly violated. A change for the better has taken place since. The honest sportsmen (this includes rod and line fishermen, as well as shooters) owe Mr. Collins a debt of gratitude."

"Mr. Collins has been instrumental in bringing upward of seventy-two illegal fishermen and hunters into the courts and losing but two cases. These were for shooting game out of season, snaring, selling game birds out of season, netting trout and bass, Sunday shooting, illegal "pound" shad fishing, illegal transportation of game, etc. Among his victims were one justice of the peace, one deacon, one capitalist and other prominent men. The rich and poor are on a level when Mr. Collins starts out to enforce the laws. Of course opposition to enforcement of the game and fish laws was to be expected, but many who thought they could deter Mr. Collins from enforcing the law found out their mistake. As a result of his indefatigable labors game is more abundant and game fish are also on the increase."

CHICAGO AND THE WEST.

CHICAGO, Ill., July 31.—This week's story of protective work in Chicago is better than a dime novel. The week moves out here also.

Last week I spoke of the case against Chas. Kern, county treasurer of Cook county, president of the Audubon Club, ex-president of the Illinois State Sportsmen's Association, defender of the faith, etc., and mentioned the evidence secured against his restaurant, as well as the conversation had with him. About 30 minutes, perhaps, after I had left Mr. Kern, the latter met Mr. Wolfred N. Low, well known as active in the protective work of the State Associations though not at present a member of the Kankakee Association.

"Mr. Low," said Mr. Kern, "that Kankakee Association is a grand good thing, and I am in sympathy with it. I must send in my check for \$20 for a life membership."

Mr. Kern's check, I learned upon inquiry, was duly received by the secretary. It is a grand good thing to have our protective societies supported in so liberal a way, and one can only wish that other prominent sportsmen besides Mr. Kern would add their \$20 contributions. I do not think the cases against Mr. Kern's restaurant can be tried before next week, as Mr. Low will be out of town for a few days, and is very busy. He does most of the legal work for the State Association.

But to continue the story just the way it happened. It was resolved by a few gentlemen to continue the investigation, to have no favorites, and to secure proof against as many restaurants and hotels as possible. Saturday evening, July 25, nothing was planned, though some valuable time was lost in talking. Monday afternoon a list of names, 21 in all, was prepared of those who would probably be interested enough in this work to try to get evidence. Billy Mussey put the addresses opposite their names, and Mr. Fred C. Donald had type-written letters, signed by Mr. Abner Price, president of the State Sportsmen's Association, in the mails Monday afternoon, asking attendance at Mussey's Hall, 106 Madison street, Tuesday evening.

On Saturday evening, July 25, previous to this called meeting, Messrs. Abner Price, F. C. Donald and C. S. Burton had visited the Central Restaurant, on Randolph street, in search of illegal game, and met so distinct a refusal that they felt assured the restaurant was altogether innocent of selling such game. Let this fact be recorded with more pleasure than had it been otherwise.

On Monday evening, July 27, pending the expected mass meeting of indignant sportsmen, Mr. F. C. Donald, Mr. A. H. Harryman and myself visited the "English Chop House" kept by "Billy" Boyle on the alley between Dearborn and Clark streets. This is a place patronized largely by the class whom we may distinguish as sporting men and not as sportsmen. As in Kern's restaurant, there is at Boyle's place a glass case where the meats, etc., are displayed. We stepped up to this case. A number of birds were on ice, labeled "Teal duck." Woodcock and plover were also labeled.

"Haven't you got any birds, any chickens?" I asked the waiter, and in reply he finally fished one young prairie chicken out of a napkin in a corner of the case. Its feathered legs and long gaunt youthfulness told the story all too plainly, and we all three knew at once that the goods were genuine.

"Give this gentleman the chicken," said Mr. Donald, "and we two will each have a nice teal duck." And so, of this openly displayed illegal game we chose and ate and paid for it. This case was very simple enough. The teal were of course as illegal as the grouse.

On Tuesday evening, July 28, the mass meeting of interested sportsmen resulted as such things usually do. Less than a dozen were present, and some of those were far more willing to advise and counsel than they were to get out and do a little work. It was agreed by the few present to push the cases in the name of the State Sportsmen's Association, and to pay any costs, etc., out of the treasury of that Association. No one appointed committees to go on after evidence. That work regulated itself, the gentlemen pairing off about as they liked. It was about 7 P. M. when the start was made.

Messrs. W. N. Low and C. D. Gammon went to the Lakeside restaurant, Adams and Clark streets, and asked for prairie chicken and duck. They were told that such game was out of season and was not kept. They failed to get any, for which we should be very glad.

Mr. Abner Price and Mr. Frank Place went to Rector's well-known oyster house, the basement, corner of Monroe and Clark streets. They found "teal duck" printed on the bill of fare, but with no price attached. Mr. Place ordered a teal duck and Mr. Price a prairie chicken. "You've got that, haven't you?" they asked.

"You know it's out of season," said the waiter. "Oh, that's all right, we're not afraid," was the reply. And forthwith their order was filled and this case was nailed. The prairie chicken was very small.

Mr. W. P. Mussey and Mr. Percy Stone selected the Lansing-McGarigle Catering Co.'s, 126 Clark street, as their field of operations. Percy met a waiter there whom he knew. Billy tossed him a coin and said, "Bring us some prairie chicken, if you've got any." The waiter pointed to the bill of fare. "English pheasant—dot was prairie chicken mit ein ander name," said he, with a pleasing wink. So one of these birds was ordered. It proved to be an old prairie chicken, and was so badly spoiled that it could not be eaten. The evidence, however, was clear.

Messrs. R. B. Organ, A. H. Harryman and myself went to Kinsley's famous restaurant on Adams street, opposite the post office. This very exclusive, gilt-edged and generally "way up" joint has long been suspected, and the result shows the suspicion only too well grounded. We went to the more quiet and seclusive apartments on the second floor. On the bill of fare we found woodcock, plover, etc., but no illegal game.

"Haven't you got any birds? I'm dying to get hold of a young prairie chicken," I said to the waiter.

"Nothing but what is on the bill of fare," said that well-trained functionary. "We don't serve it out of season." "Pshaw!" said Mr. Organ, "go along and tell your chef that we want one teal duck and two prairie chickens; all young, all broiled and all in a hurry. Do you see?"

The waiter departed, and returning said, "We don't serve game out of season, but we got some owls." A faint trace of a smile crossed his visage.

"That's all right," said Mr. Organ, "bring us two owls and a teal, and hurry up." The waiter again departed, but again returned. "Very sorry, sir," said he, "but the chef says the owls are all out just now."

We ate no game at Kinsley's. We think that the game dealer of whom he purchases had warned him to be careful for a while. An illegal prairie chicken is generally called an "owl" in certain roadhouses and restaurants of this city.

Wednesday about noon, July 29, Mr. W. L. Wells, his brother and another gentlemen, called at the Leland Hotel, the well-known and very select hostelry on Michigan avenue, fronting the lake. They signified their desire to eat three prairie chickens, and the café manager accommodated them then and there, and the case is a very clean one.

On Wednesday evening Mr. W. P. Mussey and Mr. F. A. Place visited the Wellington Hotel Café, on Wabash avenue, a new and rather pretentious concern of the rather seclusive and high-priced sort. Fifty cents to the waiter, a bottle of claret, and two young prairie chickens, at \$1.25 apiece, followed in very rapid succession here. It was all easy and open. A prairie-chicken supper in Chicago costs from \$3 to \$5 in July, but you can get it if you have the requisite amount.

Mr. Harryman and myself visited Kinsley's again Wednesday evening, thinking that as we had the password of the "owl" we should be able to secure what we wished. As we went in we passed our waiter of the evening before and I motioned to him to come to our table. This was a mistake. The head waiter saw it, looked at us and doubtless recognized us as the persistent chicken orderers of the previous evening. The waiter, head waiter and cashier held a hurried consultation looking our way. "That settles it," said Mr. Harryman in an undertone, "we'll have to send some one else here." I imagined the waiter was surprised when we innocently called for fish and steaks and did not call for game. We were now almost certain that Kinsley's had been warned, and so no more time was spent there. There will be plenty of time between now and Oct. 1 and I don't doubt that he will yet sell chicken to some innocent looking third party who asks for "owl." I should think selling illegal game would be a rather uncomfortable as well as dirty sort of business.

On Thursday, July 29, it had become rather difficult to find searching parties to go out. Mr. Geo. E. Cole, president of the Fox River and Kankakee River associations, had been out of town, but upon his return was told of what was going on. Thursday noon Mr. Cole and myself visited the elegant café of the *recherché* Hotel Richelieu, on Michigan avenue, lake front. I cannot say whether or not they had illegal game upon the bill of fare, for I did not wish to be too studious of it under the circumstances. The waiter came up. "You have some prairie chickens?" I asked.

"Yes, sir," he replied, "very nice." They were very nice, it is true, but very illegal. We ate two young birds, bringing away a leg of each. The order in this case, as in most of the other high class places, was written out in full upon an order card, and not given

verbally. It was easy to get prairie chicken at the Richelieu, and I must congratulate Mr. Bemis upon his chef. "On Thursday evening Mr. Harryman and I visited the place long known as Batchelor's restaurant, 32 Adams street. It is now run by James Cahill, the card says. We got a colored waiter of intelligence, and sent him to the cook on a quest for prairie chicken. "We haven't got any now," he said upon his return, "but we are just getting ready to keep some prairie chickens and other game. We're all tore up just now." The restaurant was in process of reconstruction.

This concluded the search, and this is the only accurate story of how the search was made. This morning the daily Tribune, of this city, published an account of the matter. It was an excellent piece of newspaper work, except that the writer of it did not get the facts at all. The article, however, might serve as a warning to the hotels and restaurants, and therefore the work will be stopped. Under a proper interest, and with proper support, with committees regularly appointed who would get out and do some work, twice or three times this amount of evidence could have been collected and should have been collected. That illegal game is sold in Chicago is the fault of the sportsmen of Chicago.

We have now evidence for 16 cases, covering some of the most prominent hotels and restaurants of this city. Many equally guilty have escaped. The most apparent deduction from it all is that it is appallingly easy to buy illegal game in Chicago. One half the middle class and practically all the high class cafés and restaurants serve it, and have done so unhindered for years. The work of the few individuals above mentioned will, it is hoped, abate this nuisance partially for a time. Mr. Low will have charge of the cases and should bring them at once if his time will permit. Each offender should be pushed and convicted for every individual illegal bird known to have been served. In view of Mr. Kern's connection with sportsmen's matters, the state of affairs at his restaurant is most unfortunate. He is reported to have learned that his steward bought only six birds, Mr. Kern being ignorant of their purchase. The first bird in evidence there was eaten on Tuesday, the last on Friday. He would not seem to have had a very strong trade in them upon that basis.

E. HOUGH.

SIX YEARS UNDER MAINE GAME LAWS.

XI.—IN CONCLUSION.

A CAREFUL observer may soon satisfy himself that the prospects for fish and game in Maine are not growing better. The fishing in some of the best places is deteriorating, and the game, though still abundant, has been mercilessly slaughtered, while the season for killing it grows yearly longer. This year the work began the first of June; and next year we expect it to open in May. The summer killing is increasing continually, and the number of sportsmen grows larger every year. It is impossible for the natural increase of the fish and game to keep pace with the demand. What then? What happens when there is not enough for all?

At the same time it is undeniable that no effort has been made to stop the summer killing; that the game laws have been very ill-enforced at the best and that outrageous injustices have been committed in their name—the laws having been executed as they have been, what then! What happens when the lowest ebb has been reached?

After the ebb, the flood; the highest tides follow the lowest. In the nature of things, there will be a reaction which will give not only a stricter enforcement of the laws we have—we want that, the sooner the better—but if the delay is long, a change of laws with heavier penalties, increasing in proportion as the reform is deferred. The longer the inaction the greater the reaction. On the other hand, when there ceases to be game enough for all, the effort will be made to secure it for the few. The non-execution of the law diminishes the amount of game and hastens the day of game preserves; the establishment of the latter tends to increase the penalties and severities of the law; the very neglect of the laws at present inclines to the same end.

Great evils may hang upon the adjustment of these points. We fear them. We know that there has been a call for the increase of penalties and that there is a constant pressure to secure the establishment of game preserves. For the former, read our Game Commissioners' reports for the past few years—the last, however, is a commendable exception—and see how strongly they have urged to add imprisonment to all gamelaw penalties; for the latter, follow the quiet, but active endeavors to secure possession of land that is now open to the public. It is something not chronicled in the newspapers, but it is here.

Of course there is no immediate prospect that any considerable portion of Maine will be closed to the public. It is still what may be called a far-off danger; but our lumbermen and landowners could tell of a very decided trend in that direction. Nor does it by any means need that a very considerable portion should be so held in order to accomplish what seems now to be a great evil. Closing half a dozen well-located townships and making it trespass to camp or hunt upon them could be made a very great annoyance. There are a few townships which, for ease of approach, excellence of hunting and fishing grounds and beauty of scenery and camping places, are worth to the sportsman forty times as much as others somewhere else. Who wouldn't prefer the snug chance we all know of, which is open to us now whenever we choose to go, to—well, to a dozen townships around Baker Lake at the end of the nine-mile carry?

We do not speak with any hostility to any one who prefers not to have the whole world use his land as an excursion ground. It is his own and he has a right to do with it what he pleases. But the principle of a game preserve is different. It is closing the land to inclose game and fish which were not bought, which are not property and to which there is no title. (Stocked ponds and preserves are not meant.) It is using a right to compass a wrong. Now this is very hateful to the mind of the average Maine man. To tell the truth our lumbermen and landowners have a little (or a good deal) spoiled us by their generosity; and, quite aside from the question of game as property, the invariable custom of leaving all land open to the public has led us to regard it as a right. I well remember my own rebellion when I first went into a country where blueberries were private property and trout streams were posted. There is a strong objection

here to closing land because the custom of sharing all the minor products is so nearly universal.

But it may be said that closing the land is not necessary; that some of the best preserves require scarcely more than respect for the State game laws. These favors are appreciated, and yet so captious is the public at present that even this would fail to disarm suspicion on Penobscot. "The whole thing was free to them before, without costing. They didn't need only enough for their shanty. When they get good and ready they mean to shut down on us." The presence of private wardens to enforce State laws would be taken as an affront. Indeed (to show the feeling), the private rewards offered last winter by non-residents, whatever might have been their effect in the western part of the State, were bitterly resented here as unwarrantable interference.

The amount of it is that our landowners and lumbermen are wholly trusted. They are the most popular class of employers in the State. They wear the homespun in speech and manners and have immense personal popularity. Some of them merely on the strength of this popularity could muster a regiment to work for them or to fight for them. The land they own cannot be transferred in any quantities from their hands to strangers, without creating the feeling that it has gone from the control of friends to that of aliens, who may be never so worthy but are not the same. It is like seeing the old homestead change hands.

"Home was home then, my dear, full of kindly faces;
Home was home then, my dear, happy for the child."

That is the feeling we have; and no game preserve can be purchased here for some years at least without buying with it also a sub-acute hostility—home no longer being home, happy for the child.

Nor is this the sole cause of prejudice. The owner of a preserve may be the pattern of all moral excellence, but to those used to different customs he seems a dog in the manger, guarding what he cannot use and thinking to growl away those who have at least as good a right there as he. This antagonizes the woodsman at two points. He will not take a dare and he hates selfishness. A body of gamekeepers signifies defiance: the effort to hold wild game on land is (to him) a meanness almost incomprehensible. Now the punishment of some sins is reserved for God alone, but (according to the Maine dictum) stinginess may be punished by God and the neighbors. There is not the slightest doubt that the establishment of preserves, or even the purchasing of land for them at the present time, would result in burning the country.

How to express the certainty of this I do not know, nor that stern approval which it would meet from a large following; but I know only too well the kind of resolution which blows up the magazine and garrison (not always by their leave) to avoid surrender to the enemy. If any one doubts the outcome of preserves here let him ask the larger lumbermen and landowners and the best guides. What a hundred years will bring forth none can tell; whether ten years will produce a change of feeling these men would know better than I, but I incline to think that ten years will not do it. Changes occur slowly here, and as I showed in the beginning, the love of freedom so outweighs the love of money with woodsmen that it seems not improbable that the opposition to preserves will strengthen as the demand for them increases.

We need not dwell upon the value of the lumbering interests to Maine, especially to the working classes who find employment by the thousand in the lumber camps, on the drives, in sawmills, in pulp mills, loading vessels and making them. Except farming no one occupation employs so many men as lumbering and its dependent trades. The people are dependent upon it, and those who try to teach us that the game and fish are worth more than all the lumber get laughed at for their pains. Then, again, the water powers are directly dependent upon the forests. This is especially true of the Penobscot, which rises in swamps and bays and little streamlets. Destroy the forests and the water powers are gone. And after the forests are gone come the floods and freshets. It is imperative that the forests should be saved from fire.

But could game preserves do this damage? Probably not. The opportunity will not be given. The chances are that the first preserve on Penobscot waters will be burned at once—there is an old saw about fighting fire with fire—and heavier conflagrations saved in later years when the system should gather force. For it would tend to heavier penalties; they would produce crime and the fires would follow. If the means of prevention cannot be commended, it must be admitted that is one of the ways in which the many instinctively protect themselves when their well being is imperilled for the pleasure of the few.

The second danger is to fish and game. I said that last summer's waste was responsible for last winter's killing. This was the beginning of retaliatory measures which will be kept up. "It isn't fair that they should have and waste what we can't have to eat," is the complaint. The fate of the game in this State depends very largely upon the good will of the rural classes. Sportsmen may be able, as has been boasted, to pass any reasonable laws here, but the veto power lies with the people, and unacceptable game laws will be destructive to the game. This is something worth remembering. People will not stand to-day what they would a few years ago, and suspicion which was formerly quiescent is now fully alert. The question is considered not one of game and who shall have it, but one of rights. The determination is to insist on fair play, to refuse to sell a birthright for any amount of pottage. Hence, any law that, for instance, cuts off December from the open season to open September is regarded with extreme disfavor. There is little likelihood that we shall have game dinners of the same order as the Boston tea party, for people are opposed to waste; but any attempt to introduce hunting licenses, for example, or leases of lands and waters, or to favor sportsmen more than residents would destroy the major part of the game in a very few years. There is, indeed, little danger of this being done with game, but at any time pickering may be put into trout waters. The sporting papers have had a great deal to say about the destructiveness of winter trout fishing, but they do not know that this is all that secures any trout fishing. The people here will have some kind of winter fishing, and if isn't trout it shall be pickerel. It is true that there is a strict law against the introduction of pickerel, but there is absolutely no means of enforcing it. I suppose that it is generally known that a pickerel may be frozen stiff, kept so for days and after-

ward resuscitated. The experiment is simple enough, for it only needs that the fish should be caught on a very cold day, frozen immediately and packed in snow, afterward thawed slowly in cold water. Any one who tries it, as I have done, will be satisfied that pickerel could be transported in this way anywhere and that no law could be framed to prevent their introduction into the best trout waters. This is an absolute check to all attempts to take away the winter trout fishing. Had it been my purpose to deal with fish laws I could have made it plain that once already this danger was pressing and was avoided by the "one line for citizens" law, which no one ever kept. The change this winter permitting five set lines (this is practically an unlimited number, the real limit to the fishing being the law forbidding transportation of above a certain amount of fish)—this change was a wise and pacific measure, which removes to some extent the danger to trout waters.

We come at length to the question of adding imprisonment to penalties. May the day of it long be averted? I know that some of our people, seeing the inequality of the money penalty, have advised it, but without due forethought. Of all bad things that can happen to us through the wretched possession of a little game, this would be the worst. "It would fill these woods full of outlaws," said one guide in gloomy anticipation. To add imprisonment to all our game-law penalties, as our Commissioners have urged, as others will be sure to urge in coming time, would be to put a premium on crime.

In the first place, the majority of all our game-law violations are committed by people called "sportsmen." This is a safe estimate for game-law violators; the guides will put it higher. Now, none of these men, if they have any ready money, need ever suffer imprisonment unless their sense of honor be fantastically nice. To give an extreme instance, let us suppose that the recommendation of the Commissioners' Report in 1886 had actually become law, and that "a penalty of \$500 and six months' imprisonment [was] the mildest punishment for killing a cow moose at any season." This would not save the cow moose. They would still be killed unintentionally, for half the time at least it is impossible to tell the sex of the animal shot before the chance is gone; and they would be killed intentionally also to spite the law. But with such a law, unworthy officers and justices would procure appointments and connive together (as has actually been done) to make the most they could out of offenses, real or trumped up. Certain justices would have the majority of the cases and have their price. But, supposing the case a good one, who would not pay \$500, or even twice that, if a busy man, in order to escape six months in the county jail? As a matter of fact it would not cost so much. Rather than have the case appealed they would come down some on their prices. The poor man, who would be some farmer, trapper or hunter, and who could not pay their price, must appeal. Now, in the higher courts both men would stand alike, or, indeed, the poor man would have the better chance; for a jury would not convict on any such case if there was any possible escape. But, as a matter of fact, not very many cases would go up to superior courts. Both would take their chances of being found out; the wealthier man would know his grounds and perhaps make it all right beforehand, while the poorer man if caught in the act would settle it on the spot or as soon thereafter as possible. That law, had it been made law, would have put a premium on murder. The suggestion was well intended, but it was not wise. It is to the credit of the Commissioners' judgment that they ceased to urge this, and have of late not proposed the addition of imprisonment. But the suggestion has been made and it cannot be forgotten. We fear that it would almost inevitably follow the establishment of an extensive system of private preserves. "It would be like it in England," writes one hunter.

No better illustration of the iniquities of preserving the pleasure of the few by arbitrary enactments against the rights of the many can be given than in quoting what Hugh Miller, the Scotch geologist, wrote nearly fifty years ago concerning the English system and its results. The extract is from his "Crime Making Laws," in *Essays Political and Social*; but others of his papers are equally profitable and equally apt. There is in these papers the weight of righteousness nobly indignant and the weight of experience which overbears all theories and theoretical objections:

"If there was a special law enacted against all red-haired men and all men six foot high, red-haired men and men six foot high would in a short time become exceedingly dangerous characters. In order to render them greatly worse than their neighbors, there would be nothing more necessary than simply to set them beyond the pale of the constitution by providing by statute that whoever lodged informations against red-haired men or men six feet high should be handsomely rewarded, and that the culprits themselves should be lodged in prison and kept at hard labor on every conviction from a fortnight to sixty days. The country would at length come to groan under the intolerable burden of its red-haired men and its men six feet high. There would be frequent paragraphs in our columns and elsewhere to the effect that some three or four respectable white-haired gentlemen, varying in height from five feet nothing to five feet five, had been grievously maltreated in laudably attempting to apprehend some formidable felon, habit and repute six feet high; or to the effect that Constable D., of the third division, had been barbarously murdered by a red-haired ruffian. Philosophers would come to discover that so deeply implanted was the bias to outrage and wrong in red-haired nature that it held by the scoundrels even after their heads had become bald and their whiskers gray; and so inherent was ruffianism to six-foot-high men that though four six feet fellows had for the sake of example, been cut short at the knees, they had remained, notwithstanding the mutilation, as incorrigible ruffians as ever. From time to time there would be some terrible tragedy enacted by some tremendous incarnation of illegality and evil, who was both red-haired and six feet high to boot."

With exquisite humor, Miller traces the gradual abolition of the enactments. He also draws a vivid picture of the former prevalence of highway robbery and murder in England. He continues:

"And so highway murder has become one of almost the rarest offenses in the criminal register of the country. Very different is the case; however, with murders of another kind. * * * Within the last few years there have been no fewer than twenty-five game keepers mur-

dered in England. The cases were all ascertained cases; coroners' juries sat upon the bodies, and verdicts of wilful murder were returned against certain parties, known or unknown; and these were, of course, but the murders on the one side. * * *

"Be it remembered, too, that the peculiar barbarism of the modern period is greatly more a national reproach than that of the ancient. The old enormities were enormities in spite of a good law; the newer, enormities are enormities that arise directly out of a bad one. There is sound sense as well as good feeling in the remark of Mrs. Saddletrée on the law, in *Effie Dean's* case, as laid down by her learned husband the saddler. 'The crime,' remarked the wiseacre to his better half, 'is rather a favorite of the law, this species of murder being one of its own creating.' 'Then, if the law makes murders,' replied the matron, 'the law should be hanged for them; or if they would hang up a lawyer instead, the country would find nae fault.' All the twenty-five ascertained murders to which we have referred, and the at least equally great number of concealed ones, were crimes of the law's making, murders which as certainly originated in the law, and which, if the law did not exist, would as certainly not have been, as the supposed crimes of our illustration under the anti-red-hair, anti six-foot-high statutes. No murders arise out of the killing of seals and sea gulls; why should any murders arise out of the killing of hares and pheasants? Simply because there is a pabulum of law in the one case, out of which the transgression springs, and no producing pabulum of law in the other. There can be nothing more perilous to the morals of the people than stringent laws—that is, instead of attaching their penalties to actual crime, and having, in consequence, like the laws against the housebreaker and the highwayman, the whole weight of the popular conscience on their side, *create the crime which they punish*, and have thus the moral sense of the country certainly not for, mayhap against them. They become invariably in all such cases a sort of machinery for converting useful subjects and honest men into rogues and public pests. Lacking the moral sanction, their penalties are neither more nor less than a certain amount of peril, which bold spirits do not hesitate to encounter, just as a keen sportsman does not hesitate to encounter the modicum of risk which he runs from the gun that he carries. * * *

And such is the principle, when the law, equally dissociated from the promptings of the moral sense, is not a law of accident, but of the statute book. Men brave the danger of the penalty, as they do the peril of the fowling piece. But there is this ultimate difference, without being in any degree a felon by his own conscience, the traverser of the statutory enactment becomes legally a felon; he may be dealt with, like the red-haired or six-foot-high felon of our illustration, as decidedly criminal. * * *

Few of our readers can have any adequate conception of the immense mass of criminality created yearly in the empire by this singularly deteriorating process. In the year 1843 there were in England and Wales alone no fewer than 4,529 convictions under the game laws. Forty of that number were deemed cases of so serious a nature that the culprits were transported. In all the other cases they were either fined or imprisoned; the fines taken in the aggregate averaging two pounds sterling, the imprisonments seven weeks. And it is out of this system of formidable penalties that the numerous murders have arisen, and that the game laws of the country have, like those of Draco, come to be written in blood."

FANNIE PEARSON HARDY.

THE NEW YORK WOODCOCK SEASON.

THE woodcock season in New York State will not open until Sept. 1. From the *Book of the Game Laws* we quote the full text of Secs. 9 and 10, Chap. 534, Laws 1879, as amended. Sec. 10 originally had no reference to woodcock, but when it was amended last year the word "woodcock" was surreptitiously interjected into the bill, presumably by some one more solicitous to do away with August woodcock shooting than to secure its abolition if at all by fair means. Here is the law:

WOODCOCK, SQUIRREL.—Sec. 9 [as amended by Chap. 269, Laws 1884]. No person shall kill or expose for sale, or have in his or her possession after the same has been killed, any woodcock, between the first day of January and the first day of September, in the counties of Oneida and Delaware, and in other parts of the State, between the first day of January and the first day of August in each year, except as hereinafter provided. It shall not be lawful for any person to kill or expose for sale, or to have in his or her possession after the same has been killed, any black or gray squirrel, between the first day of February and the first day of August in each year. Any person violating either of the provisions of this section shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of twenty-five dollars for each bird or animal so killed or had in possession. [See Sec. 10.]

RUFFED GROUSE, PARTRIDGE, PINNATED GROUSE, PRAIRIE CHICKEN, WOODCOCK.—Sec. 10 [as amended by Chap. 90, Laws 1890].—No person shall kill, or expose for sale, or have in his or her possession, after the same has been killed, any ruffed grouse, common called partridge, or pinnated grouse, common called prairie chicken, or woodcock, between the first day of January and the first day of September, except as hereinafter provided. No person, carrier, corporation, association or company shall, at any time, carry or transport or have in his or its possession for the purpose of transportation, any ruffed grouse, commonly called partridge, or pinnated grouse, commonly called prairie chicken, or woodcock, caught or killed in the counties included in the forest preserve, shall be deemed to have them in his or its possession in violation of this section; provided, however, that they may be transported from the forest preserve or have in possession for the purpose of transportation the

above-named birds or fowls from the first day of September to the first day of January in any year, caught or killed in the forest preserve, provided that they be accompanied by the owner. Any person or company offending against this provision shall be deemed guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of twenty-five dollars for each bird or fowl so killed or had in possession during the prohibited season aforesaid; or for each carcass transported or had in possession for transportation in violation of this section.

*Forest Preserve.—Chap. 283, Laws 1885 (as amended by Chap. 8, Laws 1890). Sec. 7. All the lands now owned, or which may hereafter be acquired, by the State of New York within the counties of Clinton (except in the towns of Altina or Dannemora), Delaware, Essex, Franklin, Fulton, Hamilton, Herkimer, Lewis, Oneida, St. Lawrence, Saratoga, Warren, Washington, Greene, Ulster and Sullivan, shall constitute and be known as the forest preserve, except all such lands within the limits of any incorporated village or city, and except all such lands, not wild lands, as have been, or may hereafter be, acquired by the State of New York, upon or by foreclosure of or sale pursuant to any mortgage upon lands made to the commission for loaning certain moneys of the United States, usually called the United States deposit funds, and all such excepted lands acquired by the State of New York may be sold and conveyed as provided by law.

SMALL-BORE RIFLES FOR LARGE GAME.—Shoal Water Bay, Washington.—About one year ago (I do not care to mention the exact date for obvious reasons) Capt. Finely, of the steamer *Restless*, on the down trip of the steamer, sighted two bull elk swimming across the Nasel River. He rang for the engineer to "open her out," and away they sped under all the steam she would stand. When within 50 yds. of the elk he opened fire with a .22cal. single shot Winchester, the only gun on board; and at the fourth shot turned one elk over on his back, shot through the head, sinking him. They then jumped into a small boat, as the second one had got ashore, and pulled up a slough to cut off his retreat, which they did. Capt. Finely then went ashore, and as the elk went to pass him at a distance of about 75 yds., opened out on him, killing him on the jump at the third shot by a bullet which went in at the base of the ear. Four men dragged the game to the water and towed him to the steamer, where he was hoisted aboard; and they then picked up No. 1 a quarter of a mile below the scene of the shooting, as he rose after floating that distance under water. I guess this beats all previous records for .22cal. rifles.—JIM MACK.

ROAD GEESSE.—Framingham, Mass.—I find the following in the *York (England) Courant* of Jan. 8, 1740. I send it for two reasons—as a curious bit of sporting information, quaintly told; and to ascertain, possibly, from some of your readers of what species is the "road goose," and what the significance of the term: "Yesterday great Numbers of London Gunners assembled at the several Stairs leading to the Thames, to shoot Ducks, Gulls, and Road Geese, which appear'd in great Plenty; and many of them were kill'd, tho' none could be brought off, the Frost not having yet prevented the Currency of the Tide. Dogs were of no Use to the bringing them off, the Edges of the Ice on which the Birds settled being too weak for the Dogs to get up by."—F. C. BROWNE.

MICHIGAN DEER COUNTRY.—Crystal Falls, Mich., July 27.—It may interest some of our readers to know that the deer will be plentiful in this part of the Upper Peninsula this fall. The pasture is fine and the does have dropped fawns, almost without an exception. I have seen over 100 does in the past six weeks, and have seen but two or three barren ones. Bucks, does and fawns are in splendid order now and by the time the season opens they will be prime. There is a great deal of illegal shooting done up here, but the deputy game warden has a set of dark colored glasses which he wears, unless he is after "them rich city fellers," so that the prosecutions are very few.—NESKA-QUA-NEL.

OTTAWA, Kansas.—As last summer was the best season for game, so this has been the worst, and I am afraid the quail and prairie chickens fared badly on the prairie, though there may be plenty of quail in the woods yet. Last week I was out in the country a few miles, and took particular pains to find out how our game was getting along. I found a great many plover, some killdeer and lots of rabbits, but other game was scarce. A great many coyotes were caught in this county during the past spring, also a few gray foxes. Two of the latter animals are kept at one of the stores in Ottawa, and they make very nice pets.—F. B.

YOUR WATCH AS A COMPASS.—Potsdam, N. Y., July 28.—I learned something new at Paul Smith's the other day. That is, to tell the points of the compass by your watch. Point the hour-hand toward the sun, and one half the distance between the time and 12 M. is south, from 6 A.M. to 6 P.M. After 6 P.M. one-half the distance is due north. This may be worth an item in *FOREST AND STREAM*, as I am sure a large majority of your readers have never heard of it.—IROQUOIS.

MASSACHUSETTS SHORE BIRDS.—Gloucester, July 28.—Marsh and beach birds are just coming along now; two of my friends shot 75 recently.—E. F. L.

MINNESOTA'S NEW GAME LAW.

Editor Forest and Stream:

State Game Warden Frank L. Stetson has just issued a synopsis of the game laws of Minnesota. As arranged by the new commission from the debris of old and new enactments. Heretofore it has been uncertain as to the meaning of various laws, there being an apparent conflict between the general act and the various local or county laws. The open seasons now prevailing in all parts of the State, except in a few counties where there is little or nothing to shoot or hook, are as follows:

Woodcock, July 4 to Nov. 1.
Pinnated grouse or prairie chickens and white-breasted or sharp-tailed grouse, Sept. 1 to Nov. 1.
Quail, partridge, or ruffed grouse or pheasant, Sept. 1 to Nov. 1.
Wild duck of any variety, or wild geese or brant, or any aquatic fowl whatever, Aug. 20 to April 25.
Wilson or Jack snipe, or snipe of any variety, Aug. 20 to April 25.
Moose, deer and caribou, Nov. 1 to Dec. 15.
No moose or caribou shall be killed, sold or taken in the State for five years from April 20, 1891.
Very few reports of violation have been made, the leading case being near Alexandria, where eleven nets and a seine were confiscated, but the owners did not have enough fish to make their fines very excessive, the penalty being \$2 a fish for all taken except white lake and herring. The fishing in Minnesota waters has been uniformly good all season. Notably fine strings have been taken in Douglas county, where several hundred lakes offer unusual chances.
G. R. K.

[The full text of the new law is given in the July issue of the *Book of the Game Laws*.]

MICHIGAN GAME SEASONS.

BY the present law (given in the July number of the *Book of the Game Laws*) the open seasons are: Deer, in the Upper Peninsula, between Sept. 25 and Oct. 25; in the Lower Peninsula, between Nov. 5 and Nov. 25. Wild turkey, quail, Nov. 1 to Dec. 15. Grouse or partridge in the Upper Peninsula, Oct. 1 to Jan. 1; elsewhere, Nov. 1 to Dec. 15. Woodcock, Aug. 15 to Dec. 15. Wildfowl, Sept. 1 to Jan. 1. The State Game and Fish Warden is Chas. S. Hampton, Petoskey.

Camp-Fire Glickerings.

"That reminds me."

MY friend Mr. Harryman was riding north on a railway last week and fell to talking with a young man got up for a sportsman, who was bound for Antioch. They passed a low bottom filled with close cover.

"Looks like there might be woodcock over in there," said Mr. H.

"No," said the young sportsman, "I think it's mostly hickory."

My friend Billy M. was talking yesterday with a salesman who had given him a sample box of a new mosquito dope.

"How did it work?" asked the salesman.

"Elegantly," replied Billy. "Never got bit once."

"You smeared it all over your face and hands?" asked the delighted vendor.

"No, I smeared it all over my boat pusher," said Billy.

CHICAGO. E. HOUGH.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

ANGLING ON MAMMOTH.

THE other evening I remarked that the most enjoyable fishing in the country was to be found on Raft River, in southern Idaho. A sheepman who was at the table said that he had fished all over the Raft River region and there was nothing in all that section of country to compare with Mammoth Creek, where he had camped for a couple of years. The best part of it was that I received an invitation to go to his cabin, and early the next morning we were traveling southward.

Mammoth Creek is the west fork of the Sevier River. It is the most southern of all the streams in the Great Basin and is about 7,500 ft. above the sea level. From November until April the snow lies deep on the Mammoth meadows. The cold is so intense that no one thinks of wintering there, but during the summer months a saw mill is in operation among the pines and the cattlemen guard the north bank, while the tents of sheep herders dot the south bank of the little river.

The twenty-mile ride from Panguitch was not altogether delightful. The first half of the journey was over an uphill stony trail. The sky was overcast, the wind chilly, and my steed was, in the technical parlance of the country, "raw," i. e., he would shy, buck or balk, as best suited his convenience. In my first experience with a bucking horse I remember that I was violently churned for about half a minute and then I landed gracefully on my hands and knees in a clump of cactus. That was years ago, but I have not ceased to tremble at the very idea of mounting a chronic "bucker." Coal Pit Ridge was the half-way point, and thenceforward there was more pleasure in the journey. The route now lay through the choicest part of the cattle range, over grassy meadows that had never known fence or plow, or beneath noble pines, among which the ringing of an ax had never been heard.

Before reaching one of these pine groves there was breathed upon us a most subtle, delicate and delicious perfume. It reminded me of the wild grape amid the mountains of New England or of the *Magnolia glauca* in the barrens of southern New Jersey. The source was soon apparent. The whole grove was carpeted with a diminutive narcissus, and the moss, grass and dried needles were completely hidden by the creamy blossom and the soft, tapering leaves. Every locality seems to have its own flower of surpassing loveliness. Among the Sierra it is the nodding calochortus. In the northern Rockies the caerulean columbine rules, and here, in lower Utah, the modest narcissus is without a rival. There were dandelions and violets, wild currants and bull berries in full flower, and then almost regretfully I heard the tinkle of the sheep bells and rode through the great band of ewes and little lambs to the door of the cabin that was Ike's summer residence.

After dinner I explored the creek while Ike rode around his flocks. The water was high and muddy, and a fly would be of no use; so I determined to hunt wood grubs in the timber. For me there is beginning to be a pleasure in studying the art of angling. "Gone—the Romantic Age of Trouting" may do for the caption of a Pennsylvania idyl, but here the romance still hangs about the mountain brooks, and I find it not with tapering bamboo and silver-doctors, but with pole of birch or willow and with good old-fashioned bait. There is a knack in baiting just as in the use of flies, and the angler who sticks to one grub or worm will find himself left in the long run. The time of the day, the clearness of the water, the depth of the stream—all have to do with the efficacy of the lure, and in no two streams have trout exactly the same habit. In angling not only the bait but the habits and haunts of the fish must be studied. White grubs, earth worms, black beetles and fish eyes have each a proper place, and when once the angler learns the use of each he can have as much sport as with the most delicate fly outfit, although when the number of trout captured is a desideratum, the fly is the proper lure.

Nightfall found us with all the bait that we would need for a week's campaign, and we dreamed of nothing but trout. Alas, there is no dependence to be placed upon the weather in the mountains. About 9 o'clock we awoke to find the whole country covered with snow and a perfect blast of hail and sleet. Sheepmen estimate that the storm in the immediate vicinity of Mammoth cost them not less than 5,000 lambs. All day long we sat by the fire cooking beans. From the gloom and storm came the bleating of the flocks and the wild clamor of the ducks. I have never seen greenheads so abundant as they are in the marshy sloughs of Mammoth. The females are all setting, but the males seem to be absolutely devoid of fear and would the season permit, are just waiting for a chance to be shot.

Friday morning dawned clear and warm. After two hours of sunlight the snow disappeared and dandelions and violets dotted the meadows. Ike rode about his

flock, gathered up the strays and was then ready to pilot me down the creek. It was fully 10 o'clock when we began to fish, and we had but two hours at our disposal, but in that time we landed an even dozen that weighed 9 lbs. 3 oz. If I had known as much as I do now, I should have fished all that afternoon, but it was an act of charity to help Ike with his lambs, and I could not refuse him. Late in the day Ben, the famous hunter whom I mentioned in a former article, rode up to the cabin and displayed a lion hide that measured 9 ft. 6 in. from tip to tip. He called it a lion, but it seemed to me the typical North American panther.

Ben had missed a number of colts from his mountain range and had gone up to find the offender. Just at dusk of the previous evening, he was trailing the great cat near its lair. Suddenly a bend in the route brought him face to face with the beast. They were just seven paces apart, too close for either to think of retreating. The panther snarled, switched his long tail, crouched and commenced to tremble. Ben said that he had no time to get frightened. One shot did the business. It entered the left eye and was found flattened at the base of the brain. Ben's nerve has since been the theme of village talk.

Saturday it stormed, though I managed to secure four large beauties from the creek before getting soaked through and through. Sunday stormy. Monday morning stormy. About noon the sun came out and I was congratulating myself on another opportunity to fish, when over the hill and down to the cabin came a horseman. He was the sheriff, and worse than that he was after me, at least he read me a subpoena from which I understood that at 10 o'clock the next morning I had to be at the justice's court in Panguitch, then and there to testify, etc. Regretfully I left the beautiful creek and at 10 o'clock P. M. I was back in the settlement, with the comforting assurance that the trip had not cost me a cent, and that I had made \$5 20 mileage.

The most remarkable thing about that case (one for malicious mischief and illegal destruction of property) was the verdict, which was rendered after three hours, careful deliberation:

"We, the jurors, find a verdict that the defendants are guilty of being accessory of the crime charged with, and we recommend them to the mercy of the court."

—Fourman.

Of course the court would be merciful after such a verdict, and the three boys who had smashed a barber pole were fined \$25 apiece. I wonder if I could not sue them for the loss of a week's sport at Mammoth and recover heavy damages.

PANGUITCH, Utah.

SHOSHONE.

ANGLING NOTES.

A CORRESPONDENT, Mr. F. P. Nye (not "William"), sends the following interesting notes from Arcata, California, and they can be relied upon:

"The salmon are now in Trinidad Bay, waiting a chance to run up the various streams that empty into the Pacific. By looking at the map the reader can see that Trinidad Bay is about forty-five miles north of Cape Mendocino, in the Northwest part of Humboldt county.

"While the salmon remain in this bay they afford the finest trolling in this part of the world. They grow to an immense size, and have been caught weighing 80 lbs. on a medium size trolling spoon; but they are not a first-class food fish. They belong to the variety known as the 'hook-bill' salmon.

"The steel-head salmon are beginning to take the fly in the brackish waters at the mouths of Mad River and Eel River. The large ones are taken on the spoon, and the young fish, known as 'black-spotted' trout, 'cut-throat' trout, etc., running from 1 lbs. to 2 lbs., take the fly, and are excellent on the table and afford magnificent sport."

Mr. Nye goes on to say that the fishing there is as free as air, and Tom, Dick and Harry can go and fill their creels without asking, a fact that will be appreciated by our Eastern anglers who have been "bounced" by a large and healthy farmer man. The writer can indorse all Mr. Nye says about the steelhead salmon, and in addition can say that on several occasions this fish has taken the fly when full grown.

Reports from Lake Mahopac are quite encouraging. It is well known that that lake contains large black bass, but this is the first season that anglers have met with any great success. A number of very fine specimens have been killed there on small frogs lately, two of them tipping the scales at over 6 lbs. each. A 9 lb. "Oswego" was killed in Lake Mahopac last week.

Bluefish are again as plentiful as ever along our coast, and it does seem a shame that owing to the greed of the men who control our fish supply, the people of this city, particularly the poorer classes, cannot benefit by it. When I was down at Patchogue last week bluefish were going a-begging, and the Seabright fishermen are getting 1½ cents a pound for them. But the men who control the market price will not let it break, they will let the fish rot first. Bluefish ought to sell to-day in the markets at 4 or 5 cents a pound at retail. And it is the same with sea bass. These are a most delicious fish, but there is so much waste to them that when one pays 15 or 18 cents a pound before cleaning, they are an extravagant dish. These fish could be sold at 6 to 8 cents and show a handsome profit.

A well-known angler of Brooklyn who recently returned from a lonely fishing trip up the Penobscot and down the St. Johns rivers, says that he enjoyed superb fishing and met only one man in the wilderness on the whole journey, and this individual ought to be attended to by the Maine authorities at once. He told this gentleman that he had killed seventeen moose and showed him the skins. All killed this past year, and I believe out of season. I understand he is a Frenchman, and comes from Canada.

SCARLET-IBIS.

GLoucester, Mass., July 28.—No bluefish have been seen in this vicinity up to this time, but they have been caught in abundance in Barnstable Bay. Tautog are being taken by fishermen from the rocks, and by going out in a boat about one mile from the city cod and had-dock can be caught any day in large numbers. The next thing on the programme is to go ashore and make an old-fashioned chowder.—S. J. M.,

ALONG THE NORTH SHORE AND TO ISLE ROYAL.—I.

WE had talked about making the trip for two years. "Sometime," we said, "we'll go after trout on the North Shore." May of this year proved to be the time. On the second Thursday in the month Stephens said to me as he sat at breakfast: "One week from to-day we must be on our way to Grand Marais," that being the point we had decided to go to and explore along the coast each way. "All right," I answered, and at once we began to prepare and plan. The greatest pleasure of my life is to get off on a trip with Stephens. He is such a grand, large-hearted fellow, and withal so faithful a friend, that from every trip we take together I come home respecting and liking him better than ever.

Wednesday evening, May 27, found us ready to start, each was suffering from a severe cold, all of our friends tried to dissuade us from going. "You both will die while away or come home to die," they said. We laughed and boarded the train. A run of 210 miles brought us to Duluth Thursday morning at 8:15. After breakfast a sharp walk took us to Booth & Co.'s packing house.

"Does your boat, the Dixon, go out this morning?"

"It does."

"At what time?"

"Ten o'clock."

"Where is the captain?"

"Right at your elbow."

"Captain, can you give us any points as to where to go on the North Shore for trout?"

"Don't go to Grand Marais; all the good places near there are preserved. Go to Grand Portage or Isle Royal."

We looked at each other and finally concluded to talk the matter over and decide after we were on the boat. We went aboard and were soon steaming away from Duluth. The day was simply perfect, not a cloud, no wind, no fog or haze. The view as we steamed down the lake was grand. Every rod of the ground after we left Duluth was new to us. There were some people on board who lived at various places between Duluth and Grand Portage. These the captain brought to us one after another to give us pointers, the sum of which was, "Don't go to Grand Marais, everything is preserved there. Don't go to the Brulé, no trout there, only very small ones." Yet we learned that a party would leave Duluth that evening for Baptism River, where they would fish Friday and then run on down to the Brulé and fish Saturday. We passed the Pickett, a steam yacht owned by some members of the Baptism River Club, at Silver Creek, with a fishing party aboard that were stopping at and fishing every creek and river that they came to. "Don't go here; don't go there" was the advice given, and to crown all every one said, "You are too early." At length we decided to get off at Chicago Bay, fish a little stream which came into it, coast from there to Grand Portage fishing every stream that we came to, and go from Grand Portage over to Isle Royal on the next trip of the steamer. "The streams on Isle Royal are full of trout," was the testimony given by every one that we questioned.

Half-past eleven that evening found us climbing over the side of the Dixon into a small boat, which carried us and our traps to the shore. The son of the boatman conducted us to the house, where we made a bed on the kitchen floor and were soon fast asleep. Soon after daylight we were astir. As soon as dressed we went down to the beach, unrolled our Acme canvas boat, set it up, stowed in our bedding, mess chest, tent and ourselves, and pushed off into the waters of the bay. 'Twas a pretty good load for a 14ft. Acme, but we had a great deal of faith in the boat. One of the fishermen at the bay who watched us set up the boat and pull off, as soon as he could recover his breath exclaimed, "I never saw the like of that in all my life!"

We rowed across the bay, passed the mouth of the stream that we had been told of, rounded a long point and were out in the lake. Landing on a nice sandy beach, we cooked and ate our breakfast, after which Stephens said, "Now for the creek and trout for dinner." Away we went. Our feeling cannot be described. 'Twas our first outing for trout. As we went along up the pretty little stream I felt as though I was about ten years old, and so informed Stephens, only to be greeted with a sarcastic fling—to the effect that he "hoped I would not get any more immature than I was, or I'd be lost in greenness." It was a crusher, and the poetry all evaporated from my life then and there.

Up the stream we went casting in every likely pool without success until we reached the falls, which are found a short distance up on all the streams on the North Shore. In the pool at the foot of the falls we had our first rise, and soon six beautiful trout were ours.

"Enough for the present," said Stephens, so we returned to the boat and shoving off proceeded down the shore in search of another stream which we had been told was about six miles down from the bay. This stream we had planned to fish and go on to Reservation River, where we would encamp for the night, going on to Grand Portage next day. We had a most delightful row, the scenery having those marked and peculiar characteristics that make the North Shore so grandly stern and savage. A little after noon we reached the stream which we supposed was the one we wanted to find. As we passed the mouth, making for a bit of sand beach, on which to land and get dinner, I had a strike but did not succeed in hooking the fish. I at once cast again, another fierce rush was made, and I hooked and brought in after a fierce struggle, a grand speckled prize, a 3-pounder he proved to be. Stephens hurried as he dropped the oars and dipped the beaten-out trout up in the net. We were so elated that we could scarcely eat dinner, although we had some of the trout caught in the morning nicely fried, and most delicious they were too.

As soon as we had eaten we hurried back to the mouth of the stream and at his first cast Stephens caught and finally landed another three-pounder. It was my turn to hurrah for him, but just at that moment my Montreal fly proved to be a fatal attraction to another of the game beauties and I soon had a 2½ lbs. trout added to our trophies. Directly after Stephens hooked a large one, the struggle was a long one, but at last the apparently exhausted fish was brought nearly within reach when he suddenly concluded to say "good-bye," and with a triumphant wave of his tail turned lakeward, leaving an empty hook to come in. It was a severe disappointment, the more so as the escaped fish must have spread the

alarm, for not another one could we prevail upon to rise. We made many casts but all in vain. At length we started up the stream. We could have filled our boat here with trout 8, 10 and 12 in. long, but we had no use for them, so we contented ourselves with making a cast here and there to see the quick dash for the hook and in admiring the beauty of the stream. About 4 o'clock we started onward down the shore, looking for Reservation River and our camping place for night. There was quite a stiff head wind and we thought and said that if all doubters as to the utility of canvas boats could see the Acme and the way she behaved they would each at once invest in one. Night came drawing on, still no sign of our river.

The question of where to camp must soon be decided. The shore was so rocky and forbidding that we did not like the idea of attempting to land after dark. At length rounding a point we saw a little bay with a beautiful red gravel beach, and dividing the beach nearly in the center was a great mass of red rock that rose straight up from the water 30 or 40 ft. A few feet above the beach was a park-like place, nearly level, carpeted with moss, and low huckleberry bushes, with scattered spruce trees here and there. It was very beautiful. We learned afterward that it was Red Rock, a famous camping place for Indians and others. Indications of former campers were found everywhere. Spring seemed to have just come, some of the trees were just opening their leaves, on others the buds were just swelling. The huckleberry bushes were just budding to blossom. From where we pitched our tent the outlook was superb. There were several empty barrels lying around on the beach, at which we wondered until we learned later that the long point a little further down the lake was Red Rock Point, where last fall the Dixon jumped clear over one reef, landed square on another with her bow against the rocks on shore, and to lighten her a hundred barrels of salt were thrown overboard. We had a grand trout supper and had just gone to bed when the waves commenced to roll in on the shore with great force, although it was still and clear where we were. Stephens jumped up and ran down to the boat and pulled it up higher, and to make more secure the fish we had fastened out. In the morning a heavy sea was running and it looked doubtful about our getting out. While I was getting breakfast Stephens climbed to the top of Red Rock and took a survey of the scene.

After breakfast we attempted to get off, but the waves were running too hard, as we found when a big wave completely filled our boat with water. We hauled it up, took our dunnage out, emptied out the water, carried the boat up the bluff and around to the sheltered side of Red Rock, where we loaded up and succeeded in getting out. As we rounded the point into the main lake we found a stiff breeze blowing and a very heavy sea running. The little Acme, loaded as it was, seemed a very frail thing to brave Superior in; but on we went, running under the shelter of a rocky point once, where Stephens held the boat while I went to examine a creek which came in near by. No trout would rise, so on we went, the storm getting worse, the seas heavier. We concluded that we had better land if possible. No place was seen, however, where we thought our frail boat could be run in. Rocks and dashing waves everywhere. Ahead we saw a great rock jutting out from the shore. We made for it, thinking we might land under the shelter of it. Just then an accident happened that, only for Stephens's presence of mind, might have proved serious enough. One of the oars snapped at the rowlock. Stephens, with rare presence of mind, caught the part of the oar with the blade on before it slipped away, put it in the rowlock and commenced to battle with wind and wave with an oar and a half. Not a muscle of Stephens's face changed, although for a brief while it seemed as though we should be driven back on the savage Red Rock Point, over which the waves were dashing in great fury. Stephens has heroic material in his makeup. I never admired the strength and courage of any man as I did his during the next twenty minutes.

A landing was now a necessity, or probably a death in Lake Superior. We made directly for the big rock. As we approached our supposed refuge we were surprised to see foam-capped waves flying high on the side where there should have been comparatively calm water. We soon saw the reason. The rock was tunneled clear through in two places, and the waves were coming through with a boom and crash like a cannonade. But land we must, so, watching the waves, we went in on a big comber. I sprang for the shore as the wave broke and pulled the boat as far as I could. Stephens sprang out, and we were high and dry before the next wave came in. Not a thing in the boat was wet. Just before we run in we had noticed a little stream coming into the lake, or rather we noticed the color given the water by the stream, for the mouth was completely hidden by the breakers. After making everything secure, we set off to try the stream, saying, "We'd make a new oar after dinner." We found the stream alive with trout. There seemed to be no limit to the number possible to take, and such beauties—so grandly and richly marked. I held several in my hands admiring them as I would a rare jewel—such, indeed, they were. We took thirty-five and then went back to the boat, prepared and ate dinner.

After dinner Stephens made a new oar, and then we tried to get off, but the only result was Stephens was thoroughly wetted, the boat filled with water and thrown back upon the shore like an egg shell. We gave up all hope of finding our long-looked for river or reaching Grand Portage that night. We went up on Tunnel Rock and in a cleft which was icy cold and over which the spray dashed, Stephens made what we called a "cellar" in which he put the trout we had, thinking to send them up by the steamer Monday. After watching the waves and speculating as to the continuance of the storm, we went after trout again. We went up to the falls and came down, keeping only the finest fish, of which we had fifteen when we reached the mouth of the creek. The next thing was to put up our tent and get supper. Our plan for spending the next day at Grand Portage had fallen through it seemed. The point where we were was a "brulé," no spruce boughs for a bed that night; but the moss was thick and deep, and we made a very comfortable bed, and laid down hoping for a calm on the morrow. I was awakened several times during the night by the roar of the breakers on the rocks and the boom of water through the tunnels of the big rock.

DETROIT CITY, MICH.

MYRON COOLEY.

KENTUCKY NOTES.

THE annual meeting of the Kentucky Fish and Game Club was held Thursday evening. The club is now entering on its third year with brighter prospects than ever. The following officers were elected: President, Maj. J. Fry Lawrence; Vice-President, Dr. J. B. Alexander; Secretary, Mr. H. C. Farnsman; Treasurer, Capt. John Fowler. Directors, Capt. G. G. Berry, Guy C. Sibbey, Leonard Huber, J. G. A. Boyd and W. O. Bonnie.

Several new names were added to the membership, which now exceeds seven hundred.

A number of communications regarding dynamiting of fish and other violations of the laws were read. These were referred to the board of directors, who will look the offenses up and attend to the prosecutions.

The new constitution, which is to be placed before the people for adoption next month, means much for the club if it is approved. It provides that all laws shall be general laws. The present instrument allows any county or counties to be exempt from any enactment, and the result is that when a law for the benefit of game or fish is passed every county asks to be left out. This is why the club has had so much difficulty in getting a good law.

By reason of the provision of the old constitution the open season is hardly the same in any two counties, and some have no close season at all. The aim of the club at the coming session of the Legislature will be to remedy this if it can be done. The members of both houses will be written to before the Legislature convenes and the proposed measures will be plainly set forth. Hardly a State in the Union has laws so lax.

I am in receipt of a diagram of a large salmon caught at Rock Castle Springs, July 6. The weight, according to the information on the sheet on which the picture is drawn, is 9½ lbs., and the length 29 in. It was caught by Mr. Benjamin Letcher, of New York, on a split-bamboo rod weighing 10 oz., with a No. 0 Sproat bass hook baited with a chub minnow. The witnesses were Mr. W. H. Riker, of Harrodsburg, Ky., and Maj. Weller, of Baltimore, Md. The catch for the day was 27 lbs.

Bass fishing is opening up in the streams within a day's ride of Louisville, and the resorts are being sought. A telegram from Green River, at Spottsville, Saturday, informs me that there is plenty of sport.

Major J. Fry Lawrence, Capt. John Fowler and other prominent anglers, are organizing a club to erect a hunting and fishing lodge at Falls of Rough, where all kinds of sport abounds in season. The club house will probably be erected in time for the fall sport.

A committee from the Kentucky Fish and Game Club will shortly visit Washington and see if Fish Commissioner McDonald will not furnish four or five carloads of game fish for the depleted streams. This movement has been urged from all over the State, and will be the opening wedge to incur the good feeling of those who are now opposing the game law movement.

D. A. LEV.

LOUISVILLE, July 20.

FISHING IN LITTLE RIVER.

THE first of last November our hunting party concluded they would take their annual outing this time on Little River, Pemiscot county, Mo. We found plenty of deer and small game, and very good duck shooting is generally to be had there.

Little River is a very clear stream with moss-covered bottom, and is full of fine fish. The fish we caught ranged from 2 to 7 lbs. It was no trouble at all to catch all you wanted. I would catch enough in a very short time to supply the camp for the day; they rose eagerly to the fly. I also caught a good many with the spoon; they seemed to bite at anything. I don't see how any stream could beat it, and I don't think the stream is fished a great deal.

If any of your readers are in reach of that stream, and want some royal sport with the green-sided beauties, that is certainly a fine place to go, and I have no doubt but some of them have tried it, as it is very easily reached from St. Louis. But they must go prepared to camp, as there are no hotels, club houses nor settlers to speak of in that immediate neighborhood. To go on a trip and not camp out robs one of half the sport; and if he is going to roam those woods much he will find that a good compass is needed, as one of our party will testify to. He left our camp one morning to do a little exploring by himself, and forgot his compass. He managed to get back in time for supper, but it was the next day.

We spent four weeks in camp, and I never enjoyed anything more. Came back home feeling like a new man, and am now longing for the time to come to go again.

B.

GRAYLING OR WHITEFISH?

Editor Forest and Stream:

Being interested in all things pertaining to fish and fishing in the Rocky Mountains, I have read with pleasure the recent items in your paper relating to grayling.

I am confident that the fish described by "Big Horn" are not grayling, for two reasons: First, there are no grayling in the Yellowstone River or its tributaries so far as I can learn from old fishermen. Secondly, the habits of the fish described, as lying sluggish with heads up stream, so aptly describes the whitefish of the Western streams that there is little room to doubt the kind of fish referred to.

So far as my knowledge of grayling goes (I've only fished for them parts of four seasons) they do not deport themselves as described by "Big Horn," and as a great many people call our whitefish of the Yellowstone grayling, coupled with the further fact that there is a similarity between the two fishes, I strongly believe that "Big Horn's" grayling are whitefish.

The Gallatin, one of the forks of the Missouri, about thirty miles from here, has abundance of grayling and whitefish both, and I had some very nice grayling fishing on the Gallatin the past spring, and when I next go over I will send you specimens of both fish.

LIVINGSTON, MONT.

Boston has heard of the superb fishing near New York and sends out a steamer, named New York, daily on fishing trips to the mouth of the Merrimac, the South Shore, Isles of Shoals, North Shore and Boston Bay with music, prizes for the largest fish and all the modern accompaniments for a delightful excursion.

CHICAGO AND THE WEST.

CHICAGO, Ill., Aug. 1.—A question in sporting ethics lies under a late discussion between a Chicago daily and a Chicago sporting paper over an alleged case of fish hogger. To be brief about it, Mr. D. R. Cameron, of the printing firm of Cameron, Amberg & Co., of this city, admits that he and the Rev. Thos. E. Green, of Cedar Rapids, Ia., did in August, 1887, in two days catch 73 mascallonge in Lost Lake, Wis. Mr. Cameron adds: "Later, a party went up to the same waters and took out 92 mascallonge, all of which were saved and brought back. That party consisted of Mr. E. W. Brooks, Mr. Alfred Brooks, Mr. T. J. Amberg, Mr. J. Ross and myself. All fish we did not want to save were put back." Mr. Cameron appears to think that the "saving" of 164 mascallonge in two short trips was quite sportsmanlike. His friend Mr. Green writes a long letter putting himself on record to the same effect, and the writer in the daily paper is obviously of that belief also, for perhaps obvious reasons. But those three men cannot decide a question like that in sportsman's ethics. It lies for a larger jury, to whom I would offer it. To me it seems that Mr. Cameron, Rev. Mr. Green and their friends were guilty of fish butchery to the most highly unsportsmanlike extent. I cannot excuse the actual swine which breaks into my garden and eats my vegetables any the more because it "saves" them by eating them and not by trampling upon them. The limit of a sportsman's catch is not definite, but any one who knows the environments of this mascallonge fishing in Wisconsin knows that such catches as the above are unsportsmanlike to the last degree, even though the fish be actually eaten and not merely boasted of as a record-breaking catch, as see Mr. Green's letter in the daily paper. The man who blunders into an unfished mascallonge lake can make such catches. In the known waters how many good catches were made this year? The unavoidable answer is the sole argument needed. Mascallonge fishing is the easiest on earth. Trolling is the most lubberly and unsportsmanlike way of fishing there is. Any man can catch mascallonge if his guide knows the bars, unless some other man has been in first and "saved" a ton of the mascallonge, to which, let us say, he had a right to the extent of three or four fish in two or three weeks of fishing. In new waters, when the fish are striking the spoon well, any novice can catch mascallonge and pickerel and wall-eyed pike and some bass, the easiest way in the world, with no great skill needed. But what of these waters when the "lunge" have been "saved" out for two or three years by such parties? Go and try it. Wisconsin ought to have a law limiting a mascallonge catch to proportions of common decency, "saved" or not, and the Lake Shore & Western Railway ought to be first to see that law enforced. The mascallonge once fished out does not come back. It will not reappear in those waters fished out. It is too slow of growth or scant of numbers. Unlike the bass, wall-eye and pickerel, it is, so far as fishculture now has it, practically gone forever upon its first extinction in a water. A magnificent fish, it should be properly regarded alike by those who leave their undue catches rotting on the bank or those who bring them home to photograph them. The daily paper may defend its friend, but the guild of genuine anglers will agree that they need yet a study of the better ethics of the craft.

There is a good deal of pseudo-sportsmanship these days, likewise a great deal of a certain false love of nature. It seems the thing to love nature, and to write about it, if you can write a little bit. The press is full of poets who are false lovers and false observers of nature. I notice one this morning, quoted in a daily from a Chicago weekly literary periodical. The writer of this "Summer Sketch" finds occasion to say,

"While clouds and forest glass them in a lake
Whose waves with tufts of foam the dark moss flake."

It takes quite a little wind to roll foam flakes up along the shore of a lake, and such being the case, you won't notice the clouds and forest "glassing" themselves very much in that lake. It's too rough. So this picture, though very pretty, isn't true. One may be forgiven for being a shoddy writer, but never for being a shoddy lover of nature.

A gentleman of Morgan Park suburb was fishing a month ago in Geneva Lake, Wis., and caught only two fish. One was a 4½ lbs. bass, and the other was a 12 lbs. salmon (described as a "California salmon"). Some years ago Mr. N. K. Fairbanks planted a number of salmon fry in this lake. They have not been heard from before. I am told the bait was minnow. Have not been able to get to talk with the angler himself.

Yesterday I talked with F. L. Buck, State Fish Warden, and can now give the exact state of affairs on that stream at date in the matter of fishways.

Marseilles dam, on the Illinois River, is essential to the Kankakee River. Work on the fishway in Marseilles dam was promised to begin July 27. No fight there at all. "State dam." Capt. Leighton, engineer in charge, said work on the fishway would begin about July 31.

Wilmington small dam: A possible fight here. The American Strawboard Co. are the objectors. Mr. Buck served notices on all parties, such notices expiring of limit on Aug. 3. It is thought that the owners will then put in the way rather than have it done and charged to them.

The 17ft. Wilmington dam: The owners begin repairs on this dam in August, and will then put in the way. The following letter from Mr. Hills, of the Wilmington Water-power Co., would settle that definitely:

Boston, July 17.—F. L. Buck, State Fish Warden, Chicago, Ill.: We desire to meet your Commission in the same spirit you have shown to us, as you seem to appreciate the disposition to economy. We don't know that you would care to do it, still if you will write me just what you could do it for [i. e., put in the fishway], if there is necessity for haste beyond what was indicated in my letter, please let me know and I will respond at once for our company, only asking that if you should do it, that you so arrange that it will not interfere in the repairs we propose to make next month or the one following. Very truly yours, JOEL H. HILLS, Sec'y and Treas. W. W. Power Co.

Kankakee dam: Nothing needed here but a wing to the present fishway, and Mr. McGrew, owner, says that will go on when the water is low enough, as it probably is now.

Aroma dam: Fishway here has been repaired, a chute being added to deep water above the dam. It is now all right.

Momence dam: Both parties to the injunction suit over the lower dam here have signed the stipulation per-

mitting the fishway to go in and work will soon begin. The "upper dam" here is on the other side of an island and a way there is not absolutely necessary. The situation here is peculiar. The company owning the dams is the one intending to cut through the rock ledge here and drain the great Kankakee marshes. It leased certain ice cutting privileges with the understanding that the dams should be cut open and the water drained from the going out of the ice till the first of November. Later the company sold the Momence Island for \$20,000 to the C. & E. I. R. R. for a picnic ground. The railway found the absence of water in the summer hard on the boating business and so enjoined on the opening of the dams. The fishway will go in anyway and, should the railway lose its suit, no fishway in either dam will be needed. These Momence dams are the ones highest up on the river, so that, supposing the Wilmington dam all right, either with or without a fight, the total situation of the Kankakee may be called very satisfactory. Thanks to the Kankakee Association, fish will next spring run up from the mouth of the Kankakee unimpeded.

Mr. Cole joined Dr. Bartlett a couple of weeks ago on board the State boat Lotus, and made a trip down the Illinois River. They captured one net and sunk it. The total situation on that stream is good. The party had one day of fine fishing at La Grange, Mr. Cole taking 21 "white bass," a fish we do not get about here. The latter gentleman has also had a trip to Spring Lake, Grand Haven, south peninsula of Michigan, and has bought land there he likes the spot so much. Seven small-mouths in a short trip with rough tackle satisfied him that the fishing there is good.

The State and Government work of reclaiming young fish from the overflows of the Illinois and Mississippi rivers will begin next week. The Government car is now waiting.

To take up again that old question about the leaking wading stockings. Thanks to Mr. Jay Beebe for advice. He asks if the waders leaked *ab initio*. I think they did leak there some, too, but it was mostly in the "crotch."

E. HOUGH.

SUNAPEE LAKE FISHING.

THE following landlocked salmon and trout have recently been taken in Sunapee Lake, New Hampshire:

George Woodward,	July 15,	1 salmon,	13½ lbs.
George Woodward,	July 15,	1 salmon,	8 lbs.
Sidney Bickford,	July 16,	1 salmon,	9 lbs.
Walter Aiken,	July 18,	1 salmon,	9½ lbs.
Mr. Goodwin,	July 15,	1 trout,	2½ lbs.
George Woodward,	July 16,	1 trout,	4 lbs.
George Woodward,	July 16,	1 trout,	3½ lbs.
Walter Aiken,	July 18,	1 trout,	2½ lbs.
Jacob Hutchison,	July 18,	1 trout,	5½ lbs.

BUZZARD'S BAY BLUEFISH.—Boston, Aug. 2.—Ex-President Cleveland presided to-night at a meeting in the little town of Bourne for the preservation of the fishing in Buzzard's Bay, which is rapidly becoming completely destroyed by the working of seines, pounds and weirs on the line of the Bay. Briefly alluding to the purpose of the meeting Mr. Cleveland said that the fish should be protected because it was conceded that Buzzard's Bay was a spawning ground, and such protection was in accordance with the enlightened procedure of every State. It was not, he said, a question of sport, but of industry. Though personally enjoying fishing as a recreation, he had never yet been willing to catch fish for sport and have them wasted. Every one on the shores of the bay was at least entitled to the right to secure all the fish required for food. Moreover, an element of equality and equity entered into the question. By law in various parts of the bay fishing with seines and weirs was prohibited. This same rule should apply to all places on the bay. Chas. F. Chamberlin, who was secretary of the meeting, then spoke at length on the objects of the meeting, and offered resolutions looking to cooperation with neighboring towns to prohibit fishing by seines and weirs. The resolutions were unanimously adopted, and a committee of seven, among whom was Joseph Jefferson, was appointed to forward the objects proposed.—*New York Times*.

TROUT IN EVERGREEN LAKES.—Washington, D. C.—My attention has been attracted to the letter of Mr. William R. Scott, of Denver, in FOREST AND STREAM, of July 23, in which he speaks of the successful introduction of rainbow trout into Naylor Lake, Clear Creek county, Colo., several years ago at an elevation of nearly 11,000ft. above tide water, and in commenting on it mention is made of the red-throated trout (*purpuratus*) being found at a height of between 8,000 and 9,000ft. in the Sierra Madre, Mexico. The red-throated trout occurs in the Arkansas River and its Lake Fork near Leadville; these streams are ideal trout brooks, with temperature of about 62°, in which trout are fairly abundant. Three miles west of the Arkansas and six miles distant from Leadville the Evergreen Lakes are situated at an elevation of about 10,000ft. These lakes are fed by cold streams from the flanks of Mount Massive, one of these streams having its rise in the largest permanent snow field in Colorado. These three lakes are a series of trout ponds, partly artificial, in which brook trout have been successfully propagated for several years. This, probably, is the highest point on the continent where this variety of salmon exists.—JOHN GAY.

CONNECTICUT FISH AND GAME.—The protection of its fish and game is not accomplished at the expense of the State of Connecticut, but by means of private funds and individual exertion. During the past three years the Connecticut Fish and Game Association, whose president is Mr. A. C. Collins, has spent \$1,400 in the prosecution of 70 violators of the fish and game laws. Sportsmen owe Mr. Collins and the association a debt of gratitude, which they will cheerfully acknowledge; let us hope that they will also cooperate with the association in its beneficent work.

MENHADEN FISHING.—Casco Bay has been invaded by menhaden steamers from New York, Connecticut, Rhode Island and Virginia, and it is claimed that some of them drew their seines in prohibited territory near Chebeague Bar. Fish Warden A. W. Barbour, of Portland, has engaged counsel to prosecute the cases, which will involve forfeiture of the vessels found liable.

SOME GIANT SHAD.—Washington, D. C.—In FOREST AND STREAM of July 23 reference is made to a shad caught June 25, in the Androscoggin River, at Topsham, Maine, weighing 8lbs., which is spoken of as a shad of unusually large size, and perhaps it is in Maine waters; but shad weighing from 7 to 8lbs. are not by any means rare in the Delaware River during the fishing season. Last year a 9½ lbs. shad was caught some distance below Philadelphia, and I believe was sent to President Harrison; but it was beaten by the 10-pounder caught in Thompson's seine off Gloucester City, N. J., April 20, 1890, and presented by Mr. Thompson to Governor Leon Abbott. Both these giants of the species were, of course, roe fish, but they were fairly indicative of the size generally of the shad last year. It is said that a shad weighing 13½ lbs. was caught near Lambertville last year. In May last William Pustill, of New Castle, Del., was credited with catching a shad weighing 9½ lbs., and on May 25 one of 10½ lbs. was taken near Billingsport, as vouched for by Mr. H. L. Preston and several other persons who were present when it was weighed.—JOHN GAY.

LANDLOCKED SALMON IN MOOSEHEAD.—Another big landlocked salmon has just been taken at Moosehead Lake, Maine. It will be remembered by the readers of the FOREST AND STREAM that until this season no results of repeated stocking of that lake with landlocked salmon fry had been achieved, and even the State Fish Commissioners had begun to think that Moosehead was not designed to become celebrated for its landlocked salmon. But already one salmon has been taken, of which this paper has had an account, and now a letter from Kineo, of Monday the 27th, says that Mrs. J. F. Hildreth has just taken a landlocked salmon from that lake weighing 6½ lbs. The fish was taken while trolling. There are now about 100 people at Kineo, generally quartered at the Kineo House, and more are expected next week. Capt. C. A. J. Farrar, so well known as the founder of steamboat transportation at the Rangeleys, has been stopping at Kineo, but has just left for Richardson Lake.—SPECIAL.

CANADIAN CUSTOMS.—Chicago, July 25.—*Editor Forest and Stream*: As there has been considerable inquiry concerning the tax upon tourists in Canada, it may be as well for your readers to understand more of the situation. Canada has for several years presented a Chinese wall against tourists' belongings. Rod, gun and camera have been levied upon for duty (and heavily at that), and there are few cases indeed where the duty has been refunded, because the time, expense and trouble make it of doubtful advantage. A small camera that had been carried all over Europe and Egypt, without annoyance to the possessor, was on reaching Canada heavily taxed. It will be more satisfactory for those visiting Canada to either buy their outfit there, or dispense with it altogether. The latter would in most cases prove the least satisfactory. Persons visiting old Mexico are not subjected to this abomination.—FREE TRADE.

OTTAWA, Kansas, July 31.—So much rain has fallen here this summer that I don't know whether we are going to have much fishing or not. It seems as if the streams rise suddenly every time we get ready to go fishing, and we can only wait for the water to go down again. One thing the high water does, however, is a benefit to us, or will be, that is, to tear out the dam in the Marias des Cygnes at this place. This dam is about 10ft. in height, and keeps fish from ascending the river except in high water, but it will not last much longer. A fishway was built in this dam several years ago, but never did any good, because all the water leaked through the dam in low water season, instead of running over the fishway. When a free passage is made for fish to go up stream at all times there will undoubtedly be better fishing, for most of our fish come up from the Missouri.—F. B.

THE BEST IS ANGLING.—Salamon in his parables sayth that a good spyryte makyth a flouryng auge, that is a fayre auge and a longe. And syth it is soo: I aske this questyon. Whiche ben the meanes and the causes that enduce a man into a mery spyryte? Truly to my beste dyscrecion it semeth good dysportes and honest gamys in whom a man togeth without any repentance after. Thenne folowyth it, ye gods, dysportes and honest games ben cause of mannys fayre auge and longe life. And therfor now woll I chose of foure good dysportes and honest gamys, that is to wyte: of huntynge; hawkynge; fyshynge; and foullynge. The best to my symple dyscrecion why then is fyshynge callyd anglynge wyth a rodde, and a lyne and a hoke.—*Dame Juliana Berners (1486)*.

BLUEFISH.—Raritan Bay has seen bluefish in plenty of late. Block Island, too, is having its share of sport in catching these ocean bloodhounds, and at Centerville, on Cape Cod, a fisherman caught nearly 1,000 in a week. Buzzard's Bay and the Maine coast are, up to now, given a wide berth. "No politics in mine," says the bluefish.

TARPON IN CONNECTICUT.—A silver king, or tarpon, weighing 85lbs., was caught at Mumford's Cove July 24. This renowned game fish has gone as far North as Cape Cod. Occasionally one was seen at Wood's Holl several years ago. In the Chesapeake it is not uncommon late in the spring.

"Forest and Stream" Nursery Rhymes.

(Suggested by the lines in Forest and Stream, July 23.)

II.

An angler went out to fish,
A trout came along with a swish,
A brilliant red hackle
And other fine tackle
Went off. The owner said "pish."

UTICA, July 27.

PORTSA.

III.

A codfish, which had swallowed a small bottle of brandy, was one of the fish caught during a recent excursion of a Maine branch of the Y. M. C. A.—*Boston Herald*.

A young man from Maine
Had a terrible pain,
And no "patent medicine" handy;
He fished in the sea,
Caught a big C O D,
And brought up a bottle of brandy.

WOOD'S HOLL, Mass.

AMERICAN FISHERIES SOCIETY.

Editor Forest and Stream:

At the twentieth annual meeting of the American Fisheries Society, held in Washington, May 27 and 28, these resolutions were adopted providing for the appointment of a committee to take the necessary steps to increase the membership and widen and extend the influence of the Society:

Resolved, That all anglers and members of fish and game protective organizations, and all persons who feel an interest in the fish and fisheries of the United States, be and are hereby cordially invited to become members of the American Fisheries Society, and to lend their aid and co-operation in carrying out the objects of said Society; and be it further

Resolved, That the above resolution be published in all papers and periodicals devoted to the interests of fish and fishermen; also that a circular letter embodying the said resolution be printed and sent to members of the Society for distribution.

Resolved, That a committee be appointed to carry out the provisions of the report.

Those persons who desire to join the Society can send their applications to either member of the committee, or to Edward P. Doyle, secretary. With its membership enlarged and its influence broadened, the Society can do great work for the fisheries interests of the country, and assist materially the organizations, private, State or national, having these interests in charge. The influence that a large society of this kind, powerful through organization and numbers, can exert in securing and enforcing protective fish legislation, will be especially valuable, and do much toward securing the laudable objects of its founders.

Additional application blanks can be obtained from either member of the committee whose names are signed below.

TARLETON H. BEAN, Washington, D. C.

EDWARD P. DOYLE, New York, N. Y.

YEARLINGS VS. FRY.—I was glad to see that our American contemporary, FOREST AND STREAM, agrees with the views respecting fry and yearlings, which have more than once been put forward in this column, and in other parts of the paper. "It seems," says the writer of some angling notes in the American journal, "to be the universal opinion of those who have had experience in restocking trout water that 100 yearlings will improve a pond or stream more than 10,000 fry. The only way fry seem to thrive is by placing them in tiny trickling springs, where it is impossible for their enemies to follow them or see them, or else to keep them in little artificial ponds where they can be fed and protected until able to look out for themselves." I am inclined to take exception to the word "little" in the foregoing paragraph, for our experience in England rather tends to show that fry get on better in deep ponds than in shallow ones. This can, I think, be explained thus: The water in a shallow pond rapidly rises in temperature in summer and the fry get weakly and die. The water, too, must be constantly changing its temperature with every change of heat and cold in the air. In a deep pond the temperature is more equable. I have recently had the misfortune to lose a pond full of fry owing to the supply of water being cut off for a week. The water in the pond sunk to about a foot, its temperature rapidly rose and the little fish all died one fine day. In another pond where a slight trickle of water continued to run no fish died so far as I could see. In rivers trout fry are usually found on the shallows, and so it might be argued that they thrive best in shallow water. This they may do, provided there is as great a flow of water as there is in a river. But we never get such a flow of water into our ponds, therefore it has been found necessary to make the ponds deep. In other words it comes to this: If there is a great abundance of flowing water the fry will thrive in shallows, but if the supply is limited and has to be economized the ponds must be deep.—Templar, in London Fishing Gazette.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Sept. 1 to 4.—Second Annual Dog Show of the Kingston Kennel Club, at Kingston, Ont. H. C. Corbett, Secretary.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

Sept. 8 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.

Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.

Sept. 22 to 25.—Inaugural International Dog Show of the Montreal Exposition Company, at Montreal, Canada. Entries close Sept. 8. J. S. Robertson, Secretary.

Sept. 29 to Oct. 1.—Third Annual Dog Show, in connection with the Central Canada Fair, at Ottawa, Ont. Alfred Geddes, Supt.

1892.

Jan. 13 to 14.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. F. Capers, Secretary, Greenville, S. C.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Secretary.

Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.

Nov. 23.—Irish Setter Club's Field Trials, at High Point, N. C. G. G. Davis, Secretary, Philadelphia, Pa.

Nov. 23.—Gordon Setter Club's Field Trials, at High Point, N. C. L. A. Van Zandt, Secretary, Yonkers, N. Y.

Nov. 30.—General Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.

Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

THE BLUE RIDGE KENNELS.

Editor Forest and Stream:

Last week I made a trip along the line of the Richmond and Danville R. R., stopping at the beautifully located and enterprising city of Charlottesville, and from there to Culpepper, from which point a pleasant ride brought me face to face with Col. E. Henry O'Bannon, well known as the manager and one-third owner of the famous Blue Ridge Kennels of English setters. One has but to grasp the Colonel's hand, meet his estimable better half, and stand before his sideboard to know that he is welcome. If ever you are in the vicinity of the Piedmont country and don't stop and see the Colonel and his family, and look over the grand collection of dogs, you'll have cause to regret it. Knowing that many of your readers are interested in the progress of the English setter, and that few if any of them will ever have the pleasure I have had in spending a day at the Blue Ridge Kennels, I will, with your permission, endeavor to inform

them concerning what I think will be readily acknowledged to be the leading collection of brood bitches that this land can produce.

There are comparatively only a small number of bitches that are field trial winners, and with few exceptions they are centered now at the Blue Ridge Kennels. For years past all kinds of bitches have been bred to the best dogs, their owners expecting them to throw phenomenal youngsters. That many have been mistaken time has proven. The time is now at hand when purchasers will inquire as strictly into the field qualities and the breeding of the dams as they have into that of the dog.

To this end I call their attention to what I found at this kennel. There are winners and producers of winners, viz.: Esther, first in Members' Stake, Indiana trials of '89 and dam of Lilly Burgess, a double winner, and of Reveler and Jubilee, last year's winners. She is now nursing a litter by the same sire that produced the aforesaid—Gath's Mark.

Belle of Piedmont has lately been transferred from her old home at Charlottesville. Though showing some of the marks of age, she is yet able to produce pups that will, like herself, win field trial honors. Belle started twice, winning second each time. She is the dam of some very promising bitches that belong to this kennel.

Lilly Burgess, by Gath's Mark—Esther, was purchased after she had followed her Derby win with that of the All-Aged Stake in consecutive years at Bicknell, Ind., trials, where Prince Lucifer was second. She has just weaned a beautiful litter by Dan Gladstone, showing her to be a prolific and valuable brood bitch.

Mollie Belton has not yet arrived from her Milwaukee home; but when it is remembered that she is the dam of Bohemian Girl, that is fame enough for her record as a breeder.

Fanny M., known as the phenomenal winner of the Southern '89 Derby, going through under the heat system without a single error. Since that time she has not added additional honors either as a winner or as a dam; yet she will not disappoint her owners when put to the test.

Princess Belton comes nearer a perfect bench show winner than any of those yet mentioned. She is perfect in color and marking, and will stand a deal of showing. As a producer she is well to the front. Dr. John A. Hartman, of Latrobe, Pa., has three out of one litter that are "corkers." Albert's Duchess won in great shape the Philadelphia Kennel Club's Derby last year, and Albert's Nellie got so far along in the last spring circuit as to be in the challenge class. Another sister is reported as being even better in form.

Rod's Belle, by Roderigo—Belle of Piedmont, was heavy in whelp to Mark, and being of fine form and good in the field, the puppies no doubt will be heard from. She was fitted for the trials last year, but did not start.

Gossip, a sister to Belle. You will remember that she was one of the first brace started in the Central Derby last fall, and I have a distinct recollection that she made as good a showing as some of those that were kept in for the second series. She has filled out and improved since then, and should be shown on the bench. She has not been bred, and there are hopes of her winning in the All-Aged Stake this year.

Rosa I found out in the country attending to maternal duties. Her five puppies by Mark will no doubt equal, if not excel, their famous brother Reverdy. Rosa is one of the Colonel's old "stand-bys" when he wants to shoot quail.

Tempest has not been much heard of in late years to my knowledge, but being of superb breeding, Count Noble—Lit, the three puppies that I saw by Pegbid are the coming champions for field trial honors.

Oliver, by Count Noble—Ruby's Girl, is also the perfection of breeding, as Ruby's Girl is by Gladstone—Ruby II. She has not yet been developed as a field trialer nor a brood bitch, but mark this, keep your eyes on her.

Louress is the only Derby entry that I found not in the hands of her trainer. She will be sent away soon. She is finely bred, by Roi d'Or out of Belle of Piedmont, and if she keeps in good form will be likely to get into the money. Again watch her when she gets on the bench. Another year will show her a well developed bitch.

Ighfield Sophie—Now here is something new and worthy of notice. Mr. Buckle selected her at the Heywood-Lonsdale kennels for her breeding and field qualities. She is of much the same type as Ion, and being due to whelp by him, will throw puppies that will develop into animals that are of such a different breed of English setters as to make it an experiment to cross them with the inbred dogs that are now the popular ones.

Canadian Queen was not at the kennel. She has her "hands full" taking care of her litter by Cincinnati. I remember her when Mr. Pabst purchased her at the Chicago show, and she is a fine specimen.

Princess Joy, by Gath's Joy, and Miss Nelly Y., by Gath's Hope, are two good young bitches that are worthy of attention, as their sires are brothers to the old dog champion Gath's Mark. Princess Joy is about weaning a fine litter of eight black, white and tans, by Dan Gladstone, that stamp her as the right kind to have in a kennel where this color is the fashion. The stud dogs are well known both to you and the public, and it is enough to mention that they will now be given a better opportunity than ever before to show their worth, as they will not only have the best bitches, but their get will be pushed to the front.

These three gentlemen have the money, the grit, the love of sport and the business ability to push forward. As all business transactions will be through Col. O'Bannon, this is proof that honorable treatment will in all cases be experienced.

A RAMBLER.

BEAGLE TRAINING.

Editor Forest and Stream:

I have been reading with interest and some amusement the articles that have appeared from time to time in your excellent paper regarding beagle training. The one appearing in your issue of July 30, by Mr. Geo. F. Reed, strikes me very favorably. He has my idea exactly as to what a hunting beagle should be.

I want no beagle that can be called from a good warm trail, nor do I want one that expects me to follow close on his heels to help him out should bunny be a bit cunning and turn short corners. If I must start the quarry I may as well shoot at him when he starts, as I would a game bird.

I take my beagles to the place where I have some likelihood of finding rabbits, turn them loose, and let them do all the hunting. If I see the rabbit and shoot and miss, I whoop to the dogs and put them on where I last saw the game. I always do this to teach them to come to the gun. But I don't teach them to charge, quarter, heel and drop to shot, etc. I hunt with beagles for pleasure, and I can assure you it would be no pleasure for me if I had to do all the hunting, starting and give orders to from six to twelve beagles all at one time—no, it would be too much like work, and I was born just a bit tired.

I expect to show up at the field trials to be held at Nanuet in November, and in all probability my dogs will get pegged back simply because they are not under control, and perhaps because there are better hunters; still, like Mr. Reed, I think I have as good beagles as the next man.

In one of your contemporaries some party tells us that, in training his beagles, he "rushes to starting point and follows right on trail, close to their heels, etc." Now, that's all very well, but if he can follow "close on the heels" of my hunting pack for two hours, or one hour, he can make more money as a pedestrian in six months than he can out of dogs in twenty years.

C. S. WIXOM.

COVERT, N. Y.

IMPERFECT TEETH DEVELOPMENT.

Editor Forest and Stream:

I am sure all readers must welcome the accounts of the kennels you visit as published in FOREST AND STREAM, since they are both instructive and admirable in style and spirit.

You mentioned, in writing of the Swiss Mountain Kennels last week, a St. Bernard with undeveloped teeth. This has interesting scientific and practical bearings. As is well known, horned cattle lack the upper cutting (incisor) teeth, yet in the fetus, teeth in an undeveloped condition exist. This is an extreme case of arrested development. Dentists tell us that human beings, especially in cities, tend to a late appearance, and in many cases a total absence of the last molar ("wisdom tooth") and even some of the incisors.

All St. Bernards have relatively small teeth, and most of the show dogs of the day when still in their prime, have the front teeth broken off or worn down to an extent not common in most other breeds. How is this to be explained? On two grounds principally: First—Too rapid and extensive growth, with excessive development of skull, and second, lack of stamina.

At present the desire to get giant St. Bernards amounts almost to a craze. Judges, especially in England, seem to be ready to condone great faults of legs, movement, etc., provided a dog is immense, well marked and has a "grand head." Darwin long ago called attention to "correlated growth." The excess of skull development, especially, has perhaps something to do with defective teeth, but whether that be so or not the growth of the bony system is so rapid in St. Bernards under the forcing system in vogue, that it must needs be superficial, hence the defective legs, and, we may add, teeth, so common, especially in the largest dogs.

Unnatural conditions of life and excessive use of the brain explain in part defects of teeth in modern man. As I understand the subject of growth and development, whenever it is forced, i. e., greater than is natural, or than would take place under ordinary healthy conditions, our St. Bernard rearing must be all wrong. And as I endeavored to show in a letter that was published in this paper on April 2, our notions of bench show conditions can be greatly modified for the better, if we are to have thoroughly vigorous and disease-resisting dogs.

Certain breed should be "massive," but this ought to be attained by shape and not by a mass of fat. In other words, to render dogs massive by sluggish habits and excess of food is to pave the way for disease, because such dogs cannot have stamina. I am still of opinion that my definition of bench show condition, as given in the letter referred to above, is correct. Dogs are in bench show condition when they are physically able to do a moderate amount of the work for which they are intended. All beside is of minor importance. Now some of our St. Bernards, mastiffs, etc., are not able to walk a few miles with ease, much less trot or gallop. Is there any reason for surprise that animals kept in such condition do not live out half their days? Who is responsible for this state of things? I am afraid it must be set down to both breeders and judges. This matter of breeding for giant size is at the root of the whole evil. I wish, as a friend of the breed and of the dog in all his varieties, that the St. Bernard Club would take this up. It is the most vital subject they can handle. If they will so legislate that it will be easy for judges to give the prizes to the best dogs above a minimum weight, or that weight shall not count for very much, we shall soon be on the way to better things.

WESLEY MILLS, M.D.

MONTREAL, Canada.

PAINLESS DEATH.

Editor Forest and Stream:

I observe that you copy the Stock-Keeper's recipe for the painless killing of dogs, and from personal experience am at a loss to understand how chloroform can be preferred for the purpose to prussic acid. The first dog I used the former on was a young Clumber that had a crooked tail which required cutting. The chloroform was administered by a medical friend, and there can be no doubt of his having done it properly. It took all my strength (and I am no pigmy) to hold that pup down. He bit my hand badly and howled so loudly that he could have been heard fully half a mile. Chloroform was by no means staid in this case.

Next time chloroform was used by an experienced "vet" to kill a spaniel. He administered it in the proper way and left the dog for dead in the stable. A couple of hours after the "dead" dog was chewing a bone. Again he was dosed, and this time there was to be no mistake, but he managed to crawl half way home nevertheless. They shot him after this.

The foregoing is only one of numerous instances of the failure of chloroform to really affect dogs that have come under my observation. Prussic acid I have never known to fail, even when dogs of the largest size were the victims. As soon as the fluid entered the mouth the dogs were as dead as if electrocuted. I think the best and most painless manner of killing is as follows: Take a piece of meat of a size which the dog will swallow without biting; hollow the inside and fill with a sufficiency of the acid thickened with wheat flour, and sew up the aperture. When digestion sets in and the poison touches the coating of the stomach, the dog is instantly dead, literally not knowing "what struck him."

By the way, I may mention in connection with the past greyhound squabble, that in compliance with the request of the owner, in the presence of the Ottawa bench show committee, I measured the mouth of the dog Sir Launcelot and found his upper jaw to project a scant quarter of an inch. Thus Mr. Lacy and others are entirely wrong in stating him to be overshot one inch.

CLUMBER.

OTTAWA, Canada.

NOTES AND NOTIONS.

IN a Western paper Mr. A. A. Bogen mentions a somewhat ordinary instance of the homing instinct in a dog, asking if this instance does not show a higher reasoning power in dogs than we commonly admit. By no means. The homing faculty is entirely independent of reasoning power or intelligence. The animal possessing it in the most marked degree is the cat, one of the lowest in intelligence of the domestic animals; homers are rather the exception among dogs, while they are the rule among cats. All domestic animals seem to possess this quality in a greater or lesser degree, but of course those manifesting a love for home, show it the most frequently. The whole matter is involved in most profound obscurity, no attempt having been made to explain it other than the suggestion of a physician in Philadelphia, that the department of the brain known as the pineal gland, for which no use has ever been found, may be the source of this instinct. All ordinary senses fail as explaining this peculiar faculty, as dogs have been taken away from home, shut out from all opportunities for seeing on the journey and to stop every avenue by which they might trace their way back, they were chloroformed into complete insensibility, yet they found their way home just as though no obstacles whatever to this had been interposed.

I cannot see why there should be any particular doubt of the story you give of the spaniel stealing a dust brush to replace the one it demolished and was whipped for so doing. It is only an instance of the power of association in dogs, really the foundation of all their intelligence. This spaniel

case is a parallel of the instances of sheep dogs going to another place than their own and driving in a sheep or cow to make up the number they expected to find in a certain field. There have been numerous instances of sheep dogs doing this, and it is common for a sheep dog to show signs of mortification and distress, if, when sent to the pasture to bring in the cows, it does not find the full number there. Most of them will spend a long time searching every corner of the pasture after the missing one, and the making up the deficiency from another herd or flock is but another step in the same chain of association.

The London *Stock-Keeper* hardly does me justice in its review of what I wrote of "fanciers" and "sportsmen" in your issue of June 18. The two classes, strictly speaking, are fundamentally distinct. When the sportsman breeds for looks, he is no longer the sportsman pure and simple, but is verging on the fancier's domain. The fancier who pays much heed to actual use is losing a bit of his ground as a fancier. It should also have been noted that my reference to the distinction between the two in England was simply in answer to Mr. Mason's remark, which looked as though the same distinction existed only in that country, or that owners of dogs in England were more tolerant of unfavorable criticism of their dogs than Americans are. I am very far from indorsing any disrespectful classifying of fanciers. Their achievements have been wonderful, but still the man who breeds and keeps his dogs for the use he has for them, and the pleasure they give him, is less apt to be supersensitive to criticism of them than he who breeds them with any prospect of profit in view.

It is astonishing how futile * corrections of fallacies set forth in standard works, are. It is the old story of falsehood traveling a thousand leagues while truth is putting on its boots. The story that skunk bite conveyed rabies was set forth in some medical publication, and in spite of the overwhelming proof that men and dogs are frequently skunk bitten without injury, the story sticks. So with the old fable that "bloodhounds" were used in the Southern States to recapture fugitive slaves. Mrs. Stowe wrote it in "Uncle Tom's Cabin," and no amount of disproof weighs against it. The same is true of practical suggestions in kennel papers, they are read, received, and pass out and are known no more. The loss of puppies by their dams lying on them is enormous, yet it is twenty-five years or more since the "pig protector" was devised and published, and its application to dogs has been illustrated in the kennel press, but still the breeder has a long annual list of "laid on" puppies, easily prevented by providing a strip running around the sides of the kennel at the height of the bitch's back when lying down. Bitches do not lie on their puppies, except in very few instances; they lie against the sides of the place they are in and the puppies are crushed by being caught between the bitch and the sides. The strip affords a space for the puppy to escape into and thus save it. Still there will be hundreds "laid on" this year. THE ONLOOKER.

DOG CHAT.

STATES which are older in legislation and have greater need for such an act, should take a lesson from the lawmakers in the Lone Star State. We find that the following act was approved in the Legislature of that State April 13, 1891: "Be it enacted by the Legislature of the State of Texas: That any person who shall knowingly and wilfully furnish or give to a purchaser of any animal, any false pedigree or false certificate of sale of such animal, and every person who shall knowingly and wilfully use, for the purpose of deceiving, any false pedigree or false certificate of sale of any animal, whether such false pedigree or false certificate of sale was furnished, given or procured in this State or elsewhere, shall upon conviction thereof be punished by a fine in any sum not less than twenty-five nor more than five hundred dollars, or be imprisoned in the county jail for a term not exceeding six months, or by both such fine and imprisonment."

Is this instinct or reason? There is a dog in Chester, Pa., which will never walk when there is a chance to jump on a street car and ride. He is a black Newfoundland. Much of his time is spent in the stables. Although his home is only two squares away, he never walks to it, but waits for a car going that way, on which he jumps. He often goes off on a pleasure trip, riding to the different sections of the city on different cars, always sitting on the curbstone till the car he wants comes along, showing remarkable intelligence in allowing to pass him those cars which branch off in directions contrary to the one he wishes to take.

At the Bulldog Club's dinner in England, Mr. Sprague, addressing the company made a strong point of the necessity of "pluck" in a bulldog, says a correspondent to *Fanciers' Gazette*: "Coming from such a source this advice is sure to sow its seed, and believing, as I do, that regard to function should be the foundation of our creed, I am compelled to admit that the pluck, which I believe lies latent in ninety-nine out of every hundred bulldogs of today, is necessary, though I see staring me in the face the danger to the breed of savageness being by some fanciers mistaken for pluck. I must candidly confess that I have seen no evidence that the bulldogs of 1891 are wanting in pluck, but quite the contrary and from inquiries I have made I find this is the opinion shared by many other breeders. The difficulty appears to be as to how to require a bulldog to give a manifestation of his pluck in the judging ring, that will not rapidly degenerate into a degrading spectacle of savageness, which difficulty is more insurmountable than proving that a winning pointer on the show bench is of any practical use in the field. If ungovernable ferocity is what is considered necessary in the breed, I trust it may be introduced slowly and cautiously. Let bulldog fanciers keep a specimen possessing this quality in their kennels, and not breed from him until they have discovered how charming a companion he makes, when they can then breed from him much or little, as it may suit their taste and conveniences."

Says "Ouida" in the *North American Review*: "A few years ago nobody thought it a matter of the slightest consequence to be bitten by a healthy dog; as a veterinary surgeon has justly said, a scratch from a rusty nail or the jagged tin of a sardine-box is much more truly dangerous than a dog's tooth. Yet in the last five years the physiologists and the State, which in all countries protects them, have succeeded in so inoculating the public mind with senseless terrors that even the accidental touch of a puppy's lips or the kindly lick of his tongue throws thousands of people into an insanity of fear. Dr. Bell has justly said: 'Pasteur does not cure rabies; he creates it.' And again, not less truly: 'Whether Pasteur's inoculation for rabies be a curse or a boon to mankind, there can be no question that the exaggerated ideas which it creates, the fictitious importance which it lends to what was previously a most rare malady, the nightmare horrors it invokes, and the lies which its propagandists, to justify its pretenses, find themselves compelled to invent, produce a dementia and hysteria in the public mind which is a disease far more widespread and dangerous than mere rabies (unassisted by science and government) could ever have become.'"

A correspondent relates an amusing but quite likely mistake on the part of a terrier in the London *Field*: "You often record instances of dogs' sagacity; I now send you a

rather amusing instance of a dog's mistake, which you might think worthy of recording. Last week, the rooks having pulled up about half an acre of young turnips in their search for wire worms, I gave a pair of trousers and an old coat of mine to one of the men, with instructions to make a scarecrow of them; and he made a very lifelike imitation of a man, with a stick under his arm for a gun. A few days after the scarecrow was put up I went to the field to see how things were getting on, accompanied by a retriever and a Scotch terrier; and while the latter was investigating some rabbit holes at the bottom of a bank I returned homeward unseen by him. About three hours afterward, as he did not come back, I went to look for him, fearing he might have got into a trap, and saw him patiently sitting at the foot of the scarecrow, thinking it was his master. No doubt he was satisfied by the smell of the clothes, without troubling himself to look too closely at the face, and, being a faithful little dog, would probably have stayed there all night. It was amusing to see his look of bewilderment when I walked up. I may add that the retriever when he first saw the figure growled, but on walking up to it and smelling it wagged his tail; so he too recognized the smell of his master in the clothes. The terrier took not the slightest notice of the figure as we went past it next day."

Mr. A. W. Smith, the well-known black and tan terrier exhibitor of Buffalo, N. Y., writes us: "I have sold my black and tan terrier champion Buffalo General (15 879) to Mr. J. J. Larr, of Buffalo. General was whelped Nov. 27, 1887, bred by Jos. Tatham, Halifax, Eng.; by champion Halifax General out of Lady Lottie, and is full of Burke blood. He is well known to your readers and to show-goers the past three years, as he has won 11 first, 4 second and several special prizes since I bought him. The only terriers that have beaten him in his class are Meersbrook Billy, Buffalo Lass and the two Meersbrook Maidens. As he is not yet four years old, I hope he has many years of life and usefulness before him." This reminds us that Mr. Smith, last week, bred his Buffalo Lass, a many-time prize winner, to Dr. Foote's Broomfield Sultan, and as Sultan is getting some good pups just now, the result will, we hope, prove very satisfactory.

The premium lists of the Montreal dog show are in the printer's hands and will be ready for mailing this week.

Hearing that Lord Bute would very likely make his home on this side of the water next month, Mr. Lamb did not send his bitch Margharita over to Scotland as intended. She is now coming in and will be bred to some other crack.

Mr. Sears tells us, in a private letter, that he has had the dogs of the Wyoming Kennels, of which Sir Bedivere is the bright particular star, moved into their new quarters. The new kennel is, however, far from completed yet and it will be September before the finishing touches are put to what bids fair to be the show kennel of America.

Referring to Mr. Rutter's remark, which was quoted in *FOREST AND STREAM* recently, that he could find no beagles in England worth bringing over, *Stock-Keeper* asks: "Where did he look?" It would be interesting to beagle men on both sides of the water if Mr. Rutter would tell us some of his reasons for this assertion. That beagles are not more generally exhibited in England is to be regretted, but surely our suggestion that Mr. Krehl would be pleased to point the way to where the good ones are kenneled would have been complied with had he been asked.

In England just now, selling classes at the smaller shows are meeting with good support. We should think that such classes might be more generally adopted in this country than they are. It affords a ready means of disposing of surplus stock, which, while hardly good enough to win in the open classes, have a chance of gaining a little honor in such a class, adding materially to their chances of finding good customers.

The noted English collie exhibitor Mr. Megson has exchanged his crack dog, Edgbaston Fox, with Messrs. Farrer Bros. for their Mons Meg. The peculiarity of the exchange is that both dogs return to their old homes. Edgbaston Fox is the sire of Roslyn Conway, one of the good young dogs of the Chestnut Hill contingent.

"There are some exceedingly severe remarks in *FOREST AND STREAM* about the condition in which the St. Bernard Prince Regent was shipped," says the English *Stock-Keeper*, and further, "they call for a reply on the part of the vendor." We shall take pleasure in publishing the other side of the case, but that our strictures were well timed is evidenced by the fact that on meeting Mr. Reick shortly after, he congratulated us on the stand we had taken, and remarked that it was very much to the point. We may say now that Prince Regent is looking himself again; having completely recovered, weighs over 200 lbs., and his coat is coming in nicely. It is also a pleasure to note that through the medium of our business columns several stud services have been secured to this noted sire.

The coming Crystal Palace show in October next, of which Mr. Taunton, the well-known mastiff breeder, is the head and front, will have nearly 400 classes. This is the "independent" show of England and is well supported, its premium list being a model that any club with a booming bank account might follow to advantage.

Dr. Faxon, of Boston, Mass., owner of the Kilmarnock Kennels, is one of our oldest and most respected breeders of collies, and though of late years his kennel has not been seen very often on the bench, it would appear as if the worthy doctor was laying plans to bring the Kilmarnock Kennel once more to the front. We see that he has purchased from Mr. Megson the noted collie Mother Shipton, which, among other prizes has won the 50-guinea challenge cup at Liverpool, and the Derby at the Northern and Midlands show held recently at Manchester. She has already sailed for this country, and that she is in whelp to Metchley Wonder is another cause for congratulation. We have at present quite as many good stud collies as we need, but a few more importations of high class collies of the gentler sex would be sure to do a world of good to collie interests, as the breeding results at present are not what they should be by any means.

The secretary of the coming Blackburn show alludes to the fact that he intends to pay the prizes the day of the show as a "new departure." In this part of show management America is far ahead of our cousins on the other side. It would be a "new departure" did our exhibitors return home without their prize money.

The dog lovers of St. Paul are agitating the question of holding a dog show this fall. It is proposed to have Mr. Geo. H. Hill, of Madeira, O., who has already shown his fitness for such a position, take charge of the affair. Since the show held three years ago, the interest taken in dogs by sportsmen of the Northwestern States, and especially in the city of St. Paul, has increased very much, and as every one is anxious to exhibit there is every likelihood that during fall week a dog show will be held. There are a number of good kennels at St. Paul. Among them are the Osceola Kennels, of which Messrs. Drake and Hansen are the proprietors; then there is the noted Elms City Kennel, with Mr. Paul Gotzian at the head. Mr. Edward Scott is said to have a

good kennel of St. Bernards and Mr. Wedderhorn has some English setters and pugs. It would seem therefore as if a show held after the Canadian fixtures would take well, as most of the Eastern dogs would be well on their way to St. Paul.

Some people, otherwise decent enough sort of folks in their relations with every day life, seem to sink to the lowest depth of meanness where a dog is concerned. The other day a big Newfoundland dog was coaxed by a lot of boys to accompany them to the Morris Canal, at Paterson. Seeing a little fellow struggling in the water, the dog jumped in and dragged the lad out. The mother of the boy afterward went before the Recorder and wanted to have the dog shot, as vicious, because in his well-meaning efforts he had torn the hair and scratched the face of her boy. The Recorder declined to take the complaint.

Harry Howard, the huntsman of the Essex County Hunt Club, died last Saturday night at the club's kennels in the Orange Mountains. He had long suffered from consumption of the lungs. He was about 40 years of age. When six-day-go-as-you-please races were great money-making affairs Harry Howard came here from England and entered the ranks of the "peds." He was a plucky little man and he was fairly successful as a money-maker, although he never made any remarkable record. For several years Howard had been engaged by the Essex County Club to either scare up foxes or to drag an ante-seed bar across country, and his genial manners and industry caused him to be respected by the club members.

We have received the premium list of the Kingston Kennel Club's show to be held Sept. 1 to 4. With the prize list they have set forth they should meet with good support, especially as this show opens the round of the Canadian circuit. The challenge classes are given a diploma, and in the open classes prizes of \$7, \$3 and a card are given in all classes, with sexes divided in every breed almost. When one remembers that the entry fee is only \$1, this makes the prizes of about equal value with shows which give \$10 and \$5, but charge \$3 to enter. Spratts Patent will feed the dogs during the show. The show will open on Tuesday, but judging will not commence until Wednesday morning at 10 A. M., and in the evenings from 6 to 7 P. M. the show will be closed. This is a good move, as it allows handlers and exhibitors to get their dogs exercised and fed without interference. Mr. Corbett, who superintends the show, made a record for himself last year, and was acknowledged to have a full conception of his duties with the ability to carry them out. Entries close possibly Aug. 23. We also remark with pleasure that no puppy classes are provided. A long list of specials is offered.

The field trial committee of the Irish Setter Club have decided to extend the time of closing of entries in their coming trials. The Derby Stake will close on Sept. 15 instead of Aug. 15, and the All-Aged Oct. 15 instead of Oct. 1, as already announced.

The greyhound which we alluded to last week as taking third prize at Pickering show was not, as stated, Mr. Purbeck's Ornatus, but a black dog belonging to Messrs. Toon & Symonds. The mistake arose from the peculiar practice of some shows in England only printing the name of the owner in the catalogue, which must necessarily lead to mistakes and open an avenue for fraud. The black and tan terrier mentioned as third to Rhodes Oban and Pearl was Prince George, Messrs. Toon & Symonds' new dog, and not Prince Regent. George Thomas will be coming back with his team shortly in time for the fall shows.

A Brooklyn lady held on to her pug's hindlegs while the dog catcher pulled at its head. It was a stretch of imagination on her part to fancy that she could lengthen the dog's life by any such means.

In a conversation with Mr. Vredenburg he tells us that if the World's Fair people give the dog show in 1893, no money will be given in prizes, only medals. Each exhibitor must supply his own attendance, food and water for his dogs. They had no idea of the importance that the kennel interests of this country had assumed, and especially so when they proposed that if they give the show the prizes would be awarded by a jury composed of men who would also be chosen to adjudicate on cattle, horses, etc., as well. Under these circumstances we fancy that a show held under such auspices would fail in the end it is expected to accomplish, i. e., the gathering together of the best dogs in the world. If any other club, the Mascoutah or the A. K. C., gives the show, it will have to be held outside of the Fair precincts. It is also stated that according to the view the World's Fair Commissioners take of it, only those dogs that have been duly registered would be admitted to their show, and foreign dogs would also have to be accompanied by a certificate of the registry from the secretary of the kennel club stud book of the country they came from. This would still further handicap a representative gathering. The idea is now to have the Mascoutah Kennel Club give the show, and as the Fair would very likely be closed in the evening a big attendance would very likely be secured in consequence. To make the show anything like a success, at least \$10,000 is proposed as the sum that should be devoted to the purpose of giving a show. There the matter stands at present. After all, we think that to give the affair an international aspect, the A. K. C. should hold the show, and give valuable team prizes for each breed open only to foreign exhibitors. We do not suppose that English exhibitors would bring their dogs over with an idea of making expenses out of their winnings, but it affords them an opportunity for a jaunt and a-o to dispose of a good quantity of their stock. There are many who would buy when the dogs were here but would not run the risk of importing a dog themselves. We are still in favor of international sweepstakes for dogs whelped after January, 1892, and as the show would be held in June, 1893, this would give every one a fair start and allow stock to be well grown.

We sincerely hope that the call which Mr. Shotwell sends out to ascertain the interest that is abroad in favor of sheepdog trials will meet with a satisfactory response. There are sufficient working collies in this country to make such a trial successful, provided the arrangements are properly carried out. Next week we will endeavor to give the plans and particulars of a trial described some time since in an English journal and which may be of service in getting up these trials.

One can scarcely take up a New York daily paper nowadays without reading accounts of assaults committed by the dog-catcher or his so-called assistants. Last week a lady in Brooklyn had her pug seized when taking it out for exercise, although the dog was licensed. She was plucky though and managed to grab the hindlegs of her pet as the man was carrying it to the wagon, and between them the pug came within an ace of furnishing a practical illustration of Solomon's celebrated verdict. The man, however, proved the stronger and, striking the woman, managed to get the dog into the wagon, and even then struck the lady as she attempted to climb on the wheel. The man was arrested afterward and the lady secured her pug by paying 50 cents at the pound. It turned out that the man was acting in place of the regularly-appointed dog-catcher. We trust he will get his deserts for the assault, which seems to

be the only satisfaction that can be obtained. It is pleasing to note, in the *Evening Telegram*, that Mayor Grant had suspended one of the New York dog-catchers for one month for acts similar to the above. Again we saw that some indignant residents of a certain district had taken vengeance into their own hands and when the dog-catchers attempted to take a dog out of a hallway set upon them tooth and nail till they were glad to flee with their lives. While we do not uphold any breach of the peace, still it seems that, as "Gray John" suggests in another column, some test case should be made, as to whether these men have the right to seize dogs without due process of law.

The members of the Ranelagh Club, one of the swell sporting clubs outside London, held a dog show the other day, but only a few breeds were entered; namely, Barzois and great Danes, some collies and terriers. At the show was seen a diminutive Pomeranian, generally known here as the Spitz, the bugbear of all timid people with hydrophobic tendencies. This particular dog weighed only 3 lbs., and is said to be the best of its kind.

Mr. H. Malcolm, of Baltimore, Md., has, we understand, brought two suits for libel in the United States Circuit Court against various associate members of the A. K. C. In addition to the usual heads of departments, such names as Pabst, Diffenderfer, Livesey, McNeill, Mitchell Harrison, Hoey, Hobbie, Rutherford and others are mentioned in the summonses. The damages are placed at the usual rate.

The eleventh English St. Bernard Club show passed off successfully, being held at Birmingham July 21 to 23. There were 182 entries, a slight falling off from the last show, and the quality was not quite up to the average. This was accounted for by the recent exportations to American kennels. The trophies were won by what may be termed second-rate dogs when Sir Bedivere, Plinlimmon, Scottish Prince, Prince Regent, etc., are yet alive. Alta Bella won the 100 guinea challenge cup for bitches, and also the Halsey trophy, which Sir Bedivere has won twice, as the best St. Bernard in the show, beating Keeper, the smooth, who won the 100 guinea challenge cup for the best dog in the show. Sidney W. Smith's Young Bute won the cup for the best dog of opposite coat to the winner of the challenge cup, and Mr. Gosling's Lola IV., smooth-coat, the cup in the corresponding special for bitches. Keeper and Lord Bute were equal for the stud dog prize, their progeny being of opposite types; Sans Peur taking the brood bitch prize. Miss Dutton won the rough team prize and Mr. J. F. Smith that for smooths. However, the prize list hardly reads like those of the past, due, as *Stock-Keeper* puts it, "to the export of the best dogs to be hurt in the States."

The owner of Harper and Graven Image, Mr. Sackett, of Cape Vincent, N. Y., is in England. He has purchased some bull bitches which have already sailed for this country, and he is now working toward St. Petersburg on the lookout for Barzois. Are we going to have a Barzoi craze? It looks like it.

Cantine World says that Parker, and this must be our Prof. Parker, whose troupe of trick dogs conduce so much to vary the monotony of our dog shows, is playing to full houses at the Tivoli, London.

Mr. Panmure Gordon, president of the Scottish Kennel Club, has presented the collies Omskirk Dolly and Woodland Ralph to the German Emperor, and will conduct them to their new home himself.

We hear that Mr. Sidney Smith has taken his *fidus Achates*, Mr. Baker, into partnership with him in his kennel of St. Bernards. The partnership will date from Aug. 1. Mr. Baker is also manager of Mr. Smith's business interests.

Miss Dutton has lost by death the St. Bernard champion Grace. She was a handsome animal and a great favorite as well as a big prize winner. She was also noted as a collector of funds for the National Lifeboat Institution, having for nearly two years supported a lifeboat station on the coast of Cornwall from collections at different shows. She was the dam of such noted dogs as Plinius, Plautius, the Canadian bitch Phyllis, and Claudius and Dorothy II.

Mr. Vredenburg tells us that the number of registrations in the Stud Book this year, up to Aug. 1, is 2,100, as against 1,200 during the corresponding period of 1890.

At a meeting of the Kingston Kennel Club, held July 29, the following gentlemen were elected members of the advisory board for their bench show: Messrs. J. Lorne Campbell, Simcoe, President of the Canadian Kennel Club; Dr. Wesley Mills, Montreal; A. D. Stewart, Hamilton; Alfred Geddes, Ottawa; and C. A. Stone, Toronto.

The Irish setter trotting dog Doc trotted a mile to harness in 3:36½ over the Cleveland track last Tuesday week.

We are indebted to Dr. Foote for two excellent photographs of his black and tan terrier Broomfield Sultan, "pressed" by himself.

We have received a catalogue, descriptive of some excellent stock owned by Mr. H. F. Littlefield, owner of the Lake View Kennels, Worcester, Mass.

Mr. L. F. Rutter, Jr. brought over with him from England the basset hound Rowton Wag, a bull bitch in whelp to King Lud, and another young bulldog, by Rustic King.

Mr. John H. Naylor intends to do the fall circuit if he can get up a good team. We all know that "Die hard" is an excellent man at the business, and this is a good chance for Western exhibitors.

Since Christopher, the noted collie owned by Chestnut Hill Kennels, left England, his son Stacathro Ralph's stud fee has been raised to 7 guineas.

A friendly letter from Mr. Wixom tells us that champion Harmony has a litter of ten handsome black and white pups. He has been lucky in raising puppies lately, having only lost four out of thirty-seven pups from eight bitches. Both the wolfhounds have nice litters and are doing first-rate, and old Memnon still hangs on to his old age, looks well, and although he has only two teeth left, does his full share when feeding time comes round. The Hornell-Harmony Kennels will probably show at Kingston and Toronto.

Mr. Frank Dole writes us that Mr. Comstock and he arrived on the City of New York last Wednesday, after a pleasant voyage. He found the stock all right at home and ch. Starlight with a litter of six all white pups. He is still in love with Gully the Great, his new bull-terrier. Just before leaving England he bought two bull bitches for breeding purposes, and meeting Mr. Sackett, who is doing Europe, resold them to him. He bought for Mr. Maurice the mate to the dachshund Janet, which we have spoken of before, this is Midrush Rioter (or something like that Frank was in a hurry, evidently), he is said to be a good one, having won firsts at such shows as Birmingham, Liverpool, Gloucester, etc., they will therefore make a crack pair and do well for the breed over here. These are all the new ones

he bought, but he speaks of several coming over for the fall shows, and concludes with, "Well, old man! I've seen quite a few places, but just think New Haven the best place in the world."

Although Rip Rap, the well-known pointer, has been withdrawn from public stud, his services are in great demand. In a letter Mr. Dexter tells us that Mr. F. C. Lowe, the noted breeder of field trial winners in England, is sending a bitch over to him.

We regret to hear of the death of another good pointer—Brake. This dog was owned by Mr. Stanton W. Pentz, of Fanwood, N. J. Brake was whelped April 7, 1886, and was by Bang Bang out of Jane, champion Sensation out of Heath's Lill, by Grigg's Mack II. out of his Nell. In color he was lemon and white. His excellent formation gained him notice in the show ring, having won numerous prizes during his career. He qualified for the challenge class and won the challenge prize at Wilmington, 1890. He was bred by Mr. F. T. Underhill, of Newark, N. J.

One of the new advertisements in our business columns, to which we wish to draw attention this week, is that of the Hamilton Kennel Club. Those for sale are: Handsome cocker spaniel, by Merchant; Chesapeake Bay puppies, by E. A. Palmer; beagles, by Box 7; perfectly broken setter, by M. T. Mason; a brace of Elcho, Jr., puppies, by Elcho Kennels; St. Bernard puppies, by Fred G. Street; Irish setter bitch, by C. F. Kent; St. Bernard puppies, by C. Wagner; trained pointer, by J. R. Fanning; collie brood bitches, by H. F. Littlefield; English setters, by Wm. B. Case; English setters, by Moorefield Kennels; St. Bernards at stud, John Keenan's. An opportunity is also offered to secure several well-known prize winners from Fred Kirby's kennel.

THE POWER OF SPECIALTY CLUBS FOR EVIL.

Editor Forest and Stream:

Every organization should be so established that its power for evil would be minimal and for good maximal.

The purpose of the present writing is to show that this is not true of several of the existing clubs. Many of them publish a list of approved judges, and further legislate that prizes offered by them can be awarded only by the club judges. Will any one pretend to affirm either that all those nominated as judges are competent and otherwise suitable persons for the position? Or, that the names of all who are eligible for the judging ring are on the lists of specialty club judges? We know very well that such is not the case, and, if so, any attempt to force club judges on show committees is entirely wrong; yet this is exactly what is being done at present. At all events a prize, on condition that one of the club judges be selected, is too strong a temptation for some committees. Perhaps a little bit of history quite within the memory of living men may illustrate how the matter works: At a certain large show for a couple of years two all-round judges officiated. The name of one of these does not happen to be on the list of any of the specialty clubs. The name of the other is in several. The former we will call A, the latter B. B caused such dissatisfaction in judging a certain class of dogs that the management, after considerable discussion, decided to try A for this position. He is appointed and his name published in all the papers. After a time it is announced that not A, but B will judge the class, because A is not on the list of judges of the club, that now offers prizes to this show provided one of its club judges is elected to judge. Forthwith the committee meet, and the majority, despite the protests of the minority, humiliate Judge A by appointing B in his place. What a spectacle! A is one of the most competent and respected judges in America; yet all this has happened under color of club judges. Further comment is unnecessary. Some of the clubs have had the wisdom to abolish their list of judges. All should do so at once. We are not ready for this sort of thing yet in America. Such unfortunate proceedings as have been detailed above should be rendered impossible. They are sure to give rise to no end of heartburnings, and will hurt the very club that seemed for the moment to be advancing its cause according to its own unwise constitution. The exhibitors of dogs cannot afford to be without the services of certain men that will not favor the specialty clubs; and show committees may be safely intrusted to choose their judges without suggestions from the clubs.

If a club wishes to encourage the breed it fosters by giving prizes at shows, let it do so on condition that the judge appointed be acceptable to them; i. e., if they must have such a provision, which I believe quite uncalled for, however. Usually the judges' names are announced early, and any club can offer or withhold its prizes as it sees fit as soon as the main facts about the proposed show are known. One thing is certain, that the present system will do a great deal of harm, and I trust the clubs, which mean well no doubt, will take the matter into serious consideration. At present it is scarcely possible for a show committee that is intelligent and independent to treat with the clubs on such terms as they propose; and I trust that most committees will prove that they cannot be bribed, for such the present system encourages. If the clubs wish to offer prizes, let them give them out and out in a manly way.

INDEPENDENT.

"FRAUDULENT" STUD SERVICES.

Editor Forest and Stream:

Something over a year since I was told by a friend that he had been informed, as a fact, that the owner of a certain noted dog was in the habit of putting bitches sent to this dog, to another and inferior one. This ridiculous idea rather amused me, but upon recently receiving the same story as to another noted stud dog, my amusement was changed into deep seated disgust at the inborn cussedness of some dog men. If people who circulate such stories would only reflect a little they would see how utterly preposterous such stories are. Both the dogs referred to are of world wide reputation as getters of good stock. What constitutes a stud dog's value? Why the high-class stock he gets. Now is any owner of such a dog going to be born ass enough to risk injury to the reputation of his stud dog by using another in his stead and letting the progeny go out as the get of the dog whose reputation rests solely on the character of his get? Lay aside all considerations of the honesty of the owner, admit him to be as big a rascal as possible, would not common considerations of self-interest insure his avoidance of any such course? In fact, if a rascally owner had two stud dogs, a great one and an indifferent one, his rascality would reap the greater reward in putting bitches sent to the inferior dog to the good one and thereby giving a fictitious reputation to the inferior dog. In the most noted case of doubted pedigree, that of Crown Prince, was claimed by some, that this was actually the case, that the owner of a wasterl had used a great stud dog, simply to give his bad one a false reputation. These reports are most criminal, even if received from another, no man has a right to spread them abroad until he has personal knowledge of their truthfulness, and I am glad to say that both the gentlemen who communicated these reports to me, did so merely inquiring of me, with their expressions of disbelief in the truth of the slanders. As we have a wondrous plenty of libel suits in dog matters now, and as communicating the names of those who told these stories, would add a most lively suit to the lot now on hand, I will not communicate any names to anybody, but I ask all who hear such yarns to reflect on the possibility of their truth.

W. WADE.

HULTON, Pa., July 30.

MR. MACKELCON CORRECTED.—Toronto, Can.—*Editor Forest and Stream:* Mr. J. Mackelcon could not be in possession of facts when he wrote the letter which appeared in your last issue, as he has shown himself ignorant in regard to kennel news. Mr. Bell took charge of Jolly Ranger at New York, Chicago and Cleveland shows, and when I offered to pay him he refused to take anything; and as I have not time to give the attention that is required to properly look after the greyhounds, I made arrangements with Mr. Geo. Bell whereby the Seaton Kennels would be amalgamated with the Ancient and Modern Spaniel Kennels. White Wings met with a cruel end without having an opportunity of proving her worth on the bench, as she was only shown once, and that was at the T. K. C. dog show, open to members' dogs only, and the entries were not as large as Mr. Mackelcon asserted. Jolly Ranger was shown last fall at the Toronto dog show in a large class (at one year old), where he got second; at New York, vhc. reserve; at Chicago, second; at Cleveland, first, and at T. K. C. show for members' dogs, first. These are the only times he has been exhibited on the bench.—C. E. IRESON.

THE DOG CATCHERS.—*Editor Forest and Stream:* You have seen about the dog-catcher in Brooklyn. Now, I've always had an idea that while it may possibly be constitutional to levy a tax or license upon dogs, and that is not absolutely certain, it is clearly unconstitutional for a dog catcher to take the property of a citizen without due process of law, and worse yet when the taking is done, not by the dog-catcher himself, who may have some color of office, but some irresponsible fellow purporting to act as his assistant. What about getting up a fund for a test case?—GRAY JOHN.

SHEEP DOG TRIALS 1892.—*Editor Forest and Stream:* The Collie Club, having made a preliminary announcement of its intention to inaugurate sheep dog trials in this country, respectfully requests the owners of trained collies, who desire to compete, to correspond with the secretary of the club, in order to ascertain if any interest is felt in regard to the proposition.—J. D. SHOTWELL, Sec'y (Orange, N. J.).

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address. NAMES CLAIMED.

Prepared Blanks sent free on application.

Lansdowne Dimity. By Lansdowne Kennels, Lansdowne, Pa., for white, ears ticked, fox-terrier bitch, whelped July 4, 1890, by Raffle (Brockhurst Rally—Harmony) out of Warren Vivid (Splasher—Verdiana).

Lansdowne Tenny. By Lansdowne Kennels, Lansdowne, Pa., for white, black and tan fox-terrier bitch, whelped Jan. 23, 1891, by Suffolk Toby (Carlisle Prince—Nellie Farren) out of Temptation (Mixture—Warren Lady).

Lansdowne Lorna. By Lansdowne Kennels, Lansdowne, Pa., for white, black and tan fox-terrier bitch, whelped May 26, 1890, by Telford (Raby Mixer—Temptation) out of Doone (Raffle—Warren Vauban).

Dan Burgess. By C. B. Thornton, Nunda, N. Y., for black, white and tan English setter dog, whelped May 14, 1891, by Dan Gladstone (champion Gladstone—champion Sue) out of Lilly Burgess (champion Gath's Mark—Esther).

Bright Eyes. By Eberhart Pug Kennels, Cincinnati, O., for pug bitch, whelped April 25, 1891, by imported John Bull out of Ruby E.

Miss Phyllis and Little Goldie. By Eberhart Pug Kennels, Cincinnati, O., for pug bitches, whelped March 29, 1891, by imported John Bull out of Phyllis II.

Alpha. By C. A. Stearns, Pawtucket, R. I., for pug dog, whelped March, 1889, by Rackeb (Echo—Rackett) out of Mayflower (Bradford Ruby—Pinkey).

BRED.

Prepared Blanks sent free on application.

Parvin's Queen—Snowball. Thos. Parvin's (Philadelphia, Pa.) cocker spaniel bitch Parvin's Queen (King Coal—Jersey Beauty) to Swiss Mountain Kennels' Snowball (Dandy W.—Chip K.), April 20.

Florette—King Regent. Swiss Mountain Kennels' (Germantown, Pa.) rough St. Bernard bitch Florette (Alton—Florin) to their King Regent (Prince Royal—Duchess of Kent), July 11.

Hilda—King Regent. Walter Pierson's (Philadelphia, Pa.) rough St. Bernard bitch Hilda (Plinlimmon, Jr.—Clytie) to Swiss Mountain Kennel' King Regent (Princess Regent—Duchess of Kent), July 19.

Dud—Bradford Harry. M. Gougerty's (New Haven, Conn.) Yorkshire terrier bitch Dud (Sydney—Mollie) to P. H. Coombs's champion Bradford Harry (Crawshaw's Bruce—Beal's Lady), June 16.

Pass of Graphie—Robert le Diable. F. C. Rochester's (Logan, O.) pass of Lass of Graphie (champion Graphie—White Rose) to Hempstead Farm Kennels' champion Robert le Diable (Croxteth—Spawaway), July 9.

Puss in Boots—Treasure. E. W. Barnes's (Wellsville, N. Y.) pug bitch Puss in Boots (Laddy—Topsey) to Seminole Kennels' champion Treasure (Douglass—Banjo), July 28.

Lady Verne—Douglas II. O. P. Kinnie's (Lima, O.) pug bitch Lady Verne to Eberhart Pug Kennels' Douglas II., July 30.

WHELPS.

Prepared Blanks sent free on application.

Hecla. Swiss Mountain Kennels' (Germantown, Pa.) rough St. Bernard bitch Hecla (Hector—Nell), July 7, four bitches, by their Archduke (Chequasset Max—Theo).

Blush. Swiss Mountain Kennels' (Germantown, Pa.) rough St. Bernard bitch Blush (Leo—Nell), July 2, fifteen (six dogs), by their Archduke (Chequasset Max—Theo).

Parvin's Queen. Thos. Parvin's (Philadelphia, Pa.) cocker spaniel bitch Parvin's Queen (King Coal—Jersey Beauty), June 20, six (one dog), by Swiss Mountain Kennels' Snowball (Dandy W.—Chip K.).

Rose. W. H. Case's (Lockport, N. Y.) English setter bitch Rose, June 21, eight (five dogs), by Niagara Kennels' Belton Star (George—Maggie Bee).

Bonnie. D. E. Peters's (North Baltimore, O.) foxhound bitch Bonnie (Dick II—Lady Sport), July 29, six (four dogs), by McMurray's Bumper (champion Brave—Fly).

SALES.

Prepared Blanks sent free on application.

Duke IV. Orange and white rough St. Bernard dog, whelped Sept. 9, 1891, by Archduke out of Betty Bobbett, by Swiss Mountain Kennels, Germantown, Pa., to Mr. Eberhardt, Philadelphia, Pa.

Ar-ko. Black spaniel dog, whelped July 14, 1890, by Nig W. out of Darkie III., by Swiss Mountain Kennels, Germantown, Pa., to Mrs. A. P. Smith, Philadelphia, Pa.

Go—Lucie H. whelp. Liver ticked pointer dog, whelped April 5, 1891, by C. A. Parker, Worcester, Mass., to Jos. L. Hopkins, Norwich, Conn.

Grand Duke. Orange tawny, white markings, rough St. Bernard dog, whelped July 9, 1890, by Archduke out of Madam Barry, by Swiss Mountain Kennels, Germantown, Pa., to Wilhelm Eberhardt, Philadelphia, Pa.

Arch Duke. Orange, perfect markings, rough St. Bernard bitch, whelped July 9, 1890, by Archduke out of Madam Barry, by Swiss Mountain Kennels, Germantown, Pa., to F. Backmeyer, Lafayette, Ind.

Maple Grove Luath. Black and tan collie bitch, whelped May 21, 1889, by Clifton Hero out of Sparkle, by J. A. Long, St. Louis, Mo., to Maple Grove Kennels, Logan, O.

Matchley Wonder II. Sable and white collie dog, whelped March 13, 1891, by champion Matchley Wonder out of Barbey Rose, by J. A. Long, St. Louis, Mo., to Maple Grove Kennels, Logan, O.

Lincoln—Nellie Krueger whelp. White, black and tan beagle bitch, whelped Sept. 8, 1889, by J. H. Danford, Trimble, O., to F. C. Rochester, Logan, O.

Scotch Bonbardier—Hecla whelp. White and orange St. Bernard bitch, whelped May 12, 1891, by H. F. Littlefield, Worcester, Mass., to E. W. Knoll, same place.

White and orange St. Bernard dog. by H. F. Littlefield, Worcester, Mass., to W. Robbins, Jr., Grand Haven, Mich.

White Wonder—Fannie whelp. White bull-terrier dog, by H. F. Littlefield, Worcester, Mass., to A. T. Bringhurst, Logansport, Ind.

Corvette. Black, tan and white collie bitch, whelped June 22, 1890, by Rutland Jack out of Spot, by H. F. Littlefield, Worcester, Mass., to L. W. Finley, York, Pa.

Glencalm. Black, tan and white collie dog, whelped June 15, 1890, by Gilderoy out of Zillah, by H. F. Littlefield, Worcester, Mass., to A. Williams, same place.

Venus V. Black, tan and white collie bitch, whelped July 15, 1890, by Gilderoy out of Zillah, by H. F. Littlefield, Worcester, Mass., to H. N. Neice, Chicago, Ill.

Opal. Black, tan and white collie bitch, whelped July 15, 1890, by Gilderoy out of Zillah, by H. F. Littlefield, Worcester, Mass., to Dr. Frank Cobb, New York.

Pendax. Black, tan and white collie dog, whelped July 15, 1890, by Gilderoy out of Zillah, by H. F. Littlefield, Worcester, Mass., to W. P. McSorley, Cambridgeport, Mass.

Prince. Black cocker spaniel dog, by H. F. Littlefield, Worcester, Mass., to John L. Bates, Boston, Mass.

Fanny. Orange St. Bernard bitch, by H. F. Littlefield, Worcester, Mass., to N. Robbins, Jr., Grand Haven, Mich.

Aquas. Orange and white St. Bernard bitch, by Hector out of Lila, by H. F. Littlefield, Worcester, Mass., to N. Robbins, Jr., Grand Haven, Mich.

Almont. Sable and white collie dog, whelped June 15, 1890, by champion Clipper out of Golden Rod, by H. F. Littlefield, Worcester, Mass., to Benj. Rich, Ithaca, N. Y.

Alaric. Sable and white collie dog, whelped June 15, 1890, by champion Clipper out of Golden Rod, by H. F. Littlefield, Worcester, Mass., to L. V. Finley, York, Pa.

Adonis. Sable and white collie dog, whelped June 15, 1890, by champion Clipper out of Golden Rod, by H. F. Littlefield, Worcester, Mass., to C. T. Peirce, New York.

Apollo. Black, white and tan collie dog, whelped June 15, 1890, by champion Clipper out of Golden Rod, by H. F. Littlefield, Worcester, Mass., to Eugene Dupont, Wilmington, Del.

Daisy. White English terrier bitch, by White Prince out of York, by H. F. Littlefield, Worcester, Mass., to A. Colby, New York.

Zillah. Black and tan collie bitch, whelped June 29, 1890, by Rutland Jock out of Spot, by H. F. Littlefield, Worcester, Mass., to W. B. Robinson, Rosindale, Mass.

Flip. White bull-terrier bitch, by Count out of Nell, by H. F. Littlefield, Worcester, Mass., to Jos. Messer, same place.

Archduke. St. Bernard, whelped April 5, 1891, by Swiss Mountain Kennels, Germantown, Pa., an orange, perfect markings, dog to J. P. Persch, same place, and an orange tawny, perfect markings, bitch to F. Backmeyer, LaFayette, Ind.

Bang Graphic—Carrie R. whelp. Liver and white pointers, whelped April 26, 1891, by F. C. Rochester, Logan, O., a dog to Raymond Harvey and a bitch to Geo. Golden, both of Washington, D. C.; a dog to Wm. Seabright, Martin's Ferry, O., and a bitch to A. C. Bradley, Cincinnati, O.

Roderick Dhu—Lufra II. whelps. Black and tan Gordon setter dogs, whelped May 3, 1891, by Lansdowne Kennels, Lansdowne, Pa., one each to Dr. N. S. Essig, Philadelphia, Pa., and Miss E. B. Boas, Reading, Pa.

Rutland Jock—Spot whelps. Black, tan and white collie dogs, whelped June 22, 1890, by H. F. Littlefield, Worcester, Mass., one each to A. A. Bzozara, Frankfort, N. Y.; Fred S. Groves, Philadelphia, Pa.; J. P. McSorley, Cambridgeport, Mass.; F. M. Harrison and H. H. B. Angell, New York.

Rutland Jock—Spot whelp. Black and tan collie, whelped June 22, 1890, by H. F. Littlefield, Worcester, Mass., to Mr. Tokelson, same place.

Rozie. Pug dog, pedigree unknown, by Eberhardt Pug Kennels, Cincinnati, O., to L. L. McGinn, Lexington, S. C.

Metchley Wonder. R. Sable and white collie dog, whelped March 13, 1891, by champion Metchley Wonder out of Barby Rose, by J. A. Long, St. Louis, Mo., to F. C. Rochester, Logan, O.

PRESENTATION.

Bang Graphic—Carrie R. whelp. Lemon and white pointer dog, whelped April 26, 1891, by F. C. Rochester, Logan, O., to H. E. White, Shawnee, O.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

W. A. S.—Chesapeake Bay dog pups range in price from \$35 to \$50. You will find the Chesapeake far the best for your purpose.

H. L. S., Chicago, Ill.—Most of the dogs mentioned in the pedigrees are registered either in English or American stud books. You will find one of the FOREST AND STREAM kennel record books very convenient as a means of keeping track of all your kennel transactions.

FORT WILLIAM HENRY.—Ponce de Leon, white, tawny brindles spots, black facings, double dew claws, dog, whelped Feb. 23, 1887. Breeder, Mr. C. W. Bickford, Rochester, N. H. Owner, Mr. O. D. Seavey, St. Augustine, Fla. Sire—Karl Bonivard (A.K.R. 481). Dam—Mora (A.K.R. 5340).

W. H., Boston, Mass.—1. Will you kindly publish the pedigree of St. Bernard Monastery (E. 2446) and mention (E. 2443). 2. Can you tell me any treatment to improve the feet of a two-year-old bound that is a little splay-footed? Ans. 1. Le Moine (alias Monastery) is said to trace back to Old Barry, won first prize at Birmingham in 1873, and his breeder was Mr. T. Skeale Hooper, Pen-y-Park, Llantarnam, Newport, Monmouthshire. Meuthon was imported from Switzerland by Rev. J. C. Mardona, but no pedigree is given in the English stud book. 2. We know of nothing that will improve the feet at that age.

G. B. C., Bridgeport, Conn.—I have in my possession a black greyhound called Ten Broeck, raised at 30 J. W. Foster's place St. Michaels, Md. The former owner of this bound referred me to your paper as authority for the dog's pedigree, which was represented to me as being registered. Could you furnish me with a list of his recent lineage, provided the above statement be true, or a denial if the former owner has misrepresented? Ans. There is a greyhound named Ten Broeck registered in A. K. C. S. B., Vol. IV., No. 6241. Whelped November, 1886, dark blue, by Don out of Minnie M. (6240). Breeder, C. W. Travis, Lafayette, Ind.

J. G. D., Chestnut Hill, Pa.—I have been trying to teach my spaniel to retrieve dead birds, but they won't look at them, but for a live bird they would go almost crazy, but when dead it has no interest to them. They will fetch a ball or roll of soft stuff very nicely. What would you advise? I have both Hammond's book and also Mercer's. Ans. You must force the dog to retrieve, compelling him to take the bird in his mouth and, with a cord attached to his collar, compel it to bring the bird to you. Commence by making the dog pick it up from his feet, and then further and further away as he gains confidence, he will soon understand what is required of him, especially as you say he will fetch other articles.

MEDICUS.—1. When did the American Kennel Register, published by Forest and Stream Publishing Company, stop, and why? 2. Is there any separate register for pugs or toy dogs? 3. Is my pug bitch eligible to register in American Kennel Club stud book? Pedigree inclosed. 4. If not eligible, what is necessary to be done to enter in show? 5. Can you give me pedigree of Elcho and of Rachel, both owned by Mr. H. A. Richeson, of Providence, R. I.? Ans. The A.K.R. stopped February 1890, when it was purchased by the American Kennel Club. 2. No. That of the A. K. C. is the only one. 3. No, two sires and one dam not stated in third generation. Write to A. P. Vredenburg, 44 Broadway, New York city. 4. Simply pay 25 cents and list in the Kennel Gazette. 5. Not registered.

C. A. C., Ionia, Mich.—1. I conclude you are best authority, so write you for information regarding English setters. Where can I get a correct history and more particulars of the dogs and their Count Noble and Nell, and their descendants, and what will the expense be? 2. I suppose I have the only full bred bitch in this section, and as she is from Ned Gladstone II. I should judge she ought to be crossed with some other good line. How is the Lav-rack line? Ans. 1. There is no work that we know of wherein a history of the dogs you mention can be found. For a history of the English setter refer you to Veno Shaw's "Book of the Dog," price \$8. "The Setter," by Edward Laverack, price \$2.75; The English Setter, by Bernard Waters in Shields' "American Book of the Dog," price \$5. We can supply them. 2. No better.

J. H. M., Harrisburg, Pa.—I have a St. Bernard puppy 6 months old that I wish you would please give me some advice about. He has sores on both ears, they bleed first, then start in as running sores. Do you think it is mange or external canker? He has them on his leg, but they are dry and bare and they don't seem to get any worse or better. Will you please let me know what will cure them, and if the hair will grow again? His eyes have matter in every morning, and during the day. His appetite is good and he is lively otherwise. I am using Glover's mange cure; have been using it for two weeks; it dries the sore up, but if I let it go for a few days it starts to run again. Ans. Apply balsam of Peru to sores. Treat for worms, and give the following powders: Sulphate of magnesia 3 drachms, bi-carbonate of potash 2 drachms, mix and make 12 powders. Give only twice a day mixed with the food. Write again if sores are not healed in a fortnight.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE REVOLVER AT BISLEY.

AN AMERICAN WINS THE ENGLISH REVOLVER CHAMPIONSHIP WITH AN AMERICAN REVOLVER.

THE Bisley meeting is just over, and Mr. Walter Winans has won first prize in all three revolver competitions, and consequently the Smith & Wesson prize for the revolver aggregate scores, which constitutes the revolver championship of England in effect though not in name.

The first four days of the meeting Mr. Walter Winans shot in series 2 (the target appearing and disappearing at intervals of three seconds). He made five scores of 40 points, and often retired

FIRST SERIES—SCORE: 6 6 7 7 6 7—39.

on scores which would have got up to that score, but he was working for a 41 or 42 score, as he had so often been able to do at his own private range. He discovered though, that owing to his position, exposed to wind and with the sun in the shooter's eyes all the afternoon, a score of 40 was about equal to a 42 at his own

SECOND SERIES—SCORE: 7 6 7 6 7 7—40.

range. He therefore let his 40 score stand for this series, and started in series No. 3 (six shots in twelve seconds). He found that Mr. C. F. Haig had been hard at work at this series, and got in a score of 77777=38 with a Colt. Everyone thought this was invincible, but Mr. Winans knew that the "4" was the weak point

THIRD SERIES—SCORE: 5 6 7 7 7 7—39.

in the score, and took a bet of five to one on himself that he would beat the score of 38.

He had very little practice at this sort of shooting at home so it took him a few entries to get into the bank of it. As soon as he got into the swing of the work and made two 36 scores and then the following: 56777—39, winning his bet and making a score which nobody has approached since and which constitutes the record for this style of shooting. Mr. Winans used a single action

Smith & Wesson, cocked at the recoil after each shot in proper cowboy style. Almost all the English competitors used either both hands in cocking or else double action pistols.

He then turned to series No. 1 (the sliding target); he found this ran much faster than in former years and that Mr. Haig had in a score of 39, made up as follows: 77775. In a short time he put in a similar 39 and then a "black" 39, that is, all the shots in the black (77768), instead of one in the "5" ring, like Mr. Haig's, thus beating Mr. Haig's. All this took place early in the meeting and as nobody else approached these scores Mr. Winans did not have to compete any more in revolver during the rest of the meeting and only shot for amusement occasionally. His winning scores are as follows: Series 1: Walter Winans ("black")...39 C F Haig...39

Series 2: Walter Winans (5 times over)...40 C F Haig...39

Series 3: Walter Winans...39 C F Haig...38

Revolver aggregate (championship of England): Walter Winans...39 40 39—118 C F Haig...39 39 38—116

A friend of Mr. Winans tried all over the camp to get in a bet of 2 to 5 on Mr. Winans's winning all the revolver competitions, but could not get any one to bet at any price.

Mr. Winans used a Smith & Wesson. Mr. Haig a Colt (both single-action pistols). The two English professionals were beaten by these two amateurs.

As Mr. Winans had finished with the revolver before the end of the meeting he turned his attention to the running deer. He made a score of 23 at the Holland prize, and a double shot at the deer and of 18 for the Colt single rifle competition.

After a few attempts he got in 24 for the double rifle competition with a double Jeal, by Purdey & Sons. He then started for the Colt prize (using the same rifle, the rules allowing it to be used if he used each barrel alternately) and made 18, tying with Sir E. Loder, who also used a double rifle in preference to a single shot rifle, which proves that a good double can shoot equal to ordinary single-shot rifles.

These scores held to the last hour of the meeting, when Major Williamson put in 25 for the double-shot Holland prize, and almost at the same time Sir E. Loder improved his score for the Colt single rifle prize to 20.

There was no time for Mr. Walter Winans to try to beat both these scores, so he had to try for the double-shot Holland, but only managed to make another 24, and therefore he came in second for each of the running deer prizes.

Major Williamson shot standing, Sir E. Loder and Mr. Winans sitting. Major Williamson and Walter Winans used open hunting sights, Sir E. Loder a Lyman hind sight.

July 20.—Early this morning Mr. Walter Winans, whose eyes were better after the Sunday's rest, put in a 39 in revolver series 3 (the rapid fire), the first shot being a quarter of an inch above the bullseye and the other five in it. This makes him top score for series 2 and 3 and tied with Mr. Haig in series 1. Mr. Dixon, the professional shot, made 38 in series 2, this being two points behind Mr. Winans's score.

There was too much wind in the afternoon for high revolver scores.

ANOTHER TWENTY-YARD TARGET.

HERE is another record made by Mr. Winans with a Smith & Wesson .48-cal. English regulation sights and 2½ lbs. trigger pull,

British army ammunition, at 20 yds., the target disappearing and appearing at intervals of three seconds, the score being the highest possible, 77777=49.

SAN FRANCISCO, July 23.—The range at Shell Mound was well patronized to-day. The different companies composing the National Guard feel recuperated after their encampment at Santa Cruz, and have settled down to work. The weather was all that could be desired. A pleasant breeze prevailed for a greater portion of the day. Some excellent pool shooting was done by the different competitors on the range. Herman Heeth, of Company B, of the Third Regiment, made an excellent record. He scored 13 bullseyes in 15 shots, and 16 bullseyes in 20 shots, or 96 per cent. He shot a Springfield rifle, with a 4lbs. pull of trigger.

The rifle shooting at Schuetzen Park, San Rafael, was far above the average, though some of the champions failed to keep up their record. At the public target the Eintracht Shooting Section did good work, a number of the members breaking their records in rings. There was \$200 to be divided in prizes, and the competition was unusually close. The full score was as follows: John Utschig 95, A. Stracher 95, Wm. Glimderman 95, A. Johnson 95, G. Helm 93, D. W. McLaughlin 90, R. Steden 90, A. Rahwyler 88, C. Klein 88, J. Schmidt 88, Chris. Mayer 88, C. Kuh 88, H. Gumbel 86, J. Dombier 85, A. Stamer 85, H. Schroder 85, Philo Jacoby 84, John Stanton 84, L. Barrere 84, R. Stetten 83, C. Waletan 83, G. Glimderman 82, H. R. Brown 82, O. Overmole 79, E. Hageruk 80. In the company shots the first ten prizes were won in the following order: L. Stedine first, E. Auer second, H. Stanen third, B. Brenner fourth, C. Kuhls fifth, H. Gumbel sixth, Chris Gumbel seventh, E. Pauler eighth, E. Fisher ninth, M. Gesen tenth.

The bullseye shoot of the California Schuetzen Club was the closest of the day, and probably of the season. About twenty-two men entered for the prizes, which were finally awarded to the following named members: Louis Schmidt first, L. Letzau second, H. Johnson third, M. Stanton fourth, Philo Jacoby fifth, E. McLaughlin sixth, Captain Kuhls seventh, Geo. Helm eighth, Geo. Glimderman ninth, Wm. Glimderman tenth.

The Germania Schuetzen Club was present at Harbor View to-day for their monthly medal contest. The successful competitors are as follows: Champion medal, A. Rahwyler, 408 rings; first-class medal, W. M. Glimderman, 377; second-class, L. Bendel, 391; third-class, H. Cenge, 367; fourth-class, F. Hill, 365. The medal for the first best shot was won by Chris Heeth, with 22 rings out of a possible 25, and the medal for the last best shot by W. Kuelber with 23 rings.

REVOLVER IN DELAWARE.—Lieut. Col. Howard Simpson, the Inspector for Delaware, has recently issued a very interesting circular on the subject of small arm practice, not only dealing with the rifle practice of the men, but also advising the officers to take some trouble to make themselves efficient with the revolver. This is the programme he outlines: Revolver practice, which will necessarily be preparatory this year, should be directed toward features which are conducive to the most practical utility, and the following line of practice is advised: Standing position at all distances; at 25 yds., use of each hand in alternate scores, double action trigger pull; at 50 yds., use of either hand, double action trigger pull; at 100 yds., use of both hands, single action trigger pull. Target: that used for 200; ds. rifle practice.

EXCELSIOR RIFLE CLUB.—Jersey City, N. J., Aug. 1.—The first annual prize shoot of the Excelsior Rifle Club will be held on Aug. 21 and 22, at Greenville Schuetzen Park. Hours of shooting, from 9 A.M. to 12 M. and 1 to 7 P.M. Bullseye target will close at 5 P.M. on Saturday, Aug. 22. Shooting Committee: L. P. Hansen, first shooting master; Wm. Weber, second shooting master; J. Robedoux, John Speicher, F. G. Kittredge and W. J. Channing.

THE BISLEY SHOOT.

LONDON, July 25.—The second year at Bisley and the thirty-second of the association is over, with somewhat less grumbling. There has been some good scoring, much bad weather, some improvements, and upon the whole the old Wimbledon record has not been surpassed.

The "Wimbledon Committee," to whom the whole of the functions of the annual meeting and the management of the shooting, consisted this year of the chairman and vice-chairman of the council, Lord Waldegrave and Sir Henry Fletcher, Sir Henry Balfour, Colonel Marsden, Mr. Humphry, Captain the Hon. T. F. Fremantle, and Mr. Whitehead. The executive officer was Mr. Humphry, assisted by Mr. Daldy. Mr. Martin, superintending clerk at the School of Musketry, again brought his great experience to the all-important statistical branch, of which he was in practical charge, though the department was under the general supervision of the secretary, Colonel Mackinnon.

On Thursday of the first week an order came withdrawing 150 Regulars who were acting as markers for the Aldershot Review. This was a sharp blow at the Bisley arrangement, and caused much annoyance and some money loss to the association. On this day, July 16, two great "any rifle" days were decided. The first prize in the "any rifle" (10 shots at 600 yds.) fell to Mr. John Gifford, who made the highest possible score. The other six prizes were all taken with scores of 49. In the Halford (10 shots at 1000 yds.) Captain Foulkes won the first prize with 49. There were two other scores of 49, two of 48 and four of 47, two of which were counted out.

July 17.—The magnificent piece of plate called the St. George's Vase, after a brief period of existence as a challenge prize, has been won out and out for the Paisley Corps, the 2d V. B. A. & Highlanders, formerly the 2d Renfrew. The rule is that whenever the vase is won by a member of a corps of which a member shall have won it previously, the vase becomes the absolute property of that corps. But this event has never happened until this year, though, as we have said, there have been thirty competitions. Sergeant Heilston won the vase in 1889, and to-day Corporal Ritchie, of the same corps, carried it off. The vase is now as it was last year, 600 yds. (before that it was 500), and both Corporal Ritchie and Private Patrick, of the 1st Lanark R. V., made 84 points, and proceeded, of course, to fire the tie shots, in which the former was victorious. If Patrick had been successful the vase would still have been won out and out, for Sergt. Lawson, of the same corps, had made 83 points. The original vase was made twenty years ago. Notwithstanding the fact that the original vase was permanently to Scotland, the St. George's competition will not be suspended, for provision was wisely made by the late Col. Chas. Lindsay and the committee of the St. George's when they instituted the prize in 1872, for the formation of a reserve fund, by means of which the vase could be replaced if needful. And when Colonel Stanley and the committee handed over the vase and its funds to the N. R. A. a year or two ago, it was on the express condition that a new vase should be forthcoming whenever necessary. Seventy out of ninety scores of 28 points came into the prize list. Last year the famous shot, Captain Gibbs, of the 2d Gloucester B. V., won the vase with 55 points; the same score (the H. P. S.) being made by no less than three other men—Scott, of Roxburghshire; Fletcher, of Herefordshire, and Collins, of Somersetshire. There were also four scores of 84. Seventy-seven out of 100 scores of 29 were counted out.

July 20.—The only competition this year at the extreme range of 1,100 yds., that for the "any rifle" Wimbledon cup, took place to-day. Only former winners of certain "any rifle" prizes take part in it, and it is therefore confined to the most skillful practitioners with the match rifle. Fifteen shots have to be fired, so that the highest possible score is 150 points. To-day the cup was won by Capt. Mellich, with 65 points, Major Thornburn, captain of the Scotch twenty, coming next with 61 points. Last year Capt. Fremantle (who came in third to-day) was the winner with 60 points.

The council had before them to-day a protest made in connection with the Mackinnon competition. The match was between international teams, each consisting of 10 men, the prizes of £20 and £10 to be awarded to the team who, with five volleys fired at 400 yds. within one minute, succeeded in making the best score. England, Wales, Canada and Jersey competed. The match escaped the attention of the Scotch, and the Irish did not think it worth while to enter. England and Wales had only got off four volleys each when the minute expired. Canada and Jersey both fired five volleys. The English team, however, with their 40 rounds made a higher score than Canada, and the English team with 50 shots. It was inadvertently stated that the English lodged a protest because one of their rifles jammed. As a fact, the protest was by Canada and Jersey, and was made on the ground that England, by only firing four volleys, did not comply with the conditions. Soon after making the protest, Major Weston, in behalf of the Canadians, withdrew it in very handsome terms, remarking that the loss of an entire day to the English team was in itself a severe penalty, and that they having made the best score despite this circumstance, Canada had no desire to take a prize the Englishmen had so well won. The Jersey team, however, adhered to their protest, but the council after hearing Col. Burt and Quartermaster Gratwicke in reply, disallowed the objection made by Jersey (who were the lowest scorers in the shoot) and awarded the £20 to England and £10 to Canada. The details of the shoot were as follows:

Shots.	Misses.	Bulls.	Inners.	Mags.	Outers.	Tl.
England.....40	7	7	6	10	10	109
Canada.....50	15	6	4	6	19	102
Wales.....40	11	4	5	5	15	85
Jersey.....50	27	4	3	4	12	71

The English team consisted of Major Davison (Liverpool), Sergeant Kemp (Reading), Fletcher (Portsmouth), Keating (Liverpool), Corporal Simcock (Chesham) and Wright (Salford), Privates N. C. Wainwright (Trinity) (H. G.) and Wadsworth (Liverpool). Colonel Burt was captain, and Qmr. Gratwicke the adjutant of the winning team.

July 21.—To-day the Queen's Prize Fund Stage was shot, and the individual champion of the meeting determined. At the end of the first range Milner, the silver medalist, and Gibbons, of the West Middlesex, were leading, each with 235. But Milner, soon after he was out of the line, unfortunately lay beyond Gibbons, Hill, of the 19th Middlesex, and Dear, of the Queen's Edinburgh. After the eighth round at 900 yds., Dear stood at 263, and Hill and Gibbons at 253 each. The ninth round produced a magpie for Dear, the same for Gibbons, and a bulseye for Hill. Dear thus had 266, Hill 263, and Gibbons 261. Thus, if the Scot could make 3 points at least with his last shot he must win. And he did make a magpie, and thereby raised the 261 to 269. Dear, however, and Gibbons, though they each made bulls in the last round, had only totals of 263 and 261 respectively. Lieutenant Davidson, of Canada, came next with 264 points. Mr. Dear, the Queen's prizeman, is a quiet, self-possessed looking young man. We believe that he is a solicitor's office in Edinburgh. He is well known as a rising shot in his corps, but has not previously done much in public. This is the second time that the great prize has been taken by a member of the Queen's Edinburgh, Sergeant Menzies having won it in 1873.

In the meantime a considerable number of people had assembled outside the Council building, where Lord and Lady Waldegrave, Sir Henry Fletcher, Brigadier-General McDonald, C.B., Colonel McKinnon and Marsden, and Major Knox, C.R., were in readiness to welcome the new Queen's prizeman. The band of the 2d Battalion of the Buffs were, of course, present. Soon after half-past five o'clock it was known that Private Dear had won the great prize, and he himself soon appeared escorted by his friends. During the necessary process of testing his rifle and verifying the register, the hero of the day was placed in the chair, in which he was to be subsequently borne aloft, and was vigorously photographed. Soon it was announced that all was correct, and Lady Waldegrave and the other ladies, in gold and silver, went to the arm of Private Dear, who was then carried off in Mr. Wainwright's chair for the usual greetings in the regimental camps, the band of the Buffs preceding the cortege, and playing "See the conquering hero come!"

Last year, when the conditions were exactly the same as now in force, the famous shot, Sergt. Bates, of Birmingham, took the great prize with 278 points, a magnificent score. He had held it in the previous year made 281, and Fuller in the year before that made 280. But then the magpie and inner of the third class target were reduced in 1890. On the other hand, Bates had the advantage of a sighting shot at each range.

July 22.—For the Kolapore Match, to-day, there were representatives of the Mother Country, the Dominion of Canada, Guernsey, Jersey and India. Each team consists of 8 men, firing at 200, 500 and 600 yds. with the Martini-Henry. The 2d of Canada, with 200 yds. Canada made 218, Jersey 218, the Mother Country 208, Guernsey 205, and India 194. At 500 yds. Guernsey put on 249, the Mother Country 236, Canada 235, Jersey 220, and India 209. The aggregate scores then stood as follows: Canada and Guernsey each 454, Mother Country 444, Jersey 438, and India 408. At the longest range, however, the strong Mother Country team recovered itself, making 249, Jersey 248, Canada 247, Guernsey 243, and India 209, and winning the match by 7 points above the next best score, that of Canada, and 8 points above Guernsey. The total scores were, Mother Country 679,

Canada 672, Guernsey 671, Jersey 641, and India 598. At 200 yds the best individual scores made were: Henderson (Canada) 81; Falla and Waldegrave (Guernsey), Hamon (Mother Country), and Smith (Canada) 50 yds. the full score, 35, was made by Smith (Guernsey); 33 by Chicken (Mother Country), McVittie and Ogg (Canada), and King (Guernsey); and 32 by Brown (Mother Country), Windate (Canada) and Falla (Guernsey). At 600 yds.: Hamon (Guernsey) made the H. P. S.; Watfworth (Mother Country) and Le Maistre (Guernsey) 52 each; Bates and Lawrence (Mother Country), McVittie (Canada) 51 each; and Leblond (Mother Country), Henderson (Canada), Falla (Guernsey) and Dring (India) 30 each. The highest aggregate score was that of Hamon (Jersey), 93. Then came Falla (Guernsey) with 92; Watfworth (Mother Country) and McVittie (Canada) with 90. This most interesting competition was instituted in 1871. The real contest has always hitherto been between the Canadian and the Mother Country teams, though representatives of India and the dependencies have from time to time taken part in the competitions. In the 21 matches which have now been shot, the Canadian team has been victorious five times. Last year the Mother Country team—a very strong one—won with 704 points, Canada coming next with 676. Teams from Guernsey, Jersey, and the Cape also competed.

July 23.—The great event of the day was the shooting for the Elcho Shield by the English, the Irish, the Duke of Abercorn and the Scottish, Colonel Wilson. Captain Foulkes's score of 218 points out of a possible 225 has never been equalled in this match. The highest score hitherto has been 216, which was made by Captain Barnett (for Ireland) in 1888 and 1889. The English score of to-day (1,070) has only once been exceeded—viz., in 1889, when Ireland won the match with 1,068 points.

	800 yds.	900 yds.	1000 yds.	Total

ROCHESTER TOURNAMENT.

ROCHESTER, July 28.—The seventh annual three days' shoot of the Rochester Schuetzenzilde opened to-day at Rosenbauer's range on the Ridge Road. The exercises began at 10 o'clock in the forenoon, and ex-Mayor Parson had the honor of firing the opening shot of the tournament. The attendance was exceptionally large for the first day. The scores were very good indeed. The conditions of the contest have been varied somewhat from last year. The distance for all targets is 175 yds. There are three 25 ring targets, one man target, one star target and one eagle target. The ring targets have a black center 9 in. in diameter, rings three-fourth of an inch apart, 13 in. bullseye. The man target represents the head and upper portion of a man's body, and is divided into half-inch vertical lines, the center lines counting 20. Any rifle weighing less than 12 lbs. and not over 44 in. may be used. The rain interfered somewhat in the afternoon, but toward evening the sky cleared and the sunlight falling at the most advantageous angle against the targets favored the marksmen not a little and some of the best scores of the day were made at the conclusion of the day's sport.

The officers of the Schuetzenzilde are: Charles Gottschalk, President; A. Halstrick, Vice-Pres.; F. W. Swift, Secretary; C. Kubies, Corresponding Secretary; George Bort, Treasurer; Frank Schwikert, First Assistant; Charles Harvey, Second Shooting Master; Charles Hoehn, First Assistant; T. Henley, Second Assistant; Edward Meyer, Third Assistant.

July 29.—The crack of the rifle stirred the echoes in the adjacent woods at Rosenbauer's range all day while the best shots from the Rochester Schuetzenzilde and the Buffalo and Syracuse clubs were running up some excellent scores for the prizes. The weather was in the main very fine, and they kept up a constant fusillade from morning until nearly sunset. The scores at this year's tournament have been exceptionally good, and the contest is more exciting than it has been for several previous years. The Buffalo shots, however, bid fair to carry away a good proportion of the prizes. The attendance yesterday was large, about seventy five marksmen taking a hand in the contest.

July 30.—When the boom of the cannon marked the close of the shooting this evening the results showed one of the most successful tournaments in the history of the Schuetzenzilde. Buffalo and Syracuse carried off many of the prizes, but the Rochester marksmen proved lively competitors. The scores of this tournament surpassed those of last year, while the attendance throughout was much larger. The shooting began promptly at 10 o'clock yesterday morning and was continued during the various showers that fell in the afternoon, the marksmen shooting from cover. The wind that blew during the day interfered somewhat with close shooting.

The tournament continued so late that it was impossible to shoot off the ties, so these prizes were divided equally among the contestants. Schwikert, of this city, and Cargill, of Scottsville, however, were tied for the gold badge, each having 147 points out of a possible 150. They were allowed a shot each and Cargill scoring 24 points to Schwikert's 23.

The best three men in the various contests were: The honorary target (possible 250, off-hand), Dalley, Syracuse, first; Cargill, Scottsville, second; Seelye, Rochester, third.

Badge target (possible 250, peg rest), Cargill, Scottsville, first; Schwikert, Rochester, second; Leighton, Syracuse, third.

Man target (possible 250, peg rest), D. Eggleston, Syracuse, and Seelye, of Rochester, tied for first at 175 points, and Dalley, of Syracuse, was third, with 171 points.

Public target (possible 250, peg rest), Leighton, Syracuse, first; M. Long and Schindler, both of Buffalo, tied for second; Dalley, Syracuse, third.

Star target (possible 15), Kay, Schwikert, Newhart, Cook and Cargill were tied for first place and divided the purse.

The minor prizes were distributed among the other contestants. The most interesting part of the tournament for the Rochester marksmen was that to determine who should be king of the Schuetzenzilde for the following year. The target was a large wooden eagle, 2 ft. in diameter and containing a dynamite cartridge. The bullseye was 2 in. in diameter and the target 175 yds. from the shooting stand. Charles J. Hoehn was the winner, his bullet exploding the cartridge.

OMAHA, July 26.—Bellevue rifle range is now in order for the assembly of the picked shots of the department of the Platte here to-morrow. It is the 11th annual meet and represents the following teams: Fort Douglas, Fort Duchesne, Utah; Camp Pilot Butte, Fort McKinney, Fort Washack, Fort D. A. Russell, Wyo.; Fort Niobrara, Fort Omaha, Fort Robinson, Fort Sidney, Neb.; Fort Randall, S. D.; Fort Logan and Fort Lewis, Col. The representatives will comprise fifty-eight infantrymen, five of whom are officers. The competition at Bellevue range which, in a certain manner opens to-morrow is to determine who shall constitute the department team of ten sharpshooters. With selected teams from other sections of the country. From among these teams will be selected the best ten shots, and these will be known as the army team or the representative shots of the army. The range and everything connected with the com-

petition is in readiness, the former and surroundings presenting an appearance which is absolutely charming. Those who have visited this beautiful spot can readily appreciate this fact. Those, however, who have never been there know little of the natural beauty which lies almost at their door. The range proper is an "opening" level as a table, 200 yds. in width and 600 yds. in length. At the northern extremity rise abruptly from the plain a series of terraces outlined against the dark foliage of the woods behind. Toward these targets are directed the shots of the soldiers at distances varying from 200 to 600 yds. Behind the butts, out of sight of both marksmen and spectators, are the simple machinery by which the targets are made to revolve after each shot; as also the markers, between whom and the bullets is a good log wall with a breastwork of a dozen feet of earth. On either side of the range is a number of flagstaffs, on which during the firing are hung brilliant crimson streamers to show in which direction the wind is moving. This is an important element in rifle firing and is always taken into consideration by the marksmen. Midway between the 600 yd. line and the targets on the east side of the range is an opening of three acres. On the other side of this are ranged the tents of the officers and at the eastern extremity are located the headquarters of the commanding officer. The competition will be in charge of Major Daniel W. Benham, Seventh Infantry, inspector of small arms practice, department of the Platte, who has devoted to the work a great deal of time during the present year. He also had charge of the competition last year, and the shooting will continue both to the left and right of the Platte. The preliminary prize will commence on Thursday next. Competitive firing, however, will not open till August 8. This will continue to the afternoon of the following Thursday. On August 13, preliminary cavalry competition will take place. This will continue three days when the competition will begin and continue four days. In this competition there will be about forty cavalrymen who will use both the single and the revolver. They will come both from the West and from the Platte, California, and the East, as far away as Virginia. The officers in charge of the competition will be those who have already been enumerated in connection with the competition.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Aug. 6-7.—Second Annual Tournament of the Island Gun Club, of Wheeling, W. Va. R. B. Burt, Sec'y.
Aug. 11-14.—Fourth Annual Tournament of the Standard Keystone Target Company, New London, Conn.
Aug. 12-13.—Fifth Annual Tournament of the Cortland County Gun Club, at the club's new grounds at Cortland, N. Y. Kingbird targets and live bird contests. Address E. C. Rindge, Cortland, N. Y., for program.
Aug. 12-14.—The Missouri State Amateur Shooting Association Annual Tournament, at Lexington, Mo. G. A. Surges, Sec'y.
Aug. 25-27.—Buffalo Tournament, assisted by the Inter-State Manufacturers' and Dealers' Association, \$1,000 guaranteed.
Aug. 29 and Sept. 7.—Sweepstakes Shooting at Rutherford, N. J., on the grounds of Boling Springs Gun Club. Aug. 29, sweep at 50 blue rocks, entrance \$5. Sept. 7 (Labor Day), sweepstakes at targets.
Aug. 30-Sept. 1.—Hackettstown Gun Club. Two days at targets. For programme address James L. Smith, Hackettstown, N. J.
Sept. 8-11.—Grand International Tournament at Detroit. Live birds and standard Keystone targets.
Sept. 15-17.—Knoxville, Tenn., Inter-State Manufacturers' and Dealers' Association.
Nov. 3-5.—Savannah, Ga., Inter-State Manufacturers' and Dealers' Association.

UNION GUN CLUB.

At Springfield, N. J., on Tuesday last, the Union Club, of which that crack shot, Enoch D. Miller, is the mainstay, held an open tournament. The programme was a varied one, as both blue rocks and Standard Keystone targets and live birds were used. For once Miller was favored by fairly decent weather, although the rain, which fell within a radius of 10 miles, kept a few shooters from attending. The club is not a large one and their grounds are not particularly easy of access, consequently large gatherings are not looked for. On this occasion, as at all Jersey meetings, the live-bird event filled the best. A number of familiar faces that have not of late been seen at the traps were noticed here, among them being Canon, the one-armed expert, and "Dutchy" Smith, of the old Middlesex Club. Another most welcome visitor was "Grover C." Courtney, the affable representative of the "valley" (Levee) gun. Courtney arrived too late for the regular target events, and although formerly a great admirer of live-bird shooting, he has since the N. Y. State meeting lost all desire to shoot at the feathered targets. Scores:

No. 1, 10 blue rocks, \$1 entrance, 3 moneys:
Brentnall.....1111111111-10 Sigler.....1111101011-8
Stewart.....1111101111-9 Angar.....1011101111-8

Hobart.....1110111111 11 10 10 10 10-16

Extra No. 2, 15 single blue rocks, \$1.50 entrance, three moneys: Miller 14, Angar 13, Sigler 12, Stewart 12, Brentnall 10, Collins 10, Perry 10, Courtney 6.

Extra No. 3, entrance \$1.50, 3 moneys: Miller 12, Angar 11, Collins 11, Stewart 11, Dan Terry 10, Scott 9, Brentnall 8, Courtney 8.

Extra No. 4, 15 single blue rocks, \$1.50 entrance, 3 moneys: Miller 15, Collins 14, Brentnall 13, Courtney 12, Smith 12, Sigler 11, Extras No. 5, and 6, combined, 10 singles each \$1 entrance, 3 moneys: Courtney 19, Brentnall 18, Dutchy 17, Collins 17, Miller 15.

Regular No. 9, 7 live birds, \$5 entrance, 4 moneys:
Quimby.....1111122-7 Scott.....11201212-6
Brentnall.....1112221-7 S.ewart.....2022222-5
Miller.....212121-7 Canon.....1101102-6
Angar.....121122-7 Collins.....102121-5
Sigler.....222102-6 T. Smith.....1102010-4
Terry.....121110-6

This tournament was divided; third shot, miss and out, and divided on the first round by Collins and Canon.

No. 10, 10 live birds, \$7 entrance, 4 moneys:
J. Smith.....1112212121 10 Angar.....0210212121-8
Quimby.....222222210-9 Scott.....1110101101-8
Sigler.....101111111-9 Canon.....020212102-8
Miller.....212111111-9 Brentnall.....120212102-7
Collins.....110211211-9 Stewart.....1101010102-6
Terry.....120121111-9

J. Smith first, second div., third shot out and won by Angar.

No. 11, 5 live birds, \$5 entrance, 2 moneys:
Stewart.....21211-5 J. Smith.....10212-4
Miller.....11111-3 Collins.....10011-3
Quimby.....22221-5 Scott.....10011-3
Canon.....11111-5 Brentnall.....02010-2

Stewart and Miller div. first on the shoot-off, each killing 6; Canon and J. Smith dropping out in the fifth round, Quimby losing his last bird.

THE KAT.

C. E., New York.—It is impossible to name a place near New York where you can be sure of getting good duck shooting on Thanksgiving Day. Usually at such places near the city there are more duck shooters than ducks. You might go to Great South Bay, on Long Island, to Barnegat Bay, in New Jersey, or some point on the Sound in Connecticut. For information as to details about these places write to the following parties: G. F. Howell & Son, Atlanticville, Long Island; Capt. John Kelly, Barnegat, N. J.; Samuel Loper, Waretown, N. J.; Geo. M. Neville, Great Neck, C. T. From some or all of these you ought to get the information you desire.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.
COMMODORE: WALTER U. LAWSON, Boston, Mass.
SECRETARY-TREASURER: RALPH F. BRAZER, 47 Central street, Lowell, Mass.
REGATTA COMMITTEE: J. A. Gage, Lowell, Mass.; W. G. Mackendrick, Toronto; L. B. Palmer, Newark, N. J.

CENTRAL DIVISION.

Officers:
VICE-COM: C. V. Winne, Albany, N. Y.
REAR-COM: T. P. Gaudin, Dayton, O.
PURSER: Howard Brown, Albany, N. Y.
EX-COM: J. K. Bakewell and H. M. Stewart.

EASTERN DIVISION.

Officers:
VICE-COM: J. W. Cartwright, Jr., New York.
REAR-COM: G. L. Parnelle, Hartford.
PURSER: R. Apollonio, Winchester.
EX-COM: Paul Butler, E. S. Towne and Sidney Bishop.

NORTHERN DIVISION.

Officers:
VICE-COM: W. H. Cotton, Kingston.
REAR-COM: J. C. Edwards, Lindsay.
PURSER: C. E. L. Porteous, Kingston.
EX-COM: Colin Fraser and F. H. Gisborne.

ATLANTIC DIVISION.

Officers:
VICE-COM: I. V. Dorland, Arlington.
REAR-COM: E. D. Anderson, Trenton.
PURSER: Richd. Hobart, Newark, N. J.
EX-COM: H. L. Quick and H. M. Kreamer.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay \$1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A. will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—D. H. Crane, Chicago, Ill.
Vice-Commodore—N. B. Cook, Chicago, Ill.
Rear-Commodore—O. A. Woodruff, Dayton, O.
Secretary-Treasurer—J. H. Ware, 130 Hauto Building, Chicago, Ill.
Applications for membership should be made to the Sec'y-Treas., on blanks which may be obtained from him, and should be accompanied by \$2 as initiation fee and dues for the current year.

FIXTURES.

AUGUST.

6-27. A. C. A. Meet, Lake Cham. 27. Rochester, Sailing Trophy, plain, Irondequoit Bay.

SEPTEMBER.

5. Orange, Ann., Passaic River. 10. Rochester, Fall Regatta, P. M., Arlington, Ann., Irondequoit Bay.
7. 9 A. M., Arlington, Ann., Passaic River. 12. Knickerbocker, Ann., N. Y. Passaic River.

BUSINESS IN CAMP.

UP to 1886 it was the custom to hold the general meeting of the A. C. A. at the camp, usually on the last day but one. Since the division scheme has been in operation this method has been abandoned, and there is now no such thing as a general meeting of the members of the Association, nor can the individual members vote on any question; the business of the Association being now managed by the executive committee, and chiefly at the November meet. Although the members have no direct vote save in the choice of their division officers and in division matters, the Association has been conducted on the democratic principle that the officers are elected to carry out the wishes of the members, whom they directly represent. In accordance with this idea, it would be a good thing if a general pow wow could be held in camp, some rainy morning, for instance, being selected, when all members would meet in the big tent and discuss any questions which might be suggested, changes of sailing rules, management of meets, etc. The position of the presiding officer might not be an easy one, as all would want to talk at once, but by a suitable adherence to parliamentary rules a useful discussion might result.

One thing at least might be counted on, every man present would be led to take a closer interest in the details of the Association, and to consider more carefully the questions of policy which arise each year, and which are generally left to the officers alone. Had the many sailing men in camp last year been asked to meet together and discuss informally the standing sail question, some very serious blunders would have been avoided; and though the question seems settled for the time, a quiet talk over rules by those interested in them would be productive of good this year. The closer and more intimate the relations between the great body of the A. C. A. members and the officers elected each year to serve them, the less danger there will be of mistakes in making rules, and of opposition to rules which, though good are for some reason not popular.

"ARE YOU READY? GO."

IN another week the fleet of fifty or sixty canoes will be busy racing, and we shall hear on all hands ample explanations how at least half of these would certainly have won if —. There will be a great many different models and rigs of life, but the one which will outnumber all others is the "If-the-boom, sheet, tiller, halliard, mast or seat—had not broken." A few of the many mishaps in canoe sailing are beyond prevention, but very few; nearly every breakdown may be directly traced to neglect or to the craze for light weight which afflicts the majority of canoeists.

Granted that the supposed advantage of light weight is not overestimated, that the saving of an ounce or two in the weight of the centerboard is an all-around gain, there are many who will find to their cost that they could better have carried 50 lbs. of wood and brass than to have whittled spars, gear and fittings down to the last point, resulting in a total breakdown.

The first thing in a racing canoe to-day is the sliding seat. Does yours slide freely and easily, and can you sit on the extreme end without fear of it breaking? The next thing is strong rigging and fittings, mast, halliards and sheets, and above all the rudder and deck tiller. Is your tiller strong enough to handle the whole boat by, hauling yourself in with no possibility of breaking it, or is it a little flimsy affair that must be handled most carefully? Next to strength of gear, convenience of handling is very important, the proper lead of sheets, halliards and centerboard gear. Can you handle your board when out on the piazza, raising and lowering it as a centerboard is handled in a yacht, or is it a fixed keel, fitted to evade the rule, requiring a couple of hands to hold the boat while you adjust it in deep water? To get the best results from a centerboard, it is necessary that it should be tended from time to time, and though this is a difficult matter at times in any canoe with the crew out on the seat, the board should be fitted so that the whole or any portion of it can be used at will.

It is too late now for any changes in model, rig, board or rudder, but it is not too late to make sure that, at least no later than the day before the first race, the hull of your canoe is as smooth as oil and sallow-grease can make her; that the board, seat and tiller

are in perfect order, lashings being clapped on at any weak spot; that the sails are fully stretched on the spars, all gear sound and free from chafe, running freely; paddle and bailer, the latter with a line on it, stowed below. When this is done, there will be still time for a look over the programme so as to be sure what the courses and conditions of each race are.

If all this is done in due season, there is little danger that the starting gun will find the man on the beach, his gear in a tangle, centerboard jammed, and mast's stepped in the wrong tubes, while he calls down blessings on the regatta committee because the race is not held for him. The man who breaks down and the man who is late are apt to be very closely related, and though the soundest of spars may crack under the strain of a close race, and there may be but little time between one race and the next, the wise man who is left behind or comes in disabled, even though he feels that the fault is not his, will keep his own counsel rather than risk being set down as one of the tardy kind. So much blame has been heaped on regatta committees, both yacht and canoe, about delay in starting, that the races are likely to be run off as promptly as possible, and if due notice is given of all events, especially of changes in the programme, and if sufficient time is allowed between races to permit all reasonable rest and shifting of rig, the racing men will have no right to grumble because the start is not postponed until the last man is ready.

WHO MAY COME TO CAMP.

THE question of who besides the members may come to the A. C. A. meet has been discussed for years as it has come up in various shapes. With the camp once in running order the presence of guests costs the Association nothing; and from this point of view there can be no objection to the presence of non-members. At first the rules were very lax, many non-members visited the meets and camped there unquestioned, but this privilege was in time greatly abused, men who could and should have joined the Association refraining from doing so, thus saving a dollar, but visiting the camp for the full time. Various temporary regulations have at times been adopted, but the matter is now subject to a fixed regulation under Section 2 of the by-laws. Under the last clause of this section members who for any reason wish to invite non-members to camp, save on such special occasions as visitors' day, must apply to the commodore and secretary-treasurer, who may grant permission. If the visitor's stay is prolonged beyond two nights; that is, if he is sharing regularly the advantages paid for by the members at large, he or his introducer must pay \$2, the equivalent of a member's dues and initiation. This plan permits the presence of all properly accredited visitors who may come to camp from curiosity or a desire to understand the Association better before joining; and at the same time it prevents the presence of a number of men who should only come as members. It also provides for the men who turn up in considerable numbers each year applicants for membership at the last minute who wish to visit the camp before their applications have matured. It has been the policy of the Association to welcome as far as possible all who desire to examine the camp with a view to joining, and not a few of the best members have drifted in by mere accident from being in the vicinity of the meet.

THE A. C. A. YEAR BOOK.

WE quote elsewhere some very pertinent remarks from the *Sail and Paddle* concerning the A. C. A. Year Book, a matter of some hundreds of dollars on one side or the other to the Association each year. After some experience in the publication of the small and unattractive pamphlets once issued, we suggested to the executive committee at the meeting in 1885 at Oswego the possible value of the year book as an advertising medium. The objection was then made that such a book would be inferior in appearance, and that the members generally would object to the presence of advertisements, so the matter was dropped without action. It was not until three years later that secretary-treasurer Mix and Mr. C. B. Vaux together produced the 1888 year book, far larger and handsomer than any of its predecessors, and costing the Association less than the plain rules and list of names of the previous years. The value of the book, as well as the improvement in appearance which was made possible through the receipts, was made plain, and the question of advertisements was settled for an indefinite time.

The cost of publishing and distributing the rules and list of members in the plainest form would now reach nearly \$300 per year, and the book itself would be by no means satisfactory. To issue the present book without the advertisements would cost the Association some \$500, a heavy annual expense. With the aid of the advertisements the book may be made superior to the present one, and at the same time cost the Association nothing, perhaps even turning in a profit in time.

To realize this end, however, the book must be managed on a thorough business basis, and not as it has been thus far. The value of an advertising publication depends entirely on the way in which it is managed; if a good line of ads is kept up each year the value will increase; but with a little neglect it will rapidly depreciate. Little can be done in the way of securing ads by one unfamiliar with the work or who takes it in hand for the first time; and for this reason, if no other, the secretary-treasurer of the Association cannot manage the business part of the book. In order to secure the best returns, the contract for the publication of the book should be given to some reliable firm for a period of not less than three years, renewable then if satisfactory to both parties. In this way the manager will have every opportunity to work up a regular line of custom, taking only the best ads, renewing his contracts from year to year, and making new ones in the proper season. Thus far the season has passed by before the arrangements for publication were completed, a source of loss in each year.

There is now some competition to be met, other similar publications, division year books, etc., are in the field and divert a certain amount of business. Under a proper management, however, the A. C. A. year book can be made one of the most desirable mediums of advertising in the country, with a profit to the Association, a gain to the members in a better book, and at the same time a valuable catalogue for all in want of outfit supplies. The details of the arrangement and the selection of a suitable publisher may be well left to the officers of the Association, but as there is nothing in the present rules relating to the publication of the book, we wish to call the attention of all members to the matter, in order that some steps may be taken in the direction indicated, the making of a contract for the publication of the year book for several years on such terms as may be obtainable.

LAKE CHAMPLAIN—MAP OF THE A. C. A. CAMP.—The map of the camp site in our issue of July 23 was photo-engraved from the camp circular sent out by the committee. At the time it appeared we were ignorant of the fact that the map was originally made by Messrs. H. C. Ward and H. R. Ayerill to illustrate a very interesting description of Lake Champlain in the July number of the *Sail and Paddle*.

A. C. A. MEET CAMP RULES.

1. Members are requested to register at headquarters immediately upon arrival. Membership badges will be delivered upon payment of camp dues.
2. Tents are to be located only upon approval of camp site committee, and due regard must be had for thoroughfare. Tents and surroundings should be put in order by 9 A. M. each day.
3. A member of the executive committee will be appointed daily to act as officer of the day, and will be obeyed accordingly. Senior officers of clubs will be responsible for order and neatness in their respective localities. A member of the executive committee and a lady honorary member will be appointed to take charge of the ladies' camp.
4. The signal service will be established near headquarters, and all announcements will be made under the A. C. A. signal code. The signal code book can be purchased at the bureau of information.
5. The clerk of the camp (who will also act as postmaster) or the secretary-treasurer will be at headquarters tent from 9 to 11 A. M. and usually from 2 to 4 P. M., and also upon the arrival of each mail. A yellow flag will be hoisted in front of headquarters tent when either of the above are present on duty.
6. A gun will be fired and colors hoisted at 8 A. M. The sunset gun will be the signal for hauling down the colors. All guns will be omitted on the Sabbath.
7. After 10 P. M. quiet must be maintained in the camp. The officer of the day will have instructions to strictly enforce this rule.
8. At headquarters a bureau of information will be established, where all inquiries regarding boats and trains will be answered and all general information relating to camp matters can be obtained. Members are especially requested not to trouble the officials nor committees for information which can be obtained at this bureau.
9. Passes and badges for invited guests may be obtained from the secretary-treasurer. No guests will be expected in camp before 9 A. M. or after sunset, except for occasions specially announced upon the bulletin. Neither guests nor members from the main camp will be expected in the ladies' camp before 10 A. M. nor after 6 P. M., except upon special invitation. Neither passes nor badges will be used upon visitors' day, which day will be duly announced.
10. Suggestions or complaints should be made without delay to the senior division officers, or at headquarters.

WALTER U. LAWSON, Commodore.
A. C. A. HEADQUARTERS, Indian Bay, Willsborough Point, Aug. 6.

THE 1891 YEAR BOOK.

THE publication of the American Canoe Association Year Book is left entirely in the hands of the secretary. A new secretary is elected each year, and consequently takes up the business of getting out the Year Book without much, if any, experience in such work. Before 1887 the Year Book was a very simple affair, containing only the names of members and the constitution, by-laws and rules, and costing to issue less than \$150. Mr. Mix was secretary that year, and consulted with the editor of this paper as to the best method of improving and enlarging the book without adding to the cost, as the A. C. A. could not afford to spend more money than it had formerly done. The editor and Mr. Mix worked together in the matter, and by taking a few select advertisements they were able to give the members a book which cost to produce over \$400, and yet cost the A. C. A. only about \$100. The following year the contract to publish the Year Book was awarded to the nautical Pub. Co. late in the season, after another firm had taken the work, and failed to do it. Last year the secretary and the editor of *Sail and Paddle* produced a book which cost nearly \$500, and the Association was only called on to pay the mailing expenses; but the labor involved on the parts of the secretary and the editor was given without any compensation. Each year the problem has to be solved as to how best to do the work, as it is in new hands.

Mr. Brazer has just issued the Year Book for 1891, and in its arrangement and contents it is as near perfect as a book of this kind can be made. The date of issue is later than usual on account of the regatta committee's report, and the changes in rules that were left in their hands, and which it seems could not be finally agreed upon earlier. Mr. Brazer has proved himself to be a capable editor.

The expenses of publishing so large and complete a book have been partly met by advertisements; but the large edition issued—2,500 copies—increased the cost greatly. The extra copies are to be sent to boat and yacht clubs, and in other directions, to set before a large circle of readers the purposes, aims and doings of the A. C. A. with the idea of increasing its membership.

Now the point we wish to make is this: that if a permanent arrangement could be made with some publishing house by the officers of the A. C. A., the Year Book can easily be made to pay all expenses, and net a profit to the publishers and the A. C. A. It is undoubtedly a valuable advertising medium, but only a limited number of business men will take space in it unless the contracts can be secured before Jan. 1 each year, as at a later date the advertising appropriations of all the large houses are exhausted. This is a subject that may well be discussed at the business meeting in August on Willsborough Point.

The book, necessarily, increases in size each year, and, consequently, in cost, and it is an important item on the expense account.—*Sail and Paddle* for July.

A. C. A. MEMBERSHIP.—Eastern Division: J. P. Rice, W. H. Parker, C. A. E. Eason, H. B. Service, P. J. Norton, W. H. Sterns, Harry Banks, Walter Gunn, G. E. Barron, E. A. Knight, Wm. Bryant, Henry Vollmer, Guy Kirkham, H. P. Wright, E. H. Hall, Dr. Lather Garlick, Springfield, Mass.; A. F. Greenleaf, Amesbury, Mass.; Atlantic Division: J. Ernest G. Valden, Sidney M. Wittingham, New York city; James F. Sisson, Newark, N. J.

A. C. A. REGATTA COMMITTEE.—Boston, Mass., Aug. 3.—Edwin B. Jones and William H. Chas. D. Palmer of the Regatta Boat Club, Lowell, Mass., is this day appointed chairman of the A. C. A. regatta committee, vice Dr. J. Arthur Gage, who has been obliged to resign on account of business reasons. All communications can be directed to Mr. Palmer at A. C. A. Camp, Willsborough Point, New York.—WALTER U. LAWSON, Commodore.

Fine Split Bamboo Fishing Rods,

WITH CORK AND CELLULOID HAND GRASP. (Patent applied for.)

It is light, fits and will not blister the hands. Recommended by the most experienced anglers in the U. S. Order one through your dealer for inspection, and if not satisfactory can be returned. The U. S. Net and Twine Co. are agents for New York City. The glittering gang trolling baits which we are manufacturing are the coming bait. It takes the place of the phantom minnow, and is warranted to take two fish to one on any other bait. For sale by all principal dealers in New York. We are also manufacturing all the popular spoons, such as fluted, kidney and hammered. For sale by all dealers. Send for catalogue.

Syracuse, N. Y. HENRY LOFTIE, Manager.

FINE FISHING TACKLE.

CORNWALL & SMOCK,
"THE OLD REMINGTON GUN STORE."
281 & 283 Broadway, New York.

We invite Dealers and Sportsmen to call upon us and see how ADVANTAGEOUSLY they can purchase Sporting Goods. Our stock covers the following lines in their fullest varieties: GUNS, RIFLES, AMMUNITION, Fishing Tackle, BASE BALL, TENNIS, FENCING, BOXING, CYCLING, Etc. Send 5 cents (to cover postage) and we will mail you our new Illustrated Catalogue, covering above goods. Will also enclose a "Canvas Pocket Book."

THE PROTEAN TENT.

READY FOR RAIN. READY FOR ANYTHING. READY FOR SUN.
The simplest, lightest, most useful tent made. A half dozen forms in same canvas. Compact. Cheap. Send for full circular.

WOODCRAFT. By "Nessmuk."

Price, \$1.00.
FOR SALE BY FOREST AND STREAM PUBLISHING CO

THE
Patent Jointed Sinkers

Are made in two sizes, and by removing the center sections are quickly changed from a 1/4 to 1 3/4 or 2oz. with a No. 2, and from a 3 to 5 1/2 or 8oz. with the No. 8. All changes are made without disturbing balance of rig. Extra center sections furnished to increase the weight as may be desired. Ask your dealer for them, or send 10 cents for a No. 2, and 20 cents for a No. 8.

MONKEY TALK.

THE several species of lower animals have commonly been credited with a language of their own; and now Prof. R. L. Garner has not only established in a scientific manner that monkeys talk to one another, but has actually acquired a smattering of the simian tongue. After years of assiduous study of monkeys at the zoölogical collections of New York, Philadelphia, Cincinnati and Chicago, Prof. Garner at length hit upon the device of employing the phonograph to record the sounds made by one monkey in communication with another. A pair of monkeys, which had been kept in one cage, were separated and placed in different rooms. A phonograph was placed near the female, and her "talk" duly recorded on the cylinder. The phonograph was then taken into the room with the male, and made to repeat the sounds which he manifestly recognized as made by his mate. His "talk" was then recorded, and being reported by the instrument, was duly recognized by the female. Thus, as Prof. Garner points out in the *New Review*, where he reports these experiments, "for the first time in the history of philology, the simian tongue was reduced to record."

From this first step progress was rapid. Other phonographic records were made, and by studying these sounds, repeating them over and over, and finally mastering them, Prof. Garner was prepared for addressing a monkey in the monkey's own language. Taking his place near the cage of a capuchin monkey, the professor uttered the word which he had translated "milk." At the first utterance he caught the monkey's attention; and the word being repeated again and again, the monkey spoke it in answer and turned to the pan kept in the cage for him to drink from and finally brought the pan close up to the bars, repeating the word. Prof. Garner rewarded him with some milk, and the performance was repeated until the monkey had had his fill of milk and until the experimenter was satisfied that the same word was used every time. Subsequent investigation showed that this word, first interpreted "milk," was likewise used for "water" and really meant "drink" or "thirst."

By a like course of linguistic tests, the words for "hunger" or "to eat" and "weather" or "storm" were learned, and a fourth word which is a "menace" or "cry of alarm." The Professor has made the acquaintance of many capuchins, and has found no one of them that does not use the two words for food and drink. From the experiments so far conducted it appears to have been determined that the simian tongue has about eight or more sounds, which may be changed by modulation into three or four times that number; they seem to be half-way between a whistle and a pure vocal sound; the sound used most is like "u," or "oo" in "shoot;" the next like "e" in "be." The investigator concludes:

"Faint traces of consonant sounds can be found in words of low pitch, but they are few and quite feeble. The present state of their speech has been reached by development from a lower form. Each race has its own peculiar tongue, slightly shaded into dialects, and the radical or cardinal sounds do not have the same meanings in all tongues. The words are monosyllabic, ambiguous, and collective, having no negative terms except resentment. The phonic character of their speech is very much the same as that of children in their early efforts to talk, except as regards the pitch. Their language seems to obey the same laws of change and growth as human speech. When caged together one monkey will learn to understand the language of another kind, but does not try to speak it. His replies are in his own vernacular. They use their lips in talking in very much the same way that men do. I think their speech, compared to their physical, mental, and social state, is in about the same relative condition as that of man by the same standard. The more fixed and pronounced the social and gregarious instincts are in any species, the higher the type of its speech. Simians reason from cause to effect, and their reasoning differs from that of man in degree, but not in kind. To reason, they must think, and if it be true that man cannot think without words, it must be true of monkeys: hence, they must formulate those thoughts into words. Words are the audible, and signs the visible, expression of thought, and any voluntary sound made by the vocal organs with a constant meaning is a word. The state of their language seems to correspond with their power to think and to express their thoughts."

With the attainments so far made, Prof. Garner is confident that he has discovered a clue to the great secret of animal speech, and has pointed out the way to its solution.

SNAP SHOTS.

IT IS reported that two bird butchers have been camping on "Bird Island," a projection of Anastasia Island, opposite St. Augustine, Florida, and systematically slaughtering the sea birds. Florida has for years been cursed with these millinery plume collectors; and the hopeless feature of it all is that they have carried on their work of extermination within the law, for Florida has seen fit only to forbid the killing of birds of plume by non-residents of the United States. Why a bird butcher who hails from Long Island is a whit more to be tolerated than another one from Cuba is beyond comprehension. The Long Islander is of the two apt to be the more energetic and to kill more birds. We trust that the newly enacted game law of Florida is an improvement in this respect; and if it provides any punishment for the campers on "Bird Island," the citizens of St. Augustine should see to it that their work is stopped. Bird life on the bay and seashore is one of the attractions of that charming winter resort, and should be protected.

Railroads and wagon roads give easy and quick access to old-time fishing waters, where in years gone by it was necessary to pack in over an ill-defined and arduous trail, or perhaps no trail at all. And reaching the journey's end, one finds comfortable hotel accommodations, where formerly not a board had been sawed nor a shingle split. But with all the improvement and progress there is wanting the solid fun of the old excursions: no railroad car, however luxurious, can quite compensate for the charm of the wilderness tramp; and no hotel, however well conducted, can furnish forth the comfort of the lean-to with the camp fire. This is an age of improvement and progress and development, and the charm and delight of one woodland resort after another are being improved and developed into oblivion. The sportsman, tourist naturally resents the building of a summer caravansary on the shore where season after season he has gunned for shore birds, or the building of a steamboat on a wilderness lake he has fondly called his own; but his resentment is as unavailing as that of the Arran Islanders who lament the multiplication of light-houses and the substitution of iron for wood in shipbuilding because the two agencies diminish the supply of wreckage on which they and their fathers before them have in part subsisted.

If Dr. Dawson, one of the Commissioners sent out by Great Britain to investigate the Alaskan seal fisheries, had actually declared, as he is reported to have declared, to a deputation of Canadian sealers, that "there is no danger of fur-sealing being ended, because the seal is an animal which cannot possibly be exterminated," the remark would have shown the Commissioner to be an ignorant and foolish person. But we prefer to believe that he was not correctly reported by the newspapers, for such an assertion would be simply grotesque from such a source.

A man, a cow and a gun, in a Connecticut pasture. The man intent on woodchucks. The cow quietly chewing her cud. The gun "lying low," both hammers cocked, in the grass. That was an apparently innocent and harmless combination; but it came near proving the death of the man. The cow, prompted, no doubt, by bovine curiosity, approached the gun. The man took a stick to the cow. The gun, stepped on by the cow, discharged its load into the man's right leg, which the surgeons afterward amputated.

The death of Truman Harrington, of Camden, N. Y., removes one of the best-known guides and woodsman of the Adirondack region, who died last week, aged 71. He was born at Boonville, on the western borders of the wilderness, and was noted as an enthusiastic and skilful woodsman from early youth. Of late years he had been chief forester for the Bisby Club at their camp on Bisby Lake.

ANY subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

Adirondack Number.

OUR "Adirondack Number" of June 18 was a pronounced success. As we then said, the material provided was more generous than we could make room for, and several papers were left over for a second number devoted to the same subject. This will be our issue of Aug. 27; and among the contents will be the following, the first two having been announced for the former number:

The North Woods in the Fifties.

A visit to the Adirondacks thirty-three years ago. By J. H. D.

Two Weeks at Spruce Lake.

The experiences of four young fellows under tutelage of a guide.

The Upper Adirondacks in '56.

By "Byron."

The Wane of the Adirondacks.

By Charles Hallock.

The Cranberry Lake Country.

By D. H. B.

Circumnavigating the Adirondacks.

By "Piseco."

The Sportsman Tourist.

TROUTING IN WEST VIRGINIA.

ON the 22d of June our squad started to test some of the mountain streams which are the source of Cheat River, in West Virginia, and which are almost unknown to anglers. The members of the party were Bowyer McDonald, Master Ray Williams and the writer, from Washington city, and W. T. Koontz and Hazard Othey, of Ohio. There was, in addition, before starting, the usual per cent. of ardent sportsmen who couldn't be held back at first and couldn't be dragged forward at last. What they missed will be told later on.

The scene of operations selected was the eastern side of Randolph county in that portion of the State so graphically described by "Porte Crayon" in his "Virginia Illustrated," and by John P. Kennedy in his book, now out of print, entitled "The Blackwaters."

Our route from Washington was via the B. & O. Railway to Cumberland, where the thrifty custom prevails of charging transfer fees on checked-through baggage. We here took the West Virginia Central, one of those rare roads on which a passenger may ask a question of any employe without being made to wish he hadn't.

To one who has never visited a lumber region the scenery on this road is a revelation. Enormous saw and planing mills, acres of sawlogs, and whole fields filled with lumber seem to almost inclose the entire tract. Villages are plentiful as in New England, but there is scarcely a farm under cultivation. In most of the streets the stumps are still standing, from which the lumber was cut to construct the houses.

Up the North Fork of the South Branch of the Potomac and across the divide brought us to the wild Blackwater region and to the end of our journey by rail, at the new and live lumber town of Davis. The scenery hereabouts, which half a dozen years since must have been grand and picturesque, is now absolutely dismal. Whole mountain sides are covered with the remains of fallen trees, nearly all blackened and charred by frequent fires. To see the rapid and apparently wasteful destruction—aye, devastation—of noble forests here would make Senator Edmunds's heart ache.

However, we did not come here to moralize, nor to plead for forests, but to catch trout, brook trout, mountain brook trout. Not the liver-fred frauds of suburban goose-ponds, but the brook trout in his native brook—the trained athlete accustomed to contest for his subsistence in the clear, cold, dashing mountain stream 3,000ft. above the sea, the unchallenged Apollo of the water—the splendid result of nature's most successful effort to unite the perfection of symmetry, color, space and vigor. Who that has encountered him does not remember with delight the gleam, the flash, the swirl, the struggle! Who that has captured one of 16oz. has not paused before ereeling it to feast his eyes on its resplendent beauty! A 12 or 14in. brook trout at the end of 8 or 10yds. of proper tackle, with his lightning-like curves and shoots among the rocky rapids of a mountain stream, affords the acme—the *ne plus ultra*—the extremest ecstasy of piscatorial sport. This we sought and this we got, those of us who remained to the end. But this is anticipating.

Trusting our luggage on the journey from Davis to the possibilities of a road wagon, we footed it over mountains and through valleys until at the end of twenty miles we were brought to a halt by the annoying information that the remainder of the alleged road was so obstructed by fallen timber as to be impassable. This was a serious disappointment, as we were still eight or ten miles from the heart of the trout region. Here, at the mouth of Gandy, we quartered in an old log house, in lieu of pitching our tents, and established our headquarters.

At Davis we had increased our number by adding Mr. Anton Degler as guide, and Mr. Jim Giffen as cook. Tony Degler is a paragon of guides—a thorough sportsman, tireless, cheerful, a trained woodsman, and without a mercenary symptom. As for Jim, he can get up such a meal from scant materials as will make an angler's mouth water. Our blessings rest upon the good-humored heads of Tony and Jim.

Before slinging our creels we ordained and established with all due formality the constitution and by-laws of the Gandy Salmo Fontinalis Club, which said constitution and by-laws were in the following words, to wit: "Don't Kick!" A club badge was pinned to each hopeful bosom and a daily championship badge for the biggest fish caught each day, and another for the biggest caught on the trip were displayed in order to excite emulation.

We sallied forth in the evening to test these unvouched for waters, some with bait, some with flies. The angling was fairly good, no more. When all of the party had straggled in we summed up the result, finding sixty-five trout from 7 to 10½in. in length. There were symptoms of half-concealed disappointment, not so much on account of the number as of the size of the catch. The disappointment was hardly reasonable, as we were still eight or ten miles from where first-rate fishing had been promised.

Gandy at this place and for a dozen miles above is a rapid stream, having few deep pools, and is wide enough, for the most part, to permit the free use of the fly. The temperature of the water here is about 70° Fahrenheit; that of the air ranges from 45° in the night to 73° in the afternoon. Fire and blankets were found to be indispensable to comfort every night.

Neighboring mountaineers told us we had come too late in the season for the best results in this locality; first, because the stream was now too low, and second, because it was already well fished out. Nevertheless we easily caught in a few hours each day an ample supply for our table, on which other meat was not abundant. Although 10, 11 and 12-inch fish were caught in considerable numbers, "too many small ones" was a general complaint. Some of us seemed to forget that brook trout are not surgeons.

The novices of the party expressed surprise at some features of our experience; they were not prepared to find that four-fifths of our fish were caught in less than 20in. of water; they did not expect to see the fly, as a rule, more effective than the bait. The night-fishing was a novelty, as open pools which scarcely afforded a rise during the day rewarded nearly every cast as late as 10 o'clock at night. We did not test it later. One feature rather upset some pretty well-settled notions of the veterans. This was that the white and bright-colored flies

were not the most effective at night. Out of every score caught by me after dark (no moon) more than a dozen were taken on gray and brown flies.

The first excursion beyond easy reach of camp was made by Mr. Koontz and a Mr. Cunningham, the latter a visiting brother from Ohio, who was doing the region, so far as it could be so done, on horseback. They ascended Gandy about six miles, fished several hours, and returned in the evening with 97 fine trout. One of these, 12in. in length, entitled Koontz to the championship badge for the day. This experience greatly elated him, and raised the spirits of the whole party.

Next day Messrs. McDonald and Degler scaled the Allegheny divide, slid and rolled down the eastern slope into wild, rugged and dashing Seneca—or, in the vernacular of the natives, "Sineker." The story of their experiences among the deep cañons, narrow ledges, yawning chasms, deep pools and roaring cascades was fairly hair-raising. They fished in the afternoon, slept, or tried to sleep, under the gloomy hemlocks, where rattlers, catamounts and other beasts of prey abound, ate broiled trout and biscuits, fished next morning and returned to camp with 176 trout of our standard size. May be some fellow thinks he can tell McDonald what "roughing it" means!

At the end of the first week three of our party seceded. Whether the frowning mountains, the lonely situation, or the apprehensions of an Indian uprising moved them we have yet to learn; but they departed, leaving the over-buoyant McDonald and myself, with the guide, cook and boy-of-all-work, to complete the outing as contemplated.

Mornings and evenings we would sally forth with our rods for an hour or two to replenish our larder. We lived comfortably and contentedly, spreading a luxurious table supplied with milk, butter, eggs, and all the vegetables of the season. No discontent was murmured, none was felt. We caught our fish, ate our meals, smoked our pipes and played cribbage, envying no mortal man his happiness. Frequent visits from neighboring mountaineers, who regaled us with hunting stories in their own picturesque style, added variety to our tranquil life. Here, during these halcyon days, as well as on a rough and tough campaign, "Bow" McDonald proved himself to be the *beau ideal* outing companion.

I must not omit honorable mention of a genuine Virginia "Majah," who had strayed into these fastnesses, and paid our camp frequent and protracted visits. He had seen better days, doubtless much better, had been educated at the University, and was evidently upon terms of intimacy with every well-known soldier and statesman of the present and past generations, and in every characteristic of the identical type from which "Colonel Cyarter of Cyartersville" was drawn. He was a delightful story teller, and we compensated him for his entertainment by trying hard to believe his stories. Dear old Majah Norman, we love thee; though we could not unanimously approve of thy seventeen-foot fishing pole.

There we lived in nature's luxury for nearly three weeks, when, a few days before our date for breaking camp we started, McDonald, Degler and I, for the grand tour of Upper Gandy and Laurel. It was a long, hard tramp of thirty-six miles, with first a rude semblance of a road, then a path, then a trail, then the rocky and slippery bed of a stream, then the virgin wilderness until the round was nearly completed.

This region of country is owned in large tracts by non-residents. Hundreds of acres of trees on the mountain sides are girdled, and as the trees die, bluegrass, timothy and clover spring up, affording rich pasture for herds of fine cattle. These cattle are cared for by herders, living miles apart, who, with their families, comprise the entire population. With few cultivated fields, no roads, no churches, no school houses (the parents acting as teachers and preachers), with little hope of greatly bettering their condition, these hardy people live upright and contented lives. However meagre the supply of provisions, they hospitably welcome all strangers, refusing compensation except from those apparently well able to afford it.

To traverse this interesting country we left camp at six in the morning, and wending our way up Dry Fork to its source, crossed over the divide and down to Gandy at the famous Big Tunnel. This tunnel is neither more nor less than a large cavern extending with windings and turnings for a mile under a great mountain, and through which cavern flows the rivulet of Gandy. Our guide, Degler, has conducted a number of parties through this perilous passage, but was never asked to take any person through a second time.

We reached Gandy by fighting our way through laurels, briars and swamp below the tunnel, and found it to be at this place a dark, rapid stream, 20 to 30ft. wide and about 10in. deep on the shoals. Quickly joining rods, lines, leaders and flies, we plunged into water cold enough to make our feet and shins ache. My first short cast hooked a 10in. trout, which, like all the others caught here, fought with remarkable vigor. In less than an hour, having covered about forty rods of water, McDonald had two dozen and I a dozen and a half, averaging more than 9in. Here, for the first and only time, the "throwbacks" were not numerous enough to be a nuisance, not half a dozen being hooked.

Judged by what we saw of it I regard Upper Gandy as the best trouting waters we visited. Barring two not very formidable objections, to wit, the uncomfortable coldness of the water, and in places, the proximity of the branches, it is an ideal trout stream; not too deep to be easily waded, just wide enough to be covered with a medium cast, and with trout to be proud of in every square rod. To this hour I regret that we did not give an entire day to Upper Gandy.

Following our prearranged plan, we crossed the mountain to the waters of Laurel, near Green Knob, the highest peak in all that region. In the evening we fished a mile or so of Elk Run, catching some dozens of small fish, which, with our Gandy catch, more than supplied supper and breakfast for the dozen persons who that night slept under the hospitable roof of herder Philip Harbaugh.

Next morning, following a hunter's trail for two and a half miles, we reached mahogany-colored Laurel, the local fame of which had instigated this expedition. It well deserved its reputation. We found it fairly alive with trout, big and little, especially little. Here, if anywhere, we were to fill our creels for our friends at home, and we made a new classification of sizes: "Washingtonians," 8in. or over; "campers" (for immediate use), between 7 and 8in.; all smaller ones ranking as "throwbacks."

This classification, it was found, left the "Washingtonians" in the minority, and we soon had all the "campers" we could use: we therefore reduced the classes to two, making "throwbacks" of the "campers." The reader is advised to credit any story he may hear about the multitude of trout at this place. The most accomplished fish liar or circulation editor could not earn board wages in trying to exaggerate the number. We heard from good authority that a few days before our arrival a herder youth (our packer here) with one companion caught 900 in a day and a half. After testing the stream we not only believed the story but believed that we could have duplicated this marvelous catch if numbers had been our chief object. But we wanted "Washingtonians" and, heeding the rule that the larger fish are usually among the first caught at a given place, we hurried along, leaving myriads of greedy "throwbacks" and, doubtless, hundreds of big fellows for future anglers.

After a mile or two of this royal sport we encountered a streak of adverse fortune. The catch suddenly fell off three-fourths and we were puzzled; but the mystery was cleared up when we arrived at Beverly trail and found a camp just deserted by a party of fishers, who had evidently undertaken to exterminate the entire trout species.

We spent the night at this camp, which was merely a bark roof with the lower end resting on a large log, first, however, dressing our fish. Next morning we hastened over the remaining two miles of fished-out waters and again found the glorious sport of the previous morning. By 10 o'clock we had all the fish we were willing to carry and called a halt.

As fifty-six hours elapsed between the time when we caught the first of these fish and the time we reached ice, it may be interesting to learn how we preserved them. Under the supervision of Guide Degler we dressed every one with the most scrupulous care, exactly as for the table—removing the entrails, gills and every trace of blood, washing perfectly clean, and sprinkling the inside of each with a pinch of salt. After thoroughly cleansing our refrigerator basket and creels we placed in the bottom of each a layer of elder leaves, upon this a layer of trout, and so alternating until the basket was nearly full, then elder leaves to the lid. These fish were out of the water from 30 to 56 hours without ice and 20 hours with ice, yet the cook, sundry experts, and all others who inspected them pronounced every fish to be in perfect condition. True, we had the dry and comparatively cool air of the mountains until we reached ice; but we feel assured that the method employed had much to do with their excellent state of preservation.

Returning to the subject of our pilgrimage. After dining we put up our rods, sadly reflecting that this was the last time for this long-to-be-remembered expedition. Shouldering our luggage, we trudged for ten miles over a colossal mountain at a point facetiously called the "Big Low Place," through pathless woods to Dry Fork, and down that hide-and-seek stream to camp. The tramp was toilsome, but uneventful. The inspiring "ching, ching," "boom, boom," imitations of the drum and cymbals by Degler, and McDonald's cheering trombone response "tarra-a-ah-r-r-rum," lightened our lagging legs.

Next morning we broke camp, and, accompanied by our little caravan, walked twenty miles to Davis. Next day evening we reached home, each having from 10 to 15lbs. of fish fit to grace a banquet of the gods, and proud of our achievements, pedestrian and piscatorial, as members of the Gandy Salmo Fontinalis Club.

JERE WILLIAMS.

ALONG THE NORTH SHORE AND TO ISLE ROYAL.—II.

[Concluded from page 43.]

MORNING found the storm raging as hard as ever. A fair beautiful morning it was if only the breeze and the waves were quiet. After breakfast we started to walk to Grand Portage, which we knew could not be more than four or five miles away. The walk was quite enjoyable, but tiresome as we followed the shore line. The scene was most beautiful as we came out on the point that looks into Grand Portage Bay. Nearly in front of us was Grand Portage Island, while away up at the head of the bay lay the village of Grand Portage, surrounded by high rocky hills scantily covered with small trees, bushes and verdure. Scattered about between the hills and the bay were the whitewashed log houses of the village. The contrasting waters of the bay, the green hills, and the whiteness of the houses, dominated by the chapel, made a scene surpassingly beautiful, more like an old world scene than the newest of the bustling new. It was a tedious walk around the bay, and as we neared the village rain began to fall. At the first house the Indian woman and boy refused to talk English. At the next we were cordially welcomed in good English. It was the house of an old ex-government school teacher, a Frenchman from lower Canada—now the postmaster at Grand Portage—whose strong son Joseph said that he would return with us and bring down our dunnage for two dollars.

The old ex-school teacher was much interested in us as soon as he learned that we had been on and were acquainted with White Earth Reservation. By recent treaty the Grand Portage Indians, between two and three hundred in number, may be moved to White Earth, and there is much dissatisfaction among them at the prospect of leaving the lake and hills and going to the prairies and pine woods. I was glad that we could give a good report of the land.

The return to Camp Castaway was a rough one. The wind blew harder, the rain fell, the swells ran so high that Joseph feared that if we were once landed we would not be able to get off again. We made a stern landing, running in on a big comb as we did the day before. Considerable water got into the boat, however. Dinner was prepared and eaten, our dunnage packed and placed in the boat, the Acme folded up, roller put under the big boat, and watching our chance we shoved her in on a big wave and away we went, Stephens waving a goodbye to our camp as we rounded the point.

We were landed on Grand Portage Island, as the steamer does not run up the bay to the village. Joseph told us there was fine trout fishing at the falls in Pigeon River, and also that there was a lake back from Grand Portage that was full of trout. We also learned that our long looked for Reservation River was the stream where we had caught the three big trout. Well, we have one satisfaction now—we know where Reservation River is, the distance down from Chicago Bay and the distance

up from Grand Portage. We also know that between Duluth and Grand Portage there is no better trout stream.

The only house on Grand Portage Island is one inhabited by three fishermen. The boss is called Peter, the other two Martin and John. They fish for the Booth Packing Co., getting for lake trout 3½ cts. per lb. fresh, 2½ salt, and dets. for whitefish. We were made very welcome here, both by men and dogs, of which latter eight came down on the pier and sat in a row to see us land. Joseph, Peter, Martin and John all united in saying that Isle Royal was the place to go for trout, and that Washington and Grace harbors were the particular places where trout abound. After supper we went to bed assured that between midnight and morning the steamer would be in for us. We also learned that Tunnelled Rock by our last camp was a famous trout place, and so were the ledges all about there. Peter said: "On warm, still summer days the tunnel is full of them. Some day I'm going to put a net across one end, and go to the other end with a long pole and drive them out into the net and get a boat load at once." May that day be long deferred was and is our earnest wish. We went to bed early assured that we would be called in time. A light was also set out to call the steamer in. I awoke at broad daylight, found Stephens awake and no steamer. She had passed in the night not heeding the signal, and we were left. No Isle Royal for us, as we must be home by Saturday night.

How bitter our disappointment only those who have been in similar positions can tell. The fishermen sympathized with us, Peter placed a boat at our disposal and told us we had better go to the Pigeon River Falls, as they were well worth seeing. He, however, contradicted Joseph by saying there were no trout in Pigeon River, and another fisherman named Paul, who came over from the mainland, said there were no trout there. What should we do? Go to the falls or go up to Tunnelled Rock and try for trout there? We decided to go for the rock and the trout; so started out, rowed about a mile when we saw a steamer headed toward the bay as we thought. "Tis the Dixon behind time," was our cry. We hurriedly returned, packed our dunnage into the boat, and were ready to board the boat. But, alas! no boat came, no whistle sounded. 'Twas a big "Canada boat," as they call them on the North Shore, and she steamed majestically by about five miles out. Back to shore we went, and decided to ask Peter when he came in from his nets, which he and the rest had gone right after breakfast, if he would not take us over to Isle Royal. The hooks and nets are set out from three to six miles from shore. The hooks are baited with herring, are attached to a heavy line, and are usually down about three fathoms in the water. Some of the lines of hooks are a mile or more in length.

When Peter returned, and was asked if he would go, he promptly refused, as "the wind was dead ahead," but he added, "It may change after dinner and if it does I'll go." About 3 P.M., after various furies, the wind did change and we were soon off, Peter taking John along. We went in Peter's Mackinac sailboat. The wind soon died away and recourse was had to the oars. Presently a spurt of wind came, followed in a little while by a calm, and thus it continued the entire trip. Night drew on. The outlying rocks called Rock of Ages was finally passed. Away to the northwest gleamed a beacon light on some point in Thunder Bay. Nearer came the wooded shores of Isle Royal. The darkness grew more dark. We passed an island and rounded into a bay. It was not Washington Harbor. An exceedingly animated discussion now took place between Peter and his mate. Finally the conclusion was reached that we were in Grace Harbor, but a few minutes more would put us in Washington Harbor and at the fishing station. We soon rounded another point, the barking of dogs rent the air. A few minutes later we lay to alongside a rude wharf, on which we unloaded our dunnage; then went to a fishing shanty near by and aroused the inmate, a young man named Walter, who, very scantily clad, bid us welcome and proceeded to prepare a lunch of bread and butter and tea. Stephens and I spread our blankets on the floor and were soon sound asleep, from which we did not awake until Peter and the others arose and began to prepare for the return to Grand Portage. There was a brisk breeze and they had a fine sail home, as we learned afterward.

We procured a boat and went up Washington Harbor about a mile and pitched our tent on a high point between Washington and Grace harbors. Only a few steps either way and we were in which harbor we chose. After breakfast we got our tackle ready and started for a stream which came in at the top of Grace Harbor, and which was reported to be full of trout.

We found the stream without trouble. Just as we commenced to cast it commenced to rain. The trout were not there, but the rain was in good earnest, and the wind began to sigh and sigh among the trees in a way that boded no good for us. I went up the stream a ways and returned wet through. I found Stephens sitting on a box under a tree looking gloomy enough. "I was never so discouraged in my life," he said. The rain came down harder and we started for camp feeling pretty blue. Had we taken this long trip only to be beaten at last; for we knew if the rain continued long there would be no trout fishing for us. Arrived at camp, we proceeded to make everything snug and comfortable. After dinner the rain stopped for a time, and we proceeded to undo the Acme preparatory to a trip to the head of Washington Harbor to try a river which came in there. But the rain commenced so hard that we had to leave the boat half set up and seek the shelter of the tent, where we remained until nearly night, solacing ourselves with the latest Scribner, Howell's "Hazard of New Fortunes," Nessmuk's "Woodcraft" and the Book of Books. The life of the Master of the Waters never seems so grand to me as when read by the water's side amid the enveloping woods.

Just before supper time the rain ceased long enough for us to set up the boat. Stephens took it and went to the fishing station to find out about the weather, he said, and get pointers about location of fish. I had supper nearly ready when I heard his cheery and welcome hail from the water. After supper the rain recommenced and we went to bed and to sleep with it beating on the tent. How comfortable and snug we were. If we could only find the sun shining when we awoke. In the morning it was still raining, and the outlook was dismal enough. Here we had come four hundred miles, and the prospect seemed good for us to stay in our tent. Soon

the rain ceased. "Let's go across the harbor and see what we can find," said Stephens. "All right."

So off we went, and were scarcely a dozen rods from shore when it commenced to snow. Could it be possible? June 3 and a northeast snow storm upon us? Even so. We reached the opposite shore, but only staid a few minutes, as the snow came down thicker and faster. We hurried back to fix camp for a snow storm. We turned the tent around, made all secure, built a great fire, and prepared to endure as best we might what was before us. How the snow did come down until afternoon. We read our books, and the time passed quite swiftly.

There was a little let up in the storm in the afternoon and we went up to the fishing station. The men were all busy preparing hooks and mending nets or making new ones. We visited two of the houses, one with a sign over the door saying "City Hall." This was kept by two young men, who made us very welcome. From there we went to Capt. Johns's house, where we found Mrs. Johns and four children, the only woman on that end of the island; had been on the island twelve years. After a pleasant visit here we returned to camp—Stormy Camp we had named it now. The clouds had still further lightened, so after supper we went across to Grace Harbor to the stream again, but all in vain. There was a brief spell of sunshine at sunset and our hopes were high for the morrow. We went to bed early and awoke to find the sun shining, grass and leaves frozen stiff and everything white with frost and ice half an inch thick in the wash basin.

Nothing daunted we started up Washington Harbor for the river at the top. The harbor is five miles long and so narrow that it looks more like a river than a bay. At the head of the harbor is the dock and settlement of the Wendigo Copper Mining Company. At the dock was their steamer, the W. B. Taylor and the little steam yacht Louise, of Hancock. We went up the river about a mile, but could get no rise to our temptations of various kinds. Saw many suckers in the river. At length we gave up in despair, and returning to the harbor, left the boat and went back a mile to one of the prospecting holes of the Mining Company. A broad road has been made at great expense and labor from the harbor to the mine so-called. We went into the tunnel which they are drifting in the side of the hill, saw the drillers at work, examined the indications, Stephens fired off a blast—then we returned to the harbor, ate our dinner and rowed over to the dock. Saw some men fishing from the dock.

"After trout?"

"Yes."

"Do you find them?"

"Not now, but before the storm caught lots of them here."

We landed and made a few casts, and Stephens caught a fine 12 inch trout; but that was all. We started for camp, and on the way down the harbor Stephens caught a fine lake trout on the troll.

We prepared a grand dinner, read and chatted a while, then to bed and to sleep. 'Twould be our last night on the island. Stormy our experience and slight our success. Yet we had put in the time pleasantly. We put in the next forenoon in trolling around and exploring. In the afternoon we packed up, bid farewell to "Stormy Camp," and went over to the fishing station to wait for the steamer. A large quantity of fish was ready to be shipped. It had been a busy day with the fishermen. On account of the storm they had not been able to visit hooks or nets for three days; so their labor had been excessive the first fair day. We took a run into Grace Harbor while waiting and I hooked a large laker, but lost him.

Soon the whistle of the steamer was heard and we were aboard. The captain ordered a lunch for us. While we were eating the boat steamed out of Washington Harbor and we were on our way to Duluth. At Grand Portage an Indian brought some trout on board for the captain, which he had caught in the lake, of which mention has been made before.

We did not sleep as well on the boat as in the tent, there were too many stoppages, each heralded by three long blasts of the whistle. At Baptism River, where there is a club house and club of 45 members, two fishermen came aboard, members of the club. They had been up all the week but had caught nothing, the storm having stopped the fishing all along the shore. We came to the conclusion that we were not the only ones whom the storm had knocked out. We reached Duluth a little ahead of time but were soon on the train, rolling westward and planning how we can arrange it to take the trip over again in July or August. MYRON COOLEY.

DETROIT CITY, MINN.

Natural History.

LEAVES FROM A NOTE-BOOK.

HOW do I "kill time"? What do I find to do in this lonely region, where there are no books and where the mail arrives monthly, if not at less frequent intervals? These and similar questions are put to me with surprising regularity by every one whom I chance to meet, by the shepherd who cannot understand why a fellow can gather weeds and take care of them as though they were gold dollars, why I should prefer to write while the rest of the boys are sleeping or playing "freeze-out" for tobacco and knives; and to the more aristocratic dwellers of the settlement, who reside in log huts instead of under canvas, who live on bacon instead of on mutton, venison, grouse and trout, whose world is bounded by four narrow walls instead by the fathomless blue, I am an unsolved enigma. Now I can find plenty to do, and the thought of "killing time" is as far from me as the thought of committing suicide. So here go some of the leaves from my note-book.

July 18.—Up at dawn to catch the sunrise from the peak just above camp. I take my botanical press, for I believe I have found a new orchid, must also gather purple clematis and some of that giant larkspur. So much for intentions. At the "bed ground" I am arrested by the sight of eight freshly killed sheep and lambs. An examination of the surroundings shows the trail of an old she bear with two cubs. To-night I will watch for them.

Observation 1.—Bears, where they have a choice, do not kill wethers—only ewes and lambs. The lambs they de-

vour, but of the ewes they touch only the udder, evidently being partial to the lacteal fluid in its natural receptacle.

I climb higher and enter a dense pine grove. There is a whirr before me and a female dusky grouse (*D. obscurus*, typical form I believe) with her half-grown brood arises at my feet. The young soon disappear in the underbrush.

Observation 2.—The dusky grouse, when endeavoring to protect her young, does not resort to the strategy of the ruffed grouse, but flies boldly before the intruder, alighting on branches over his head, even following him to attract his attention and courting his shot until the brood is far away.

Well, I gather my flowers and come back to breakfast. Along strolls Jack from a neighboring camp and wants me to go fishing. He has gathered a supply of grasshoppers and I accompany him. Going down the meadow I find the nest of a warbler (species unknown) in the grass.

Observation 3.—Do birds have a prejudice against pines and aspens as nesting places? Here are nests upon nests of species that I know to be arboreal elsewhere, and all are built upon the ground. In fact I have never found so many nests containing eggs in any one season before.

What is that buzzing? Ah! a fight? Two horse flies are attacking a cicada, and they whirr around just on a level with my eyes.

Observation 4.—Insects vary in their methods of attack. The cicada carries on the warfare with its wings, endeavoring to beat its opponents to death. The horse flies rush in and try to bite. The vulnerable part of the cicada is at the junction of thorax and abdomen. Two minutes were sufficient to end the fracas, and the cicada, much larger and apparently stronger than the combined opposition, lay dead on the ground, while the flies are gorging themselves upon their prey.

At length we reach the creek. I have in a tin can some live specimens of the diminutive fish called here bull-heads. Now, in Mammoth, only 12 miles below, bull-heads abound and they are the best bait imaginable. But they are not found in this creek, and though every one of the trout had come up from Mammoth, I did not get a bite.

Observation 5.—Trout in this creek darker and with fewer spots than I have before noticed. They, contrary to the custom of other trout in this vicinity, do not lie in the riffles or hide beneath overhanging banks, but are found only at the bottoms of the deepest pools beneath the most dense shade. Trout know the food natural to the waters in which they are, and will refuse any other nourishment no matter how tempting.

However, I was not discouraged, but tried to allure the shy brown backs with a brown-hackle. This, too, was ineffectual. I finally secured a dozen beauties with a silver-dector, which, according to the time of day and the state of the water, was not according to Hoyle, Pole or Cavendish.

From a rocky point just before us arose a female mallard. We went to the spot and found a nest containing seven eggs. It was nothing but a bed of feathers plucked from the duck's breast and placed upon bare, grassless, shrubless stone. Jock broke one of the eggs, and I saw that it was at least two weeks old. Such a place for a nest was most singular. The water below was a roaring torrent, where a duck could not swim, so it was absolutely impossible that there the ducklings should learn to enjoy their natural element.

Observation 6.—At the period of incubation ducks make their nests whenever the desire to deposit the first egg comes upon them. If they have neglected to provide a suitable retreat, it is too late to mend matters.

Since then I have passed and repassed the spot and have seen the eggs handled frequently, but for all that Madame Duck does not desert her rocky home.

Jock suggests that I go to his camp, three miles distant, for dinner. On the way we cross an immense marshy flat, and in the middle of this is a beautiful spring, some 8 yds. in diameter. The water is fairly blue, icy cold, and no bottom can be seen at the center, but about the edge, where the water is from 1 to 10 ft. deep, are massive rocks that are fantastically draped with aquatic mosses and algae so that it seems like looking down into fairyland. The waters of this spring run for a quarter of a mile and then sink to reappear a mile away, bursting into the creek from crevices in the volcanic rock. The swamp is a great breeding place for teal, and three or four ducks with their young broods are swimming in the miniature lake. As we burst upon the scene one duck flies off, but the rest stay to conceal their young. How do they do it? Bring them in to shallow water, where they can rest upon the bottom and stick their bills up through the moss. Then the old ones swim out into deep water and resort to the same tactics. We drive the ducklings from their place of concealment and they swim out to their parents with half of their bodies exposed. Though the moss is just as inviting they will not hide where they cannot feel bottom and their mothers bring them back to shore.

Observation 7.—Young ducks can dive, but have not the power of remaining beneath water for any length of time until they can make a strong flight. The power of remaining beneath the water is acquired by practice and is not innate.

We proceed with our walk and on a rocky mesa, more than a mile from water, I find several large quaking aspens gnawed off from 8 to 10 ft. above the ground. The work is the exact counterpart of that done by beaver, but the trees are from 9 to 14 in. in diameter. Too large and too far from water for beaver. The limbs have been gnawed away and all of the bark has been eaten off. Among the wreckage lie the skeletons of five horses.

Observation 8.—When compelled by dire necessity, herbivorous animals may become first-class rodents.

I have since learned that winter before last five horses were snowed in in this grove, where the snow falls 10 ft. deep and lasts from October until May. When their owners came up in the spring they found the snow for a limited circle about the grove packed for 3 ft. as hard as ice and the trees in the condition they are at present. After getting all the nourishment possible from their forced diet, the poor equines had starved to death.

Now, these are notes from my book for zoology. I have another devoted to botany and a third to Ute-ology, if I may coin the word, and between the three I manage to keep busy. Whether my observations, or rather my surmises are correct or false I cannot tell without comparing notes. If I am wrong I want to be corrected, information is what I am after, and there are many

readers of FOREST AND STREAM that can verify or disprove this guess work of mine. SHOSHONE.

MACKAGUNT PLATEAU, Utah, July 27.

A DAY IN YUCATAN.

WE were up and ready to resume our journey at sunrise. Our abode for the previous night had been an old, much-ventilated thatched shanty, the property of a Maya Indian family. Upon our inquiring as to the possibilities of obtaining a breakfast we learned that a few tortillas and a little milk might be had. After much trouble and considerable swearing in Spanish at last we were given each a bowl of the worst milk I think I ever tasted. It was bitter and very disagreeable to the taste. The tortillas were quite good, being fresh made and warm. Upon inquiring of the man of the house as to what was the cost of our entertainment, he immediately answered "Cinco pesos" (five dollars). We demurred at this, but were finally compelled to pay it.

About 7:30 we commenced our march. S. and myself going ahead to look for birds. The road upon which we were traveling was cut through a dense forest, and presented a most grand and beautiful scene as we glanced before and behind us. The early morning sun was just peeping through the foliage, gay plumaged birds were making the air resound with their notes, and the pure, fresh air gave us travelers a feeling of freedom and enjoyment which must be experienced to be appreciated.

The first trophy to fall by my hand was a beautiful yellow breasted flycatcher, which I took on the wing as he was diligently chasing a huge dragon fly. A short time after I shot another, and I knocked a third from the top of a high tree. These flycatchers appear to be the most abundant bird in Yucatan, and there are said to be no less than twenty species found here.

Shortly after shooting the flycatchers we were startled by a series of sharp, shrill notes which were totally unknown to us, and soon over the tops of the trees came a flock of bright-plumaged parrots, which alighted in the branches of a large tree not far away. With quickened pulses we carefully approached the spot, and fired into the flock, which with a mighty chattering took wing and flew to a tall tree in the midst of the jungle and beyond our reach. We found under the tree four fine specimens, which were immediately transferred to our game bag. These were the first parrots seen by us and they produced an intense feeling of excitement.

About noon we arrived at a convenient lunching place and proceeded to do justice to our provisions. This spot was upon the edge of one of those remarkable cenotes, so common throughout Yucatan. This one was of a round shape and about 30ft. below the level of the ground. It was surrounded by reeds and rushes, and it was dotted here and there by patches of water lilies. We discovered several herons, rails and ducks upon the water, but failed to obtain any. This cenote is called in the Maya language *Shkolack*, and is double; that is, there is one upon either side of the roadway. The waters were inhabited by several species of fresh-water shells of the genera *Ampullaria*, *Planorbis* and *Physa*, and by a water snake, the character of which I was not able to determine.

After eating our dinner, taking a few photographs and skinning our birds, we resumed our journey toward Sitelpech, a small village, the objective point for the day. On the way we passed several large fields of heniquen, from which the famous Sisal hemp is made. The heniquen industry constitutes the chief wealth of the Yucatecans, and immense quantities of the hemp are annually shipped from the country.

The plant is an agave and by some botanists is said to be identical with the pulque plant, or maguey (*Agave americana*). The leaves of the plant are first cut off close to the ground. They are then passed through a tearing machine, which reduces the leaf to its fibre. It is then hung up upon poles in the sun to dry and afterward is pressed into bales by machinery.

Shortly after dark we arrived at our destination, and after partaking of a hearty supper of tortillas, friolitas and chocolate we retired to rest in a carpenter shop.

F. C. BAKER.

"PLAYING POSSUM."

Editor Forest and Stream:

The supposition of a recent correspondent relative to the opossum coiling solely from fright when attacked, is, I think, erroneous. I believe this remarkable little animal occupies a position very close to the fox for cunning and sagacity, and that its actions are due at least to instinct, and perhaps to reason.

I have known this animal to submit to the most terrific blows of a club, without, apparently, moving a muscle; but on placing a fire brand in close proximity to his flesh he would scamper off as rapidly as his motive power could carry him.

In fact, with regard to the brain power of our lower animals, I venture the prophecy that before many years have passed our scientists will have conceded that those actions that are now attributed to mere coincidence or instinct in our animal kingdom, are, in reality, the outgrowth of a systematic course of reasoning or original thought.

I have seen the fox adopt tactics to outwit the hunter, that for instantaneous originality and shrewdness, would outwit ninety-nine out of one hundred men.

The raccoon, in these respects, is almost, if not indeed, quite on a par with reynard, and I hope in the near future to place before the readers of FOREST AND STREAM a few facts gleaned from personal observation of animals in their native home that will prove my assertion.

PITTSBURGH, Pa.

C. A. R.

WHITE MUSKRATS.—In your edition of July 23 ("A. G. H.") comments upon the rarity of white muskrats. A family of white muskrats were placed in my hands to be mounted for the Earl of Dunraven, if I remember correctly. They had been obtained by some one of his party when it made the very extensive collection while on the tour of this country in 1875-6-7. I was at that time engaged with Prof. H. A. Ward at Rochester. One day four very beautiful albino specimens of the muskrat were given me to prepare and remount into a characteristic group. They consisted of an adult female and three young about two-fifths grown, and all of them a pure chalk white. They were considerably contorted by the

botch who first skinned and undertook to mount them, and it was with some apprehension that I decided to remodel and give them their true form, for they were too valuable to run much risk. However, after some difficulty they were prepared and combined into one of the most novel groups it has been my pleasure to make. Albinoism among mammals and birds is much more common than is generally supposed. As another interesting example of the subject we have at our establishment, 738 Broadway, two albino wolves of the largest type. One is from Siberia, and came with a lot of 700 skins. The other came from Hudson's Bay. The former skin has a slight creamy or yellowish tint, but the last mentioned is a clear chalk white.—FREDERICK S. WEBSTER.

CAROLINA PAROQUET.—Savannah, Aug. 8.—In reference to Mr. Frank M. Chapman's letter in regard to the Carolina paroquet in last number of FOREST AND STREAM I beg to say that this species was fairly abundant in Hillsborough and Hernando counties, Fla., as late at least as 1878. The flocks were generally from ten to thirty in number, and I saw the greatest numbers in the sandhill region, they seemed to feed in the small cypress swamps. The cry of this species is harsh and can be heard a long distance.—THEODORE GORDON.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—Purchased.—One rhea (*Rhea americana*), two European jays (*Garrulus glandarius*), two spotted-sided finches (*Ammodramus latham*), one moccasin (*Aneides*), five ground rattlesnakes (*Crotalus adamanteus*), five ground rattlesnakes (*Crotalus mitchellii*), one harlequin snake (*Elops fulvipes*), one copper snake (*Ameletus*), one copper snake (*Ameletus*), five American glass snakes (*Ophiostoma centralis*), ten corn snakes (*Coluber guttatus*), three chicken snakes (*Coluber quadripunctatus*), four king snakes (*Ophibolus getulus*), four hood-nosed snakes (*Heterodon platyrhinos*), three banded water snakes (*Tropidonotus fasciatus*), three scarlet snakes (*Cnemidophorus coccineus*), thirteen black snakes (*Basiscantium constrictor*), three coachwhip snakes (*Basiscantium flagelliforme*), eight pine snakes (*Pituophis melanoleucus*), two indigo snakes (*Spilotes crehensis*), two green snakes (*Cyclophis vernalis*), six ringed snakes (*Tropidonotus natrix*), two slow worms (*Anguis fragilis*), eight cistern newts (*Amphibia cristata*), and one fire-bellied toad (*Bombinator iguana*). Presented.—One red fox (*Canis vulpes fulvus*), one weasel, two common seals (*Phoca vitulina*), one sparrow hawk (*Falco sparverius*), one bulfinch (*Pyrrhula ludicilla*), one red-winged blackbird (*Agelaius phoeniceus*), one screech owl (*Scops asio*), two American yellow birds (*Chrysomitris tristis*), one peacock (*Pavo cristatus*), two alligators (*Alligator mississippiensis*), one water snake (*Chionosternum peninsulanicum*), one carinated tree boa (*Trophidophis melanurus*), one tree boa (*Epiplatys anguifera*), one black snake (*Basiscantium constrictor*), three Blanding's terrapins (*Emys blandingi*), one horned lizard (*Phrynosoma cornuta*), one snapping gecko (*Hemidactylus rupicapudus*), and one spotted salamander (*Ambystoma punctata*). Born.—One elk (*Cervus canadensis*) and one raccoon (*Procyon lotor*).

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

STILL-HUNTING DEER WITH BIRD DOGS

Editor Forest and Stream:

In an article contributed to your paper I described a method of hunting turkey with pointer and setter. Those dogs are equally as useful in still-hunting deer. They take to it as readily as to fowl. If well broken for turkey they will slow-trail deer, or if the game is lying in covert lead the hunter to it, setting it the same as if quail or prairie chicken.

Often than otherwise in hunting in heavy covert, without such a dog, a deer will spring up and away without the hunter seeing it, or he may barely have a glimpse of it, its presence being generally known only by hearing it run, or if there is snow by seeing its trail. Not expecting to obtain but a shot or two a day, if that much, the hunter does not at all times carry his gun at a ready, as it is very tiresome to do so a whole day, especially if the gun be heavy. Again, deer may spring up in very unexpected places, and at such time the gun may be on the shoulder, and the quickest of shots not be able to bring it to bear in season. With such a dog the hunter will be apprised, and have his gun at a ready, knowing of the presence of game and the probable place of its springing up.

I have used six different bird dogs, which I trained to still-hunt deer, two pointers and four setters. I could tell to a certainty whether they were winding deer or lesser game. Walking no faster than myself, a few steps in advance and naturally very quiet, when they winded a deer they would carry their heads more erect than when winding smaller game and manifesting more anxiety, and in approaching a lair their tread would be cat-like, and every muscle would seem to be strained to its utmost tension, and without moving their head they would frequently turn their eyes to me as much as to say, "Look out!" On such an occasion the eyes of one of my pointers, when turned to me, seemed to glow like coals of fire, his excitement was so intense.

When very dry in timber, still-hunting deer is very difficult. The rustling of leaves, the breaking of twigs in walking, the rubbing of the clothing against brush on a still day can be heard a long distance. Whoever has seen the head of a deer lying in covert without having been seen by the deer will have observed that its ears are constantly in motion (I believe the same to be the fact when they are asleep), turning slowly in different directions; and when the ear has caught a sound it will be turned in the direction of the sound.

Sometimes a deer will lie very quiet when they see the hunter; but let the eye of the hunter and that of the deer meet and the deer will be away the moment the two eyes meet.

Out of rutting season deer will ordinarily lie down by an hour after daylight, then your dog may strike the trail and lead you to its lair. Many deer are fatally wounded and lost to the hunter if there be no snow and the hunter has no dog. This is often the case when hunted with the shotgun. Often deer, when mortally wounded, will not bleed externally, and if they do the character of the ground may be such as to make trailing by the blood difficult, if not impossible; but with a dog thus trained you can find your game if dead or bring it to bay.

On one occasion a friend and myself had been to the marshes and ridges for deer for a couple of days, but not meeting with success, we started for a lake for ducks and geese, and when near the lake and passing a large marsh

with our team, we saw a young man and an old man beating the marsh. Presently a large buck sprang up and both men fired at it. The buck ran beyond gunshot, then stopped a few minutes and looked at the men, then resumed its flight. The men came to where we were, and I told them they had mortally wounded the buck; that I never knew an instance where a buck had been shot at and had acted thus, but it was mortally wounded. The men went back and took up the trail and followed it into a ridge of timber. We camped near by, and the men returned to our camp and said they had found blood and followed the trail almost through the timber near to another large marsh when they lost the trail. I said to the men that the buck had gone into the latter marsh to lie down. When the men returned to our camp they were disputing as to which of them had wounded the buck. The young man was armed with a shotgun and the old man with a long, old-fashioned Kentucky rifle. Taking my dog I went with the men to the west side of the latter marsh so as to have the wind of it, the buck having run down wind, and commenced beating the marsh across wind, going deeper into it at each point. Soon the dog turned his nose up wind, and following him I found the buck in about the middle of the marsh, dead, killed with buckshot.

The old man had not touched it with his rifle, and seemed much crestfallen, as he had been boasting to the young man what a sure shot he was with that rifle, while the young man was green at hunting.

At another time a friend and myself went into the same region for deer, and had been there several days without seeing game. After dinner I thought we had better return home. My friend thought we had better put in that afternoon hunting and return home in the morning. We started west cross wind, which was blowing freshly from the south. When about half a mile from camp the dog turned his nose into the wind and we followed him half a mile or more, when down came a large and a small buck on a slope. They came so near me that I sent an Ely cartridge through the body of the larger buck and then killed the smaller one with the rifle.

After dressing the game I took my belt axe and started to cut some forks to put the deer out of reach of wolves, and had gone but a few steps when my companion hailed me, "Say, L., your dog is making a point." As I was turning to get my gun, out sprang a doe from a small thicket not 200ft. from where I had killed the bucks. It was rutting season, the doe had tried to hide from the bucks; they were trailing her. It was the doe the dog had winded in the first instance, and we happened to be in the right place at the right time. At such season a buck will trail a doe as easily as a dog can.

For still-hunting deer the dog must be thoroughly trained to understand and obey the slightest directions by voice and gesture and the whistle. A dog that you have to be continually scolding is a nuisance in still-hunting deer or turkey.

For the last five years I have been without a dog, and I feel the loss very much, not being able to cover as much ground in a day as when younger.

Many amusing incidents happening while hunting deer come into my mind as I write. My brother once made me a visit when he had never seen a deer, but was a very good shot for a boy. A friend, brother and myself went into the ridges for a day's hunt for deer. When beating the brush the friend fired. After we came together, brother inquired what the friend had shot at. Friend replied, "A deer. Did you not see its flag?" Brother replied, "I don't know what you mean." It was explained to him that the flag was the deer's tail elevated and waving as the deer ran. "I saw something white flitting through the brush," he said, "I thought it was a white bird. I could have shot it. The next white bird like that I will shoot." We obtained no game that day.

A few days afterward my brother and myself went into some timber for deer. Directing my brother to go down along one foot of a brushy ridge, I went down the other with the dog, so as to have the wind of the ridge. The dog turned his nose up wind, and I followed him. Presently I heard the report of brother's gun; and the dog being anxious, I bade him go quickly. Running to the crest of the ridge, I saw a sight to see worth more than a circus. The dog had a large doe by the throat, and brother had it by one of its hind legs. There was some grand kicking, tumbling and sprawling, a much-mixed-up mess of deer, dog and boy. After enjoying the scene for a moment, I went up and killed the doe with my knife. Brother had stunned the deer by creasing it, and as he was looking at it, having laid down his gun, the deer sprang up, and the dog being present, both seized it. After brother had recovered his wind he said, "I saw that 'white bird' and shot at it."

The nephew of a friend came to pay his uncle a visit. The young man had never seen a deer. We gave him a hunt, going into the ridges with a two-horse wagon. On arriving near the timber I took the young man to an open space beyond that timber, where I thought a deer would pass in case one was started by the rattling of the wagon when it should be driven into this brushy timber. I also took a station near by. The young man was armed with his uncle's double shotgun.

Upon the wagon being driven into the timber, down came a splendid buck, dancing and prancing along with mincing steps, its attention being wholly directed to the rattling of the wagon. The buck came within easy range of the young man. As soon as he saw the buck he pointed at it, and partly turning to me, saying half aloud, "There he is! there he is!" at the same time nodding in the direction the buck was moving. I tried to draw bead on the animal with the rifle, but this young man, in spite of my efforts, would keep in the line of range. The uncle breaking cover, took in the situation and hallowed, "Lie down, Joe! lie down, Joe!" but Joe did not lie down and the buck escaped into the timber. The young man was so excited he forgot he had a gun in his hands. I thought my dog standing at my side looked disgusted at the outcome.

H. L.

GLOUCESTER, Mass., Aug. 5.—Beach birds are plentiful now. Two men shot about 200, I am told, and another one about 100 in a single day recently. They find sandpipers, ringnecks and chicken-plover, and a little later the winter yellowlegs will be here.—E. F. L.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—A. D.

CHICAGO AND THE WEST.

CHICAGO, Ill., Aug. 6.—The flurry of excitement has not yet died out here over the restaurant cases, of which mention was made last week and earlier. The first of the cases was brought against Chas. Kern, county treasurer of Cook county, ex-president of the State Sportsmen's Association, president of the Audubon Shooting Club, restaurant keeper, etc., etc. The hearing was to have been next Monday, but Mr. Kern was wise enough to forestall that. Day before yesterday he dropped into Justice White's office and threw himself on the mercy of the court, pleading ignorance, youth, inexperience, first offense and an alibi. The court promptly fined him the limit, \$25, with costs, total \$32. This was in the case of the bird ordered by myself and tasted of and examined by Messrs. Mussey, Low and Dicks. On the evening before Mr. Mussey had obtained another prairie chicken at this restaurant, and three evenings before that another gentleman had still another prairie chicken. Beyond that, Mr. Kern is reported in the columns of a friendly paper to have admitted that his steward had purchased six prairie chickens for purpose of sale. I see no reason on earth why Mr. Kern may not and should not be fined not only twice \$32, but three times \$32, and more than that, six times \$32, always provided that his steward told the truth in owning up to only six birds. As one paper here puts it, County Treasurer Kern as a sportsman heartily approves of the action of his fellow sportsmen in fining restaurant keeper Kern for violating the game laws, while restaurant keeper Kern is angry at sportsman Kern for getting into any such a fix. Now, I would like to ask County Treasurer and sportsman Kern if he sees any good reason why restaurant keeper Kern should not be fined six times \$32 or \$192? And I would like to ask restaurant keeper Kern if such a fine as that would not be a powerful jog to a man's memory? And I would like to ask both sportsman and restaurant-keeper Kern if a good round fine like that would not be six times as good an incentive as \$32 to induce sportsman Kern and restaurant-keeper Kern to get a little closer together next year, when this dangerous season again comes round, and each is again going his way apart. Why should we remit on a single bird when we can get a case on it? Is it not the full severity of these lessons which gives them their usefulness? If we get a light fine or a stayed fine, of what use is that for a public lesson? We intend to hold all these other cases for every bird we can, and why should we treat Mr. Kern, either one of him, any better than any one else? Mr. Kern, both of him, has this recourse left in face of a criticism like this, and that is exactly what would be only a wise, tactful thing for him to do. He can step into Justice White's court, he can inform against his own restaurant, he can say, "Here, I'm done with this; my restaurant did sell six birds, and I know every one of them was as illegal as any other one. Here's \$192. Does that square it?" That would square it. Half the fine would be paid into the treasury of the Illinois State Sportsman's Association, and at the next spring's meeting of that body he could come forward with clean hands and vote for its disposition for the prosecution of other violators of the law. Clean hands in sportsmanship are what we ought to have, and the mere formality of washing them does not always make them clean. Mr. Kern's friends now hesitate to prosecute him any further, but he ought not to hesitate for a moment to prosecute himself, and if only as a measure of self-protection. He ought to pay \$192 and not \$32.

I do not insinuate that Mr. Kern will need a lesson to keep him from selling any more illegal game, but I do say that all these other restaurants need a lesson, and a sharp and severe one, to keep them from selling such game right along. I see no reason why we or Mr. Kern, as sportsmen, should pass upon the wisdom of the law, and no reason why we should distinguish between violations of that law. Merciless this may be, but mercy is not what is wanted, if we mean that we really want to see this sale of illegal birds stopped. If we are only out for a talking-bee, very well; then fine them all one bird around, and go away and let them get back to selling again as quick as possible, as most of them, barring Mr. Kern of course, will do. Mr. Kern should not wish to see justice tempered with mercy in his own case, because he is a level-headed sportsman. Now, he can spend \$192 better and more wisely and more tactfully than he ever spent that amount before in his life. Will he do it? Read the answer in the stars; there are no restaurants there. But I hope he will. It would be such a nice thing for him to do. Won't you do this, Mr. Kern? Come, let us have some of that oft-quoted poetry of justice.

I don't seem to be able to quit writing about this, for I have been thoroughly indignant at seeing these little young birds so commonly offered on sale all through this city. When will the time come when game will no longer be legal merchandise, at any season? Not until the fields and covers are bare of it, I presume. This fall men will write me asking where they can find some prairie chickens. I shall direct them to South Water street freezers.

At present one freezer in Chicago market is said to be empty. Fred Smith has shipped his game to Boston, about 2,000 lbs. of venison and a lot of quail. At least, so says the well known shooter here who, truer to his friendship for Mr. Smith than to his friends the prosecuting sportsman, warned him to be on the lookout.

In this work it was hard to get sportsmen who would go out after evidence, though plenty could be found who would stand around and holler. "It's a shame!" the prominent sportsmen would exclaim, and tears would stand in their eyes. "Oh, these wicked men, to sell illegal game!" they would say. But would they hustle? Nay, verily. "If you will go to the Stock Exchange restaurant, corner of Dearborn and Monroe streets," said I to one of a firm of sporting goods dealers in this city, "you will find on the bill of fare 'Teal duck, whole, 45 cents.' I saw it there when I happened in with a lady. Can't you get a friend to go and locate that?"

"I would like to go—it's a shame—but I don't dare to, on account of my business," was the reply. And so it goes. I wish to offer a letter from Mr. A. C. Collins, the well known violator-jerker of Connecticut, president of the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish. This I would do not as a rebuke to any one, but as an incentive to all by way of a word from a live, active man. The letter runs:

HARTFORD, Conn., July 31.—I have just read the exploit at Kern's. Go for him. Those milk-and-water-shaky-afraid-of-

their-shadow persons who wish to be called sportsmen make me weary. You are going at 'em (game law violators) right. I sincerely wish you and your friends success. I have no particular use for no "sand" sportsmen. Down with game law violators should be the war-cry of every honest sportsman.

A. C. COLLINS.

Aug. 7.—The merchandise of game made possible paragraphs like the following, which I find: "JAMESTOWN, N. D., July 25.—Two buffaloes were seen some thirty miles southwest of this place last Sunday. A ranchman gave them chase, but being poorly mounted failed to capture either animal. These buffaloes are doubtless the last of the race that is at large. A few years ago a small band were discovered feeding in the hills a short distance from this city, and one big bull was killed. How these two managed to escape slaughter for so long is a mystery, as they have been persistently hunted by both whites and Indians for two or three years."

Mr. E. D. Graham and Mr. Walter Waddington, a young Englishman, have inquired for some place along the Milwaukee & Northern line to spend two weeks of outing, and I have sent them to Thunder Lake and river for a first camp, with advice about Ellis Junction and Middle Inlet country, and a hint about the Little Oconto country. They should be well located if they get any sort of a guide for a teamster.

I am very often asked to direct parties wishing to go into Wisconsin for a summer trout or mascalonge trip. The other day a gentleman surprised me by stating that "last summer they killed a good many grouse with the rifle." Nearly every party that goes in takes a rifle. Why? I was prepared for the question which followed, as with a confidential smile the gentleman asked, "Do you believe it's all right to kill a deer for provender when you're camping out in the summer?"

"No, I don't," I replied to him, "and I don't believe in taking a rifle along in there in the summer time, and I don't believe, moreover, in directing or aiding or advising men who believe that is all right." A large number of deer are killed every summer in Wisconsin by fellows who try to justify themselves by such specious excuses as the above. It makes me tired. If I wanted to rob, I'd just come right out and say, "Here, I'm a robber; I'll steal, I will. Get on to me, see?" But I wouldn't try to steal behind my own back. The man that kills a summer deer simply steals from the people. It isn't honest. Leave the rifle home.

Mr. Hud. Jones and Mr. Percy LeRoy start soon on a delightful canoe voyage in the North Peninsula of Michigan, of indefinite duration. Mr. Jones will stay in till cold weather. They will try the Brulé, the Menominee and the Michigami. I advised Mr. Jones to try the Ontonagon, as he would be almost certain to get good trout fishing there, and this he will probably do, although I can personally testify that the Brulé has abundance of 2 and 3 lb. trout left this summer, for I saw them.

Mr. R. B. Organ, and for that matter Mrs. Organ also, is mourning a loss which they will never see repaired. Their dog Cleaver is dead, having finally yielded to old age and rheumatism, after long months of helplessness. I have mentioned Cleaver before. He was one of the best known dogs in Chicago, and I doubt if there ever was a more intelligent. His sire was an Irish setter, not quite full bred, and his dam a Chesapeake Bay. Cleaver looked more like a Gordon, of which strain he had about one-thirty-second, through his sire. Human companionship had made this dog almost more than brute. At 10:30 every night he went to bed, on his own motion, at that time going into another room and carrying in his own bed, which he arranged at the side of the fire. Cleaver could count up to 7 and he could connect sound with ideas up to that number. Mr. Organ would tell him to get up in a chair and would then throw a number of objects on the floor, his collar, chain, a glove, etc., etc. When he said, "Cleaver, go get your collar" (or glove, chain, etc.), Cleaver would at once go to the heap of articles and pick out the one designated. He always did this without the least hesitation. Some dogs learn to do this trick to some extent, but are uncertain or puzzled at times, nosing over the articles, but Cleaver's mind always seemed clear and he knew how to associate the command with the right article at once. I have seen a dog pick out his master's watch or pocket knife from among a dozen by scent, but this would not account for Cleaver's feat. He simply heard and understood human speech up to the extent of those seven articles. For Mrs. Organ he would fight, even if Mr. Organ himself raised a hand against her in pretended rudeness. They will not see his like again.

Mr. E. C. J. Cleaver (it is a mere coincidence that Mr. Cleaver's name follows that of Mr. Organ's pet) is just back from a two weeks' trip on Delavan Lake, Wis. This lake I have already mentioned as one of the very most beautiful around Chicago, and it is full of interest and fish. Mr. Cleaver, as many know, is an ardent yachtsman, and he returns to Delavan to-morrow to participate in a little twelve miles race which was recently postponed. The lake is about five miles long. It is much frequented by summer people, but I do not hear of many expert anglers who have tried it, and so do not depend upon reported fishing. Two gentlemen last week caught twenty-five wall-eyes, pickerel and bass, just plain minnow fishing and not casting, in one day. Neither fisher nor summer man need fear to risk it at Delavan Lake.

Fox Lake hotels, and all the places, farmhouses and all, along Lake Marie, Camp Lake, Loon Lake, Silver Lake, and dozens of others, are now crowded. The Mak-saw-ba Club boys, on the Kankakee, however, are the only ones of whom I hear who are doing any steadfast angling, and they are catching good strings of bass every Saturday.

E. HOUGH.

VIRGINIA BAY BIRDS.—Norfolk, Va., Aug. 4.—The bay bird shooting at Currituck is very good now. I took some friends from Pittsburgh, Pa., down on July 23. Our party bagged 250 yellowlegs, graybacks, willets and curlew in one day's shooting. Some other members of the Martin's Point Club bagged about 250 on Friday of last week. Should any of your readers or friends desire to join a club where they are certain of always making a good bag, I heartily recommend this one. Any information desired may be obtained by addressing J. B. White, Norfolk, Va. Tarpon (silver king) are still being caught off the Princess Anne Hotel. Our party found a very large one on the beach on our way down to the club in July. Our bay bird shooting was never better than now; all will last through August, September and up to Oct. 15.—YELLOWLEG.

NEW YORK STATE ASSOCIATION.

Editor Forest and Stream:

Oneida county sportsmen have been greatly interested in the articles published in the FOREST AND STREAM recently regarding "The New York Association." The letter of Gen. D. H. Bruce, of Syracuse, met with the warmest approval, and a number of associations would be glad to enlist in the work he so admirably outlines. The subsequent letter of Horace White, president of the Sportsmen's Association, was also commended, but there are serious objections to the plan he suggests. The FOREST AND STREAM editorially hits the nail on the head. If the sportsmen of the State are to form an association that is to be protective not only to fish and game but to the forests, not a moment should be lost. It is high time to act. There has been and still is too much apathy among sportsmen, although there has been a great awakening during the past twelvemonth. Many who scarcely gave the matter a thought before are now emphatic in their expressions that something should be done to preserve our grand old forests and that a State park should be established in the Adirondacks at once. This awakening of public sentiment has been brought about by the vast purchases of Adirondack lands by syndicates and the establishment of private fish and game preserves, by the wholesale devastation of the forests by lumbermen and the invasion of the wilderness by new railroads. Sportsmen who are not identified with the clubs owning the preserves are shut out from the resorts they have so long frequented in the southern and western portion of the Adirondacks, tourists are debarred from many privileges they formerly enjoyed, and those who seek the wilderness with the hope of regaining impaired health find themselves restricted to a few resorts by no means as desirable as those monopolized by the syndicates. Central New York sportsmen are anxious that some action shall be taken speedily. If it is desirable or advisable to endeavor to bring about the desired ends through the medium of the existing State Association, the urgency of the case ought to be sufficient to warrant President White in calling a special meeting at an early date to consider the matter. There is no shadow of an excuse for delaying action until the regular meeting of the Association next spring. There has been too much delay already, and if anything is done it should be done with a view to mapping out a plan of action before the next session of the Legislature.

W. E. WOLCOTT.

UTICA, N. Y., Aug. 4.

IOWA DUCK SHOOTING GROUNDS.

IF the readers of FOREST AND STREAM will look over the map of North America they will find almost directly north of Minnesota and Iowa in the British possessions the greatest breeding grounds for ducks and geese in the Northwest. There are thousands of lakes and sloughs, in which grow great quantities of wild rice. There is nothing that ducks and geese like to eat as well. They will find it wherever it grows. South of the lake country in the British possessions is almost a continuous chain of lakes running through Minnesota and the northern part of Iowa. When the northern ducks and geese are on their way south in the fall they drop into these Iowa and Minnesota lakes and feed on the wild celery and rice which grows in many of them. In the northern part of Buena Vista and Pocahontas counties, Iowa, are located many of these lakes and sloughs, and there is also considerable flat land which is not very well settled. Here may be found fine shooting. In and around the lakes and sloughs may be found ducks and geese, and on the higher lands good chicken shooting may be had.

There is good prairie chicken shooting almost anywhere west of Eagle Grove, a division station on the C. & N. W. R. R. Eagle Grove is a fine town for sportsmen to stay in. There are many local sportsmen, and they are very gentlemanly to visiting sportsmen. Mr. Young, of the Railroad House, takes great delight in making sportsmen as comfortable as possible. Nothing is left undone by him. He is always at their service.

West from Eagle Grove is located a nice little town called Rubens. It is on the open prairie, and the shooter will have to go but a short distance to be on the chicken grounds.

West of Rubens, about 10 or 15 miles, we come to the town of Laurens. This town is also located on the open prairie, and is one of the best points in Iowa for shooting. Northeast and southeast of the town is a fine duck country. At times, I think, the mallard duck shooting cannot be surpassed in the west. The town of Marathon, west of Laurens, is located a few miles east of the Little Sioux River. It is a fair shooting point for ducks, good for chickens, but too near the Little Sioux River for the best duck shooting. Where the river runs through that part of the country the land is quite rough. As we go west, toward Sioux Rapids, we find high "river bluffs," some of them more than 100 ft. above the river. Good shooting may be had in the spring at river ducks, but I am not able to say what the fall shooting is, but would not think it would be first-rate, as the country is so rough.

At Sutherland we are out of the valley of the Little Sioux. Good chicken shooting may be found anywhere in the southern part of O'Brien county. J. G. S.

MASSACHUSETTS SHORE BIRDS.—Boston, Aug. 6.—As near as can be learned no big bags of shore birds have yet been made by the Massachusetts gunners, though the law was off on July 15. It is in the midst of the mid-summer vacations, and everybody is more interested in vacations of some other sort than with gun and dog, though some of the boys are getting ready their decoys and practicing with the bird-call whistle. But the weather is hot and the sport starts slowly. Grouse have not yet been seen in any considerable numbers in this State, in fact those who take notice of the young broods report them scarce. In Maine the hope is that there is to be a fair supply of grouse for the gunners. In May and June a good many broods were reported, but later the weather has been cold and wet at times, and the fear is that the broods have suffered.—SPECIAL.

The best harness dressing is that which has been tried and approved by the largest number of practical men. The test of half a century places Frank Miller's celebrated harness dressing at the head of all American preparations of this kind, and its popularity is such that most others have been distanced in the race.—ADO.

Camp-Fire Flickerings.

"That reminds me."

THE BOYS A-FISHING.

I HAD just arrived in the town of L., and being a stranger I was lost for the want of amusement. Having finished one cigar, I might have smoked another to while away the time, but that was against my principles. So I started for the river, which was about 200 yds. in front of the hotel in which I had taken my lodgings. As I neared the stream I heard some one say:

"Bill! Bill! I've got a bite. I tell you it's a big fellow too."

The voice, I perceived, was quite near, so I directed my steps thither and took a path leading around a knoll. I followed it and soon came in sight of two fishers. It was a pretty sight. Nestled among the trees was a rustic bridge, and leaning far over it were two boys tugging away at the fishing line, their clothes bespattered with mud and water, but their faces all aglow with the prospects of carrying home the big fish that was just then giving them so much trouble. I stood looking on, while many instances of my boyhood days were called to mind and the many times I was flogged for wearing my Sunday clothes on my fishing expeditions (of course I did not soil them). Pretty soon I heard one of the boys say:

"Here he comes! pull hard!"

The pull was too hard for them. Over they went, one falling head first into the water. I ran to the bank, and by this time the little fellow had recovered himself and swimming vigorously for the shore. He came up the bank blowing the water from his face. I expected to hear him cry, but he looked at me winking and blinking, trying to get the water from his eyes, and said so seriously, "Well, Mister, that was a big fool!"

It amused me considerably, as also the boys, to find that the hook had only caught in some bushes which held it fast.

A FISHERMAN'S SONG.

DEDICATED TO ALL THOSE WHO LOVE THE FOREST, LAKE AND STREAM.

THE deer from his red coat the night dew is shaking—

Fisherman, up and away!

The birds in the forest with glad songs are waking—

O, fisherman, why will you stay?

The sun o'er the hilltops is timidly peeping—

Fisherman, up and away!

Arise O thou fisherman why art thou sleeping?

O, fisherman, why will you stay?

Through mists of the morning the wild duck is flying—

Fisherman, up and away!

In the depths of the lake the black bass is lying—

O, fisherman, why will you stay?

The bright sun in the east the night clouds is flushing—

Fisherman, up and away!

O'er their wild rocky beds the clear brooks are rushing—

O, fisherman, why will you stay?

O there is more joy in the forest, on billow—

Fisherman, up and away!

Than man ever found on soft bed or pillow—

O, fisherman, why will you stay?

FREMONT, Mich.

DR. JOHN W. McNABB.

RAINBOW TROUT OF THE McCLOUD.

Editor Forest and Stream:

Your correspondent "Scarlet-Ibis," in number of June 11, mentions the Dolly Varden and rainbow trout.

A perusal of his article recalls most agreeably the two weeks spent by the writer and Nat. B. Harmon on the famous McCloud River in Siskiyou county, California, in June, 1887. Leaving San Francisco the evening of the 17th we take the sleeper of the Portland train at Oakland Mole, and the next morning finds us at Sisson, 250 miles north, and at the headwaters of the Sacramento, here but a meadow brook.

While eating our breakfast at Sisson we interview the landlord regarding the best fishing places, and he refers us to the driver of the Fall River stage, which leaves in twenty minutes. "Wall, ye git in with me an' I'll set ye down over on the McCloud." We ask him how far he proposes to take us, and learn that the nearest stopping place is Downing's Ranch, 18 miles east, at the southern base of Mt. Shasta, which looms up 14,400 ft., bright and gleaming with eternal snows, a prominent landmark for a hundred miles in any direction. Having come to this point simply on the reputation of the McCloud to furnish trout of remarkable size and vigor, and with no definite destination in view, we quickly place our traps and ourselves in the open spring wagon, and hugely enjoy the ride in the fresh, crisp morning air over Squaw Mountain, and noon time brings us to Downing Ranch, a two-roomed log house, a stable of "shakes" without roof, and a sheep corral.

The driver introduces us to the ranch people, who conclude they can take care of us; so after a hasty lunch and rigging up in our fishing gear, we ask to be directed to the most likely place on the stream, which we find at its nearest point is some two miles away. Only the old people were at home that day, and they directed us to the Upper Fall, some distance up the stream. We found a fall of some 90 ft., at the foot of which was a swirling, eddying stretch of water, with dark, deep cavernous holes among the rocks that looked the very home of the famous beauties we had come so far to interview.

A word as to our tackle. My companion, an ardent lover of the royal sport, a veteran angler, is just now about to test the qualities of a new split bamboo from the hands of some noted maker, and I have an humble rod of ash with lancewood tip, light, strong, and of that whiplike flexibility and perfect balance so pleasurable to

feel. Our flies, a varied assortment of the commoner kinds, the hackles in grays, browns, ginger, etc., predominating. We are each supplied with 6 ft. leaders, lines of lightest silk, in color darkest green, and small multiplying reels, and ample room in our creels for all that may come to our hooks, which, by the way, are No. 8.

Thus equipped, we fearlessly make our first casts, and for some time are successful; but as the shadows lengthen small trout of 6 to 8 in. begin to take the fly, and at sunset we count a total catch of 104. Wending our way over the trail to the ranch, we discuss the situation, which, considering the largeness of our expectations as to size of the fish to be found in this stream, seems discouraging.

At our supper of fried trout and corn bread we meet the young son of our host, Will, a stalwart youth of seventeen, who laughs at our catch of "little uns," and says he can show us where we can see "some whoppers jumpin'," but in rather a sarcastic vein remarks that we "can't get 'em with them little bits of poles." In fact, he had "got on" numerous big ones, but they had either broken his "pole," the line or the hooks, and he looked with contempt upon our slender tackle. However, Will proved extremely good-natured, and after breakfast at early dawn of the next morning we follow him to the hole at the big springs, some two miles below the scene of the previous afternoon and much nearer the house.

We find the river down in a narrow cañon, with rather precipitous banks of two or three hundred feet, and the hole a somewhat turbulent pool of good length and breadth, between immense springs, the waters of which issue from the rocks a hundred feet above our heads, and came leaping, tumbling and cascading down and mingling with the waters of the McCloud.

These feeders or springs, of which there are many in the short course of the river, find a channel under and through the lava beds all the way from the snow line of Mt. Shasta, a veritable nature's ice house, and afford an abundant and constant supply of the purest and iciest water to the stream below. The space between these two big springs—the largest on the river—is about 100 yds., and in the pool between, according to Will, the big trout lurked.

The morning is glorious, the sun just peeping through the tops of the giant sugar pines, and while we eagerly joint our rods and tie on our most taking casts a gentle breeze, drawn up the mountain gorge by some invisible force, slightly sways the bushes on the banks, and directly we see hundreds of June flies, dislodged from their retreat under the leaves, fly fluttering with damp and heavy wing over and near the water's surface. Talk about rainbow trout. They began their breakfast right then and there. Dozens of 2-pounders could be seen at a glance, as they leaped high, their beautiful sides gleaming in the morning sun, 16 in. sections of the most brilliant rainbow.

A thrilling sight, truly, and we hastily change our flies for the gray and ginger hackles, as most nearly approaching in color the drab and dun of the natural fly, for which the trout so plainly manifest their liking. After two or three short casts to get the leaders straightened, I reach out a little further and softly drop my cast just over where but a moment before a grand specimen had shown me his whole length, when the hungry fellow, as if to dare me to battle, again leaps clear from his element and, with a saucy flip of his tail and a most graceful summersault, disappears with my gray hackle. A slight and quick motion of my wrist, and I know that I have hooked my first rainbow. I have held a plow behind a yoke of unruly steers, and it seems an apt though prosaic comparison to the wild rush of that trout through the swift waters of the pool. When first struck he vaulted 2 ft. or more into the air, and with a vigorous shake tried to free himself from the hook; then, with zigzag and erratic course, down the stream he headed for a rock half hidden by a growth of watercress that partly dammed the channel at the foot of the pool, making the reel sing as it paid out the line.

With some effort I checked his mad charge, and shortening the line with every yielding turn, glanced about for a place to land my prize, for I have no net. Suddenly the tension upon rod and line is eased and I fear the game is off, but quickly reeling in, as he leaps again and again, and soon showing the first signs of lost vigor, I have him turning up his gleaming sides in token of defeat and he comes a weary captive to the ready hand of Nat, who, standing by, has watched the gallant fight of this gamey fish. Time, 13 minutes. Will, who has cut a pole in the brush near by, and has seated himself on a rock while making fast the small "clothes line" he has been wont to fish with, drops his work and wide-eyed and open-mouthed, is speechless from start to finish; but with the fish safely in hand he gives one wild yell and a jump to where I stand with thumb under the gill of my captive.

"That's my trout, my trout," he exclaims, and points to a wire snail hanging from the mouth of the fish, where sure enough I find a No. 2 hook firmly caught through the cartilage of the nose. Will recognizes this hook and snail as his property, which more than a week before he had baited with a grasshopper and cast upon the waters. It had been seized by this same trout and in attempting to land it in the good old way, by a vigorous jerk of the pole, the trout objecting to such violent methods, had kept part of the tackle in protest. This magnificent specimen of the rainbow trout weighed, when caught, 3 lbs. 9 oz. Will had hooked and lost so many in this same pool that he had come to believe that short of a good-sized sapling for a rod and a lin. bawser for the line, nothing could induce them to leave this, their favorite haunt. While I am telling all of this Nat has not been an idle listener, but has hooked an almost exact duplicate of my prize, one as full of fight, game to the last.

Here let me mention and comment on the fly-taking propensities of the rainbow as we found them. We confined our fishing for the next ten days mostly to this pool, and in this time took from its dark waters with the fly over 500 trout, all rainbow, that would average 2 lbs. each. The last day's fishing was as good as the first, with no apparent decrease in numbers or voraciousness. There seemed to be no small fish here, and their even size and wonderful vigor were most remarkable. Many were the repetitions of the scene describing the capture of the first fish, and occasionally, when two of these gallant beauties were struck at one cast, the long and exciting contest can be better imagined than described. We lost but few fish, as they rose to the fly with no uncertain rush, and we always saw our game the instant of

the rise, the fish invariably leaping clear of the water. Standing squarely facing across the stream, a long cast directly to the front would drop the flies well out, and the hackles, dry from their course through the air, would fall soft and light as a bit of down upon the swiftly-flowing waters, and floating airily while the slack of the line lasted, formed the most seductive lure. The good qualities of hackles, from the fact that they dry quickest while casting, were here firmly impressed upon me; and since that time their use in many of the mountain streams and lakes of the Northwest has confirmed my first impressions.

I have not since that time found another place where all the elements were so perfectly combined as we found them on that trip to the McCloud—no mosquitoes, no black flies. The weather perfect and the hungriest and gamiest trout it has ever been my experience to deal with.

We found no Dolly Varden unless a trout captured by Nat at the foot of a fall some eighty rods above the hole could have been one. Here at high noon the sun's rays penetrated a deep, still pool, and here we could see some large fish almost motionless near the bottom. They would not notice our flies, but a No. 4 hook baited with a piece of trout belly, a double gut leader, and a .44 cal. cartridge for a sinker, had the desired effect, and Nat had the liveliest kind of a time in very cramped quarters for 25 minutes.

This trout had the appearance of being a very old and overgrown rainbow, weighed 5 lbs., and measured 24 in. from tip to tip. In color one could imagine seeing where the brilliancy and beauty of the rainbow once existed, but now dulled and gray with age. I carefully and reverently scraped the moss from his venerable pate, fully expecting to find the initials "B. C." thereon, but he had outgrown all reliable evidence of his certain years.

Words are inadequate to describe the full measure of our enjoyment on this memorable trip. I have not since then visited the McCloud, but my lines have been cast in other places where the trout, if not so gamey, have atoned in size and numbers. Some time, if agreeable, I will tell you of the sport to be found in the waters of western Washington, the trout in the streams and lakes, and the salmon in the sound.

GEO. E. MILLER.

SEATTLE, Wash.

ANGLERS OF THE ST. LAWRENCE.

THE Anglers' Association of the St. Lawrence River convened at Clayton, N. Y., Aug. 6. Those present were C. G. Emery, Brooklyn; H. H. Warner, Rochester; Wm. P. Esterbrook, Rahway, N. J.; Frank P. Mathews, Potsdam; H. S. Chandler, Phil. Luther, New York; Dr. E. L. Sargent, Watertown; Geo. Sawyer, Syracuse; W. H. Thompson, A. C. Cornwall, Walter Fox, Alexandria Bay; H. S. Barker, Dr. Liddy, G. M. Skinner, R. P. Grant, John Foley, G. H. Strough, Clayton. Secretary Thompson, of Alexandria Bay, read the annual report:

I have to report a year of hard work and many perplexities. We have, with the aid of our State game protector, secured the capture of a large number of nets. The exact number I am unable to state, as the protector did not report the number taken.

The State Fish Commission has been very liberal to our association in granting us a protector for the river. We felt at the time Chief Drew was superseded that the service would suffer, and with that feeling we sent a delegation to New York to wait on the Commission and urge Mr. Drew's reinstatement, but failed. The necessary aid of two individuals was brought against Joseph Hazleton and Porter Holden. They were tried and acquitted, and I am glad to say that we have a very efficient and willing helper in our present chief, Mr. J. W. Pond. He has in hand some suits for violations in the county, and has employed Mr. Clon R. Brown, a very efficient and competent attorney, to prosecute for the State. I learn that Attorney-General Tabor will be the chief to push the suits to a successful termination, and will render the necessary aid. Two indictments were brought against Joseph Hazleton and Porter Holden. They were tried and acquitted. Since their acquittal they have brought suits against Protector Starring, Michael Haas, H. W. Visger, John I. Cornwall and myself. Our chief has employed E. R. Brown to put in a defense. We have had delegations at Albany in favor of the game law reported by the codification committee, which bill failed to become a law. The railroads have shown a willingness to do anything in their power to aid in the protection of the river from netters.—W. H. THOMPSON, Secretary.

A letter from Attorney-General Tabor was read, in which he writes: "I am in entire accord with the object of your association and pledge you my hearty co-operation in any undertaking you may have in view in furtherance thereof. In behalf of all the anglers of the State who are true lovers of the sport, I desire to convey the thanks to which yourself and your association are entitled for the good work already done and which I know you will continue to do in the future."

Treasurer R. P. Grant reported a balance of \$555.71 on hand. Messrs. Strough, Emery and Cornwall were made a committee on nomination of officers of the association. Upon their report the secretary was instructed to cast a ballot for the association, and the following officers were declared elected for the ensuing year:

President, H. H. Warner, Rochester, N. Y.; First Vice-President, H. S. Chandler, New York; Second Vice-President, Jacob Hays, New York; Secretary, W. H. Thompson, Alexandria Bay, N. Y.; Treasurer, R. P. Grant, Clayton, N. Y. Executive Committee: A. C. Cornwall, Alexandria Bay, N. Y.; J. H. Quimby, Albany, N. Y.; Jas. T. Story, Albany, N. Y.; G. T. Rafferty, Pittsburg, Pa.; A. D. Williams, New York; G. H. McKinley, Clayton, N. Y.; F. H. Taylor, Philadelphia, Pa.; C. W. Crossman, Alexandria Bay, N. Y.; David Stevens, Syracuse, N. Y.; G. M. Skinner, Clayton, N. Y.; W. P. Esterbrook, Rahway, N. J.; J. B. Wistar, Alexandria Bay, N. Y.; J. R. Stebbins, Dr. E. L. Sargent, Watertown, N. Y.; W. J. Cassard, New York; H. R. Heath, Brooklyn, N. Y.; C. A. Johnson, New York; W. I. Bascom, Alexandria Bay, N. Y.; W. W. Byington, Albany, N. Y.; C. A. Ellis, Dr. A. Bain, Clayton, N. Y.

The chair appointed Messrs. Strough and Chandler to draft resolutions in respect to deceased members.

A series of resolutions was adopted, after debate, as follows:

Resolved, That the Anglers' Association of the River St. Lawrence appoint a committee of three, besides the president, to co-operate with the State Sportsmen's Association for the Protection of Game and Fish to secure active legislation for further protection of the St. Lawrence.

Resolved, That a committee of four be appointed to confer with the Canadian Fish Commission with a view to securing their co-operation in the protection of the frontier.

The chair appointed G. H. Strough, G. M. Skinner, Clayton; J. L. Luckey, of Rochester, and Henry Folger, Kingston, as such committee.

Resolved, That the president of this Association appoint a committee of two members at each of the following places: Cape Vincent, Clayton, Round Island Park, Thousand Island Park and

Alexandria Bay, whose duty it shall be to solicit subscriptions of money from all persons visiting the islands and from residents, such subscriptions to be paid into the hands of said committee, or to R. P. Grant, at Clayton, W. H. Thompson or A. C. Cornwall, Alexandria Bay, for the purpose of creating a fund to be used in enforcing the laws for the protection of fish in this county. All funds so collected shall belong to the Anglers' Association and be paid to the treasurer.

The chair appointed as such committee to solicit funds for the furtherance of the objects of the Association W. P. Esterbrook, Thos. J. O'Donohoe, Cape Vincent; R. P. Grant, G. M. Skinner, Clayton; Anson Sweet, David Stevens, Thousand Island Park; R. S. Moseley, H. R. Heath, Alexandria Bay; F. H. Taylor, H. Van Wagenen, Round Island Park; Hamilton Child, Grand View Park; H. F. Inglehart, Central Park and Westminster.

This paper was headed by H. H. Warner with a subscription of \$100, C. G. Emery followed suit with another hundred, W. P. Esterbrook subscribed \$25. Walter Fox \$20, A. C. Cornwall \$25, W. H. Thompson \$20, J. A. Davis \$10, Wellington M. Willis \$10, E. L. Sargent \$10, Geo. A. Strough \$10, R. L. Moseley \$5.

Sixty-three new names for membership were proposed and accepted. The association now numbers 381 members.

The usual annual excursion of the Anglers' Association will not be made this year.

In proof of the association's good work Mr. Warner cited the fact that never before were there so many bass of less than a pound weight. He made an eloquent address on the subject of further protection of the game fish, and advocated the employment of a patrol boat in the waters of Jefferson county, which includes the lake shore as well as the river. He had been coming to the islands for nineteen years, and had seen the almost total annihilation of the wall-eyed pike in these waters. That excellent food fish as well as the white fish and lake trout had all but disappeared from Lake Ontario, and but for the efforts of this association the black bass and pickerel would likewise have been netted out of existence. He wanted it understood that violators of the game laws would be followed to the end of all law. No case would rest with defeat in Jefferson county, or Supreme Court. The Anglers' Association would carry every case to the United States Supreme Court, if necessary, to win a victory. No resident of, or visitor to, the Thousand Islands need be ashamed to solicit funds for the furtherance of the objects of this association. And all who participate in the sport made possible by the united efforts of the members should feel that they are contributing to their individual pleasure when contributing to the cause.

Wednesday was the anglers' day on the river, says *On the St. Lawrence*, of Aug. 7, and well can they feel proud of their achievements, not for success in tempting the finny tribe but for capturing the nets of illegal fishermen who gobble up the game fish of the St. Lawrence River and destroy the sport of fishing among the Thousand Islands. As the private steam yacht *Siesta*, owned by H. H. Warner, of Rochester, approached the bay at 11 o'clock Wednesday evening she was bubbling over with joy, and the peculiar toots of its rich-toned whistle aroused the villagers and visitors thereabouts and told them that something unusual had happened. The *Siesta* tied up at Cornwall's dock and its owner with several friends went ashore to witness the burning of thirteen nets that the *Siesta* had captured near Fox Island. It seems that the *Siesta*, after leaving Mr. Warner at Clayton to attend the meeting of the Anglers' Association, had received orders to continue up the river as far as Cape Vincent and watch for nets. State Game Protector Pond, of Malone, and Joseph Northrup, of Alexandria Bay, the game protector in this district, were aboard. They went to Cape Vincent and steamed about the lake in the vicinity of Fox Island. They grappled for nets and were astonished to find them so numerous in that locality. Capt. J. A. Davis, of the *Siesta*, espied a sailing boat off Fox Island, and with the aid of a field glass he could see the occupants of the sailboat pulling in their nets and making for the shore. A small boat was lowered from the *Siesta* and the game protectors started for the sailboat. When they reached the boat they found it overloaded with nets, in one of which were over 500 black bass. The men in the sailboat were Fred and Edward Barber. The latter made a desperate effort to turn the officers away. He struck at Game Protector Northrup with a hatchet, but was finally overpowered, handcuffed and taken aboard the *Siesta*, which conveyed them to Cape Vincent, where they were arraigned before Justice of the Peace Borland and the examination was set down for August 19, the prisoners being released on their own recognizance. The yacht, with her thirteen captured nets, then steamed away for Clayton, where H. H. Warner was taken aboard, and then it went direct to Alexandria Bay. The nets were thrown upon the dock, and at midnight were piled up in front of the Marsden House and set afire. At least property to the value of \$500 was destroyed in this way. Game fish of all kinds were caught in these nets.

MINNESOTA BASS.

DULUTH, Minn., Aug. 4.—I returned a few days ago from my second fishing trip of the season and a short note may not come amiss to future fishers. On the first trip I could only stay one day and decided to try a small lake three miles south of Aitkin, on the N. P. R. R., and hunting up a former companion we reached the lake about noon and at 3 o'clock commenced fishing. Black bass and rock bass took the bait as fast as it reached the water and at 8 o'clock we went ashore and counted our string and found we had 115 fish, nearly all black bass. The bass are very game and make a good fight, but this country is not a good one for fly-fishers. The fish will not rise to the fly but take frogs, minnows and worms at any hour of the day until late in the evening. The country here is full of small lakes and there is, undoubtedly, finer bass fishing here than at any other point in the country east of the Mississippi. Our catch was considerably over the average, but it is nothing out of the common to take 20 or more bass, weighing from 2½ to 5 lbs. a piece, at this lake any morning or evening. A party of nine of us were out last month at a lake 20 miles north of Aitkin and enjoyed a week of the finest kind of sport. The bass were all very large, from 3 to 5 lbs. each, and fought nobly against coming in out of the wet. I must not write any more at present and will save the account of our happenings for some future time.

EDWARD J. LUTHER.

THE ILLINOIS RIVER FISHING.

Editor Forest and Stream:

Nature has bestowed an abundance of beauty upon the Illinois River. The stream winds its way in a westerly direction, bearing to the south, between high bluffs on either side which rise in some instances out of the water's edges to a height of nearly 150 ft. These bluffs are studded with native pines, besides other forest trees, which give a most pleasing appearance to the country to those seeking a pleasure trip. The river is navigable for boats from this point to its mouth, and boats ply the water from here to Peoria, a distance of 73 miles, and return daily. The valley proper is from one to three miles wide, that is above Peoria. Along the valley there are many lakes or cañons which abound with fish of all kinds, especially those known in the northern Illinois waters; black bass and pickerel predominating.

This river is the home of the fishermen. The lakes and bayous along the stream are their fishing grounds, not exclusively, however, but generally. These are the places where illegal fishing has been going on for years past unrestricted until this season, when an attempt has been made to bring the violators to justice. During the past six months a large number of violators of the fish laws have come to grief through my vigilance and persistence to punish the offenders, regardless of who they may be. The outcome of the work done has thoroughly stirred up not only the fishermen, but those sportsmen who delight in taking a day off from business and spending a few hours along the banks catching fine strings of fish. The former know not at what time to place their illegal nets in the water, for fear of being caught in the act and given a heavy fine for their indiscretion. Of the latter, their words of approbation is sufficient evidence of their appreciation of the work so far done by myself.

There is one place on this river which I think worthy of mention, and that is what is known all along the river as Senachwine Lake. At this place illegal fishing has been persisted in despite all that could be done by the local authorities and the gun and rod clubs along the river. This lake is about five miles in length, opening into the river, and has always been the home of the fishermen. This is a clear sheet of water on the west side of the river, and has a fine gravel bottom in the larger part of the lake. It is supplied by many cool springs of fresh water which flow from the bluffs on the west into it, and near the extreme upper end a small stream or creek empties its contents therein. This makes it a favorable place for fish to spawn. The west bank of this lake rises rather abruptly out of the water, while on the opposite side the land is low and swampy. Here can be found in immense quantities the yellow and white pond lilies, and a larger and more beautiful species of water plant called the lotus. At this season of the year this is a grand spot, both for fishing and scenery.

There is a fine large three-story hotel near the upper end of the lake, called the Undercliffe Hotel. It is located on the most pleasant portion of the lake, with a clean gravel beach lying to the front and with fine forest trees surrounding the whole. This hotel is magnificently furnished in the interior, and is under the management of a Mr. Lincoln, whom one will find a very accommodating, agreeable and genial host, and one who takes a great pride in having everything to suit the wants of his guests. This hotel is easily reached from the Peoria branch of the C., R. I. & P. Railway, which has a station one-half mile from the Undercliffe and called Putnam.

Illegal fishing has been carried on in this lake to a great extent, and numerous persons had been coming to me and entering complaints of violations and requesting my assistance in the matter. These illegalities were done by large gangs of fishermen who had repeatedly defied all the authorities, and it proved a tedious task and one full of risks to gain sufficient evidence to convict them. To remove all the obstacles in this instance a man acting under my instructions and supervision—in the capacity of deputy fish warden—was sent to the lake to collect such evidence as he could. While there he saw enough to justify him in sending word to me, and I immediately went down to the lake. This was on July 28 just past. While there I saw two gangs of men commence illegal seining. One party of nine men worked a seine 650 yds. in length, 200 yds. of which was of illegal mesh, being 1½ in. only, 650 lb. of fish were taken with this seine at one haul. The other gang, of five men, on the opposite side of the lake were using a seine 320 yds. in length, all of which was of 1½ in. mesh. They were taking out with these seines very small sunfish and bass, too small to catch with a spoon hook. These fourteen men were arrested on the spot and taken by myself and deputy to Hennepin, Ill., where they were fined. The aggregate of the fines was \$176.85, which was paid. A good half day's work among defiant fishermen.

One of the peculiarities of the case is the fact that the Woods brothers are in charge of the Swan Lake Club House for a Chicago sporting club—the very fellows who are always shrieking for the enforcement of the laws for the protection of game and fish. But this seems to be a general rule (with but few exceptions). The men who call themselves "sportsmen" and declaim the loudest about enforcing the game laws are the very men who do the unlawful shooting and fishing. These club house owners are the greatest source of trouble to the fish wardens, as they, being the proprietors of the house and lease or own the land and water, lay claim to their rights to do as they please, regardless of the State laws. They have money to back them in their acts, and it is a hard matter for the authorities to make successful prosecutions. But sooner or later, I, for one, would be pleased to learn of the capture and punishment of these fraudulent sportsmen. (?)

Since making this raid on the representatives or managers of this club, I have been requested to extend my territory further down the river, by parties who are now, and have for years past been doing all that lay in their power to put a stop to the illegal fishing, and who have been thus far unsuccessful in their efforts. Many letters of encouragement are now being received from these gentlemen, who assure they will lend any assistance I may need to collect evidence in similar and other cases.

Some few weeks ago Mr. G. E. Cole, president of the Fox River and Kankakee River associations, was in La Salle in company with Mr. Bartlett and Fish Warden Beech, of Elgin, on the steamer *Lotus*. In conversation with Mr. Cole, he was anxious that an association for the protection of the fish be formed here, and gave the assurance that he would lend all the assistance in his power to

further such a scheme. He stated that when the citizens became interested in the movement then was the proper time to act. Since making this big haul of "suckers"—almost single-handed—a large number of gentlemen of this city, Peru and others along the river have become enthusiastic in the matter and wish an organization perfected as soon as possible. There have been over thirty of these gentlemen who have signified their intentions to become active members and to do all in their power to organize. Mr. Cole has been written to for a copy of the constitution and by-laws of the Fox River Association, which are considered standard. It has been suggested that the proposed association be called the Illinois Valley Game and Fish Protective Association. Mr. Cole will, no doubt, be greatly pleased to know that his advice has been made use of, and that his suggestions have borne good fruit in the establishment of an association, and one that will redeem itself in the pledges taken by the honorable gentlemen who shall comprise it. More will be written of the association as soon as more progress is made.

M. D. GREEN, Fish Warden.

LA SALLE, Ill., Aug. 3.

BOSTON MEN IN MAINE.

AMONG the Boston vacationists who have taken rod and line along with them may be mentioned Mr. S. C. Proctor, salesman in the hardware store of A. J. Wilkinson & Co., and Mr. E. A. Wilson, with B. S. & G. C. Wilson. These gentlemen went to Paris, Me., chiefly because it is the native town of Mr. Proctor. They did not expect remarkable fishing, but were rather happily disappointed. They tried Norway Lake one day for black bass and caught one of 2½ lbs.; but just as the sport began to be good there arose a gale of wind that made fishing impossible. Several nice strings of pickerel were taken from the Little Androscoggin and several from the vicinity of Snow's Falls. From this river at that point Mr. O. W. Thayer took a pickerel weighing 4 lbs. one day when they were fishing the Little Androscoggin below the falls. Mr. Proctor says that the idea prevails in that section that the stocking of Bryant's Pond, the source of the Little Androscoggin, with black bass has driven the pickerel down into the river. At least they are more abundant in the river since the bass have begun to get big enough to fight their way in the pond above. But over forty years ago, before the same pond was stocked with pickerel at all, it was a famous trout pond. Of late years no trout are found there of any account.

Mr. R. B. Foster, of the firm of Foster & Meeks, went down to Providence the other day with a view of going fishing for scup and tautog. He was invited by his son-in-law, who has charge of a pleasure yacht there, to make the trip. They went down on Saturday and had some good fishing, till the weather interfered. They fully intended to be back that night, but were becalmed and had to wait the turn of the tide, when they slowly began the tedious process of drifting up the river and back to town. They were all night long at it, or rather they got into port about 3 o'clock A. M.

S. J. Ellis, bookkeeper for Stearns & Winslow, of Boston, and Charles C. Morgan and W. S. Richardson, salesman of the same firm, went to Bath, Me., the other day. They hired a boat, with the full intention of roughing it in the bay and on the Androscoggin. They caught perch in abundance, and other fish of that sort, when the weather permitted. But the elements were so boisterous that they could not get out much of the time, and after trying it from Friday to Monday they gave up and came home. They will try "roughing it" of that sort again only in fair weather.

The vacationists are leaning more than ever to rod and line sports this year. A great many excursionists have gone in to the Rangeley Lakes over the new narrow gauge railroad from Phillips to Rangeley, and the majority of these excursionists have fishing rods with them. In most instances their outfit is crude, but their expectations are large enough to balance the whole. They expect big trout from a few hours' fishing in August. They have read the guidebooks and the Maine papers, but with reading of trout fishing their practical experience ends. Hence they are disappointed. They should be. The good things of this life come only to those who are capable of earning them, and such ability comes only through experience. A party of four excursionists have been fitted out in Boston for the Seven Ponds this week. They have had no previous experience. They did not even know where the Seven Ponds are located till inquiry was made of the initiated. Will they have great sport?

As already written for the *FOREST AND STREAM*, I am much afraid that partridge shooting in Maine is to be very poor this fall. I have made still further inquiries, and the general reply is that the birds are not seen where it would be reasonable to expect to see them. Mr. John Allen, of Newton, with the Stanley Dry Plate Co., has been on a vacation to his old home in Kingfield, Me. He had some good sport on the trout streams, though he did not succeed in getting any large trout, one pound being about the largest of his catch in several days' fishing. He saw no partridges in locations where he most expected to see them. In fact, he saw none at all. A gentleman of Boston, who has considerable correspondence with guides in the vicinity of Upton, Me., says that the older guides write him that there are very few partridges this year in the vicinity of Upton. On the other hand, the papers that are trying hard to boom the Rangeley Lake region say that partridges are unusually plenty this year. But I have questioned a good many returned sportsmen, and they say that they have seen fewer broods this year on about the same trips as on former seasons. The quiet theory among the guides and farmers is that the foxes have destroyed the chicks. Foxes are unusually abundant in Maine and New Hampshire, and are thought to be rapidly increasing. The boom theory is that shooting is to be great.

Mrs. R. M. Bartleman, who has spent several seasons at the Mountain View House, Rangeley Lake, has lately succeeded in landing a 5-pound trout. This is that lady's first big trout, though she has fished several seasons.

Bears are unusually abundant in Maine. Mr. John Allen, mentioned above, says that the vicinity of Kingfield is infested with them, much to the disgust of the sheep farmers.

SPECIAL.

Simpson—I wonder what kind of a line it is that Budkins uses when he goes fishing. It always breaks just as he is landing the "biggest fish you ever saw." Sniffer—It's nothing but "yarn."—*Detroit Free Press*.

ANGLING NOTES.

OWING to the lovely cool weather during the month of July and the rains, the fishing for black bass, trout and salmon took quite a spurt. The June fishing, which is generally the best, was a great disappointment as most of the streams were too low, but the latter half of July almost made up for it and the number of large fish killed, particularly black bass, is unprecedented.

Mr. R. B. Lawrence writes from Blooming Grove Park that he is agreeably surprised to find the trout taking the fly so well. And Mr. Alfred Roe was so successful when he was up there a short time ago, that some of the members begin to suspect that his guide was helping him out with his reel. Any one acquainted with the gentleman referred to, of course, knows such a suspicion is unjust.

From the Adirondacks I hear that there is little fly-fishing, the trout have retired to cooler "watering places," and unless at the mouth of some cold spring, they can only be taken with bait or gang in deep water. There is no law against this method of fishing at present, but there is no telling what public sentiment and a wise Legislature may do in the future.

I would advise anglers going to the Adirondacks to take some green-drakes with them. Last August I would have given 25 cents apiece for a few of them. It is awfully provoking to see a fly drop on the water and a great trout rise and end its frantic flopping with a splash and be unable to provide the fish with an imitation of it. The nearest I had to it was a "professor," and if I happened to be within casting distance and could drop my fly quick enough in the widening circles, the trout would take it, but I could not bring up a single fish out of the deep dark water with any of the flies I had.

I find that in deep water trout will not rise to small flies as a rule, that is any respectable sized trout. I do not believe that any angler has such a record for big fish in the Adirondacks as Superintendent Pillsbury, who has fished that section for thirty years, and he uses flies dressed on No. 3 and 4 sproats. The majority of anglers use No. 8 and the result is that they only catch baby trout. No. 6 is plenty small enough, and as I say, if lakes or deep ponds are to be fished, No. 4 or 5 would do better yet. For August and September the following flies are excellent: Light and dark Montreal, great-dun, Howard, Brandreth, white-miller, coachman, Abbey, green and gray drakes, ibis, Yottie, professor and Beatrice.

The fishing for black bass in Lake Hopatcong is much better this season than usual. The best time of day to fish is from daylight until about 8 or 9 A. M., and again in the evening. On small lakes or ponds this is generally the rule, but on large bodies of water like the St. Lawrence, they take better in the middle of the day or from 9 A. M. until sundown. I do not think I ever caught a bass after dark on the St. Lawrence, whereas at Hopatcong they will rise to the fly all night. SCARLET-IBIS.

BLACK BASS AT REED'S BAY.

Editor Forest and Stream:

If any of your readers would like some magnificent bass fishing, let them start at once for Cape Vincent. Stop with mine host Frisbie of the Union long enough to secure honest George McDonald as oarsman, and go at once to Reed's Bay, and if they are not satisfied with their catch they will be hard to please indeed.

Reed's Bay is about nine miles from the Cape, and of course too far for one to fish and return the same day. Go calculating to stay two or three days or longer. J. J. Only keeps a very good house at this point and his charges are moderate.

On July 29 last Mr. Ellery Stebbins, of Clinton, N. Y., and myself, started for Reed's Bay for a two days' fishing. The result was 188 as fine small-mouth bass as one could wish to see, a large number of them weighing from 2½ to 3½ lbs. on the scale. The first day we captured 108 bass, trolling with minnows and flies. What we call our record day was really a part of two days, the weather being so bad we could fish only four five hours each day. Still, with all the disadvantages of a hard thunderstorm, high winds, etc., we saved 80 beauties. We caught several doubles, some of them weighing upward of 2 lbs. each. One large one got away with a No. 1 Sproat hook of mine, and in less than twenty minutes Stebbins took him in out of the wet with my hook in his mouth; he weighed 3½ lbs. My hooks are tied with a different colored thread from any I have seen, so there can be no mistake as to its being the same fish. Our catch was pronounced the finest lot of bass brought into Cape Vincent for two years.

F. A. ELIOTT.

CLINTON, New York.

ROCKY MOUNTAIN GRAYLING.

Editor Forest and Stream:

Some of your contributors, if I understand them aright, seem to doubt that grayling are found in the streams of the Rocky Mountains, and one thinks that another correspondent mistakes whitefish for grayling. I have caught whitefish, grayling and trout in the Madison River and its tributaries in Montana in 1864 and again in 1883. How any person who ever heard or read a description of a grayling, or saw a woodcut of one, could mistake a mountain whitefish for a grayling is past my comprehension. I could excuse a careless observer if he confounded a grayling with a mountain trout.

In 1883 I did much fishing in the Madison and its small tributaries. We would take ten times as many whitefish as trout, and about the same ratio as to trout and grayling, trout being the more abundant.

In 1886 a friend in Montana, a fine fisherman, long a resident of Madison county, wrote me that grayling had become very plenty in that river—that at a point where we had fished in 1883 grayling were plentier than trout, and that trout and whitefish were plenty. Whitefish have a mouth much like the sucker, adapted to gathering food on the bottom of the stream, such as crustacea. In fact, by an examination of whitefish I caught, I found they were then feeding on such food. In the latter year my wife, daughter, myself and a guide tramped and camped for thirty days in the vicinity of and in the National Park, doing much fishing. The guide, who had been in the country since 1863, informed me he knew, in

1863, of a fine place for taking whitefish in the Madison, at the upper end of the Upper Madison Cañon. So I made it a point to stop there for dinner and let the horses graze, and laid in a store of grasshoppers as we went up the cañon. In about an hour's time we took about a bushel of whitefish—did not attempt to count them. When our "hoppers" were exhausted we resorted to horse flies, which we caught on our horses. That fly proved to be a killing bait. About as soon as the bait struck the water we would take a fish.

The bottom of the river at that point was filled with small stones, and quite rapid, and the water lukewarm, occasioned by the inflow of hot and warm water from springs along the margin of the stream above that point and from the Firehole Basin. I surmised the reason that fish were so plenty at that point was that the water was of a temperature to facilitate the growth of crustacea, and thus become a feeding ground, or that the water of the river above that point was too warm for them, as such springs were very plenty from that point up the river.

For table use I consider the whitefish as palatable as trout or grayling; in fact, many of the residents there prefer the whitefish. I found the whitefish gamy, making a strong fight, a fight as strong as the trout, if not stronger; hanging, as one of your correspondents says, to the bottom of the stream. H. L.

A CAMP ON THE LICKING.

JOE, Jim and Jack made up the trio that undertook, one May afternoon, to make a reality of much talk and much planning an expedition to the wilds of Licking Creek, in Pennsylvania, object of said expedition being to prevent in some measure a too close peopling of the finny natives of that stream, those beauties with the gorgeous spots and silvery sheen.

A covered wagon at last held the commissary stores for man and beast, and the numerous impedimenta of three fishers: these last proceeded to stow themselves away in the remaining space, and the party were soon en route; not, however, ere we had been focused in the eye of the watchful editor, who we well knew would make us, nolle volle, the subject of a news item.

After traversing eight or ten miles of roads of all degrees of roughness, we arrived at the wooded country; here and there a number of abandoned homes were passed, the clearings for which the surrounding forests were rapidly closing up. Deserted homes are supposed to be viewed with rather sombre feelings, but in this case not so, but with a grim satisfaction that here at least the forest area was more than holding its ground.

Arrived at the point selected for our rendezvous, another deserted place, a very few minutes were spent in looking the ground over. By general consent camp arrangements were postponed till it should be too late to fish, and a match was begun on the creek. Joe and Jack decided to work upward while Jim followed the stream down. The former two could hardly think it possible that in such ideal water they should not receive a rise at least to every other cast. The case was different, however, and when the party met in the late twilight, they were still fishless, besides minus some of their fishy exuberance. Jim's reel on inspection was found to contain but four trout, so we then and there decided that the trout for good and sufficient reasons were not at home to us that evening, but we promised to call again on the morrow.

On our return to camp we saw that some hustling would have to be done, before we could fill the void aching beneath our belts, so with a right good will all set to work and by nine we were all enjoying our first meal in camp. The meal dispatched, camp was cleaned for a camp-fire chat. All good things must end, and toward midnight several moves were made to retire, but all were loth to shut out in sleep the charm of the surrounding scene—save for the constant gurgle of the mountain stream, and the uncanny notes of the whippoorwill, the woods were perfectly silent. At last the thought of the early rise in the morning drove us off to seek rest for another day's activity.

Preparations for a good start were begun in the morning, but trifling over our breakfast, caused the sun to be well up before we marched out. I will not state in numbers the day's take, but brother anglers have no fear, that that we are of that species denominated the "trout-hog". Jack scored best in size, his largest fish completely hiding a foot-rule. The magnetic thrill of pleasure he experienced on taking this one, he declared sufficient recompense alone for this trip.

After ten hours steady fish from six to four, and that without lunch, more than hungry and with aching limbs, we again sought our camp. A hurried, but good dinner eaten, the unwelcome task of breaking camp presented itself. All too soon were affairs in shape for leaving, and away we rolled homeward bound, with the thought that there still remained some places in which one could commune with nature in wildness primeval. ONYJUTTA.

CAPE COD NOTES.

BLUEFISH continue scarce, but a few are taken almost daily at Woods Holl. Three were taken by a fisherman on July 28—two of them at one time. Mr. Slaughter caught one weighing 7½ lbs. and another weighing 6½ lbs. July 29. On the 31st Mr. John Field took a fine one weighing 8½ lbs. 7oz. from the rocks, chumming with menhaden and heaving and hauling with live eel for bait. This is the bait generally used now at this place. One of the best catches of recent date was a 3½ lbs. striped bass and six bluefish by one line. The bass seemed to find the eel exactly what it wanted. A few tautog are caught in Buzzard's Bay and in the "Hole." Sea bass are not yet plentiful, but scup of a larger size are coming in now. A brier ray, which is not at all common here, was obtained on the 27th and shipped to Washington to be cast for the Columbian exposition. A cramp fish or torpedo was one of the curiosities brought in alive a few days ago. The shocking powers of this singular fish were tested by a number of people, among them one of the Fish Commission employees, who undertook to help lift it into an aquarium. The result can be imagined—the employee dropped a remark and the torpedo at about the same time. A big sturgeon, captured last month, was cleaned and from it were taken three basketfuls of eggs. T. H. B.

WOODS HOLL, Mass.

A MONSTER SUNFISH.

ON Aug. 4 Story & Stevens secured from one of the harbor traps a curiosity in the shape of a sunfish about 4ft. long and 4½ ft. in width. It weighed about 150 pounds and was evidently an old-timer, as leeches and barnacles were clinging to it.

The above mention from the Gloucester (Mass.) *Daily Times* calls to our notice one of the most singular of the fishes appearing as summer visitors on the New England coast. The sunfish has been aptly distinguished by Dr. Jordan as a fish "apparently composed of a head to which small fins are attached." A good figure of the species is published in the "Fishery Industries, U. S.," plate 35. The mouth is very small and the teeth of each jaw are united into a beak. The dorsal and anal fins are very far back and the tail fin is a mere narrow fringe scarcely separated from the first two.

Points which make the sunfish a curiosity are its great size, odd shape and singular habit of floating almost horizontally at the surface of the water. It reaches a weight of 800 lbs. and is known in all temperate and tropical seas. Floating sluggishly for days at a time and slowly moving its breast fin above the surface, it is sure to attract notice and is easily captured, but as worthless when taken as the sun-jellies upon which it feeds. The Italians call the fish *mola*, which is Latin for millstone; another name, given in the "Synopsis of the Fishes of North America," is head-fish, in allusion to the disproportionate size of the head. The flesh is not eaten, as it consists chiefly of oil and tough fibers.

STRIPED BASS IN A MILL POND.

IN the city of Bridgeton, N. J., is a large mill pond of about 160 acres, which was made primarily by a dam over the headwaters of the Cohansay River in 1814, and the area of the pond was increased about 1835 by a dam further down the stream. This pond has in it the ordinary pond fish of New Jersey, sunfish, "raccoon" (yellow) perch, pike, catfish, eels, suckers, and a rare fish known here as the "silver fish," besides large quantities of roach, which furnish food for the other fish. About twelve years ago it was stocked by the West Jersey Game Protective Society with small-mouthed black bass, which have become very abundant and have been taken up to 6 lbs. weight.

The most extraordinary catch was made yesterday. A rock, or striped bass, was taken in the middle of the pond in about 15 ft. of water, with a large roach for bait, by a glass-blower, who sold the fish in the town as a black bass. Its weight was 8½ lbs. This seemed to me an extraordinary catch. The employee of the Iron Works who guards the pond claims that this is one of the small rock which he placed in the pond several years ago, which he had taken with a net from the river below the dam. I think the better explanation is that this fish had ascended from the river when the waste gates were raised last week to vent the water from a freshet which had broken a dam further up the stream, and which endangered the dam at this pond. It must have required wonderful power for this fish to ascend the waterfall caused by the raising of the gates. F. S. J. C.

AUG. 5.

STRANGE CAPTURE OF A TROUT.—Mr. Gillies, Edington Mill, and a friend (Mr. Jones, from London) were fishing from a boat in the dam road at Edington Mill, when a large fish was observed feeding in the shallow water just under Pear Bank stream. Mr. Jones carefully rowed up behind the fish and Mr. Gillies threw the line, which caught a swallow a few feet off the end of the rod. The swallow and the worm struck the water at the same time, and the fish was seen to move round. On pulling up the line the fish was found struggling in the water and the swallow in the air. The latter soon freed itself, and it was fortunate it did, as the fish claimed all attention by at once making for the deep water. The tackle used being very fine, great care had to be used, and the fish had a great deal of its own way; but after a fine run of a quarter of an hour he was safely landed into the boat and proved to be a yellow trout in splendid condition, which on being weighed turned the scale at just over 3½ lbs.—*Newcastle (Eng.) Chronicle*.

THE SALMON FISHING.—The season is practically over in New Brunswick rivers, and it has been unsatisfactory because of a lack of rain. The waters are clear and low and altogether too warm to induce salmon to dally with the artificial fly. The reserve of Mr. I. W. Adams, treasurer of the American Net and Twine Co., on the lower Nipissiquit, has yielded about sixty salmon and grise to four rods, a poor showing for so fine a stream, but better than that of many other celebrated waters. The Cascadia and the Restigouche fell far behind their usual record. Salmon were plentiful enough and netters reaped a rich harvest at the mouths of the rivers, but the conditions were dead against the fly-fisherman who liberally dispersed his gold and lost his patience in the upper reaches.

GLoucester, Mass.—*Editor Forest and Stream*: A day or two ago I was informed by a resident of Riverdale that on Sunday, July 25, the mill pond there was alive with young alewives from 1 to 2½ in. long. About the same time the water was allowed to run out of the pond, and in a large, deep hole near the dam great quantities of white perch were seen. Yesterday morning a lot of mackerel got caught in the canal near the bridge, and men and boys dipped them up with nets and with their hands. The fish were of good size and quality, and were estimated to be about twenty barrels. The *Daily Times* has a note on a big eel captured in Cape Pond on Aug. 2, which was 37 in. long and weighed 4½ lbs. dressed.—E. F. LOCKE.

UNION BRIDGE, Md.—The Monocacy has been furnishing some pretty good bass fishing during this season. Rain has greatly interfered with anglers, however. During the first few days of July good catches were made. On the 1st Messrs. Dern and Hollingberger caught seventeen bass, ranging from ½ to 2½ lbs. each, and since that date have had a fair day's fishing, Dern catching two weighing 2½ and 2½ lbs. Later, should the weather clear, we hope to give you full scores from our little river, which is well stocked with bass.—C. A.

TADPOLE BAIT FOR BASS.—Charles Parkins has been enjoying some fine bass sport with a new fly. It is intended as a large trout fly. He made it for Prof. Lee, of St. Clair, and has named it after that gentleman. It has red wings, hackle and tail; it has a combination body finished off in gold tinsel, the colors being red, orange and yellow. Mr. Parkins went up to the dam and threw the fly one day several weeks ago. He caught forty nice bass. A few weeks later he caught fifteen. In speaking of his experience Mr. Parkins said: "You can't catch very large bass with a fly at the dam on account of the number of boats passing. For bait fishing for bass this year you will find tadpoles the best. It is funny, but last year liver was found to be the best bait. The fisherman must change his bait to suit the demand of the fish. In rivers helgramite, small frogs and stone catfish are the best."—*Pottsville (Pa.) Chronicle*.

DUTY ON FLY MATERIALS.—In referring to "Free Trade's" note on the duties levied on sportsmen's and tourists' belongings by the Canadian customs authorities, what consideration can we expect from other countries as long as our own tariff laws are so onerous and prohibitive? I have been trying to teach myself to tie salmon flies lately, and but few of the necessary materials are to be had in this country. I have imported a few feathers, tinsels, etc., by mail, and have had to pay as high as 45 per cent. duty, lost much time at custom house, and had to sign eight documents and pay for blanks.—*THEODORE GORDON*.

GLOUCESTER, Mass., July 28.—Fishing in Fernwood Lake has not been good of late; after trolling for over two hours recently I took only one white perch, and my companion caught nothing during the whole afternoon. Very little angling is done in the fresh waters here. We have white perch, yellow perch, pickrel and bass. A pond has been stocked with German carp, but I have not heard that any have been seen. A short time ago I saw the largest mackerel I have ever seen; it measured 24 in. in length, 12 in. in circumference, and weighed 4½ lbs. It was taken at Cape Cod.—*E. F. L.*

BLUEFISHING AT PERTH AMBOY.—In your issue of July 30 is published a letter from me. In that letter I should have written that our boatman was Frank Dawson, instead of John Davison, as was published. Mr. Frank Dawson claims to know where the center of fishery is located, and with the belief that honor belongs to whom honor is due, I ask that this correction be made.—*H. C. W.*

BLACK BASS.—Greenwood Lake, New Jersey, has furnished excellent bass fishing during the past week. The fish are of the large mouth species and of small average size, although occasional big ones are seen. Scores of 42, 50 and 70 in a day have been reported, the last made by Mr. Fred Clark, of Storm's Island. Helgramites, crayfish and frogs are the successful baits, and still-fishing brought better returns than casting.

SHARKS AND DOGFISH.—With the improvement of the summer fishing come the fisherman's pests, to drive off edible fishes and cause danger to apparatus and danger to life. In the vicinity of Cape Ann, Mass., line fishing for cod is seriously interrupted by dogfish, a small kind of shark, and near Seaville large and ferocious man-eating sharks have made their appearance, and two men have been grievously bitten by them.

THE ANGEL SHARK.—A specimen of the rare shark, *Squalina angelus*, was taken near Atlantic City, N. J., last week, by Capt. Jos. L. Gaskill, of the Life Saving Service. The specimen measured 4 ft., and is on exhibition at the pier where it has been an object of great curiosity.

MOOSEHEAD LAKE, Maine, has been stocked with land-locked salmon, and, apparently, with success. At Kinco, a lady from New York took one recently that weighed about 4 lbs. On July 27 Mrs. J. F. Hildreth, while trolling in the lake, caught a salmon weighing 6½ lbs.

A SHARK 12 ft. long was caught at Block Island recently and exhibited on Block Island dock. Whenever bluefish are plentiful on any part of the coast sharks may be seen feeding upon them, but menhaden suffer vastly more than bluefish from such depredations.

"Forest and Stream" Nursery Rhymes.

IV.

Sing a song o' trout-ing,
"Three-pound fish, I yum!"
Biggest fish in that ere brook
"That ever swallowed yum."
When the "whale" was hefted
He didn't weigh a pound.
Wasn't that a pretty lie
To be a traveling round!

V.

There was a young man lived in Youghall
Was the biggest liar since Adam's foughall.
For the fish that he bought
He'd swear that he'd caught—
This young man of unlimited goughall.

LOUISIANA.

H. P. U.

A QUEER DECISION.

THERE has been a curious decision in France upon the right of ownership in private fish; that is, fish bred and brought up and protected in private waters, but which had escaped to waters owned by other proprietors. A Mr. St. Vincent, living in the Department of Marne, in France, was the happy possessor of an artificial pond built in the center of a running stream, but protected and shut in by a dam and a screen from the waters above and below. There he raised his fish. The report does not say whether they were trout, black bass, carp, or that favorite of the French sporting gentleman's heart, the merry little gudgeon. They were not only his property but his pets, and the law stood with its legs over his right and title to do with them as he would, possibly even that he might fish for them out of season, but certainly that no other ruthless hand could deprive him of their possession and enjoyment. Unfortunately there came a flood, and the waters roared and raged and beat upon that dam, and tore at that screen, and shook and shattered and undermined it, and finally swept it wholly away and allowed the pets and the property to pass down into other regions as the prey of the spoiler. Such things have happened in this country, and human nature is human nature the

world over, and French nature is not so unlike American nature as they think, in their pride of giving extravagant fashions and a difficult language to the rest of the world. The riparian owners of the stream below the former dam of Mr. St. Vincent proceeded promptly and manfully to fish for their squamond pets and property of the said St. Vincent, just as the riparian proprietors and many vagrant anglers have been in the habit of taking advantage of similar heartrending accidents upon the soil of Long Island. They thought they were in their right and gloated over the misfortune of the modern saint which had thus suddenly turned to their profit. The bank of that stream was lined with their rods and the current filled with their dobbers by the by, this is a good old Dutch word, so don't despise it), while the willow owner wrung his hands and said, "Sacré bleu, sapristeche, sapristie, nom de Di-u," and possibly even more improper words in his native tongue.

But having got through railing at fate, his rage gave him an inspiration, and he commenced suit against the sportsmen who were thus making sport and gain on his misadventures. He went to French law, it must be distinctly understood, and French law is a wonderful and incomprehensible article. No one need be surprised at anything from French law, whether it is got out of the Code Napoleon or the dusty recesses of the judicial mind. There is only one result that can be confidently and invariably relied upon: it is that in a case between a foreigner and a Frenchman it will always decide for the Frenchman. Vide, the remarkable case where it required an American father-in-law, whose daughter had married the Frenchman, to support the father-in-law or count son-in-law, whichever he might be, as it said, "according to what would have been his station in life if the daughter had lived and become heir to her father."

But this case of Mr. St. Vincent was "Greek meet Greek," and, strange as it may seem, out of the intricacies of French law, he won his case, not only on the first trial, but upon appeal to the French court, where the decision was confirmed. How the court managed to determine a certain side issue, the report of this interesting decision does not tell. For example, how were these riparian proprietors, possessed as they were of the right of fishing upon their own domain, to arrange not to catch the private fish of their neighbor, Mr. St. Vincent? Thus raising a question as complicated as our own beautiful statute, which provides that an angler shall not catch any fish less than six in. long, and compels him to find out beforehand how big a bite he is about to get. And when the court fixed the amount of damages which these involuntary poachers were to pay, how could it tell how many of their basketfuls were of their own inherent gudgeons, supposing them to have been gudgeons, and how many were interloping gudgeons?

Moreover, were not these law-breakers entitled to compensation for the food and nourishment of the strangers, which they had thus unwittingly taken from their gates for the period of their sojourn before they were illegally yanked from their native element? This would raise the further question of what would be the cost of maintaining and entertaining fish per diem, and as that depends upon their relative size and weight, and as they have to secure their own food, which often consists of deleterious insects, whose destruction would be a benefit instead of a detriment, the calculation is a tricky one.

However, I give you the precedent for what it is worth. The dam of the famous and wealthy South Side Club, which has done such royal work in producing and cultivating trout, may give way some day and the vandals below may undertake to imitate the neighbors of Mr. St. Vincent. Then this decision will come into play, although the four following horns of dilemma will have to be considered: First, shall the owners of the stream thus favored by fate be restricted catching their own trout at the peril of "damages-interests," as this case says? Second, shall they be forbidden to fish at all thereafter for all time? Third, shall the owner of the broken pond be allowed to enter upon their property in spite of the ancient saws about *quare clausum fregit*, to recapture his own fish and those only? Or, fourth (finally and in conclusion, as our good old sermons used to put it), in what imaginable way is the former proprietor to get his property in to his possession anyhow?—*Robert B. Roosevelt in New York Times*.

Fishculture.

FISH HATCHERY FOR VERMONT.

THE State fish hatchery will be located at Roxbury, on land donated for the purpose by E. N. Spaulding, of that town. The site was selected upon the recommendation of Commissioner Elliott B. Hodge, of the New Hampshire Commission.

Commissioner McDonald is now in Vermont, to decide upon a location for the new station for which the last Congress appropriated \$5,000. Several essential conditions will determine the choice in this case as in all others; there must be a bountiful supply of clear, spring water of even temperature and capable of delivery into the hatchery by gravity. The location must be central in the region which it is intended to supply and with railroad communication to its distributing points. It is often difficult to find all of the necessary conditions present in localities which seem at first glance to be eminently suitable.

ST. LOUIS NOTES.—The United States "Fish Farm," at Nessho, in this State, is progressing finely. The station is one mile from Nessho and contains 13 acres of ground, in which there are 18 pools and ponds, around which are laid out well-kept walks and drives. The water area of the hatchery amounts to 145,000 sq. ft. of surface, and the water itself is admirably adapted for its purpose. The product of the hatchery last year was 22,000 rainbow trout, 12,000 brown trout, 500 speckled trout, 1,350 red-eye perch, 1,750 carp, 9,907 tench, and 17,000 gold fish. The estimated production for this year is as follows: Twenty thousand black bass, 3,000 croppie, 15,000 carp, 15,000 tench, 10,000 red-eye perch, 5,000 gold fish, 12,000 speckled trout, 18,000 brown trout, and 12,000 rainbow trout. The trout do well in the waters at Nessho, and also at Mammoth Springs, the head of the Merrimac River. Mr. James, one of the owners of Mammoth Springs, informs us that there are seven miles of good trout water at that place, and that there are now California trout there which will weigh 5 lbs. These were planted by the U. S. Fish Commission some years ago. There are other streams in the Ozark Range where this trout would do well, and it may be that trout fishing may yet be numbered among the sporting offerings of this State.

VERMONT FISH HATCHERY.—The directors of the State fish hatchery, Messrs. C. C. Warren, of Waterbury; R. B. Noyes, of St. Johnsbury, and Dr. H. H. Swift, of Pittsford, held a meeting at Burlington, and decided, upon the recommendation of Col. Elliott B. Hodge, of Plymouth, N. H., to locate the new building at Roxbury. Mr. E. N. Spaulding has donated the land necessary for the purpose. There is a desire on the part of some persons to see the United States hatchery, for which the last Congress appropriated \$5,000, located at St. Johnsbury. Commissioner McDonald will soon visit the proposed sites and make a selection.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 1 to 4.—Second Annual Dog Show of the Kingston Kennel Club, at Kingston, Ont. H. C. Corbett, Secretary.
Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.
Sept. 8 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.
Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto, C. A. Stone, Sec'y and Supt.
Sept. 22 to 25.—Inaugural International Dog Show of the Montreal Exposition Company, at Montreal, Canada. Entries close Sept. 8. J. S. Robertson, Secretary.
Sept. 29 to Oct. 1.—Third Annual Dog Show, in connection with the Central Canada Fair, at Ottawa, Ont. Alfred Geddes, Supt.

1892.

Jan. 13 to 14.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. E. Capers, Secretary, Greenville, S. C.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Secretary.
Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.
Nov. 23.—Irish Setter Club's Field Trials, at High Point, N. C. G. G. Davis, Secretary, Philadelphia, Pa.
Nov. 23.—Gordon Setter Club's Field Trials, at High Point, N. C. L. A. Van Zandt, Secretary, Youkers, N. Y.
Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.
Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles F. Connell, Secretary.

WHITE WINGS.

Editor Forest and Stream:

I notice in your issue of July 30 a letter signed J. MacKelcan, who states that he is an old journalist, and, therefore, not afraid to sign his name to all he writes to the press. For all I know he may be an old journalist, but when he gets into kennel matters his journalistic abilities do not shine out very prominently. He ought to know that when writing upon doggy affairs (as well as on other topics) it is requisite to know what one is writing about, or he is pretty sure to fall into error.

Now, we will take his letter from the commencement and be as brief as possible. He infers that Mr. George Bell did not own White Wings. Now I can vouch for his being in partnership with Mr. Ireson in the Seaton Kennels; however, any one doubting this can easily have it verified by writing Mr. Ireson as to the truth of this assertion. Consequently it is only natural that Mr. Bell would handle his dogs at the shows at which he exhibited them, instead of "being employed by Mr. Ireson to attend to them," as your correspondent puts it. He then goes on to inform your readers how White Wings was brought into existence, and this is where he should have come to a full stop, for the rest of his letter is only a conglomeration of errors. He states that Ranger beat Gem of the Season last year at Cleveland. In the first place, this show was held April 14 to 17 of this year, and these two dogs did not compete in the same class. Gem of the Season won in the challenge class and Ranger in the open class. However, Mr. MacKelcan may have reference to a race which was held during the show in which Ranger proved the victor. He concludes his letter to you by stating that White Wings, the only time shown, won in her class over twenty competitors at the Members' show of the T. K. C. Now, if Mr. M. would only strike off a cypher, he would come nearer the truth, as instead of twenty there happened only to be two competitors in this class.

Now in his extract taken from the *Globe* he is also astray. He gives the time of the running at the Woodbine by White Wings and Ranger for 440 yds. as 25½ and 25¾ seconds, whereas the time recorded by Messrs. Ireson and Bell was 26¾. White Wings beating Ranger by half a length.

In conclusion, I trust that our "old journalist" when he "effuses" again on kennel matters will endeavor to ascertain facts so that people who do not know may not be led astray.

TORONTO, Can.

H. P. THOMPSON.

Editor Forest and Stream:

With your permission I would like to say a few words regarding Mr. MacKelcan's letter in your issue of July 30, and perhaps may be able to throw a little light on the subject.

Some time ago Mr. Bell informed me that he had acquired an interest in Mr. Ireson's kennel of greyhounds, and desired Jolly Ranger (since shortened to Ranger) to be added to his list of stud dogs in the *Canadian Kennel Gazette*. In an interview with Mr. Ireson shortly after, he (Mr. Ireson) corroborated Mr. Bell's statement. White Wings won first at the Toronto Kennel Club's club show in May, the only other entry being Mr. Fitzsimmons's Why Not. Where were the remaining eighteen?

In writing this I have no other object than to correct positive misstatements, which, I am sure, were not published with Mr. Ireson's knowledge or sanction.

H. B. DONOVAN.

TORONTO, Can.

Editor Forest and Stream:

In the July 30 issue of FOREST AND STREAM, under the heading "How is This?" Mr. J. MacKelcan says Gem of the Season was beaten last year at Cleveland by Jolly Ranger. Gem of the Season was at that time in England. If he meant last spring, Gem of the Season was not then and never has been beaten by Jolly Ranger. I think it would be wiser if Mr. MacKelcan would confine himself to facts.

A. W. PURBECK.

SALEM, Mass.

A DOG'S DEVOTION.

Editor Forest and Stream:

A friend of mine being a lover of dogs and the chase, keeps an excellent pack of hounds and puts in his leisure days, during the fall and winter months, in hunting foxes.

At the close of a run last November one of his favorites was missing, but as the chase had extended over several miles of new country it was thought he had fallen in with another pack and would soon be heard from, or get starved out and come home for his rations. However, as the week passed and nothing was heard of him he became convinced that some reprobate had shot him out of pure cussedness, and maledictions dire were heaped on the head of the slayer of poor Dick.

Among his canine family was an intelligent sheepdog, and one of his many accomplishments was that he knew the name of every horse on the farm, and when sent to the pasture for a particular animal would single it out and bring it up to the barn lot. Sometimes the others would come with it, but the animal wanted was certain to be on hand. After the hound was missed the sheepdog was absent a good part of the time, seldom coming home except for food, when it would eat the smaller pieces with haste and filling his mouth with the larger portion start in the direction of the barn, as was supposed to finish his meal in peace and without interference from the hounds.

One morning it occurred to some of the family to watch him, when they saw him cross the fields toward an old straw stack a half a mile from the farmhouse. They followed him, and to their surprise found the favorite hound in an emaciated condition with a broken leg and a bad wound in his side that he received in some manner in this last race. The faithful collie was wild with joy. When he saw his master coming, he ran to him and putting his fore feet on his breast barked with delight, then ran to the straw stack and back again to his master, manifesting his pleasure in unmistakable dog talk. The dog had carried his own food to the hound for over a week and went without himself. The patient was placed carefully in a blanket, and on the way home the sheepdog headed the procession, the proudest dog in the county.

The invalid was given comfortable quarters, and carefully nursed, but even then Shep would not wholly give up his charge but would lie with him for hours on his pallet of straw, evidently sympathizing with and keeping him company, and not until Dick was able to take his place in the pack did he resign his guardianship.

CAMERON.

ELSAH, Ill.

GREYHOUNDS AND GREYHOUND JUDGES.

Editor Forest and Stream:

I certainly must take exception to some of the remarks made by Dr. Mills in your issue of July 23, regarding Mr. Huntington's decisions at the late New York show, and ask him for proof of the statement that his opinion of the error made by Mr. Huntington in "donning the ermine" is "proved by events."

I will ask the doctor what judge ever entered the ring at the W. K. C. show, for the first time, and came out with more flying colors than did Mr. H. Perhaps, in the history of American dogdom, never has a judge been placed in such a delicate and trying position, and the great credit Mr. H. did to himself is worthy of being emulated. His best friends met side by side in friendly rivalry, assured they would get both an impartial and intelligent decision and—they surely did. I spent many hours at the W. K. C. show among the greyhound men and failed to hear either any of his friends or any judge of a greyhound take the slightest exception to the award of special prize to ch. Balkis, over Gem of the Season, and I will esteem it a great favor if Dr. Mills will mention one friend of Mr. H.'s who is a greyhound judge, who dissents from the decision. As to the decision being "a great blunder" let me assure Dr. Mills he either does not know the requirements of a greyhound or if he does, is too biased to see through other glasses than his own. That Gem of the Season is a hard one to beat goes without saying. He, a dog brimfull of quality, is a bit better in head than Balkis, and not so wide in front, but aside from that where stands Balkis? For legs and feet he has no superior, he has a far better back than Gem, while from the last rib to his hind feet he out-points Gem a hundred fold.

I have for many years lived in Kansas where almost our only enjoyment and pastime was coursing jack rabbits. I have coursed them week in and week out, and my friends will testify I never owned the worst greyhound in the State but rather the other way. I have bred greyhounds by the score, sold them, exchanged them and bought a good one when I saw it, and if Dr. Mills knew the first principles of coursing and the requirements of a greyhound he would know that placing ch. Balkis (that grand old sire) over Gem of the Season was not "a great blunder."

He would also know that excepting the exceptions which are very rare, a greyhound short between his couplings, high on his hind legs, without his hocks being well let down and his hind legs tucked under, his body can never be considered to be built on correct greyhound lines. If he does not believe this let him look over the dogs that run for the Great Waterloo or come out to Kansas next October and see the outline of those that win.

Before setting himself up as a greyhound authority against such a man as Mr. Huntington who has bred more winners than probably the Doctor has dogs, I would advise him to study a little more or not talk about "great blunders" unless he wishes the criticism to revert to himself.

Gem is a very taking and flashy dog, but with his short back, tucked up loin and high set up hock, he can no more beat ch. Balkis than Elcho can beat Scavenger. Dr. Mills must remember that the propelling power of a greyhound lies back of the ribs, not in front of them, and a greyhound not right there will be beaten by a dog that is. Let us hear from some of the judges on this, as I think it a question of great moment to the greyhound cause. GREYHOUND OSBORN.

NEW YORK CITY.

MASTIFF JUDGING AT NEW YORK.

Editor Forest and Stream:

It is unfortunate that this subject is kept to the fore. It seemed the universal wish to dismiss the many and grievous mistakes made, as lightly as possible, stamping them with disapproval and letting them be forgotten. Had this course been accepted by all, forgetfulness would have drawn its pall over the unfortunate affair, but the absurd defenses of the serious mistakes made have fanned the flame again, and the interests of mastiff judging for the future demand emphatic condemnation of these defenses far more than the original mistakes do.

As I said before, I did not see Beaufort at the time of judging, but I did see him not more than half an hour after, and being dazed at the awards, asked Mr. Winchell to take the dog off the bench that I might see his condition at that moment. There were Messrs. G. G. Stephenson, George Glazier, Chas. E. Wallack and others present when Mr. Winchell took the dog off, and all coincided in the opinion that no dog ever showed more vigor and activity. I remember as well as though it were an hour since, how nimbly he hopped up on his bench again, and the easy power he displayed in all his movements.

The statements of anonymous scribblers that Beaufort showed the extremity of decrepitude, the wavering ghost of mortality in the last gasp, are of no weight. The statement that the writer will not put his name to is very much emptier than air; but the statement of the judge as to this point is entitled to respect. Now, as the dog most positively did not show any signs of weakness or weariness half an hour before the judging or half an hour after, a search for an explanation of the judge's statement is necessary. My theory is this: I understand that the judging was protracted, that the dogs were trotted out and in, back and forward for a long time. Beaufort is a dog of marked mental peculiarities, and while the best show I ever saw (except C. O. D.), having the faculty of setting himself in the best positions if left to himself, I fancy he got disgusted with aimless trottings around, and "it makes me tired" was the view he took.

This is not an unusual trick of dogs; it is on record that the oldtime champion, Miss Hales's Lion, had this trick; he would show well for a while, and if kept too long at it would lie down and go to sleep, disgusted with useless performances. My DeBuch, a dog of tremendous power and activity, was another; he was very lively for a while, both at Pittsburgh and New York shows, but he got disgusted at the long judging at the former, and Mr. Watson just got inside the line of his endurance at New York.

Now, what is the duty of the judge in such cases? Evidently to determine whether the dog's appearance is due to physical weakness, or mere transitory environments. One or two trots across the ring should satisfy the judge whether he moves all right and there is no use in keeping up a procession. The judge must confine himself to the appearance of the dog when before him, but it is his duty to determine what share he had in effecting a change in the dog's appearance. Again I must condemn as most mischievous the dictum of the judge that earning large stud fees and winning prizes are incompatible. Such mischievous nonsense as this was never before announced in connection with dog shows, and the "per curiam" of the judge that he would frown down all such attempts, should relegate him to other pursuits than dog judging. Is a stud dog disqualified from winning show prizes? Or must a show dog not be used in the stud?

W. WADE.

HULTON, Pa., Aug. 3.

Editor Forest and Stream:

In your issue of July 30 a very wild letter appears from the wilder brains of an anonymous correspondent. If he saw the dog in the ring, as I much doubt, he must have been as disabled as he describes Beaufort. Of course, in such a state some one would "totter around the ring." Such authority as Mr. Charles Mason, Mr. Wm. Wade, Mr. E. G. Stephenson, Mr. and Mrs. Chas. Wallack and others agree that Beaufort was never shown in better shape. Mr. Wade

says of him there that "he was as active as a cat, without showing a trace of weakness. I know that most positively, having the best opportunities of seeing this." If there was a word of truth in the assertions of the unknown, why was he the only one to discover it? It is one thing I admire about the unknown, he sticks up for the side that is down; but why not be a man about it, and not be ashamed to sign what he asserts. Ninety-nine times in a hundred an anonymous correspondent writes what he knows to be a falsehood. The truth is, I think that he did not see the dog, for if he did he could not have had the assurance to state what he has, even when the judge says in his own defense in his report, "That his awards of Beaufort have met with almost universal disapproval." Is the unknown not in the same condition that the Rev. Mr. Stiggins was when he was brought to the temperance meeting drunk, and he got up and gravely "declared the whole meeting drunk." There is one thing about the judge's defense in his report, that I called his attention to, Beaufort's being exhausted in stud service and his feebleness. I did say that he had been well used in the stud, as I was proud of his appearance there, as it showed what a grand one he was in activity and condition.

Would it be natural to call the judge's attention to what would throw him back or entirely out? All who are familiar with Beaufort in the ring know that he is the most perfect trained dog there, that he always appears at his best; his every position is one of grace, any boy could lead him in the ring and show him to as good advantage as the most expert handler, if they will lead him by the end of his chain and let him have his own way. He has been educated for the ring as no other dog I ever saw. Mastiffs have not advanced as they should for the last two years or so. Is it not partly on account of the uncertainty of the mastiff awards at the principal shows, as some of the sporting papers assert? Whatever it has been, they can again be brought to the front if the breeders will work together. I am glad that Mr. Whitney has given it a push in the right direction with his broad shoulders; let others do as much according to their means, though their purse may not be so big. Let's bring a class of mastiffs before the judge at New York that America will be proud of. Let each breeder bring his best, though he may not win first, he will have the satisfaction of knowing where he stands. The chances are that there will be a judge there then, who is recognized as an authority. It is now quite certain that champion Beaufort will go back soon unless purchased here. England knows the value of such a stud dog as Beaufort. The dollars England has received from America since he has been here have been few. It pays her better to sell America his puppies at high prices. Figures would show that we have paid England more money for Beaufort blood than that of all the other stud dogs combined.

J. L. WINCHELL.

A WOMAN'S EXPERIENCES.

Editor Forest and Stream:

I don't know whether, because I was not born a man, I should be debarred from contributing to your interesting journal, but it was not my fault, I assure you, for if I had been consulted upon the specification, I might to-day have graced the Presidential chair instead of being the wife of one of the most ardent admirers of dogs and guns, and one whom many consider a first-class shot, too. Modesty, of course, forbids me giving my own opinion, but I do know he never fails to bring home game when he goes after it. I am very fond of intelligent canines myself, and the experience I have had in caring for every animal that could be construed into a hunting dog should, I think, entitle me to a little liberality in the columns of FOREST AND STREAM. To be truthful, when I married Mr. Jones I was not aware that he was such a lover of dogs and guns, but that fact made no difference, for I have had ample time in finding this out, and my first lesson commenced soon after we were married. I proved such an apt scholar that I went through all the grades and graduated with a flourish. I was also mortally afraid of a shotgun, but I soon got over that, and, in fact, learnt how to shoot and load a gun myself. Only once when I tried to scrape acquaintance with a rifle I came near being disgusted with the performance, for I hit my mark so straight, and the target being of oak, the bullet rebounded with such force as to burn a streak on my forehead, and that settled the rifle business for a little while.

I have a better acquaintance with the canines than many would suppose, and though Mr. Jones is complimented so highly and praised so loudly about his management and training of dogs, I know that I have about as much to do with the training as he has; yet I am naturally relegated to the background and must perforce listen to his praises, and do nothing but grin and bear it. The first dog I was introduced to in the hunting line was a full-blooded Irish setter. I was "bedazzled" into taking the little thief when he was about five weeks old. Why he was called a setter puzzles me to this day, for he did everything but set while at home, and kept things going pretty lively, too, and all the time he looked so fearfully innocent. The way he grew, too, was amazing; I suppose it was the fresh air and the running so many miles away from home did the business. Mr. J. would leave home in the morning and tell me to take good care of that dog. Now that was reversing the order of things to what I was accustomed, for my father always had a dog to take good care of me. But I wished to obey orders, and the first time I left home locked the dog in the kitchen. On my return some hours later, I found the window—sash and all—gone, so was the dog, and by the way things looked, I was thankful there was any kitchen left. I thought I had better go, too, and skirmish around a little; but had I known that Irish setter a little better I might have saved my shoe leather. Mr. Jones came home, and, of course, explanations being in order, I went to see a friend and left him to solve the window and dog problem. He lost two days hunting for that dog, not with him; finally finding him ten miles in the country. Not much setting about that, but I thought in future he should practice the art a little. This all occurred in Wales, and for the purpose of my tale I must tell you that the majority of bedsteads used by those able to get them, were iron, with iron strips placed to hold the mattress or feather beds. To be doubly sure of having things comfortable, we had a mattress first, then a feather bed on top.

Next time I went from home I had an idea, and thought it a brilliant one, too. I chained the dog to the bedstead so firmly that if he went the bedstead must follow suit, and complacently left home thinking of woman's wit. Vain exultation! I returned to find the house, as far as the outside went, looking as I left it. I opened the front door. All was quiet. How glad I felt; and on good deeds intent meant to give the dog an extra supper. I opened the bedroom door—Goodness! Was it a dog or a spotted leopard that greeted me? Had some one turned my room into a feather-cleaning establishment? Instead of setting he had been engaged in biting, and so very successfully that not a vestige of mattress or bed was left, and the most feather-loving Indian would have been frantic at the exhibition. For three nights we slept in the cellar, and I had all the extra work I could attend to without the extra supper. Of the many experiences I had with that one dog alone I could fill a five-hundred-page book. Once he laid bare the mysteries of one of my haircloth chairs, one of a set that I was especially proud of. Then he concluded to chew up all the articles of clothing he could find hanging to dry, regardless of ownership. For some time I replaced those garments, but so frequently were his misdeeds brought home to me that, after exhausting my finances and my credit, I decided to investigate, and found that if that dog was ten miles away in the country the next

door neighbor's dress would be chewed up by him. Poor dog, and poor me, we were sadly imposed upon.

By degrees I concluded to take the dog with me on my rambles, and one day we espied a hare. I had heard Mr. J. say To Ho, and I said To Ho, too. The dog stopped with his bushy tail straight out. The hare stopped, and I stopped, too. For a time I thought we were all three paralyzed, and if an artist had come suddenly upon us just then what an admirable subject for his canvas he would have had. However, I got tired standing like a mummy and pulled at the dog's tail, he did not expect this and turned on me, but although he was disgusted he did not bite me, as I thought he would. He grew up a splendid animal and was sold for a high price when we left Wales, and soon after took first premium at a dog show at the town of Carmarthen. He was very fond of sugar, and would risk a whipping to get some any time. Mem.: For a thiefish, slick, catch-me-if-you-can dog, I commend the black blood every time.

MRS. HENRY B. JONES.

PHILADELPHIA K. C. DERBY ENTRIES.

THE entries for the Philadelphia Kennel Club's Derby of 1891 number 12 English setters, 6 pointers and 2 Irish setters, 20 altogether. The stake is open to all setter or pointer puppies whelped on or after January, 1890.

ENGLISH SETTERS.

TORY STOKER—(Francis R. Hitchcock), black, white and tan dog (Rebel—Trinket II.), Sept. 15.

PHILADELPHIA PRESS—(L. Shuster, Jr.), black, white and tan dog (Cincinnati—Cornelia G.), April 21.

HAZEL THE BLACKIE—(L. Shuster, Jr.), black, white and tan bitch (Cincinnati—Cornelia G.), April 21.

TENNYSON—(B. Ridgway), orange and white dog (King Noble—Queen Vashti), March.

BOOTH—(B. Ridgway), black white and tan dog (King Noble—Queen Vashti), March.

KATIE NOBLE II.—(F. G. Taylor), black, white and tan bitch (Breeze Gladstone—Katie Noble), April 29.

NAT'S BOY (F. S. Brown & J. B. Ellison), black, white and tan dog (Nat Goodwin—Hazel).

NAT'S GIRL (F. S. Brown & J. B. Ellison), black, white and tan bitch (Nat Goodwin—Hazel).

SUSSET (F. S. Brown & J. B. Ellison), black, white and tan bitch (Nat Goodwin—Countess B.).

JOE LEWIS (J. O'H. Denny), black, white and tan dog (Count Noble—Fanny), April.

WINNIE NOBLE (J. O'H. Denny), black and white bitch (Count Noble—Fanny), April.

SIG GLADSTONE (J. O'H. Denny), black, white and tan dog (Gladstone's Boy—Diamond), March 18.

POINTERS.

HOXIE GODWIN (C. E. Connell), liver and white dog (Duke of Hessen—Fan Fan), May 7.

DICK LEE—(J. H. Winslow), liver and white dog (Dick Swiveller—Bloomo III.), May 6.

MACK NASO—(Dr. J. A. Hartman), liver and white dog (Nick of Naso—Lillie Dale), May 10.

MAY DOWNING—(Dr. J. A. Hartman), liver and white bitch (King of Kent—Chloe), Oct. 23.

TORY SQUIRE—(Francis R. Hitchcock), liver and white dog (Duke of Hessen—Westminster Ina), Sept. 6.

TORY BARON—(F. R. Hitchcock), liver and white dog (Duke of Hessen—Westminster Ina), Sept. 6.

IRISH SETTERS.

ADONIS—(H. E. Richards), dog (Champion Tim—Curren Bell II.), July 29.

BESS—(B. M. Vaughn), bitch (Champion Tim—Curren Bell II.), July 29.

All these with the exception of Mr. Connell's Hoxie Godwin were whelped in 1890.

DOG CHAT.

THE Rhode Island Poultry Association will hold a bench show in December, during the week commencing on the 16th. Mr. Michael Flynn, Jr., has the management of the affair and wishes to make the show a success, so that the managers of the Association may think fit to join the A. K. C. If sufficient inducements in the way of prizes is offered there is no reason why a nice little show should not be held. Mr. Lacy has been asked to judge all classes.

His many friends will be pained to learn that "Uncle Dick" is again pursued by misfortune, as Mrs. Fellows broke her leg in a most singular and unexplainable way. We are pleased, however, to learn that Mrs. Fellows is doing well under the circumstances and promises a speedy recovery.

One of our correspondents writes that some crank is poisoning the dogs in his neighborhood, chiefly valuable dogs. If any of our readers have had a like experience and can give any advice in the matter, we shall be glad if they will communicate with us, either confidentially or for publication.

We hear from Mr. John A. Logan that the bench show that was to have been held at Youngstown, Ohio, Sept. 1 to 4, has been abandoned. As this show would have conflicted with that held at Kingston, Ont., the arrangement is perhaps a wise one.

Mr. Paul Hacke's eight Barzois are now on their way from Russia, and on their arrival will go to Spratts' Kennels for a while to get rid of their sea legs and be freshened up before proceeding to Pittsburgh. This is without doubt one of the most important importations of dogs that has occurred for some time, and such a collection of Barzois as Mr. Hacke will now be able to show will be sure to create a craze for these dogs sooner or later.

"Namquoit" has his hands full nowadays with his new venture *Forest, Field and Shore*. He is owner, editor, and pretty nearly everything else, and we must say he deserves great credit both for his pluck and the very readable paper he has brought out. It will now be issued semi-monthly instead of monthly.

Mr. Lamb tells us that Clydesdale Nell, his newly-imported St. Bernard, whelped Aug. 3, 13 puppies, six dogs, by Lord Bute, and he is delighted with them. All are perfectly marked and healthy, and the bitch has plenty of milk. Mr. A. H. Moore purchased through Mr. Lamb the puppies Lady Brooke and Lady Myra, by Scottish Prince out of Hepsey. Lady Brooke weighed 6½ lbs. at four months. He ends up his letter with, "I sold three St. Bernards last week at good prices through my little 'ad' in your paper."

The Blue Grass Kennel Club, an association formed for giving a show at the coming State fair, has decided to hold a bench show Sept. 23, 24, 25 and 26, at Lexington, Ky. Application has been made for admission into the American Kennel Club, which meets Sept. 17, and the show will doubtless be given under A. K. C. rules. The services of the well-known Mr. Geo. H. Hill have been secured as superintendent and a liberal premium list has been decided upon. The secretary, Mr. Roger Williams, was until recently in partnership with Dr. Van Hummel in the Kookwood and Landsker Kennels and is a noted breeder of greyhounds. It was his intention to give up his kennels, but we are glad to see he still takes sufficient interest in dogs to boom the new

show along as its secretary. There are lots of good dogs that are within convenient distance of Lexington, so that they should be able to get up a good show. The old Meadowthorpe Kennel, with Scotch Bailey at the helm, evidently laid the seed that has now germinated in a practical form.

From what "Peto" says, it seems collies are deprived of the rights of a first offense in England, for he tells us of a case where a collie jumped at a horse which ran away and so injured itself that it had to be killed. In the suit for damages against the owner of the dog the judge decided that, although it was proved the dog had never misbehaved before, according to a law passed for the protection of sheep the collie was singled out as punishable at the first offense.

It is astonishing to what ends some people will go to secure their dogs winning in the ring. At a show held at Haverfordwest, a small town in Wales, a man showed a pointer that had won previously but was afflicted with a twitching, the result of distemper. He was advised to give the dog strychnine to pull it together while being judged. He did so—"not wisely but too well," and the dog fell down apparently in greatest agony. He recovered, but whether he will be any good for showing again is uncertain.

The new mastiff bitch Exeter Diree, that is to make its home in the Flour City Kennels, Rochester, N. Y., must by this time have arrived, as she sailed July 25 on the S. S. American. She is said to be in whelp to Exeter Boanerges, who is by champion Beaufort out of Bura. This will be another acquisition to this good kennel.

The St. Bernard interests of this country have in this year of 1891 received some fearful blows, the mortuary list showing such famous names as Ben Lomond, Alton, Hesper, Plevna and now Prince Regent and Scottish Prince. St. Bernard men congratulated themselves, and very properly, on the acquisition of such blood, as they were dogs that had already shown the ability to produce good stock before they were imported. Now we are set back, with one or two exceptions, almost to the same position as in 1889, as far as crack dogs go. We have, however, r. dogs of the same blood, which we must perforce pay more attention to, and we must remember that we still have Sir Bedivere, Plinlimmon, Watch and Aristocrat among the big guns. At the same time these heavy losses are calculated to break the heart of any but the truest fanciers and those with very long purses, and will make breeders pause and think twice before they pay the prices they have been doing the last year or two. These large figures do not represent the true value of the dog, because there is not one that can be depended upon to reimburse the buyer for the outlay. Three thousand dollars is a large sum of money to get back in stud fees. No dog ought to be put to stud until he has been at least six months in the country and become acclimated, for say what they will, this country is not a St. Bernard country, and we do not believe that dogs can be raised as they are in England; there are exceptions, but very few. What stud dogs, with one exception, although they have had good bitches, have produced St. Bernards that equal either themselves or their progeny begotten on the other side. It therefore seems clear that we must pay more attention to importing good specimens of the female sex, and in this division is where we fancy most of the money will go in future. Next week we will print some extracts from an article in *Fanciers' Gazette* (England) by "Conrad" that puts the situation plainly before breeders in England and shows in what a crippled state recent American importations have left St. Bernard breeders over there, and the death of these dogs have now made the situation still worse.

Mr. Eberhart writes us: "Score one for the dog in Cincinnati. Our Mayor has been forced, by strong opinion and thousands of the dog's friends, to call off his brutal dog catchers in Cincinnati, preparatory to turning over the whole business to the Ohio Humane Society, who will soon have full charge and conduct it mercifully. Much credit is due Messrs. Love and Todhunter, superintendent and assistant of the Humane Society. Now, let other cities make as big a fight as we did here, and the dog will get a 'square deal.'" Mr. Eberhart intends to do the Toronto show, and speaks hopefully of some pups of his own breeding that will come out there.

Mr. A. C. Stone, who knows how to work up a show, and if not a success it will be no fault of his, writes: "From present indications the 3d Annual International Bench Show of Dogs of the Industrial Exhibition Association, to be held in the city of Toronto, from Sept. 14 to 18, will surpass anything held before in Canada, and will compare more than favorably with the best shows held in the United States. Applications are being received from all parts of the United States and Canada for premium lists, besides mailing over 2,500 to known exhibitors. Most of the large kennels have signified their intention of exhibiting, and all the large classes are expected to be well filled. The Industrial Exhibition Association are erecting a large open inclosure ad joining the bench show building to be used for the storage of crates and an exercising room. All dogs will be received there. In premium list in Skyeterriers the number of class for open dogs is 155½, open bitches 155½, and toy terriers (other than Yorkshire) open dogs and bitches 164½; the above were omitted in printing. The following classes have been added: 46½, harriers, dog puppies; 46½, harriers, bitch puppies, prizes \$5 and diploma in each case. Class 169½, pug puppies, bitches, \$5 and diploma. Diplomas are added to classes 112, 113, 114 115 in field spaniels, and 121, 122, 123, 124 in cockers. A bronze medal, valued at \$10, is offered for the best bloodhound dog or bitch. Entries close Aug. 29."

We hear that Mr. Sears has purchased Mr. Diffenderfer's last remnant of what was a good kennel of "ladies." In buying Hepsy, however, he has secured the pick of the basket, and she will be assured of a good home, which Mr. Diffenderfer most desired. Mr. Sears has materially strengthened his team by this purchase and is to be congratulated on his good judgment. She is a breeder and one of the best specimens of her sex in the country.

Our readers must forgive us for having so much about St. Bernards in this issue, but somehow all the doggy news this week seems to run that way.

An excellent show of fox-terriers was held at Leicester, England. There were also a few collies shown. As this is in the heart of the fox-terrier country, as might be expected all the cracks were on hand. Dominie won in the challenge class, and Mr. Redmond again stepped to the front with D'Orsay in the open class, and also won with him the cup for the best in the show owned by a member of the Fox-terrier Club, and another for best in open and novice classes. Deputy, Starden's King and Newcome were also in the money in the or 'or named, all well known dogs. In bitches Mr. Timme's Dollar beat Mr. Redmond's Donna Dominie, a decision that was not generally indorsed. Some good ones were also shown in the novice and wire-haired divisions. Mr. Vicary was the judge.

"Old Turk," speaking of his "Reminiscences of Fox-Terriers and Fox-Terrier Men" in *Fanciers' Gazette* says of the noted bitch Cottingham Nettle, owned by Rev. W. J. Mellor: "He had also Cottingham Nettle (afterward Mr. Henry Gibson's), said to be by Old Jock ex Wish, although

I have grave doubts as to this being correct; still she bore a resemblance to the old dog, but circumstances connected with his early life make me feel convinced that his breeding was uncertain. The first time I saw this bitch was during one of my frequent visits to old Jack Terry's. On going into his house (a public) he said, 'You are just in time; I have just bought a smart bitch, come upstairs and see her.' We went to Jack's room and there on his bed she lay, covered up with a rug, having just been washed. At that time her ears were carried as straight up as ever I saw a dog's. I remarked this to Jack; he said, 'Say nowt, no one has seen her except you and when you see her again her lugs will be all right.' And the next time I saw her they were carried splendidly; they were small and of good shape and texture. The Rev. W. J. Mellor was not cognizant of this, I am certain; nor do I believe he ever knew they had been tampered with." These old reminiscences, that seem to be in vogue now, are laying bare a good many of the secret ways of dogdom.

The trotting dog Doc created quite an interest at the late trotting meeting at Buffalo. He was pitted against horse, pony and bicycle in quarter and half-mile contests, and got the judge's decision every time. This dog is four years old; and during the last two years has earned \$9,000 for his owner, Willie Ketcham, who drives him to sulkey. Of course such a dog is valued very highly, and large sums have been offered for him. He is a thoroughbred Irish setter. His owner is out with a challenge to trot any pony not over twelve hands high, half-mile heats, or against any man runner for the same distance. He will give any trotting horse a start of twenty-five seconds to do a mile to Doc's half-mile, or will trot a half a mile against any horse running a mile in harness, and also challenges to walk, trot, run, jump or swim any dog in the world, best three out of five. Doc is a native of Canada and evidently a wonderful dog.

Gordon setter men are expecting good results from the field trial arrangements, and soon expect their favorites to regain their long-lost but old-time popularity. Messrs. Smith Bros., Deep River, Conn., who have for some years possessed a kennel of this breed, have asked Mr. Morris to select them a good brood bitch of the Ronold—Rhine strain, which they consider is the best combination of field qualities and show merit. He has decided on one of champion Beaumont's pups out of Countess Flo, both of which he imported. She is sister to Sally Beaumont and Flomont, winners at the spring shows, and is unusually good in the field. She is to be served by Mr. Morris's dog Rexmont (Heather Harold—champion Bellmont), winner of three first prizes, and from this union the Smith brothers expect to get winners at future trials as well as shows.

Le roi est mort! Vive le roi! Or at least so the fair owner of King Regent thinks now that Mr. Lamb has sent his newly-imported bitch Margharita to be bred to that dog. As his name denotes, he is a son of the lately deceased Prince Regent.

Dr. Cryer, who has been fishing "up in the woods" at Bethany, Wayne county, Pa., writes: "I feel lost without the FOREST AND STREAM," and orders it to be forwarded to him. He has Bob Ivy with him, and he is having a good time helping him fish. Dr. Cryer has sold champion Bessie to Mr. Fisher, of Detroit, Mich., to be delivered after the fall shows and she has visited Bob Ivy.

Mr. Diffenderfer sends us word that he has cleaned out his kennel. The last to go yesterday were Lakme and Princess Hepsy, an excellent-headed pup by Scottish Prince out of Hepsy. These will find a home with Mrs. Smyth in the Swiss Mountain Kennels. The photograph of Princess Hepsy, which Mr. Diffenderfer kindly sent us, taken at four months old, shows an exceptionally fine-headed pup.

The South Carolina Poultry and Pet Stock Association has been reorganized at Charleston, and is now a chartered association under the laws of South Carolina, with a capital \$2,000. After the show of poultry and dogs held last winter they found they had incurred a loss of about \$1,087; but as they had purchased new coops and benches from Spratts Co., they have, with cash contributed by members, assets to equal that amount. Messrs. Ross A. Smith, the president of the old and new association, and Alwyn Ball are the moving spirits and have worked hard to keep the thing going. On their advice the assets of the old association have been purchased. A new board of directors has been elected: Messrs. Ross A. Smith, President; Alfred Aldrich, Vice President; B. McInness, Jr., Secretary; J. Alwyn Ball, Treasurer; W. St. Julien Jervey, Solicitor. They announce that the next show will be held Jan. 5 to 9, 1892, and the president was authorized to communicate with several gentlemen with a view to their employment as judges. Mr. Lacy has been asked to adjudicate in the dog department. All the stock for the new company has been subscribed and everything points to a successful show, and one that should be popular with Northern exhibitors, considering the way they were treated last January.

Dr. Snedev, of Brooklyn, N. Y., is getting together a nice kennel of bull-terriers. He has purchased several from Mr. Harris's kennels; among them Little Donovan, who did so well last spring, and White Violet. It looks very much, with the new ones that have recently been brought from the other side, as if this breed will take another jump in popular favor next spring.

Mr. L. T. Eads, of Davenport, Iowa, writes us that they are about forming a kennel club out there, and propose exhibiting some dogs at the coming fair. From little causes arise great effects sometimes, and those little gatherings often start a local interest in dogs that grow to proportions little thought of at first. The more of these little fair shows we can encourage the better, as it affords the country people who are able to keep dogs at little expense an opportunity to become acquainted with breeds of dogs that they had little idea of before, and that they are often tempted to take up either as a business venture or as a hobby. If our big breeders would look a little ahead they would encourage those little gatherings by sending on a few of their dogs as an object lesson and—an advertisement.

Mr. George Thomas will leave England Aug. 12 with his new purchases and the terriers he took over with him. While he has been away we have tried to keep our readers informed of the winnings of the dogs belonging to the Anglo-American Terrier Kennels, together with the new ones they have bought. Mr. Thomas will bring fourteen over with him. Among the new ones there is a good St. Bernard, by Alton out of Victoria III., a Basset hound for Mr. Rutter; Prince George, the black and tan terrier, and also a bitch of the same breed, two Irish terrier dogs and two bitches, one in whelp to The Irish Ambassador and the other to Breadenhill, and another "Irishman" that is expected to secure all the blue ribbons at the coming shows, but whose name is not forthcoming yet. This kennel is coming out strong in the "Home Rule" breed, for their team will consist of five Irish matrons of the best blood, and two, if not three, stud dogs. As their stud dogs had not arrived, Ballymony visited Larika, owned by Mr. Chas. N. Tweeds. Mr. Tweeds is a New York lawyer, a son-in-law of ex-Secretary Everts, and a lover of fine dogs, having a kennel at his place at

Beverly, Mass. He owns a Scottish terrier bitch, which he imported from Mr. Ludlow, who bred the noted Kilston, and this dog will be responsible for her coming litter.

The greyhounds Ornatus and Lily of Gainsborough will also come over with Thomas, and will materially strengthen Mr. Purbeck's team, and Dearborn street, the handsomest avenue in Salem, will be pretty lively these summer evenings when Mr. Purbeck is trying to find out which of his dogs can go the fastest. Several Yorkshires will of course come over, but Mr. Symonds does not know yet what they are.

In a friendly letter, Mr. Chapman, the energetic secretary of the National Beagle Club, informs us that his beagle Tone, who was first in her class at the beagle trials last year, has whelped five handsome pups by old champion Bannerman. The only dog pup that will be sold goes to Mr. R. E. Rowley, of Topeka, Kan., a great lover of the beagle for sport. Tone is dam of the challenge winner Twintwo, who made such a good record this spring. He expects great things of a sister of Tone's in the coming trials. Old champion Tone is in better shape than ever. Mr. Chapman's is essentially a working pack, and about twice a week he takes them, about dusk, in the woods behind the house, and after staying with them a few hours leaves them to run alone the remainder of the night. They will run for sixteen to twenty hours by themselves, and do not come home till the sun dries up the scent. Champion Fitz Hugh Lee and Lou are among the last to come in. Exercised and run in this way their offspring must necessarily be to the manner born, as well as strout and hardy.

We little thought when penning a rosy paragraph about Prince Regent last week that within a few days he would be beneath the sod. It seems that last Friday morning he attempted to serve the St. Bernard Lady Flo, when he fell to the ground and seemed to lose all power of his limbs and then commenced to vomit. Mr. Reick sent for a doctor, and as it was important that Lady Flo should be served that day, he went over to see Col. Ruppert, Jr., who owns Scottish Prince, and asked him if he would allow the owner of Lady Flo the services of that dog. Col. Ruppert agreed and the bitch was at once sent up to Poughkeepsie, arriving late in the afternoon. She was put to Scottish Prince and this dog collapsed in a similar way, from apoplexy it is said, and was dead in three-quarters of an hour. In the meantime Prince Regent had been getting worse and an hour before he died Mr. French, of Glover & French, arrived, but nothing could be done for him and at 12:30 P. M. he died. An autopsy revealed a ruptured spleen. Thus two of the best St. Bernards in the country and \$8,000 were lost. Mr. Reick sent for us as soon as he came down town, and informing us of Prince's death, he said, "What dog shall I buy now?" While admiring his pluck, we hardly commended his wisdom, but of this further on. It is indeed a melancholy coincidence that both these dogs, father and son, should die within a few hours of each other, and from similar causes. It is also peculiarly unfortunate for the breeders of St. Bernards that these two grand dogs should have passed away, for Prince Regent was securing the attention from breeders that he should have had before when in this country, Mr. Reick having booked eight bitches for him and two were on the way from Port Huron, Mich., the day he died. This noble dog has been buried on Mr. Reick's lawn and "Prince Regent" in coleus will mark his grave.

Prince Regent was by the great Plinlimmon out of Miss Meg, showing a list of well-known names in his pedigree that fully accounted for his great success in the stud and which earned for him the title of "sire of sires." Among his get are such dogs as Princess Florence, counted the best St. Bernard in England to-day; Scottish Prince, that was the worthy successor of Sir Bedivere in England; Earl Rosebery, Duke of Armadale, Lady Gladwin, Kingston Regent, Lord Dante and King Regent. He was whelped in February, 1887, and in the ordinary course of events he had many years of usefulness before him. He had also won numerous prizes on the bench, and was the only dog that succeeded in lowering the colors of Sir Bedivere, though of course this was a rather left-handed honor, as Sir Bedivere was but a pup at the time and his first appearance in the ring. Prince Regent showed that true St. Bernard quality to a high degree, and his beautiful disposition endeared him to his owner, who, though he tries not to show it, feels his loss very keenly. It has been rumored that Prince Regent had done little in the stud since his return to England from America; but we hear that on May 29 a bitch whelped fourteen pups to him, eight dogs, and the dam of Salvador Rosa is now in whelp to him; so this refutes any such rumors as these, which unfortunately are of too common occurrence in this country.

Col. Ruppert also naturally feels his loss, as few men would care to put \$5,000 into dog flesh and lose it within a few weeks. In buying this dog Col. Ruppert thought he had the only dog that could hustle Sir Bedivere, and this was Mr. Sidney W. Smith's opinion. Scottish Prince was whelped April 24, 1889, and consequently only just about full grown. He was by Prince Regent out of Moss Rose, and was completely described in our issue of June 11 on his arrival in this country in company with Aristocrat and Altonette. Col. Ruppert had just got his kennel into working order, and engaged the services of Mr. Loveland as manager, but this sudden loss has rather disgusted him with the idea of carrying out his projects. The loss is certainly severe, but he has yet a good one in Aristocrat, and it is to be hoped that he will, as time heals this wound, reconsider his decision. Scottish Prince of course had not much opportunity in the stud since he has been here, as he was sick on his arrival and was just getting around again when he died so suddenly. He had, however, served one, champion Flora II., the smooth, and as Mr. Reick is lucky enough to own her and she shows signs of being in whelp, due Aug. 23, this gentleman must be congratulated, as this will be his only progeny sired in America. His litter out of Hepsy is said to have been a very good one, and as he has sired some good ones in England the chances are that Mr. Reick will have something to console him.

"Sealyham" terriers is the name given to a breed of terriers owned in Wales by a Capt. Edwards. They have been bred by this family for a very long time. Their pedigree can be traced for 100 years back. They are described in *Canine World* as a sort of small, long-backed and short-legged terrier, not especially good looking, but game to the back bone and well fitted, by build and temperament, for going to earth. They have wonderful noses and will run a fox to ground, but are better adapted for otter work.

Collies are at present commanding tremendous prices in England, something like a second St. Bernard boom. Mr. Stretch has just sold a young collie, bitch seven months old, to Messrs. Farrer for \$500. The sale is of more than ordinary interest to Americans, from the fact that its sire, Charleroi II., was in the Chestnut Hill Kennels some time. The dog is now showing what he is worth in the stud, and although American breeders were told this at the time, he was not appreciated as he should have been. The puppy was out of Ormskirk Countess, and but for the offer of such a long figure for this youngster he would not have parted with it, as it is said to be a wonder. Another litter that we hear of is owned in Birmingham, and a big price has been offered for them by a connoisseur of the breed.

We call the attention of those interested in Irish setters to the advertisement of the Glenmore Kennels in our business columns. O. A. has trained Irish setter for sale; R. G. Van Volzha, foxhounds and English setters; and Fox and Coon Hunter, foxhound pups; J. B. Alfred, beagle pups; A. H. Moore and Chequassett Kennels, St. Bernard pups; Webb Smith, foxhound pups; Prospect avenue, choice Irish and Gordon setter pups; C. E. Stanley, Gus Bondbu pups; and N. A. Dickinson, Chesapeake Bay dog pups. The Toronto Kennel Club show is also advertised.

The fast-running greyhound bitch Why Not, the property of Mr. Fitzsimmons, of Toronto, was found in her kennel at a late hour July 24 with the cords of her hindlegs cut close to the feet. It is supposed that this has been done by the same persons who poisoned White Wings. Of course, this fast greyhound is incapacitated from running again.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Bang Bang of Kippen, Sensation of Kippen, King of Kippen and Queen of Kippen. By J. S. Summers, Philadelphia, Pa., for lemon and white pointers, three dogs and one bitch, whelped July 14, 1891, by Bing of Kippen (champion Naso of Kippen-Dela) out of Ida Heath (Heath-Maud).

Graphic of Kippen, Bella of Kippen, Charm of Kippen, Naso of Kippen and Meteor of Kippen. By J. S. Summers, Philadelphia, Pa., for liver and white pointer dogs and bitches, whelped July 14, 1891, by Bing of Kippen (champion Naso of Kippen-Dela) out of Ida Heath (Heath-Maud).

BRED.

Prepared Blanks sent free on application.

Tudie-Eberhart's Cashier. H. J. Bramlage's (Cincinnati, O.) pug bitch Tudie (Coco-Judy) to Eberhart Pug Kennels' Eberhart's Cashier (champion Kash-Lady Thor), Aug. 7.

Wild Rose-Pious Pembroke. F. M. Nash's (Berwick, Me.) greyhound bitch Wild Rose (Joe Juniper-Bessy II.) to A. W. Purbeck's Pious Pembroke (Nelson-Adrian), July 31.

Metchley Surprise-The Squire. Seminole Kennels' (Chesnut Hill, Pa.) collie bitch Metchley Surprise (Sefton-Lady Rutland) to their The Squire (Charlemagne-Flurry), Aug. 6.

White Violet-White Wonder. Dr. Sneden's (Brooklyn, N. Y.) bull-terrier bitch White Violet to H. A. Harris's White Wonder, June 5.

Classic Bang-King of Kent. F. S. Webster's (New York) pointer bitch Lassie Bang (Bang Bang-Tellie Doe) to Westminster Kennel Club's King of Kent (Priam-Kent Baby), July 31.

Fauntie M-Gem of the Season. Manatage Kennels' (Marblehead, Mass.) greyhound bitch Fauntie M. to A. W. Purbeck's Gem of the Season (Vanhook-Fly II.), Aug. 3.

Winsome Wagtail-Waterfall Wagtail. Dr. Sneden's (Brooklyn, N. Y.) bull-terrier bitch Winsome Wagtail (Kushner-Neil Bright) to their Waterfall Wagtail, May 25.

Ida Heath-Bing of Kippen. J. S. Summers's (Philadelphia, Pa.) pointer bitch Ida Heath (Heath-Maud) to his Bing of Kippen (champion Naso of Kippen-Dela), May 9.

Molt-Henmore Shamrock. F. L. Cheney's (Pittsfield, Mass.) Irish setter bitch Molt (Berkeley II.-Daisy) to his Henmore Shamrock, May 16.

Onota Peg-Henmore Shamrock. F. L. Cheney's Irish setter bitch Onota Peg (Chief-Bizreema) to his Henmore Shamrock, (Muskerry-Avoca), May 2.

Bizreema-Henmore Shamrock. F. L. Cheney's Irish setter bitch Bizreema (Nimrod-Lorna) to his Henmore Shamrock (Muskerry-Avoca), May 25.

Daisy-Henmore Shamrock. F. L. Cheney's Irish setter bitch Daisy (Chief-Ligh Doane) to his Henmore Shamrock (Muskerry-Avoca), May 26.

Harp-Henmore Shamrock. Wm. H. Wise's Irish setter bitch Harp to F. L. Cheney's Henmore Shamrock (Muskerry-Avoca), June 18.

Yum Yum-Henmore Shamrock. B. P. Rotherock's Irish setter bitch Yum Yum (Glencho-Yum) to F. L. Cheney's Henmore Shamrock (Muskerry-Avoca), June 18.

Breeze-Rowdy Rod. D. A. Goodwin's (Newburyport, Mass.) English setter bitch Breeze (Bob Gates-Flo Machin) to Mr. Ewing's Rowdy Rod.

Maud-Rowdy Rod. Bert Crane's (Chicago, Ill.) English setter bitch Maud to Mr. Ewing's Rowdy Rod.

Peg Athol-Rowdy Rod. Dr. N. Rowe's (Chicago, Ill.) English setter bitch Peg Athol to Mr. Ewing's Rowdy Rod.

Volley-Rowdy Rod. P. Lorillard, Jr.'s (Jersey City, N. J.) English setter bitch Volley (Antic-Prince) to Mr. Ewing's Rowdy Rod.

Eve-Rowdy Rod. H. Merriam's (Weston, Mass.) English setter bitch Eve (Orlando-Royal Merial) to Mr. Ewing's Rowdy Rod.

See Noble-Rowdy Rod. Col. B. Ridgway's (Philadelphia, Pa.) English setter bitch See Noble to Mr. Ewing's Rowdy Rod.

Celest C-Rowdy Rod. Greenfield Hill Kennels' English setter bitch Celest C. (King's Dan-Elsie Belton) to Mr. Ewing's Rowdy Rod.

WHEELS.

Prepared Blanks sent free on application.

Ida Heath. J. S. Summers's (Philadelphia, Pa.) pointer bitch Ida Heath (Heath-Maud), July 14, eleven (seven dogs), by his Bing of Kippen (champion Naso of Kippen-Dela).

Countess. M. Ramsden's (Ambler, Pa.) collie bitch Countess, Aug. 5, nine (four dogs), by Seminole Kennels' The Squire (champion Charlemagne-champion Flurry).

Mack's Juno. W. B. McCulloch's (Hyattsville, O.) pointer bitch Mack's Juno (Hex Morgan-Fleet), Aug. 3, thirteen (eight dogs), by Hon. G. H. Barger's Leslie (Spot Dash-imported Belle Randolph).

Dixie. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Dixie, Aug. 5, five (three dogs), by Rowdy.

SALES.

Prepared Blanks sent free on application.

Ruby. White bull-terrier bitch, whelped March 27, 1890, by Rusher out of Nell Bright, by L. Dehm, Philadelphia, Pa., to Dr. W. C. Sneden, Brooklyn, N. Y.

Dandy Boy. Silver fawn pug dog, whelped June 8, 1891, by Spokane out of Lalla Rookh, by Eberhart Pug Kennels, Cincinnati, O., to Frank W. Hess, Chicago, Ill.

Lady Desmond. Silver fawn pug bitch, whelped June 8, 1891, by Spokane out of Lalla Rookh, by Eberhart Pug Kennels, Cincinnati, O., to Richard Graham, Mexico, Mo.

Patience. Silver fawn pug dog, whelped June 8, 1891, by Spokane out of Lalla Rookh, by Eberhart Pug Kennels, Cincinnati, O., to S. Stanton, Grand Lodge, Mich.

Shot. Orange and white English setter dog, whelped July 18, 1889, by Dash out of Dot, by Greenfield Hill Kennels, Greenfield Hill, Conn., to N. Bishop, Bridgeport, Conn.

Gautama. Liver and white pointer dog, whelped July, 1890, by Arkus H. out of Lark, by Greenfield Hill Kennels, Greenfield Hill, Conn., to H. Figg, Bridgeport, Conn.

Alvino Alaniz, a Mexican ranchman of Rio Grande City, Tex., has undergone a fearful experience that will probably cost him his life. He was riding after cattle two days ago, and camped at night by a little creek that ran through a tangled mesquite. He tethered the horse, cooked his supper, and was squatted by the fire smoking the inevitable cigarette, when a mad coyote sprang upon him from the dark. The little beast, with every hair standing on an end and jaws drooping foam, struck him full in the face and fastened its teeth in his nose. The attack bore Alaniz backward, and he sprawled at full length. He endeavored to defend himself with his hands, but to no avail. The coyote snapped his teeth through the skin in a half dozen places and the face of the man was covered with blood. As he struggled to his feet, frenzied with terror, his assailant disappeared. The ranchman reached Rio Grande City next morning and was treated, but is extremely prostrated and will probably die of hydrophobia. Mad wolves and coyotes are by no means uncommon. Three years ago G. C. Chamberlain, a son-in-law of the millionaire ranchman, Richard King, was attacked while on horseback by a mad wolf. He went to Paris as fast as steam could take him, was treated by Pasteur, and has not suffered any inconvenience. — *St. Louis Globe-Democrat.*

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

F. S. P., New Bedford, Mass.—Can you tell me to whom to write to inquire about a breed of dogs called the great Danes? Ans. W. E. Hagans, secretary of the Great Dane Club of America, 505 Stock Exchange Building, Chicago, Ill.

S. C. W., Brooklyn, N. Y.—One of my dogs, a bull-terrier, has a great many warts upon his lower lip. Will you please tell me how to get rid of them? Ans. Remove them with a pair of scissors. If you do not care to do this, apply with the end of a match glacial acetic acid every other day till they disappear.

H. C. C.—My terrier has a sore about the size of a quarter on the inside of ear. There is a small hole in the middle of the ear which matters a little, and this forms a scab round it. I have tried several things to heal it up, but cannot do it. It does not spread at all, but just will not heal up. Is there no remedy for it? Ans. Apply a little of following ointment twice a day: Green iodide of mercury, 3 grains; vaseline, 1 drachm. Also put cap on the dog, so as to fix the ear and prevent the dog shaking it.

CANINE.—My setter pup, 8 mos., old, acts very peculiar when I set his feed before him. He will eat a mouthful and then turn away from it and look as if he would like some more, but dare not touch it. He will attempt to eat and then go and sit down. Sometimes he has vomited after the first mouthful a yellowish, slimy looking matter. After a little while and when coaxed he will begin to eat and seems all right after. What is the trouble? Ans. Examine mouth and see if all the teeth are sound. Treat for worms and then give the following mixture: Bicarbonate of potash, 1 dr.; compound tinct. of gentian, 3 drs.; water, 6 oz. Give one tablespoonful three times a day.

W. L. P., Vicksburg, Miss.—I have lost several valuable pointer dogs from disease. All showed the same symptoms. Considerable slobbering, with gums and tongue much inflamed, the latter around the edge, which toward the last stage extends into the throat. The dog becomes unable to lap water, and eats with great difficulty, and in four or five days dies. I think there was no swelling of the body. What is the disease and what is the remedy? Ans. From your description it looks as if the dogs had licked some irritant, which set up inflammation of the gums, tongue and throat. Bathe the gums and tongue frequently with the following solution: Boracic acid, 4 drachms; water, 10 ounces. Feed the dogs with white of raw eggs beaten up with milk and a little scraped raw meat.

RUTHERFORD.—I have lately been presented with a pointer bitch called Dell, and I am going to trouble you for her pedigree if she has any. She was bred in Wyoming, and is said to be of Sensation stock. As the bitch is a gift, and I don't wish to look too far down her throat, I will be obliged if you will give me such information as you can. She was formerly the property of a Mr. Jarvis, who has had her on his farm at Brentwood, L. I., for a year or more. As she seems very nearly up to the pointer standard, I will be obliged for any information that you can give me as to her ancestors. Ans. We are afraid we cannot help you, as this Dell is not registered in either stud book. There is a Dell in A. R. R. (1822), but this is by Croxteth out of Trinket, and was bred by Mr. Sterling, of St. Louis, Mo.

A READER.—Please inform me of the best way to break an old dog. I have a pointer about 4 years old, and he will break and chase dogs of all kinds. I have whipped him and it does no good, and I have shot him with No. 30 shot and he pays no attention to it. What had I better do? 2. What amount of shot should a 16-gauge gun put in a 30in. circle at 40 yds., No. 8 shot? and which is best 12 or 16-gauge for trap and field? Ans. 1. When you go out with him you must attach a cord to his collar, better have an improved spike collar in his case, and when he attempts to break shot, pull him down. This is the only way you can manage him, but we are doubtful of success unless he keeps up all day. His skin looks all right, but is rather dry. We feed him lightly on bread and milk with an occasional bone; no sweets. The local veterinary surgeon can discover nothing the matter with him. Can you tell me what is the matter with him and suggest a remedy for the scratching, which bids fair to leave him a "hairless dog" every other day, or a fortnight, then wash off. Best kerosene, 1 pint, best cotton-seed oil 3 pints. Treat for worms and then give this mixture:

Sulphate of magnesia.....4 drs
Bicarbonate of soda.....14 drs.
Liquor sodæ arseniatæ.....1 dr.
Water ad libitum.....6 oz.
Give a tablespoonful twice a day and allow two or three ounces of meat daily.

Rifle and Trap Shooting.

RANGE AND GALLERY.

ENGLISH REVOLVER NEWS.

BISLEY, July 18.—The revolver shooting for the first week has ended, but of course there may be many changes in the leading scores before the end is reached next Friday. The top scores, at present are:

Series 1, sliding target:
Walter Winans (Smith & Wesson).....39
C F Haig (Colt).....39
Series 2, disappearing target:
Walter Winans (Smith & Wesson).....40
C F Haig (Colt).....39
Mr. Winans has made 40 on five different occasions this week in this competition.

Series 3, rapid-firing:
C F Haig (Colt).....38
Walter Winans (Smith & Wesson).....36
Smith & Wesson aggregate prize for best scores in above competitions:
C F Haig.....39 39 38-116
Walter Winans.....39 39 38-115

Mr. Walter Winans has a bet of 5 to 1 on himself that he beats Mr. Haig's 38 score in series 3 during the coming week. (Mr. Winans to-day made a good enough group for a 42 if it had been half an inch higher.)

Plunkye prize, restricted to English officers: Major Williamson and another 37 and 35.
For all prizes the fight will begin in earnest next week, as the range was strange to most of the competitors and there is no shelter from the wind, which makes high scoring very difficult; but after Sunday's rest they will come fresher. Mr. Walter Winans is suffering rather in his right eye from burnt powder blowing into it, but hopes to have it well enough to begin shooting on Monday or next Tuesday.

Our previous blunder has crept into the programme book for the Irish Rifle Association prize meeting just published. In the two revolver series (one restricted to Colt's revolvers and the other to Webley's revolvers) the conditions say:

"Minimum bore .40cal., ammunition, government, marks I, II, and III, only allowed."
Now, "mark I" is .45cal., "mark II" is .455cal. and "mark III" is .457cal. and will be interesting to see competitors shooting this ammunition out of .40cal. pistols.

BISLEY, July 25.—The following are the full details of revolver prize winners and scores:

REVOLVER—FIRST SERIES.

Six shots at a target about 20 yds. distance, and moving across the line of fire at about the rate of the "quick march." No sight-ammunition allowed.
Mr. Winans, N. R. A. (Smith & Wesson), first prize.....39
Mr. Haig, N. R. A. (Colt).....39
Private Green, 2d Gloucester (Green).....37
Private Martin, 10th Lanark (Colt).....36
W W C Dixon (Webley).....35
Capt. Barchard, Inspector of Musketry (Colt).....35
Major MacKerrell, 1st Bn. Grenadier Guards (Colt).....34
Lieut. Tryon, 1st Battery Grenadier Guards (Colt).....34

Capt G Hamilton, 14th Hussars (Colt).....34
Private Elliot, 2d Cornwall (Colt).....33
D Wilson (Webley).....33
Capt Lamb (Colt).....32
Major Williamson (Colt).....32
Mr Breton (Colt).....32

Winners of £1.

Captain Cowan, Royal Engineers (Colt).....32
Captain Lewis, Jersey Militia (Colt).....31
Private Carter, 1st South Stafford (Webley).....31
Major Heap, 2d Manchester R. V. (Colt).....30
Lieutenant Heath, 18th Middlesex (Colt).....30
Captain Lamb, Cheshire Regiment (Colt).....30
Captain Millner, 8th K. R. (Colt).....29
Lieutenant Darrah, 2d Queen's (Webley).....29
Sergeant H. H. 7th Canada (Webley).....29
Mr Joyn, I. R. A. (Colt).....29
Lieutenant Stewart, 1st R. S. Fus. (Colt).....29
Captain East, 1st V. B. H. R. (Webley).....29
Private Lowe, 18th Middlesex (Colt).....28
Mr Miller, N. R. A. (Colt).....28
Commr. Scott, R. E. (Webley).....28
Color-Sergeant Henderson, Canada (Webley).....28
Lieutenant Gibson, R. A. (Colt).....28
Captain Urmost, 2d Gordon High (Colt).....24
One score of 24 points counted out.

SECOND SERIES.

Six shots at a target appearing and disappearing at intervals of three seconds at a distance of about 20 yds. The following are the best scores:

Mr. Winans, N. R. A. (Smith & Wesson).....40
Mr. Haig, N. R. A. (Colt).....39
Dudley Wilson (Webley).....38
At Breton (Colt).....38
Mr. Dixon, N. R. A. (Webley).....36
Major MacKerrell, 1st V. B. Royal Scots (Colt).....36
Mr Green (Green).....36
Capt Cowan (Colt).....36
Pvt Carter, 1st Stafford (Webley).....36
Capt Lamb, Cheshire Regt (Colt).....35
Sergeant Martin, N. W. M. I. (Webley).....34
C M Hall, Canada (Colt).....34
Capt Lamb, Cheshire Regt (Colt).....33

Winners of £1.

Capt Barchard, D. I. Musketry (Colt).....33
Capt. Millner, 8th K. R. (Colt).....33
Mr Miller, N. R. A. (Webley).....33
Major Williamson, Oxford L. I. (Colt).....33
Mr Jynt, I. R. A. (Colt).....33
Mr Andrews, Woolwich (Colt).....32
Capt Lewis, Jersey Militia (Colt).....32
Mr Lloyd Jones, (Colt).....31
Mr May, N. R. A. (Colt).....31
Lieut. Rose, Second East Surrey (Colt).....30
Pvt Elliott, Second Cornwall (Colt).....30
Lieut. Tryon (Colt).....29
Lieut. Darrah, Second Queen's (Webley).....29
Capt Scott, R. A. (Webley).....29
Mr Tryon, 1st Bn. Grenadier Guards (Colt).....29
Capt East, 1st V. B. Hants (Webley).....29
Major Heap, Second Manchester.....29

THIRD SERIES.

The best scores made in this series are given below. Six shots are fired at a target about twenty yards distance, which is shown for twelve seconds only. No concession is given for misfires or any failures of the revolvers or ammunition:

Mr. Winans, N. R. A. (Smith & Wesson).....39
Mr. Haig, N. R. A. (Colt).....38
Dudley Wilson (Webley).....35
Major MacKerrell, 1st V. B. R. S. Fus. (Colt).....35
Private Carter, 1st Stafford (Webley).....33
Mr. Breton, N. R. A. (Colt).....33
Captain Millner, 8th K. R. (Colt).....31

Winners of £1.

Mr. Dixon, N. R. A. (Webley).....31
Capt. Barchard, D. I. Mus. (Colt).....30
Major Williamson, Oxford L. I. (Colt).....30
Lieut. Darrah, 2d Queen's (Webley).....30
Private Hall, 79th Battalion Canada (Colt).....30
Captain Lamb, Cheshire Regiment (Colt).....30
Captain Hamilton, 14th Hussars (Colt).....29
Captain Straker, 31st West York (Colt).....29
Mr. Joyn, N. R. A. (Colt).....28
Captain Cowan, Royal Engineers (Colt).....28
Captain Lewis, Jersey (Colt).....28
Captain Barchard, 15th Regiment (Webley).....28
One score of 22 points counted out of prize list.

REVOLVER AGGREGATE.

A Smith & Wesson engraved gold-plated .38cal. target revolver, pearl stock, to the highest scores in the above three competitions, constituting the revolver championship of England:

Walter Winans.....39 40 39-118
C F Haig.....38 39 38-115
Dudley Wilson (professiona).....35 38 35-108
Major MacKerrell.....34 36 35-105
Breton.....32 36 33-101

Although there were thousands of entries for the different revolver series, there were only twelve entries for this aggregate, and only four of them got scores in all three series. Mr. Wilson, the professional, was unfortunately in not entering at all time, so could not compete, but, as seen above, his scores would not have won even if he had.

All the competitions at the revolver range ended at 1:15 on July 24. The presentation of prizes took place on the afternoon of the same day before a large audience, but, while many of the rifle shots went up for their prizes, the revolver shots were unable to attend, as they had an important meeting sitting at the time in Mr. Walter Winans's cottage in the camp, to decide on a memorial to the council of the National Rifle Association asking for certain alterations at the revolver range for next year.

As these competitors had no opportunity to meet all together except just at that day and hour (as they live some in Ireland, some in England and Scotland, etc.), they had to be excused being present at the prize distribution. The following resolutions were agreed to unanimously except for one dissentant in one or two cases:

1. Agreed that the revolver 20 yds. target should have a 2in. instead of a 3in. bullseye, also that this 2in. should not have any subdivision, as these latter give advantages to "faking" shots, also that the value of the bullseye should not be indicated by a figure printed in white in it, as that spoils the blackness of the bullseye.

2. That the rings round the bullseye should be "hair lines," invisible from firing point, and that these lines should be very close to the bullseye for the first lines and gradually get further on the principle of the American pistol target, not at regular intervals like the English target.

Every one agreed to this except one, who said that he did not approve of imitating America, but that Bisley ought to keep to its own way of scoring.

3. That there should be more target accommodation and that "pool shooters" should be put by themselves so as not to interfere with the serious competitors.

4. That there should be competitions at 50 yds. at a 6-in. bullseye.

5. That revolvers should be divided into two classes, military and "any revolver," and competitions given for each.

6. That military revolvers should not have "bead" front sights or movable sights, but real practical bolster sights was proposed by Major MacKerrell and Walter Winans, but voted against by all the rest.

7. "A" revolver to be allowed any ammunition. Caliber, sights, weight and length of barrel was agreed to unanimously, but most thought that the trigger pull should be the same as for military revolvers, viz. 4 lbs., so that competitors who shoot both classes of revolvers should not be confused by two sorts of trigger pull.

The meeting was greatly in favor of a 100 yds. range for pistol, as through the kindness of the Association they had been allowed to try a few shots at that distance and found they could do good shooting; but they thought 50 yds. would be far enough for the next few years till the poorer shots had been educated up to long distance shooting.

The revolver competitions have been such a success, and the Council of the N. R. A. being so obliging when they know that the bulk of competitors desire anything, it is likely most of these requests will be complied with.

WALTER WINANS ON THE RANGE.

A reporter of the *Sussex Daily News* had a chat with the leader of the English revolver field, and in the issue of July 25 says: "The first item of discussion was his position at the present

STARLING.—On Aug. 8 the sloop Starling, owned by Mr. S. W. Knowler, was struck by the steamer Gay Head when passing through Wood's Sound and sunk, the crew being saved.

BIJOU.—The owner of the catboat Bijou, Mr. P. H. Jeannot, has just been notified that by the correct measurement his boat won in the annual regatta of the Atlantic Y. C., beating Marguerite (the Cape Cat A. P. E.), though the race was at the time given to the latter. This makes Bijou's record still unbroken.

TIME TO KEEP COOL.

EVEN the present torrid weather is no justification for the hot and intemperate language which is used by some in discussing the foul between Volunteer and Gracie. One Boston paper goes so far as to characterize the possible disqualification of Volunteer by the regatta committee as "bare-faced robbery," while the usual "prominent yachtsman, etc.," has threatened that in such an event Gen. Paine will withdraw forever from the races of the New York Y. C. Although these idle vapors carry little weight of themselves, they are indications of the very strong feeling which has arisen over the matter, and they show the necessity for calm and deliberate action on the part of all concerned. In spite of the unwarranted insult of the Boston Post the regatta committee of the New York Y. C. is beyond all suspicion of unfairness or partiality, and whatever its decision may be, there is no doubt that it will be a perfectly honest one. In such a case as this the principals are but poor judges of the true merits of the case. Each is strongly interested, and naturally sees but his own side, while in the hurry and excitement of such a moment the coolest man is likely to be mistaken. There is plenty of evidence from impartial spectators, while Mr. Stebbins, the photographer, has sent to the committee a series of four views of the whole affair. These should be the basis for a fair and impartial decision, in which both parties should agree, however much one may be disappointed.

IROQUOIS, though well known for some years, has just excited much favorable comment on the New York Y. C. cruise. The steel schooner Iroquois was designed by Mr. A. Cary Smith, and is now owned by Vice-Com. Ellis, of the Seawanhaka C. Y. C. Her reputation as an ideal deep water cruiser was made long ago by her experiences in the great blizzard, which she rode off the coast, and by her work in southern waters under her original as well as her present owner. That she was by no means a slow boat has been known to many, but this season, with a new suit of canvas and in the best possible condition, she has taken a place at the head of her class, all the more credit being due to her owner from the fact that he handles the wheel himself. A boat which is admitted to be one of the easiest sea boats in the fleet, in which the owner spends the winter in comfort among the West India Islands and on the Florida coast, and in which, as has this year been proved, he can not only make a most creditable showing in a good class, but comes within 20 seconds of taking the Golet cup from Volunteer, must be considered as very near perfection in these days of special racing machines.

THE EVOLUTION OF THE BATTEN.—The use of several flexible battens extending entirely across the sail is an old thing in canoeing, but up to this time the batten as used by yachtsmen has been merely of an elementary form, a short stick run into the leach of a sail to correct some local fault. For several years Mr. Herreshoff has used the full batten on his cat yawls, and within the past month he has applied it to Gloriana's mainsail in much the same way. The sail now has three battens extending from the leach nearly half way to the luff, these being very thin and flexible on the forward end but stiffer near the leach. The perfect sail no doubt should have a correct draft without other spars than the boom and gaff, but as this degree of perfection is seldom attained, the batten has proved in many cases a useful makeshift, even in its usual form. The longer ones in Gloriana's mainsail are still better in all probability, but it is doubtful whether the process of lengthening will continue still further, until the entire breadth of the sail is covered, as in a canoe. To do this requires a material not yet obtainable, something very strong and flexible but of light weight.

RACING VS. CRUISING TRIM.—The idea is generally prevalent among racing men that every ounce of weight sent ashore in a race is a gain to the boat; but so far from this being an invariable rule, the exceptions are numerous, several being noted on the cruise. Liris, so far as can be judged, is sailing better this year on the cruise, and especially in the New York Y. C. regatta, with no end of furniture and fittings aboard, than in many of the races when Designer Gardner had all the match safes emptied and made the crew leave their pocket handkerchiefs ashore. Mayflower has been sailing up to her old reputation, for the first time since the change of rig, on the runs of the cruise in cruising trim. In the Golet cup race she was completely stripped and made the worst showing of the cruise. Whether or not a yacht should be stripped, and with what weight she will do her best sailing, is not a matter of rule, but must be learned by each skipper before he can hope to win races.

"DRAWING LINES."—A most amusing commentary on the practice "drawing lines" from the performances of certain boats to determine the merits of other craft, an amusement very popular in Boston of late, is found in the result of the late Golet cup race, in which a boat that has not been counted at all turned up second to Gloriana. Although she was beaten badly herself, she in turn left the rest of the fleet astern to the same tune. All the elaborate calculations of the comparative speeds of Owene and Gloriana which were based on the performances of Sayonara fell to pieces before the fact that Barbara beat both Owene and Sayonara very fairly to windward, and finally came in second to Gloriana.

"DEAD FOR A DUCAT."—The work of Gloriana in the Golet cup race gave the event very much the appearance of the funeral of the class, and though there is a chance that Beatrice may prove able to make a race for the Herreshoff flyer, it is evident that the others, Owene, Sayonara, Barbara, Nautilus, Minola and Alborak have no use at all for her, and can only win prizes when she is not present. While the coming races off Newport and Marblehead are certain to prove both exciting and interesting, there is little prospect that they will do more than settle the question of second, third and the poorer places, leaving Gloriana anywhere from 5 to 10 m. ahead of the fleet. In this event, the class will be as dead as the 40ft., and after even a shorter existence.

GUNS VS. WHISTLES.—The guns on the Electra are manned and handled as well as any in the fleet, and far better than the usual starting gun on any chance yacht or tugboat, but they are not free from the infirmities of their kind, and have twice missed fire on the cruise in giving the starting signal. The old reliable steam whistle is seldom known to miss fire in competent hands, and the wonder is why regatta committees still adhere to the tricky and treacherous gun at the risk of spoiling the start in every instance.

A BABY GLORIANA.—In the new edition of "Yacht and Boat Sailing," published a month since in London, and just passed through the Custom House here, there is a design for a 1/2-rater by Mr. Dixon Kemp, which in some respects shows a remarkable likeness to Gloriana, the outline of stem being the same, though the bow has not the excessive fullness of the Bristol boat.

NEW YORK Y. C. CRUISE, 1891.

A PART from the 46ft. class, the racing up to the end of July has been of the most unsatisfactory sort; the schooners and larger single-stickers have done little or nothing, the handicap and cruiser races have failed to fill the entry lists, and the sole interest has been in the small classes, from 46ft. down to 25 ft. It is then a matter for regret that the cruise, which has shown a most decided improvement over the club regatta as well as over last season. The racing among the schooners on the cruise has been specially good, a very fair fleet of starters showing up for each run as well as the Golet cup and Vineyard Haven races, and while nothing specially startling in the way of speed or of exciting finishes has been seen, there have been some very pretty contests between Mayflower, Marguerite, Iroquois, Quickstep and Oweene in particular, while Volunteer, Constellation and Fortuna of the larger classes have taken part in most of the races. Grayling has not been with the fleet, and though Montauk was present she raced but little.

The racing in the single-stick fleet has been of unusual interest in the 46ft. class, the only one which is at all alive and up to date. Of the old classes, the 70ft. has not come up to expectations this year. Katrina, of the old class, has been in the fleet, Grace and Fanny, as to leave them little chance of beating her. On the hard beat of the first day she did the best work of the fleet, but she failed to start in the Golet cup race, and there is good reason to doubt whether she would have been able to give Gloriana some 25 m. had she done so. Shamrock was with the fleet but did not race, and Gracie was left behind at Newport in the 46ft. class, while the 40ft. class was a very spirited attempt to represent the class in the Golet race.

In the other classes, however, a number of the old boats started and made very fair racing among themselves, though, of course, not in the game with such craft as Owene and Gloriana. It is good to see the familiar names of Hildegard, Mischief, Cinderella, Clara, Huron, Tuels and their fellows. It is to the owners of the boats and the schooner that the chief credit is due for the success of the cruise. The 40ft. class made but a poor showing, Gossoon being out of several races through her accident. Liris has sailed well with the fleet, but Ventura, the only other racer, has done but little, and the racing of the class has been very tame.

While racing is by no means the sole end and object of the annual cruise, and the complaint is frequently made that too much time is spent in the menial part of the programme, it is a plain fact that without racing the cruise is a failure as a sporting and cruising craft. How to obtain just the proper amount of racing to give life and excitement to all, without at the same time making the cruise one big regatta with a daily round of hard work and no chance for rest or social intercourse, is a very difficult problem; but the danger lies rather with too little racing than too much. This year four of the five runs were races for all who wished to enter, the conditions being as follows:

SQUADRON RUNS.

From Huntington Bay to New London, 63 miles. Start off Eaton's Point Buoy and finish off lighthouse, New London.

From New London to Newport, 40 miles. Start off Sarah's Ledge and finish off the Dumphings.

From Vineyard Haven to Vineyard Haven, 37 miles. Start off Brenton's Reef Lightship and finish at red buoy No. 2 off West Chop. Vineyard Sound Lightship must be left on the port.

From Vineyard Haven to New Bedford, 34 miles. Start off the bluffs in front of the Sea View House and finish off Clark's Point Light, leaving Sow and Pigs Reef buoy on the starboard.

From New Bedford to Newport, 67 miles. Start off Clark's Point Light and finish off Brenton's Reef Lightship, leaving Hen and Chickens Lightship on the starboard.

The Electra will establish start and finish lines for each run and give the corrected time of all yachts crossing with their private signals at the peak and their racing numbers displayed (Sec. 3, R. R. X.) and in cruising trim, anchors on the bow and cables boat, cruising complement of boats carried, cruising deck, cabin and galley fittings and fixtures in place; topsails extending aback the truck or to the end of the boom, if so desired.

A squadron run prize will be given in each class where two or more start, with a second prize if four or more start.

Any yacht alone in her class can sail in the class above.

Water can be taken into the tanks until 8 A. M. the morning of the run with this exception, racing rules to govern.

These conditions subject to alteration in any class on the request of a majority of the contestants on any run.

Vessels that do not wish to be timed will not cross the line, nor carry their private signals at the peak. They will be at liberty to get under way and proceed to the squadron's destination with the gun announcing the harbor start.

STARTING SIGNALS.

The Electra will fly the United States ensign at the fore until the preparatory signal is made. Preparatory signal.—One gun will be fired, and at the same time the U. S. ensign will be hoisted and the blue peter set in its place. 1st start.—Ten minutes later a second gun will be fired, the blue peter lowered and the club signal set in its place; when the time of yachts in Classes V., of schooners, and V., VI. and VII., of sloops, cutters and yawls, will be taken as they cross the line. Five minutes later the club signal will be fired. 2d start.—Ten minutes later a fourth gun will be fired and the club signal again hoisted; when the time of yachts in Classes I., II., III. and IV., of schooners, and I., II., III. and IV., of sloops, cutters and yawls, will be taken as they cross. Ten minutes later the handicap gun for yachts in Classes I., II., III., and IV. (all types included) will be fired.

With a large fleet of some 40 yachts as a nucleus, the entire fleet aggregated about as many more sailing and some 50 steam yachts, a number of course being with the fleet only a few days at a time, as at New London, Glen Cove or Newport. When under way, however, as in leaving New London or Newport, the regular fleet of some 60 to 80 yachts made a spectacle that the New York Y. C. may well be proud of. The flagship Electra was assisted by the regatta committee and also carried the representatives of the New York and Boston papers. Com. Gerry finding his chief pleasure in making every one at home. It is needless to say that under the direction of the fleet captain, Mr. Stephen Peabody, and the regatta committee, Messrs. S. Nicholson Kane, Irving Grinnell and Chester Griswold, all arrangements for the handling of the fleet in the runs and races were well carried out. The new feature of a special steamer for members at the start of the cruise and again for the Golet cup race, was very generally appreciated by the large non-owning contingent of the club.

FIRST RUN, HUNTINGTON BAY TO NEW LONDON, AUG. 4.

The first racing run of the cruise, a brief account of which was given last week, was something out of the regular line of cruising passages. The wind and sea were nothing particularly bad, but the distance, 63 miles, was just twice the length of the usual run, and the error of head wind and all the way, the race was tedious and trying and not a little wet. The sailing fleet included some 60 yachts, from the big schooners Constellation, Dauntless and Palmer down to the forties Gossoon, Liris, Choc-taw and Ventura. Of these nearly 30 crossed the starting line, with numbers and private signals set, only 20 finally crossing the finish line at New London. The racing was close and the contest exciting in some places, but after the first half dozen miles it was impossible to follow the contestants at all closely, they were widely scattered. Breakdowns and minor casualties were numerous, but the details were not generally known until the entire fleet was assembled in harbor a couple of days later.

At the start the weather was cloudy with a light rain, the wind being from the eastward, a worktopossal breeze and the water a little rough. As the fleet advanced the rain ceased, save a few showers, the sky cleared and the wind held steady until afternoon, dropping toward evening, and falling entirely by sunset. In the middle of the sound there was some tolerably rough water. The crews of the smaller boats being well soaked. On the last third of the run the sea was much smoother. When the leaders reached the finish the weather was clear and fine, the evening being perfect. The start was made between the Electra and a tug, off Eaton's Neck, the tide being at low half flood. The finish was made off the lighthouse at the mouth of New London Harbor.

In several classes the boats were so matched as to make good racing, Minola, Sayonara, Owene and Nautilus in the 46ft.; Liris and Gossoon in the 40ft.; the modern Katrina against the old-time cracks Gracie, B-down and Huron in the 70ft.; while Iroquois, Marguerite and Clara made a good class of the smaller schooners. Constellation, Palmer, Norswaan and Intrepid made up the largest class. Cinderella and Clara were ready for a duel, this being their first meeting this season, and though a race was in poor form as to sails or crew, a close fight was expected. Cinderella was steered by Clara's old skipper, Capt. John Barr, while Clara was sailed by an amateur, Mr. Walter Thompson, her crew being made up of the wife of Mr. Osborne, her owner. Unfortunately Clara broke a chainplate just before the start, and did not cross the line but fell in with the non-racers to leeward. She made a good race, however, overtaking Cinderella in the worst of the sea, when more than half the course was covered,

and beating her into New London by a good lead, though neither was officially timed.

When the time for the smaller boats was nearly up, Capt. Chas. Barry took Overton along the line, with Sayonara and Minola for a lowing him. Even the El-etra's guns, which are usually prompt and reliable pieces of ordnance, at times prove subject to the same weaknesses as others of their kind; and this time the gun missed fire, leaving the boats hanging at the line for a short interval until the whistle was blown in place of the gun. The three were obliged to reach along to the leeward end of the line, while Nautilus and Gracie, who had been lying to windward of the flagship, dashed promptly across on the whistle with a good start to windward. Although the starting explanations were very explicit, being the same for all the races of the cruise, they were not understood by three of the larger schooners, Columbia, Dauntless and Montauk, all crossing with the small boats, well ahead of their proper classes, and thus not being timed. The official time was:

Nautilus.....	6 20 56	Katrina.....	6 37 00
Sayonara.....	6 21 18	Hildegard.....	6 37 07
Gossoon.....	6 21 31	Sylph.....	6 37 15
Quickstep.....	6 21 31	Huron.....	6 37 50
Cinderella.....	6 21 45	Bedouin.....	6 38 12
Oweene.....	6 22 07	Constellation.....	6 38 39
Liris.....	6 22 57	Mayflower.....	6 38 43
Minola.....	6 23 48	Gracie.....	6 39 29
Cllo.....	6 24 02	Gevalla.....	6 39 40
Mischief.....	6 24 44	Whaleway.....	6 40 25
Eleanor.....	6 25 00	Forget Me Not.....	6 41 35
Iroquois.....	6 30 16	Phantom.....	6 42 51
Marguerite.....	6 30 23	Palmer.....	6 44 03

Norsmaan, Fleur de Lys, Intrepid and Eleanor were handicapped.

Not a few, both of the racers and in the cruising division, were more than satisfied with the first 20 miles of beating, and a number put into New Haven and other ports. Among these were Mischief, Fleur de Lys, Cllo, Sylph, with a broken board, G-valla, Eleanor, Whito, Oweene, Fanny, Por-abona's, Phantom, Whaleway and Forget Me Not, the old sloop Bertie with a new name. Of other white craft, a number came to grief in one way or another; Constellation, for instance, lost some time in setting a smaller one, Nautilus carried away the jaws of her gear, Owene crushed the sheaves out of her throat hallow back and also lost the tack of her topsail, Mayflower tore her jib, Sayonara lost her topsail sheet, taking in the sail and housing her tomast for a time, and Gossoon parted her main shrouds at the masthead when but a few miles past Fort Jefferson, immediately giving up and running for safety under loose sails. The honors of the run went to Katrina, Iroquois and Oweene, the former leading the fleet nearly all day and finishing 20 m. ahead of second boat, the big schooner Constellation. Iroquois, the 80ft. schooner, like Katrina, designed by Mr. A. Cary Smith, saved her time easily on the schooner classes, being fourth boat in. She beat her rival Marguerite by 30 m. and was about even with Mayflower on the 40ft. class, doing good work with her mates, beating Gracie and Huron badly, though herself out-sailed by the newer Katrina. Owene held a good place all day, sailing well to the front with the big boats for a long time and finally leading her class by a quarter of an hour. Liris did well, having about caught Gossoon when the latter was compelled to withdraw. The official times of those which finished are as follows, the corrected times not being given, owing to incomplete measurements, and to the fact that they were not needed, the winners being correctly placed by the elapsed time:

FIRST CLASS SCHOONERS.

	Start.	Finish.	Elapsed.
Constellation.....	6 33 50	5 34 27	10 55 57
Palmer.....	6 41 03	5 53 05	11 09 02
Norsmaan.....	6 45 00	7 35 20	12 55 20
Intrepid.....	6 45 00	7 47 56	13 02 56

SECOND CLASS SCHOONERS.

Fortuna.....	6 40 25	6 43 21	11 32 56

SEVENTH CLASS-SLOOPS.

Liris.....	6 22 57	8 04 55	13 41 58
------------	---------	---------	----------

The Electra anchored off the lighthouse at 5 P. M., lying there to time the yachts until after 9 o'clock. After dark her search light flashed out in all directions as a guide to the belated craft. The harbor of New London presented a very different appearance on her arrival from that of last year or 1889, there being comparatively few yachts in the harbor, and the usual difficulty in anchorage, near by her Puritan loomed up as familiar to her friend, and the Eastern boats—Merlin, Alga, Wayward, Baboon, Alucete—were with her. Of the New York boats awaiting the fleet were Concord, Uvira, Lydia and a number of steamers. Just before dark the fleet of the Philadelphia Y. C., also cruising, sailed into the harbor after the flag-ship Norma. As the yachts anchored the crews came ashore in small groups under the piazzas of the Pequot House were crowded with yachtsmen discussing the events of the day.

During the evening the fleet was startled by two fires. Just as Clara was about to anchor, Mrs. Osborne, who was below, gave the alarm of fire, and the after cabin was found in flames. As the yawl was turned over on top of the skylight, and the boom was nearly at top of the mast, the fire was so difficult in reaching the flames; but the skylight was broken after the boom was cleared away and the cabin well drenched with water. The damage was confined to the paint and hangings, the hull being unharmed. A little later the Golden Rod, a naphtha launch of some 40ft., with a cabin, owned by Mr. Bourne, caught fire when near the Port Griswold House, as she was returning from a trip outside the harbor. The best accounts of the fire were that one of the crew attempted to light the cabin lamp, when the flame spread and spread very rapidly. The owner and his wife were on board, but the yacht was promptly beached, so that no one was lost, a boat's crew from the U. S. ship Constellation lending valuable aid. The boat burned down to the water, being entirely ruined. Beyond these two accidents the evening passed very quietly ashore and on the yachts, all hands turning in early after a hard day.

NEW LONDON, AUG. 5.

After Tuesday's run a day in port was a matter of necessity, as few would have been willing to continue to Newport, and many had small repairs to make; while it was also necessary to wait in order to re-unite the scattered fleet. Early on Tuesday morning the auxiliary yacht Golden Fleece came in, making a fine appearance under her square rig, all canvas set, having made the entire harbor run. One by one yachts struggled in from the westward and eastward until the harbor was well filled. A bright sunny day with a light air put all hands in a good humor, as no sailing was on the programme. A match has lately been made between the owners of Minola and Jessica for \$250 a side, and it was expected that it would be sailed on this day under the management of the committee, but Mr. B. Belmont declined to start on the ground that the race needed the rest before starting again on the cruise, and the race was postponed to a date not named, when a race, 10 miles to windward and leeward will be sailed. It was announced during the day that the unsuccessful race of the Cherry Diamond Y. C., on July 25, had been declared off, and that the race will be re-sailed on Aug. 18, off Newport, the other two races of the series possibly being sailed immediately after.

At 11 A. M. a meeting of captains was held on board the Electra, at which it was decided to continue the cruise next day to Newport, sailing for the Golet cups on Friday, and making the third run, to Vineyard Haven, on Saturday. Com. Gerry has announced that it is the policy of the club in the future to accept no cups from parties outside the club, but that where certain races are desirable, the club will furnish the prizes. In the afternoon the rowing races for the Owl and Greenbock colors, and also the race of naphtha launches, was held; creating but little interest outside of the contestants, as is usually the case. The first race was for the Gamecock colors, open to four-oared gigs pulling sweeps, course about two miles, with five crews from the schooners Dauntless, Iroquois, Fortuna, Fleur de Lys and Columbia, the finish being in this order. The race for naphtha launches, under the handicap arranged for by Fleet Captain J. B. Peabody, came next with six starters: Columbia, Sapphire, Iroquois, Electra, Huron, Fleur de Lys, the prizes being \$30 for Columbia and \$10 for Sap-

phire. The Owl colors, for cutters pulling two sweeps or pairs of sculls had but one starter, from the Columbia, and the dinghy race had also one, from Bedouin. By nightfall there was a very large fleet of yachts, both sail and steam, in the harbor. The evening was spent very quietly, the music at the Pequot House tempted no one to dance, and the yachtsmen were nearly all on board their ships. The orders were for a start at 9.30 A. M. off the buoy on Sarah's Ledge.

SECOND RUN, NEW LONDON TO NEWPORT, AUG. 6.

As soon as the fleet was astir on Thursday morning the news ran from ship to ship that Volunteer had arrived during the night, and glasses were quickly focussed on the hold-looking black schooner with clipper stem and peculiar rig which lay near the mouth of the harbor. There was little doubt as to her being the old white craft, the altered sheer, rig and color disguising her completely. The course for the day's racing was from off the Sarah's Ledge buoy to the Dumplings, in Newport Harbor, 40 miles, going outside of Fisher's Island, or through the Race. The day was warm and bright, with a moderate easterly breeze, smooth water and the tide being near the turn of high water. A number of the yachts started through the short cut, Fisher's Island Sound, where the fleet got under way at 9 A. M. the racers standing out to the starting line. Golden Fleece, with funnel stowed, was under canvas only, in spite of the light head wind.

It was 9.45 when the preparatory gun for the smaller classes fired and 9.55 when the start was given. Although it was a time start, with 5m. to start, the men have been trained to "one gun" start and the importance of starting first in nearly all cases has been so clearly proven, that this start, like the others in the cruise, found the boats crowding for the line at gunfire. At this work the Barrs have few equals, and Oweene's skipper has taken the line first on most of the races of the cruise. This race was no exception, and Oweene ran her bowsprit close under the stern of the flagship in the lead of the pack. All were so closely bunched as to make it difficult for the spectators to tell the boats apart. With Capt. John Barr burying Cinderella along beside her, Sayonara turned close to the ship, but not so close that Ventura could not find room to poke her bowsprit, crowding through at the risk of a collision on one hand or the other. The start of the larger yachts, 10m. later, was a little slower, but hardly less exciting. Fortuna forcing her way in between Milicete and Gracie and threatening to run the Rock Reef lighted, the leader of the pack, but when clear of the line Cinderella went about, heading in shore, and soon the fleet was scattered, some on one tack and some on the other. The start was timed:

Oweene	9 55 31	Wayward	10 11 32
Liris	9 55 39	Fleur de Lys	10 11 42
Cinderella	9 55 53	Merlin	10 11 55
Mineola	9 56 03	Volunteer	10 12 03
Sayonara	9 56 39	Gracie	10 12 43
Jessica	9 56 43	Fortuna	10 12 54
Ventura	9 56 50	Volunteer	10 13 16
Nautilus	9 57 31	Phantom	10 13 23
Milicete	9 57 47	Palmer	10 13 57
Uvira	9 58 19	Mayflower	10 14 10
Quickstep	9 58 45	Hildegard	10 14 39
Clara	9 59 19	Intrepid	10 14 43
Katrina	10 10 50	Montauk	10 15 39
Enone	10 10 52	Iroquois	10 16 22
Marguerite	10 11 27	Whiteway	10 16 40

The early part of the race was rather dull, the wind being light. Oweene was well in the lead, with Sayonara, Uvira and Katrina near her. When off the Rock Reef lighted, the leader of the pack, most of the schooners, standing in toward the Rhode Island shore, while Mineola, followed by Jessica and later by Huron, stood off shore toward Block Island, hoping for a southerly breeze. Beyond Fisher's Island the cruising contingent was picked up, including Puritan. Watch Hill was passed about noon, and an hour later the order was Oweene first, well in shore, with Uvira second and Sayonara third, with less tide, the leader of the pack, was of not more than half a mile, but a wide stretch of water lay between Sayonara and the next pair, Katrina and Quickstep. Not far from these two was Liris, who had been doing good work with Ventura, while near her was Capt. John Barr in Cinderella, trying to beat his old rival Capt. Hank Huff in the new Volunteer. The big schooner had not done much thus far, but perhaps all that could be expected, her previous record being a first place in the division. Hildegard and Wayward, both left, had been fighting all day with small gain to either, the black sloop being now a little ahead of the Burgess cutter. Puritan, not in the race, was between Hildegard and Wayward. Ventura and Nautilus, also close in shore, came next, followed by Clara, who had been chasing Cinderella all day and was now gaining on her. Milicete was also with this group, making a division of her own, and advancing guard. To the westward of Watch Hill were the most of the schooners, Marguerite, Iroquois, Fortuna, Palmer, Mayflower and the sloop Gracie. Far off shore was Mineola, followed by Jessica, while Huron was astern of both. They had a moderate breeze, but the best course, as events proved, was that taken by Oweene, working the beach from Watch Hill to Point Judith, and getting a favoring start there.

The yawl and cutter came through Fisher's Island Sound, and was making no effort at racing, tacking in and off along the shore in that lazy and deliberate manner which characterizes her rig. When first sighted she was well ahead of the fleet, and the leaders gradually overtook her, but when she once fell in with the racers she seemed to stick with them, holding her own for a long time in a way that excited general comment. Mr. A. Bryan Alley was preparing to give her a chase, but he was so busy with his super-abundant racing spirit into the old hooker.

Marguerite to-day was beating Iroquois, working away from her when east of Charlestown Inlet, and joining company with Volunteer and Quickstep. Mayflower tried her luck off shore in the direction of Mineola, picking up the latter's breeze, and, like her, gaining when they came in for Point Judith. Merlin followed Mayflower part way out, but tacked in again and joined the beach company.

Oweene pointed high and got out to windward when nearing Point Judith in a way that cheered her admirers, who, in spite of many confident assertions for a month past, had for the whole day been pondering doubtfully on what the morrow might bring forth. After clearing the point, sheets were started and intermediate jibtopsail set for the race, and the finish, where the Electra was waiting to time her, Mayflower and Intrepid, but sailing with sheets hard in, as they had been trimmed on the wind. She caught and passed Oweene, while the other big boats, with a freer course and a moderate wind, made a gain on the little fellow, though she finished second, as the following times show:

Mayflower	5 31 06	Quickstep	6 26 31
Oweene	5 35 51	Palmer	6 26 37
Sayonara	5 45 23	Hildegard	6 26 37
Mineola	5 46 34	Clara	6 26 32
Katrina	5 50 08	Iroquois	6 29 13
Merlin	5 55 42	Cinderella	6 34 03
Volunteer	5 57 59	Enone	6 41 42
Uvira	5 59 19	Ventura	6 41 42
Jessica	6 10 43	Milicete	6 50 29
Fortuna	6 14 45	Montauk	6 51 30
Gracie	6 18 03	Milicete	7 03 29
Marguerite	6 18 53	Phantom	7 10 23
Liris	6 23 40	Whiteway	7 12 29
Nautilus	6 25 40	Fleur-de-Lys	7 17 21
Wayward	6 26 02	Dantless	7 19 32

Clara, starting astern of Cinderella and sailing her own course, had proved that fair sailing was not to be expected. She was very quickly caught and passed Cinderella, beating her by a handsome margin. Constellation had sailed to Newport on Wednesday to give a rest to Gloria's crew, so was not with the fleet, losing a leg thereby. The full times were:

Start.	Finish.	Elapsed.	Corrected.

In the harbor were Barbara, Beatrice and Gloria. Beatrice is the only yacht in the fleet, and she is enrolled in the New York A. C. her owners having but recently made application for membership, and their names not having been acted on according to the constitution, the required time not having elapsed. The owners of the other boats in the class were willing that Beatrice should be admitted to the Golet cup race and the other events of the cruise, and no objection was made by any one, but it was decided that the regatta committee should accept the entry of a yacht whose owner is not regularly enrolled in the club. This was generally regretted, as every one was anxious to see a meeting between Gloria and the two Burgess boats with which she has not yet raced. The fleet in the harbor included the entire class with the exception of Alborak and the Vanderbilt boat Ilderim: Mineola, Sayonara, Oweene, Beatrice, Nautilus, Gloria, Barbara, Jessica, Uvira and a new and very interesting entry, the yacht whose owner is not regularly enrolled in the club. This was generally regretted, as every one was anxious to see a meeting between Gloria and the two Burgess boats with which she has not yet raced. This was generally regretted, as every one was

and Pigs was reached the wind had dropped and all life and interest had gone out of the race. For a long time the yachts drifted along, Mincola, Nautilus, Gossoon and Oweene, with the schooner Quickstep, being in the lead, passing Sow and Pigs between 1:30 and 2 o'clock. The wind now came in light from the south, increasing slowly until the whole fleet was going at a fair pace through Vineyard Sound. The head tide caught the laggards and they made a late finish. The race amounted to nothing as a test of speed. Mincola was handled very well in the light airs and came in leader. Clara again beat Cinderella, though by only a few seconds. The official times were:

FIRST CLASS—SCHOONERS.				
Start.	Finish.	Elapsed.	Corrected.	
Dauntless.....	10 52 15	5 42 09	6 49 44	Not meas.

Ventura.....	10 38 20	Not timed.		

One Sunday in Vineyard Haven is much like another, the yachtsmen flock to Cottage City to talk, flirt and ride bicycles, and the day is one of lazy bustle. Nothing particular being done. This year the Oak Bluffs Club was as hospitable as ever, throwing open its doors to the visitors. In the morning a meeting of captains was held on the flagship, at which it was decided to hold a race for all classes on Monday, for cups given by the club, sailing on Tuesday for New Bedford. The yachts dressed ship during the day, to the entertainment and edification of the Vineyarders.

VINEYARD HAVEN RACE, AUG. 10.

Vineyard Sound is a fine place for racing, while the high ground gives every chance to the spectators, and with a good S.W. wind the racing was most satisfactory to all hands, ashore and afloat. The special feature was the presence of the Burgess centerboard boat, owned by Messrs. Bryant and Prince. She sailed with the fleet for a sweepstakes prize of \$50 each put up by the 46-footers, not being eligible to sail for the club prize. The prizes were cups costing \$200 for each of the three schooner classes, \$150 for the 70 and 61ft. classes of singlestickers, and \$100 for the two smaller classes. The course was from off the Sea View House around a mark off Robinson's Hill, 32 miles, the forlorn turning with Cinderella, Beatrice and Mincola close to her, Oweene being a couple of minutes after the gun:

Clara.....	10 40 15	Ventura.....	10 45 00
Cinderella.....	10 40 20	Fortuna.....	10 45 48
Beatrice.....	10 40 23	Marguerite.....	10 45 49
Mincola.....	10 40 28	Oweene.....	10 45 49
Oweene.....	10 43 08	Quickstep.....	10 47 50
Sayonara.....	10 43 42	Mayflower.....	10 47 54
Bedouin.....	10 44 03	Dauntless.....	10 48 35
Mischief.....	10 44 17	Iroquois.....	10 49 18
Hildegard.....	10 45 00	Palmer.....	10 50 00
Gossoon.....	10 45 00		

Hildegard, Gossoon, Ventura and Palmer were handicapped. Ventura parted by the halliards before the start and Messrs. Adams held Gossoon until her opponent made repairs. Volunteer was with the fleet, but did not start. Beatrice led the fleet to the Nobsk Buoy, all being on the wind, the times being:

Beatrice.....	11 30 00	Fortuna.....	11 37 37
Cinderella.....	11 31 00	Merlin.....	11 39 05
Clara.....	11 33 00	Quickstep.....	11 40 05
Oweene.....	11 33 30	Iroquois.....	11 40 37
Mincola.....	11 33 40	Palmer.....	11 42 07
Hildegard.....	11 34 05	Mayflower.....	11 47 15
Sayonara.....	11 34 12	Dauntless.....	11 47 15
Bedouin.....	11 34 45	Mischief.....	11 54 00
Marguerite.....	11 36 30	Gossoon.....	11 55 35
Oweene.....	11 36 53	Ventura.....	12 00 15
Huron.....	11 37 45		

Oweene was close by Hildegard, and after passing the buoy went on starboard tack off shore, the rest continuing on port tack. Marguerite and Oweene led the schooner fleet over the first leg, the former taking the lead near the buoy, Quickstep being close to them. Beatrice soon had a long lead on the fleet, Mincola and Sayonara, close together, being far astern of her. The yachts north down the Naushon shore, the wind drawing more to the north, until Hildegard and Iroquois were close by, Clara had dropped back and was with Mayflower and Iroquois, but Quickstep was pushing the leader, Marguerite. Gossoon had no competitor but Ventura, and the race in this class possessed little interest. The outer mark was timed:

Beatrice.....	1 14 26	Hildegard.....	1 41 00
Mincola.....	1 23 00	Bedouin.....	1 41 00
Sayonara.....	1 23 45	Marguerite.....	1 45 00
Oweene.....	1 24 55	Quickstep.....	1 45 00
Cinderella.....	1 36 00	Iroquois.....	1 45 00
Clara.....	1 39 00	Huron.....	1 50 00

The run home was made with spinakers to starboard, with more wind than was needed for the big kites, but all came home safely. The official times were:

CLASS A—FIRST, SECOND AND THIRD CLASS SCHOONERS.				
Start.	Finish.	Elapsed.	Corrected.	
Dauntless.....	10 43 35	Did not finish.		
Palmer.....	10 50 00	3 19 43	4 29 43	4 29 43

RUN VINEYARD HAVEN TO NEW BEDFORD, AUG. 11.

This year old Long Island Sound has redeemed itself by providing a good breeze as long as the fleet stayed within its limits. While the open water to the eastward gave two days of drifting to one of good sailing. The run of Saturday to Vineyard Haven was very unsatisfactory, and that of Tuesday to New Bedford was no better. All the morning there was a flat calm, and the start was delayed. The start was timed:

Oweene.....	11 29 39	Milicete.....	11 29 45
Mincola.....	11 25 51	Sayonara.....	11 30 31
Nautilus.....	11 29 10	Clara.....	11 30 43

Cinderella.....	11 29 23	Gossoon.....	11 32 28
Quickstep.....	11 44 50	Volunteer.....	11 50 54
Merlin.....	11 46 25	Hildegard.....	11 51 59
Palmer.....	11 48 52	Beatrice.....	11 56 32
Gracie.....	11 50 29	Iroquois.....	11 58 21

Gossoon had no competitor, so went into the 46ft. class. Milicete had joined the fleet after withdrawing on Saturday with the loss of her hobstays, making a hurried repair job at New Bedford. Mayflower went to the eastward from Vineyard Haven, and many other yachts left the fleet to join again at Newport on Wednesday.

The wind was very light from the west, all crossing on port tack, the fleet making for the north side of Vineyard Sound, only Hildegard and Quickstep holding the Vineyard Haven or south shore. The strong ebb tide drove the knowing ones close to shore, where short tacks were the order of the day. Near Nobsk light Oweene was ahead, with Sayonara, Cinderella, Gossoon, Milicete, Clara, Nautilus, Merlin, Volunteer and Iroquois in order.

Just after noon, while stealing her way close inshore, Mincola picked up the rocky bottom off Wood's Hole. Two steam launches from the shore and the Electra's launch went to her aid, the former heeling and heading her offshore, but being unable to move her off. Mr. Frost went with the Electra to New Bedford where he secured a tug, and the yacht was hauled off at midnight, the damage being supposed to be but slight.

The next exciting incident was furnished by Oweene, who took the ground half an hour later some three miles beyond Mincola. She, however, was on a sandy bottom and the steam yacht Wild Duck, by skillful management backed in, ran off a hawser and hauled her clear. Sayonara laid by her for a time and then continued the race.

About 1 P. M. the wind came in stronger and the larger yachts began to move. The 46ft. class and the Quickstep went in through Quick's Hole, while the others ran outside by Hen and Chickens, finishing off Clark's Point, where the fleet was timed:

FIRST CLASS—SCHOONERS.				
Start.	Finish.	Elapsed.	Corrected.	
Constellation.....	11 53 00	4 07 23	4 10 23	4 10 23
Palmer.....	11 48 52	4 10 06	4 27 14	4 27 14

SIXTH CLASS—SLOOPS.				
Sayonara.....	11 50 33	4 03 02	4 32 29	4 32 29
Nautilus.....	11 29 08	4 24 11	4 55 03	4 54 15
Milicete.....	11 29 43	4 38 29	5 08 46	5 07 48
Gossoon.....	11 32 26	4 06 10	4 23 44	4 28 11
Mincola.....	11 28 48	Did not finish.		
Oweene.....	11 28 38	Did not finish.		
Beatrice.....	11 56 32	4 28 25	4 32 03	4 32 03

Beatrice was timed with the fleet. Cinderella beat Clara, and Hildegard made a very fine showing.

On Wednesday the fleet continued to Newport, where the special race will be sailed to-day, after which the squadron will be disbanded. The sweepstakes of the Corinthian Y. C. of Marblehead will be sailed off Newport on Monday, Aug. 17, followed by one or more of the Cherry Diamond Y. C. races on Tuesday. The match between Mincola and Jessica will probably be sailed at Newport, and in the following week, beginning Aug. 24, the mid-summer matches of the Corinthian Y. C. will call all the 46ft. class to Marblehead.

HULL Y. C. CHAMPIONSHIP RACES.—The first cup races of the Hull Y. C. for classes 3, 4 and 5 were sailed on Aug. 1 in a freshening S.W. wind, the times being:

THIRD CLASS—CENTERBOARDS.				
Length.	Elapsed.	Corrected.		
Moodynde, W. H. Shaw.....	24.08	2 00 05	1 27 39	
Posy, R. G. Hunt.....	22.08	2 02 52	1 28 04	
Susie, W. W. Keith.....	23.02	2 04 15	1 30 04

Magpie, H. G. Otis.....	19.00	1 25 28	1 01 30	
FIFTH CLASS—KEELS.				
Composite, J. McIntyre.....	16.04	1 30 58	1 04 13	
Vandal, E. W. & H. W. Pratt.....	22.01	1 29 04	1 07 45	
SIXTH CLASS.				
Rocket, H. M. Faxon.....	16.02	1 26 50	59 53	
Cricket, E. B. Lambert.....	16.08	1 27 50	1 00 23	
Mab, J. Shaw.....	15.09	1 28 18	1 01 56	

The judges were Messrs. W. A. Cary, J. B. Forsythe, W. E. Sheriffs, H. S. Woodbury, J. R. Chadwick, E. E. Souther, J. J. Souther, E. L. Bunnell. In the evening a hop was held in the club house.

On Aug. 8 the second race was sailed, the times being:

THIRD CLASS—CENTERBOARDS.				Did not finish.
Ustane, S. N. Small.....	20.11	2 52 16	2 20 57	
Mosby, J. B. Brown.....	23.08	2 40 39	2 10 25	
Posy, R. G. Hunt.....	22.07	2 56 30	2 27 14	
Moodynde, W. H. Shaw.....	24.08	3 10 54	2 41 43	
Three Brothers, O. A. Galvin.....	21.04	Did not finish.		
THIRD CLASS—KEELS.				
Swordfish, H. L. Johnson.....	24.07	2 56 30	2 27 14	
Echo, Hurwell & Isham.....	24.06	3 15 24	2 46 02	
FOURTH CLASS—JIB AND MAINSAIL.				
Idler, F. L. Dunne.....	20.06	1 58 54	1 36 18	
True Blue, H. T. Hutchins.....	17.10	2 21 05	1 55 59	
FIFTH CLASS—CENTERBOARDS.				
Atala, E. F. Linton.....	19.10	2 48 53	2 25 42	
Egeria, F. Ware.....	19.11	2 51 08	2 27 59	
FIFTH CLASS—KEELS.				
Composite, J. McIntyre.....	16.04	Did not finish.		
SIXTH CLASS—CENTERBOARDS.				
Rocket, H. M. Faxon.....	16.02	2 24 14	1 59 17	
Cricket, E. B. Lambert.....	16.03	Did not finish.		
Mab, John Shaw.....	15.00	Did not finish.		

The result up to date is to give the championships to Swordfish, Idler and Rocket in the third class keels, fourth and sixth classes respectively. Pansy and Torment have each won a leg in the third class centerboards, Egeria and Atala each a leg in the fifth class centerboards.

A TUXEDO FOUL.

THE question which was discussed in the abstract last fall, the race which was the origin of it being of no importance, has been revived in very practical shape by the collision between Volunteer and Gracie in the Golet cup race last week. The conditions were similar to the Tuxedo case, save that the weather boat, with the larger sail plan of the two, was the overtaking vessel for some time. At this date we have not heard the decision of the regatta committee nor seen the evidence, of which no doubt plenty was submitted, but apart from the question of position, which will probably be the basis of the decision, there is also a question of the interpretation of the rule.

On the part of Volunteer, Gen. Paine is reported as saying that when Gracie hailed for room, Volunteer luffed as far as she could and that then Gracie struck her. The rule, No. XXIV, Section 14, of the New York Y. C. reads: "If overlap exists between two yachts when both of them, without tacking, are about to pass a mark on the required side, then the outside yacht must give the inside yacht room to pass the mark."

As we understand the statement of Gen. Paine, the rights of the yacht hailing for room were admitted, and an effort was made by Volunteer to concede them, but only to a certain point. She luffed as high as possible, but not tack.

The question arises whether in doing this she fully complied with the rule, and though there may be some difference of opinion, we believe that she did not. However unfair it may seem in some case to require a boat to tack while her companion goes by on the same course, the wording of the rule seems clear and definite. Granted that the inward and leeward yacht has an overlap, and, with close hauled, can still jam by the mark without tacking, it is still the duty of the other to be entitled to room regardless of the effect on her opponent. If the leeward yacht is in this position, it is the duty of the other not merely to luff as high as possible, but get out of the way, even though she may be obliged to tack to do so. How far this principle applies in the present case can only be determined from the evidence submitted by the committee, aided perhaps by a number of photographs of the foul which were taken, but we call the attention of racing men to a very important point in the rule—that under given conditions the outer yacht must get out of the way, at whatever cost to herself.

RIVERSIDE Y. C. ANNUAL REGATTA, AUG. 8.—The Riverside Y. C. of Riverside, Conn., held its annual pennant regatta on Saturday, the race being very fluky, owing to the wind. The full times were:

SLOOPS AND CUTTERS—45FT. CLASS.			
Wayward.....	12 50 00	Finish.	Elapsed. Corrected.
Alcedo.....	12 50 00	Did not finish.	
40FT. CLASS.			
Doctor.....	12 50 00	Not timed.	
35FT. CLASS.			
Vorant.....	12 50 00	Not timed.	
Estela.....	12 50 00	Not timed.	
YAWLS—25FT. CLASS.			
Dot.....	12 50 00	2 34 15	2 44 15
Natima.....	12 50 00	3 35 37	2 45 37
Effie.....	12 50 00	3 32 11	2 42 11
JIB AND MAINSAIL.			
Sirene.....	12 50 00	3 10 10	2 20 10

The regatta committee were Frank B. Jones, Wm. Huffington and Chas. E. Wilson.

HOBB'S HOLE REGATTA, AUG. 8.—On Saturday a race was sailed at Hobb's Hole, near Plymouth, Cape Cod, open to yachts from Plymouth, Kingston and Duxbury, the times being:

FIRST CLASS—CENTERBOARD SPRITS.			
		Elapsed.	
Old Honesty, J. C. Dawes.....		1 54 14	
Dandy, S. S. Richards.....		2 03 08	
Mignon, Damon Bros.....		2 03 35	
Henrietta, C. W. Watson.....		2 04 00	
Puritan, D. H. Craig.....		2 04 00	
SECOND CLASS—KEELS.			
No Name, George Atwell.....		2 01 21	
Jesse, I. Morton.....		2 05 47	
Roulette, Charles Rogers.....		2 08 59	
No Name, G. Rogers.....		2 09 54	
Outlaw, E. Morey.....		2 16 52	
THIRD CLASS—CANOES.			
Mollie, A. L. Bailey.....		1 03 27	
Carmen, F. A. Jenks.....		1 04 26	
Phebe, C. R. Raymond.....		1 07 31	
Kittiwake, W. T. Eldridge.....		1 10 27	

THE OCEAN DORY RACE.—One of the two foolhardy navigators, Captain Lawlor of the Sea Sparrow, reached the English coast on Aug. 5, landing at Coverack, a small town near the Lizard. He was well, but very much exhausted by the long trip. The other dory, Mermaid, Capt. Andrews, was last spoken on July 27 in lat. 45 N., long. 55 W.

LYNN Y. C., AUG. 8.—The fourth race for the Expert cup was sailed on Saturday at Lynn harbor, with five starters, in a strong northwest wind. Tempest won very easily.

CAPE COD Y. C., AUG. 8.—The first of a series of three races of this club was sailed on Saturday off Orleans, the times being:

FIRST CLASS.			
	Length.	Elapsed.	Corrected.
Wave Crest, D. S. Young.....	19.09	1 46 28	1 43 20
Madge, Cummings & Hines.....	23.05	1 50 37	1 50 37
Unique, W. Wareham.....	20.00	1 53 50	1 50 55
SECOND CLASS.			
Carrie L., George Clark.....	16.01	1 53 20	Not taken.
Little Brave, J. Ryder.....	18.03	2 03 07	Not taken.
Henrietta, R. Rich.....	18.06	Did not finish.	
THIRD CLASS.			
Viola, E. L. Cummings.....	23.05	1 29 00	Not taken.
Josephine, P. A. Smith.....	22.00	1 41 06	Not taken.
Nauset, A. O. Hurd.....	23.00	Did not finish.	
FOURTH CLASS.			
Georgie, G. Hopkins.....	13.00	1 33 42	Not taken.
Breeze, H. L. Cummings.....	12.06	1 36 48	Not taken.
Fawn, D. W. Dean.....	12.09	1 41 39	Not taken.

SOUTH BOSTON Y. C. CHAMPIONSHIP, AUG. 8.—The third championship race of the South Boston Y. C. was sailed on Saturday in a variable breeze from N.W. to S.E., finishing in a calm. The times were:

FIRST CLASS—CENTERBOARDS.			
	Length.	Elapsed.	Corrected.
Stanley, W. L. Colson.....	20.05	4 03 35	3 32 45
Quisset, W. P. Taylor.....	25.08	Withdrew.	
SECOND CLASS—CENTERBOARDS.			
Ideal, F. Williams.....	21.10	4 01 20	3 25 28
Good Luck, J. B. Farrell.....	21.09	4 11 40	3 35 41
Awilda, J. H. Bligh.....	24.00	4 18 30	3 46 09
Wraith, W. H. Cheatham.....	22.08	Withdrew.	
Wapiti, James Hertram.....	23.04	Withdrew.	

Ideal wins two legs, subject to protest from Awilda for sculling with tiller. Awilda also protests Good Luck on the same grounds.

Canoeing.

AMENDMENTS TO THE RACING RULES.

WE publish this week several amendments to the racing rules which are offered for adoption at the coming meet. Two of these are necessary, as has been proved by experience; but they are of such a nature that for this meet at least they may be adopted and posted by the regatta committee as a part of the racing programme. We allude to the conditions for starting and finishing.

One of the proposed amendments, however, is in exactly the wrong direction and we hope that it will be very carefully considered by those who vote on it. It is the custom of all yacht clubs, based on long experience, to make changes in the racing rules only in the off season, between October and May. When Rule XXII was amended last year we urged the addition of a clause limiting all changes of rules to the annual meeting in November, but the work was so hastily done that this important point was neglected, though indirectly covered by the method of procedure prescribed, all amendments coming through the regatta committee. It is now proposed to amend Rule XXII, so as to allow a vote by mail at any time on the question of a change of rule; a change which we object to on two grounds.

In the first place, the vote by mail is but a necessary evil, an expedient made necessary by the impossibility of holding more than one meeting in a year at which a quorum of the executive committee can be collected. As questions come up from time to time which cannot be deferred to the November meeting, such as a change of camp site or election to fill a vacancy, the vote by mail is necessary. At the same time it is a very undesirable mode of voting, all discussion of the question being barred, and it should be used only in most urgent cases. For all changes of rules it is most unjustified, as the great point of such changes is the discussion which takes place in all meetings and which tends to prevent mistakes. Its racing rules are the most important of all the A. C. A. laws, and while changes are necessary to keep the rules up to date, it is essential that they should be as few as possible; and when made, so well considered as not to require immediate alteration.

By the plan now proposed, a rule may be changed without any discussion; the due notice, being given, a vote by mail is taken; the question probably being only partly understood by many who vote on it.

The second objection is based on the fact that all changes of the rule should be made out of the racing season and before building begins. As now provided, it is the business of the regatta committee to report on all needed changes immediately after the meet, the report being published so that every member may know what is proposed, and if necessary may file an objection with the division officers. The changes are submitted to the general meeting of the executive committee, where they are subjected to a discussion and criticism which is likely to reveal any faults. This method of amendment cannot be improved on, and if any change is made in Rule XXII, it should take the form of a statement that changes in the racing rules should only be made at the annual meeting.

AMENDMENTS TO THE A. C. A. RULES.

THE following amendments were sent by Dr. Gage on July 31, but failed to reach us in time for publication last week: Proposed by Francis H. Gisborne: To omit all of Rule XVI, after the first sentence. Proposed by Colin Fraser: To insert in Rule XXII. In place of the words "meeting of executive committee at which they are to be acted upon;" the words, "vote of executive committee is taken thereon." Proposed amendment to rule 10: "In paddling and combined races canoes shall be started by their sterns and the finish time taken when their bows cross the line." To rule 6: "In sailing races a canoe shall be considered to have finished when her forward or mainmast has crossed the line."

WESTERN CANOE ASSOCIATION.—The annual meet of the W. C. A. at Ballast Island, July 11 to 25, went far to justify the comments of our correspondents, Mr. Warder, two years since, which created so much stir at the time. The prohibition of the standing sail, the opening of all races to the canoe yaws, and various other causes, have resulted in the extinction of the regular 16x30 canoe, and of all paddling and sailing races for canoes, the racing being practically confined to a few canoe yaws of 36in. beam. The attendance was small, and gave no evidence of a growth on the part of the Association. The officers elected were: Gen. G. H. Gardner, Cleland, O. C. Vice-Com.; G. G. Case, Jackson, Mich.; Rear Com., C. F. Pennewell, Detroit, Mich.; Sec., O. A. Woodruff, Dayton, O.; Executive Committee, Messrs. Crane, Ware and Ellard.

A. C. A. MEMBERSHIP.—Eastern Division: Alden P. White, Salem, Mass.; Onas, Dana Palmer, Lowell, Mass. Atlantic Division: Thos. J. Hand, Geo. B. Watts, Jr., New York. Central Division: John E. Tatham, D.D., Hoosac Falls, N. Y.; Chas. W. Lansing, O. S. Presbury, Port Jervis, N. Y.; Wm. H. Langford, Peterboro, N. H.; Doring, E. F. Jones, Troy, N. Y.; B. J. Worman, G. H. Blakeslee, F. L. Brigham, Albany, N. Y. Northern Division: Russell H. McMillan, F. J. Mann, Howard A. Kelly, Leslie W. Sweetman, A. J. O'Malley, W. E. M. Powell, Toronto, Ont.; C. S. MacInnes, Hamilton, Ont.; W. A. Lempiere, Edmond F. R. Tate, Lakeside, Ont.; D. MacInnes, H. C. Baker, A. T. Lefevre, R. M. Colke, Kingston; Walter J. English, Fred H. Langford, Peterboro, Ont.; Arthur Knowlson, Lindsay, Ont.; F. H. Dowling, Thos. Bisk, Bobcaygeon, Ont.; E. F. Burritt, Ottawa. Eastern Division: Wm. Reid, Holyoke, Mass.

A NEW RACER.—Mr. W. Whitlock, of the New York Y. C., who has probably owned and built more canoes than any other American canoeist, has a surprise ready for the races in the shape of a new racer from a design by Mr. Wm. Gardner. The new boat, built by the St. Lawrence Co. of Clayton, is of the latest type, somewhat after the fashion of Kismet. Before designing her, designer Gardner examined closely all the canoes in the New York C. C. house. The order was given on July 9, and the boat will be used at the meet.

NEW YORK C. C. SAILING RACE, Saturday, Aug. 1: Start. 1st round. 2d round. Aztec, W. W. Howard..... 3 19 30 4 59 45 Bonnie, C. B. Vaux..... 3 19 43 50 withdrew. Tide, strong flood. Wind, moderately strong in first round, and very strong and squally in second round, S.W. by W.

THE A. C. A. MEET.—Camp was opened on Wednesday of last week, Com. Lawson being present. The men came in slowly at first, but Monday the camp was in shape, and everything promised a large and successful meet. The weather was rainy at the start. A full account of the camp and the races, which begin to-day, will appear next week.

NORTHERN DIVISION MEET.—The meet of the Northern Division at Pigeon Lake was quite a success from all that we have been able to learn.

ANSWERS TO CORRESPONDENTS.

S. G. S., Newburgh, N. Y.—It has been well demonstrated that woodchucks climb trees.

T. C. P., Canajoharie, N. Y.—The open season in New York for deer is from Aug. 15 to Nov. 1. Hounding is permitted from Sept. 1 to Oct. 20.

W. D., Paterson, N. J.—What is the proper way to clean a 38cal. rifle? We have been using fresh water, and also used oil. It seems to lead at the firing of each shot about the end of the cartridge. Ans. Would try a change to a harder bullet and lubricant can, and failing to get good results send rifle back to maker.

J., Silver City.—Which of the two bullets has the greater force or penetration, fired from Winchester repeating rifle, 26in. barrel, .45-70-500 or .45-52-405, at short range, say 50yds.? Ans. It will depend on the powder used, whether it is all burned up; the heavier powder charge should give the better penetration.

C. E. M., Detroit.—1. Will a 26in. barrel shoot as far as a 30in. barrel and will it burn as much powder? 2. What is the difference between a stub twist barrel and a Damascus barrel? 3. Which is the better for all-round shooting, the full or modified choke? 4. Would you consider a 12-gauge 28in. barrel gun weighing about 74lbs. heavy enough for ordinary shooting? Ans. 1. Theoretically no. 2. It is in the quality of the steel and iron used. Single iron-steel is the cheapest and the best quality. Damascus barrels run up to 6 rods twisted together. 3. Modified choke. 4. Yes.

'IN THE SWIM'

A pure Virginia plug cut smoking tobacco that does not bite the tongue, and is free from any foreign mixture. More solid comfort in one package of Mastiff than you can get out of a dozen others. Packed in canvas pouches.

J. B. PACE TOBACCO CO., Richmond, Va.

RODS.

MR. JAS. WYHTE writes to us from Nova Scotia, saying: "I took two grilse and three salmon on the Lancewood trout rod you sent me. How is that for a light rod! It is as good as new yet."

The 9lb. 15oz. bass recently taken in Greenwood Lake was killed on one of our 7oz. Greenheart rods.

Send 10 cents for our 136 folio page Illustrated Catalogue.

ABBEEY & IMBRIE,
18 VESEY STREET, NEW YORK.

Notice to Fishermen. Cut Prices for 1891.

Here I am again as usual cutting the prices of Fishing Tackle. Low prices and good quality of goods increases my business. It will pay you to buy your tackle in Brooklyn.

Puppies for sale from these celebrated dogs out of famous matrons.

HILLSIDE KENNELS,

LANCASTER, MASS.

AT STUD. FEE \$50.

KING OF KENT

(A. K. C. S. B. 6264),

Sire of the phenomenal field trial winners, Rip Rap, Zig-Zag, Tapster and Maid of Kent. Pointer Puppies for sale.

Apply to JAS. MORTIMER,
Supt. Westminster Kennel Club,
Babylon, L. I.

Mastiffs and Bloodhounds.

IN STUD: W. K. Taunton's Champion Beaufort. His success as a stud dog and his record on the show bench for the last five years prove him the greatest and best dog living. The only kennel of English Bloodhounds in America. Choice ones for sale at all times, or imported. Mastiff pups from the Albion and Beaufort litters, also out of well known and proved breeders of champion and great prize winners. Photographs, 25 cts. J. VINCHILL, Fair Haven, Vermont.

IN THE STUD—THE ETHAN ALLIN SETTER Al, fee \$25. Al was bred by the late Mr. Allin and trained on ruffed grouse by his handler. Two puppies by him for sale. Address F. L. NICHOLS, 54 Taylor street, Springfield, Mass. 12

At Stud.—English greyhounds, Gem of the Season, winner of over 50 1st and specials. Pious Pembroke, winner of over 20 1st and specials; Dexter, corded coat poodle. Pups from the above for sale. GREYHOUND AND POODLE KENNELS, Salem, Mass.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.
SIX MONTHS, \$2.

NEW YORK, AUGUST 20, 1891.

VOL. XXXVII.—No. 5.
No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers:

Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

Adirondack Number.

OUR "Adirondack Number" of June 18 was a pronounced success. As we then said, the material provided was more generous than we could make room for, and several papers were left over for a second number devoted to the same subject. This will be our issue of Aug. 27; and among the contents will be the following, the first two having been announced for the former number:

- The North Woods in the Fifties.
A visit to the Adirondacks thirty-three years ago. By J. H. D.
- Two Weeks at Spruce Lake.
The experiences of four young fellows under tutelage of a guide.
- The Upper Adirondacks in '56.
By "Byron."
- The Wane of the Adirondacks.
By Charles Hallock.
- The Cranberry Lake Country.
By D. H. B.
- Circumnavigating the Adirondacks.
By "Piseco."

RESTOCKING LAKE ONTARIO.

THE necessity of restoring the fish supply of Lake Ontario is most strikingly illustrated by the following item from a Rochester newspaper: "A novelty in Harned's window is a genuine Lake Ontario whitefish, something rarely seen these days." Mr. F. J. Amsden reminds us that "fifteen years or so ago whitefish were caught on our shores and peddled the next morning through our streets, selling as low as 5 cents a pound." The rapid decline of the fisheries of this lake may be seen at a glance by referring to the Review of the Fisheries of the Great Lakes, recently published by the Fish Commission.

In 1880 the catch of whitefish was 1,064,000lbs.; in 1885 the amount was only 90 711lbs. Lake trout in the same period fell off from 569,700lbs. to 20,510lbs. The causes of this decadence have been the subject of heated and fruitless discussion until recently the public demand for restorative measures has resulted in the appropriation by the United States of \$20,000 to establish a great hatchery to restock Lake Ontario. Commissioners McDonald and Blackford last month visited the region in which the establishment is needed, and the former examined all the sites proposed for the undertaking, but none of them are suitable. The water is invariably too warm and the supply inadequate for the purposes of a hatchery such as the one proposed. When it is remembered that Com. McDonald hopes to rear 1,000,000 salmon at a time besides hatching many millions of whitefish annually it will be realized that the water supply must be practically unlimited. The Neosho, Missouri, station started its existence with a spring flowing nearly 600 gallons per minute, besides a collateral supply of several hundred gallons per minute from another spring. It is hoped that some point on the Salmon River will yet be found available for the new establishment. Another subject of equal importance with the location of the hatchery will come up for conference in October between the special commission appointed by New York and the Commissioners of the Dominion, and that is the protection of fish in Lake Ontario, the terms of the resolution carrying the appropriation by Congress requiring such legislation before the funds of the Government can be used to build a hatching establishment.

TWO PICTURES.

RECENT advices from Brockville, Ontario, on the St. Lawrence River, inform us that the once famous Union Park fishing grounds have been, up to the present time, sadly unproductive, very few bass and pike having been caught there. On the New York side, however, and nearer the foot of Lake Ontario, at Cape Vincent and Clayton, there are multitudes of both of these fishes, as may be learned from a note in our angling columns, just received from a correspondent at Cape Vincent. How is this difference to be accounted for? Apparently by the legalizing of the use of nets by the Canadian authorities on the north shore of the river and the prohibition of netting on the American side. It may be a good thing to catch bullheads, but in doing so the game fish fall into the same trap and probably never find their way back to the river again. Last winter the mouth of Jones Creek was beset with nets, fished ostensibly for bullheads. In the early spring Clow's Bay was completely webbed with nets of the same kind. In this month of August scarcely a pike is to be found in this once prolific bay, and the bass, which contributed mainly to the fame of the Union Park grounds, have vanished, it is feared, almost beyond hope of restoration unless prompt remedies are applied. Putting two and two together it seems clear that netting bullheads is incompatible with the enjoyment of bass and pike fishing, and it remains for the Brockville people to determine, first, whether or not the explanation suggested has a basis in fact and, second, whether it is not desirable and more than desirable to effect a change in the present fish law.

SALTED SALMON TROUT.

THE trade name of a fish is often very different from the name by which it is known to fishermen. "Ocean trout," for example, is a canner's term for young menhaden; "sea salmon" is a name now applied to the new preparation of the tunny or horse mackerel—a fish reaching nearly half a ton in weight. In Labrador about 1,000 barrels of so-called "salmon trout" are salted annually and most of them are sent to New York, Boston

and Gloucester. Some of these find their way eventually into New England, whence several specimens were recently obtained by Mr. A. N. Cheney, of Glens Falls, to whom we are indebted for the opportunity of seeing the fish. We had supposed that the salmon trout of Labrador is the species described and figured in our Salmon and Trout Supplement as the *Salvelinus stagnalis*, or sea trout, and so it is in part; but at least one other trout is salted and sold along with the sea trout and that is the common brook trout (*Salvelinus fontinalis*). It is highly probable that grilse salmon are sometimes seined with the two kinds of trout and go to make a part of the contents of the barrel. We are led to believe this from the fact that a specimen of the so-called unspotted sea trout of Canada received by the National Museum proved to be a young sea salmon.

The Labrador sea trout is a very large fish, red-spotted, and with a moderately forked tail; it runs up the large streams to spawn, but for commercial purposes it is caught in salt water near the mouths of streams. It resembles the Dolly Varden of the Pacific coast (*Salvelinus malma*) and the golden trout of New Hampshire and Maine (*Salvelinus aureolus*) very closely in appearance and habits. The sale of this Labrador trout in salt is legal, but the fish is really a brook trout and a very near relative of the common red-spotted *fontinalis*. It may be also that the sale of *S. fontinalis* in brine is not prohibited, but the practice is woefully destructive and ought to be stopped. In New Hampshire the brook trout (*fontinalis*) is identical with the Labrador brook trout and the golden trout is so nearly like the sea trout that few people can distinguish one from the other.

SNAP SHOTS.

IN reference to the suggestion of "H. P. U." "that there should be a reunion of the old friends and contributors to FOREST AND STREAM during the World's Fair at Chicago in 1893," we are assured by Dr. Henshall, who has charge of the Angling Exhibit, that this matter has been already considered by Capt. J. W. Collins, Chief of the Department of Fisheries, and himself, and that every facility will be provided to render such a reunion not only practicable, but pleasant and profitable. A reception room will be arranged with a register to contain the name, home address and Chicago address of every angler and sportsman who wishes to avail himself of the privilege. Personal interviews and meetings between brother sportsmen can be arranged by telephone or correspondence, the means for which will be at hand. Also certain hours of each day can be set apart, during which friendly greetings could be exchanged, new acquaintances formed and a spirit of universal good fellowship established, and the *esprit de corps* of the angler's guild maintained. Suggestions from contributors to FOREST AND STREAM are in order and will be gladly received and duly considered. It is especially desirable that anglers send their photographs with their autographs at bottom of card, to be placed on the walls of the reception room. They may be sent to Dr. J. A. Henshall, U. S. Fish Commission, Washington, D. C.

Many older visitors to the North Woods will learn with genuine regret of the destruction of "Bartlett's" by fire last Sunday. The brief report which has come to us says that the hotel was burned in the morning, the seventy guests losing clothes and luggage. Of all Adirondack resorts this was one of the most cherished by the goodly company of true anglers who year after year met there.

From a tarpon fisherman of long and successful experience we have received an explicit paper on the requirements for that popular sport. It will be published at a later date and cannot fail of being helpful to anglers when fitting out for a winter on the west coast.

Now that Kentucky has adopted her new constitution, one of the provisions of which is that all laws shall be of general application, we may hope to see decent game and fish laws on her books. The existing statutes are a mass of local regulations with no general observance.

ANY subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

The Sportsman Tourist.

ALONE.

ALONE How can I be alone,
When earth and air and babbling brook
Are pages in that wondrous book
Dear Mother Nature wrote for me?
Each bird and bud lifts up his voice
And bids my heart awake, rejoice.
Even the winds, that gay and free
Go tripping over hill and lea,
Give greeting with a glad tone,
And all I see I call my own.

ALONE How can I be alone?
Each morn Aurora's ruddy fire
Calls forth a sweet, celestial choir
That wooed me from refreshing sleep.
The roses lift their heads and say:
"All hail, kind mate, to thee good day!"
And from the grassy, fern-clad heap,
Where smilax and clematis creep;
From blackened pine, by moss o'ergrown,
Comes welcome, as from friends well known.

ALONE! How can I be alone?
High in mid-heaven an orb of gold
Pillars of amethyst uphold.
It gleams with love, whate'er betide.
The doe with opal-onyx eye
Peers from the coope as I pass by.
The rubies in the shy trout's side
Their silver setting almost hide.
Sure, fairer jewels never shone,
And every radiant gem my own.

ALONE! How can I be alone?
Though fellow man doth seem more far
Removed than yonder twinkling star,
Though not in our familiar tongue
Come words of comfort, words of cheer,
Sweet messages from those most dear,
Still, nature's vesper chimes are rung,
And songs, by unseen spirits sung,
Float round my head, that on a stone
Finds rest, I sleep, yet not alone.

SHOSHONE.

CAMP LIFE ON MUSKOKA LAKE.—I.

LAST May we began to overhaul our outfit in preparation for our annual summer outing. We found that it would be policy to contrive some kind of an arrangement that would take the place of the pine boughs used last year as a bed. After considerable figuring we had a folding cot made, which has proved to be the one thing needful in that line. The plan is as follows: A frame of well-seasoned Georgia pine, 2x4 stuff, with the ends mortised together, a center piece of same size, extra heavy canvas tacked on sides and center piece, holes in four corners for pins. When not in use ends can be taken off and all rolled up together. Before setting it up we cut crutches about a foot and a half in length, driving them in the ground so that the four corners of the cot rested on them, bringing it up from the ground about twelve inches. The center piece kept us from rolling against each other, and we have yet to see anything that will equal this for a convenient and comfortable double cot.

As we had made up our minds to spend the summer on our old camping grounds in Muskoka, Canada, we concluded to take passage to Toronto on one of the Canadian line of boats which run from Chicago to Montreal. June 13 saw us and all our luggage at the Chicago dock ready to start on a trip that would last fourteen weeks.

The day was dark and gloomy, with occasional showers, and to any one of a superstitious nature it would have been a harbinger of bad luck, but to us who had been on a continual jump since early morning, it was only one of the unpleasant days we were sure to have while in camp. The Alma Munroe, which was to bear us and our belongings for five days and nights, was not a boat that would impress one as possessing much speed, nor would such impressions be far wrong, for during our whole trip we overtook nothing in the shape of a floating craft, and I think to-day the Alma is the slowest boat that ploughs the waters of the great chain of lakes. But what did it matter to us, as long as the weather was fair and the provisions held out; and we must say they set an excellent table and give good service. The different points of interest are passed too quickly—Waugoshance, Skilligalee and the Isle of Mackinaw; then our first stopping place, the Canadian port of Sarnia, where a number of the passengers availed themselves of the chance to lay in a supply of tanglefoot. River and Lake St. Clair and Detroit River are one continuous panorama, which should be seen from the deck of a steamer to be thoroughly enjoyed. Windsor and then Cleveland are reached in due time, from there across the lake to the Welland Canal, and here commenced one of the most enjoyable parts of the whole trip. They sing of moonlight on the lake, but give us ours on the Welland Canal, with the deck of the Alma Munroe under our feet, corn cob pipes in our mouths, camp luggage in the cabin, and a three months' vacation staring us in the face.

The next morning we arrive in Toronto, where we have considerable difficulty with the custom house officer, who is in grave doubts whether to allow our guns to go through or not, our Winchester especially attracts his attention. "How long have you had it? When did you get it? How much did it cost?" and other sundry questions are put to us in quick succession, but we finally convince him that it would be the proper thing to allow us to pass; not without a great many shakes of his head, however, and prolonged mutterings. We soon transferred our luggage on the steamer which was to take us to Hamilton, our starting point on the railroad journey to Muskoka.

At Hamilton we had considerable work to do. As our canoe was in storage there it had to be shipped north; provisions and a few cooking utensils were bought; and then with heads shaved we are ready to start again.

Three hundred miles north we arrived at Bracebridge, a small village on the Muskoka River. The falls here cause the first portage to those who wish to follow the river to the great northern watershed.

Before the chute was built the falls were one of the

hardest on the river for the lumbermen to run. Many are the tales told of the great jams, the last one continued many days—one log standing upright was the key to the whole thing. Ropes were fastened; horses and men pulled, but to no avail—the log must be partly sawed. Who would do it? It would be taking one's life in hands to attempt it. Fifty dollars—an Indian and a saw, and the story is told.

For half a dollar we induce a farmer to haul our canoe and luggage to the river's edge below the falls. Here we were at last ready to start on our long-looked-for trip. Perhaps it would interest some fellow campers to know what our outfit consisted of.

First—Our canoe, the Chicago, was a cedar lapstreak, 16ft. long, 30in. beam and 10in. depth, weighing about 60lbs., and carrying an extra large lateen sail; her capacity was supposed to be 1,300lbs. As an all-round canoe she pretty near fills the bill.

Second—Clothing.—Each outfit of our extra clothing was packed in small round bags, 20in. long and 24in. in circumference. These and the ammunition bag had been well parafined, which made them perfectly waterproof. Our wardrobe was limited to extra pair pants, extra shirt, extra suit of underwear, two extra pair socks, one of them heavy wool, four bandana handkerchiefs, three pair of shoes—one low canvas, one tan color and one extra heavy, with thick soles—and a rubber overcoat.

Third—Ammunition.—This bag was about the same size as the clothing one, and contained 700 rounds of .32 cartridges for the Winchester, 200 rounds for the .22 rifle and about 200 rounds for the shotgun. Into this bag went the fishing tackle box and the miscellaneous stuff, such as nails, string, tacks, wire, etc., etc.

Fourth—Provisions.—This bag consisted of an inside bag of heavy canvas inclosed in oilcloth, length 40in., circumference 36in., with heavy rope handles on side. Into this went the following, each in a bag of its own: Tea, sugar, flour, rice, beans, oatmeal and salt, also the coffee, which was kept in an air-tight tin with small screw top.

Fifth—Blankets.—Three heavy pairs were tightly rolled in oilcloth, inside of which were the matches (in rubber-corked beer bottles), towels, dish cloths and mosquito net.

Sixth—Tinware.—These important articles consisted of large, small and smaller pails, tin plates, cups, porridge dish, frying-pan, coffee pot, knives, spoons, etc. These all fitted in the large pail which went into a bag with draw-string at the top.

Seventh—Stove.—This was an invention of our own, and was made of sheet iron, 2ft. long, 14in. high, the four sides were hinged to the top which had one hole. Having no bottom it could be folded up flat. The pipe—three lengths—telescoped together. This stove gave good satisfaction, but it is not perfect by any means, although for size and convenience we have never seen its equal.

Eighth—The Tent was an 8ft. wall, rolled up with pegs inclosed and in a bag of its own, the poles and ridge being tied together.

Ninth—The Cot was folded up with ax lashed to its side.

Some will think we had a great many bags, but experience has taught us that "A bag for everything and everything in a bag," is a good motto while out camping.

Any one but a camper looking at our pile of luggage and then at our canoe would wonder what we were going to do with it all, but that was soon settled.

The sail, tent poles and cot were laid in the bottom. In the bow went the stove pipe, clothes bags, tinware and stove. Then came the provision bag, tent, blankets, with the guns and fishing poles laid along the sides, the ammunition bag was placed in the stern, which just left enough room for the two of us to crowd in.

By this time the day was pretty well gone, and as we wanted to make our old camping ground about two miles down the river, we sent the canoe along at a pretty good speed, although it required close watching as the river contained a great many logs from the drive now going on.

We were informed at the village that we would not be able to make the lake by the mouth of the river, as the logmen had possession, but would be compelled to take what they called the cut, which branched off about a mile further up. Turning the bend of the river the old camp ground came in view. It seemed such a short time since we had pitched our tent there before. Everything was just as we left it; the dead pine boughs lay in a heap at one side, relics of our once fragrant bed; the blackened hole in the ground showed where the camp stove had once done good service and in a short time would be utilized for the same purpose. It did not take us long to pitch the tent and get everything under canvas; one of us getting supper while the other got things in ship shape. Night overtook us before we had the dishes washed, but by the aid of a camp-fire we made short work of them, and were soon under the cover of two pairs of heavy blankets. But what a night! We had neglected to put up the mosquito netting and—but what camper has not gone through the same experience. We got up about two o'clock in the morning and smudged the tent, which seemed only to sharpen their appetites. We will let this pass, as we do not wish to awaken sad memories.

CHICAGO.

BAXTER AND GRIMM.

EPHRAIM AND CHERRIES.

I AM alone to-night and memories of bygone, happy days in Colorado on the southern border come crowding thick and fast. Just about this time of the year I was resting up at my ranch on Rita Azul, Colorado, after a long cow hunt. I had three Mexican families on the ranch. Two of them had land from me, which they were working on shares after the leisurely way a Mexican generally works. The other man was taking care of my cattle and doing chores and his wife was doing my cooking.

One afternoon I felt pretty well rested and told the women on the ranch that I would take them over into the Manca del Burro Cañon after cherries, which grow there in profusion. The men were all gone except one boy of about sixteen, a rather lazy, quiet young gentleman about the color of an old saddle. They accepted the invitation eagerly, and so I told Juan Maria De Castro to hitch a pair of ponies to the farm wagon and put some hay into it; some blankets were put on the hay, and my load piled in. Five young women, six or ten children, with Juan Maria and me on the seat. Taofla Josephite

Luisa and the other women, with the ever-present shawl over their head, and several with a coat of white dirt on their faces to preserve their complexions. It was a curious-looking load, and they made as much noise as a flock of blackbirds.

We drove west along the base of the hills to the entrance of the Manca del Burro and then up the cañon, sometimes in the creek, then out, crossing it twenty times in a mile. It is a deep valley with a brook at the bottom and the banks slope steeply up for half a mile each way from the brook. We passed one patch of cherries about a mile up the cañon, and went to the next patch, two miles further up, turned the wagon round and unhitched the horses, the women got out, and leaving Juan to herd the children we climbed up to the cherry bushes. They were about 200yds. up the steep bank and ran parallel to the creek for several hundred yards. The patch was about 20yds. wide and the bushes about 5ft. high, covered thickly with fruit. These cherries resemble the choke cherries of the East. The women all went to picking cherries, talking and laughing as they picked. I picked a few and ate them, then sat down and dreamed of other scenes and my far away home in the East.

All at once the women stopped talking, and as I rose, there was a grizzly bear as big as a beef steer, standing on his hindlegs and looking at us from the other side of the bushes. He stuck out his tongue, licked his lips and growled. The girls were paralyzed, and stood still and stared with blanched faces. I told them to run and stood my ground. There was a wild stampede down the hill, accompanied by some good honest screaming. I drew my .45 six-shooter, resolved to make a fight if he came after them. He quietly dropped down on all fours and disappeared, and I went down the hill as fast as I could go.

When I reached the wagon it had just started, and I climbed in as Juan Maria struck the horses with the whip, got on at the hind end, scrambled over the women and children so that Juan should not break our necks running the horses; and soon grabbed the reins and slowed them to a walk. The women looked as if they had been run through a threshing machine. Their calico dresses were torn into strings, and they almost cried, until I promised them a new dress apiece for getting them into the scrape, when they laughed and seemed perfectly satisfied. It was quite a contract, for good calico was worth 25 cents a yard in Trinidad. We stopped at the lower patch of bushes, but the women would not get out till I had thrashed around in the brush for some time to convince them that there were no more bears.

They filled pails and baskets at last and we all went home. They to a home that was home. I to a place where I staid—one American alone with a horde of savage, ignorant Mexicans around him. Well, there is one comfort, I am well out of it.

W. J. DIXON.

Natural History.

THE BEAVER AND HIS SUNKEN WOOD.

Editor Forest and Stream:

I have just returned from my annual outing, and on looking over the numbers of FOREST AND STREAM that came during my absence, I observed in the number dated July 2 an article having the above heading, signed by "Berlin."

I wish to apologize to "Berlin" for what he terms my "flippancy," and to assure him that I thought his first article was really intended as a joke. I now see that he was in deadly earnest, and as I have personally seen and inspected many colonies of beaver when I was a young man, I feel that I ought to try and make clear my position of skepticism as to the manner in which "Berlin" says the beaver accomplishes the feat.

When a boy of 14 or 15 years of age, I began spending my school vacations in the forest, in company with different companions, some of them being well versed in wood lore, and a love of nature was thus inculcated that has continued to grow with the passing years. When about the age of 20 (I cannot be just sure, as my notes of those long past days were destroyed long ago by fire), I spent two summers far from the haunts of man, and within half a mile of two colonies of beaver. Many an hour, both day and night, have I spent in trying to get acquainted with this most interesting and sagacious of wild creatures. I had a companion at that time, a man as well versed in the ways of the "wood folk" as the most enthusiastic youthful questioner could desire; and between my own observations and the information derived from my campmate, I fancied that I had acquired a fair knowledge of *Castor fiber*. Some years afterward I also had various opportunities of observing different families of beaver, in late fall and early winter, while deer hunting. All this was in the Megantic region, in Canada, and neighboring parts of Maine. I mention all this only to show that I know something of the subject I am writing about.

This question of sinking their wood, as provision for the icy months of winter, was often discussed, and with considerable pertinacity I endeavored to ascertain how it was done. I have seen the bottom of their ponds literally paved with pieces of alder, poplar, white birch and other woods from the size of a pipe stem to 4 or 5in. in diameter, cut in varying lengths. They did not seem to be bedded in the mud, but only lay upon it. Disturb one of them, and up it would bob like a cork. Now, where can the theory of "sucking the air out" come in here? If the air could be exhausted from the cells of the wood (of which more hereafter), and replaced by water, the wood would remain sunken when disturbed, and could not float any more than any other "water-logged" piece of wood. But this is just what the beaver's wood will not do. It is like Banquo's ghost, and will not "down." Of course, after it has lain upon the bottom for a long time it will not rise, as it becomes thoroughly water-soaked, but it takes considerable time for it to reach this stage—certainly more than the first season, as all freshly cut wood will rise quickly. This I personally know, as I have often disturbed it.

A few words about the theory of "sucking the air out" will now be in order. I do not care to cast any ridicule in my remarks, as any theory in regard to natural history, honestly maintained, should be treated in all fairness. But let me ask "Berlin" how large a piece of wood can he

exhaust the air from, so that it will remain under water? Can he take a piece of poplar, 2in. in diameter and 3ft. long, and not alone with his mouth but with the most powerful air pump, exhaust the air, and replace it with water to such an extent that it will remain submerged when at rest in the water? He cannot do it. And I have seen pieces of twice that size submerged by the beaver. The air cannot be exhausted from the wood no matter what size it may be unless the whole circumference of the stick at the end to which the lips are applied be inclosed during the act. Now I would again ask, can a beaver take the end of a 2 to 4in. stick into his mouth and grasp it firmly with his lips? The form of his mouth renders this impossible.

A beaver's incisors protrude so that they cannot be covered entirely from sight by the animal. The lips are not flexible enough to accomplish this, much less to tightly inclose a piece of wood when wedged between the teeth.

So that aside from the philosophical improbability of being able to exhaust the air in the manner mentioned by "Berlin," by any means, it is clear that the beaver cannot do it.

It was the opinion of my old teacher in wood lore—and it became mine also—that the beaver anchored his wood by pressing it sufficiently deep into the mud to overcome its buoyancy by the adhesive qualities of the latter. The bottom of a beaver's pond is always covered with a heavy slimy ooze, where he anchors his provisions; and if the wood be held in contact with this for a short time it becomes tightly adherent. This I believe to be the secret, but would not assert it positively.

This article is written in all kindness, and only with a desire to set myself right with "Berlin" and others interested in the subject. It is already far too long, but I do not propose to reopen the subject or trespass further upon the columns of dear old FOREST AND STREAM in regard to it, and so have been thus diffuse. AREFAR.

CALIFORNIA.

REARING QUAIL IN CONFINEMENT.

YOU remember I mentioned several weeks since that Mr. Dyer had hatched in his incubator sixteen little Virginia ortyxes, and that two half-grown bantams had been pressed into service as assistants to the brooder in mothering the orphans. It grieves me to say that this experiment, like that of the grouse, was a failure. The quail lived about a month and were as chipper as could be, running all over the large yard and garden, busily searching for insects and other food with the bantams, and made a very pretty picture. Then without any apparent cause they began dropping off one by one or twos, and in a week or two had gone to join the big bevy on the other side. But the bantams and the brooder are all right, the latter now having eleven more quail eggs in it nearly ready to bloom.

The failure cannot be laid to neglect in care, for Mr. D. is at home all the time, and thoroughly enjoys such experiments. The birds had a varied food of finely-cracked wheat, corn, oatmeal, millet seed, ample run in the grass and garden, were carefully kept in the brooder and wire run when the weather was wet or chilly, and watched with loving care, and if the bantams had taken half as much interest in the matter as Mr. D. the result might have been different. But it was hardly to be expected. It was their first experience and they were but callow themselves, yet they did nobly, submitting to the nestling as far as their capacity would allow with great patience, but otherwise evincing little interest in their adoptions, neither calling them nor attending them faithfully in their foraging, though generally seen with them. It was a perfunctory performance and was quite an interesting study. The little mites were as fearless of humanity as so many ordinary chicks, and often evoked from the passers by the exclamation "Oh! aren't they cute." I don't know what course Mr. D. will pursue with the ensuing editions, but let us hope he may witness an abundant fruition of his patient labors. O. O. S.

VINELAND, N. J., Aug. 12.

MARINE BIOLOGICAL INVESTIGATION.

A USEFUL work is being undertaken by the University Marine Biological Association, which has been founded for the purpose of establishing and maintaining laboratories and aquaria on the coast of the United States, where accurate researches may be carried on, leading to the improvement of the biological sciences and especially to an increase of our knowledge of the food, life conditions and habits of American food fishes and molluscs, and for stimulating public interest in these matters.

The importance of possessing seaside laboratories at which the working naturalists of the country, the teachers in schools and colleges, the patient investigators in pure science, the Government experts and others could secure a practical acquaintance with the structure and habits of marine animals, has long been appreciated in Europe, where many such laboratories exist. A beginning has been made in this country, but more such stations, well equipped and provided with competent instructors, are needed. To establish these laboratories money is required, but no one doubts that the sums expended will be returned manyfold by the actual increase in food fish—to mention only one example—which will result from the study of marine life.

The laboratory established by this Association is located at Sea Isle City, on Ludlam Island, New Jersey, a situation which seems very well chosen. A tract of land of five acres has been secured on Ludlam Bay, within three or four minutes' walk of the ocean beach. Two railroad stations are almost within a stone's throw and a steam tramway affords facilities for reaching any point on the beach within six miles at any time of day.

The laboratory consists at present of a two-story building 24x72ft., thoroughly equipped for practical and scientific investigation. A suitable pumping plant furnishes a constant supply of salt water for the aquaria and working tables, and a number of boats of various kinds, dredges, trawls, tow-nets, pound-nets, etc., under the management of experienced collectors and fishermen, will keep up the supply of specimens and enable the investigators and students to search all points of interest in the neighboring waters.

The establishment of this laboratory is authorized by act of Legislature of the State of New Jersey, which provides that its property shall be exempt from taxation, and that the authorities in charge of the station shall

have the right to fish unmolested in any of the waters of the State for the purpose of obtaining material needed in their investigations.

It is expected that publications, to consist of monographs on various forms of life, will be issued from time to time. Further information may be had by addressing the Rev. Jesse Y. Burk, University of Pennsylvania, Philadelphia, Pa.

PENNSYLVANIA NOTES.

KANE, Pa., July 25.—Col. Thos. L. Kane founded and laid out the town of Kane, McKean county, where he raised, in the spring of 1861, a regiment of hunters, trappers and loggers, known as the "Bucktails," which became famous for their great bravery, skill as marksmen, and unusual powers of endurance. Kane, ninety-five miles from the city of Erie, is situated at an elevation of 2,001ft. above the level of the sea. It is the highest point reached by the Philadelphia & Erie Railroad, a division of the Pennsylvania Railroad Company's system, and one which traverses some of the best regions in our State for hunting and fishing. The town is located on an elevated tableland known as "Big Level," which constitutes the boundary from south to north of the Pennsylvania oil and coal field. In this region the ornithological student will find several species of birds as summer residents which are found in but few localities of the State as natives. During the past summer the following-named species have been observed breeding, or seen during the months of May, June and July:

Winter wren, tolerably common; olive-backed thrush, common, five nests found; red-bellied nuthatch, rather rare; mourning warbler, one nest taken; magnolia warbler, frequent; chestnut-sided warbler, very abundant; hooded warbler, several birds seen; Blackburnian warbler, frequent; black-throated green warbler, common; large-billed water thrush, rather rare; Canadian fly-catcher, frequent; yellow-bellied fly-catcher, tolerably common; rose-breasted grosbeak, common about three miles east of Kane; wild pigeon, few single individuals or pairs seen; red-shouldered hawk, common; snow bird (*Junco hyemalis*), very abundant. W.

DEATH VALLEY.

SOME time since we published a review of a Bulletin of the Department of Agriculture, which contained a preliminary report by Dr. C. Hart Merriam of the investigations which he has been carrying on for several years in Death Valley. The present season's work in this region closed some little time since, and Dr. Merriam—who, as already stated in FOREST AND STREAM, has been appointed one of the American commissioners to investigate the present status of seal life in Bering Sea—has started for the north. A reporter of the San Francisco Chronicle interviewed Dr. Merriam while he was in that city, and quotes him as making the following statements with regard to Death Valley:

"The valley and its lowering black walls of barren rock," he said, "are weird and strangely sublime in their desolation. For miles and miles the curious mountains may be seen outlined against the clear sky. From the top of Telescope Peak, the highest of the Panamint or western range which shuts the valley in, one may look down precipitous 12,000ft. to the level of the valley, as dazzling white as snow. Stretching from the mountain's foot are the glistening fields of salt. Here and there are running streams of salt and mineral waters. To drink of them is to die. The view is closed in by the gloomy cliffs of the Funeral Mountains, which form an impenetrable barrier at the east of the cañon. The scene is one of violent contrasts of glaring whites and dead blacks."

"The valley is the most barren and the lowest of a series in eastern California and southwestern Nevada. At a rough estimate it is about 150ft. below the level of the sea. It runs generally north and south, although its most fertile regions turn to the northwest. This portion has been named Mesquite Valley. It is a region far worse than Death Valley proper. The valley may be compared to the Grand Cañon of the Colorado. It is rather an immense chasm than a valley. It is about 140 miles long and at its broadest part is only 18 miles wide. In some parts it is not more than 15 miles in width."

"On either side of the valley, stretching almost its entire length, is a range of mountains, absolutely barren of animal and vegetable life. The western range is the Panamint, averaging in height about 9,000ft. The eastern range is the Funeral, a suggestive and not unapt name. The Funeral Mountains rise fully 7,000ft. above the level of the sea. These mountains are black with the exception of curious patches of red rock. Away to the north is Mount Mageruder. Beyond in the distance rise the heights of the Sierras. Almost at the southern limit of the valley is Mount Ivanwatch. Behind it is the 'Devil's Playground,' a region of absolute barrenness."

Down the valley a hot, suffocating wind blows with terrific velocity. In its course through the stricken region it gathers a black cloud of hot, shifting sand that has blinded many an unwary horse and rider. Under the glistening beds of crystallized salt in places are running streams of salt water. Beneath these is still another bed of salt. In other parts of the valley are wastes of hot sand drawn in some places into high mounds by the whirling blasts that sweep down the cañon. There, too, is the most curious earth I have seen—self-rising earth, as it is called. As far as the eye can see it appears in curving outline, up and up, as if puffed by a natural yeast. The unfortunate animal that steps upon the little hills will crash through, for they are not much more than fragile crusts."

"Still stranger is that section of the valley which for want of a better name is called 'Death.' Innumerable pinacles taper from the ground. They are as hard as stone and as sharp as sharpened steel. Beneath and hidden by them are pitfalls, tumble into which means a broken leg or arm. Then, too, are the rich fields of borax, which have lured many a man to death. Dreadful as is Death Valley, its northwestern arm, Mesquite Valley, is worse. All of the water upon its surface is poison. The wind has thrown the sand into immense mounds, one of which is three miles long and 500ft. high. It was in this valley that the immigrants lost their lives. Water may be obtained only by digging deep wells, and then it is none too pure."

"Our party, the Biological Survey of the United States Government, has been in the valley for months. It left there only a few days ago, having finished investigation. The general purpose of the report is to find out the cause of the long, rise in close array from the ground. They are as hard as stone and as sharp as sharpened steel. Beneath and hidden by them are pitfalls, tumble into which means a broken leg or arm. Then, too, are the rich fields of borax, which have lured many a man to death. Dreadful as is Death Valley, its northwestern arm, Mesquite Valley, is worse. All of the water upon its surface is poison. The wind has thrown the sand into immense mounds, one of which is three miles long and 500ft. high. It was in this valley that the immigrants lost their lives. Water may be obtained only by digging deep wells, and then it is none too pure."

"We found that in certain zones certain flora and fauna flourish. These zones are both horizontal and vertical. The party chose the desolate region of Death Valley for its labors, for from it, and not far distant, can be traced the seven zones we have established. The valley, notwithstanding its barren elements, has many phases of life. It has thirty or forty species of animals and fully as many of vegetable growth. Nothing, of course, will thrive on salt or borax bottoms, but on the edges of these districts various hardy plants thrive. In the sand and gravel, mice, rats, bats and many other animals, and not a few reptiles."

WASHINGTON, D. C., Aug. 6.—Another specimen of the rare Argentine was recently caught in the harbor at Belfast, Me., and forwarded by Mr. H. P. Thompson to the U. S. Fish Commission. This fish is a relative of the smelt, but grows larger. A few days since I noted a fine

tarpon in the market at Golden's; also a nice example of the flasher (*Lobotes*). The tarpon was taken at Virginia Beach. It would measure 50in. in length and probably weighed 70 or 80lbs.—BONART.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

A MISSISSIPPI RIVER ADVENTURE.

ONE cold morning in January early in the sixties five resolute fellows hurriedly stepped into a skiff at a little town in Illinois on the east bank of the Mississippi, and with two sets of oars pushed out into the current in pursuit of game—a fugitive from justice—intending to intercept or get track of him at a railroad town sixteen miles below.

The river was full of running ice, stretching from shore to shore, with here and there small streaks and patches of open water, which the men worked the skiff into when they could gain time by doing so. They would frequently get into a pack of mush ice and have to fight their way through it with tedious and exasperating delay. At other times they were hemmed in with ice fields as large as a good-sized farm, and would drift with the current until an opening showed itself through which they could get into open water; but by hard work and good management they reached their destination after a four hours' run, when the crowd separated.

Two of our number went to the railroad depot, two others to police headquarters and the other to the telegraph offices, but all to no purpose, as the party we were so anxious to interview had evidently kept away from railroad and telegraph lines.

It was well along in the afternoon when we got together again ready to make the return trip.

The ice was not running as heavily as in the morning and there was more open water, but we had the current to contend with, which had been in our favor on the down trip, but by hugging the Illinois shore and taking advantage of the openings we were making satisfactory progress under the circumstances.

We had pulled leisurely over about six miles of our course, comparing notes and discussing the incidents of the day, when we heard the baying of hounds nearly two miles above us on the Missouri side, followed soon after by the report of a gun, when the music suddenly came to an end. As there were "right smart deer" in the river bottoms at that time, such occurrences were so common as to scarcely excite comment, except among hunting circles and lovers of the chase.

We had probably rowed about a half a mile further when the keen eyes of the steersman saw what appeared to be a piece of driftwood coming down the river in the ice and drawing toward the Illinois shore, but there were so many cross currents during the winter when the water was low that there was nothing strange about that. A few moments later, however, he sang out, "Boys, there's a doe, and it is making for the Illinois shore." How our pulses leaped, all was excitement on that little craft, and every man was on the alert. The blades fairly bent under the strong steady sweep of the oarsmen, the pilot stood up in the stern the better to overlook the field and keep the skiff clear of the ice.

The doe saw that a new danger threatened it and increased its speed, rapidly nearing the bank. Now it was at the head of a stretch of comparatively open water, while we were at the lower end of it.

And now the boat jumps at every stroke of the oars, and seems to fly over the water; the doe redoubles its efforts and in a few minutes will reach the bank. It is now or never with us, and the oarsmen by a sudden spurt aided by a skillful maneuver of the pilot ran the boat between it and the shore, which was not more than 50yds. distant, and at that place opened out into a heavily-timbered creek bottom. The boat was under such headway that we shot several lengths past the doe, and as luck would have it got fast on a small cake of sunken ice. Had the doe kept its course it could easily have passed below the skiff and reached the bank in safety, so far as we were concerned, for we had no firearms with us, not even a revolver. In its fright it started back toward the Missouri shore, beating the water into foam in its effort to escape; but it soon settled down to a steady swim when it reached the heavy ice.

It was some minutes before we got rounded to and headed for it, and it now was over two hundred yards out in the river, fast leaving the shore behind. Then the chase began. The skiff was heavily loaded and the undertaking was not without a spice of danger, but fortunately we had on board three cool-headed fellows and two of them had the oars when we first sighted the doe; the other, who had lived on the banks of the Mississippi until he was well nigh amphibious, stood in the stern with a steering oar and directed the chase. And now look out for music.

We soon overhauled the doe, when the man in the bow caught it by the ears and tried to cut its throat; but he might as well have tried to hold the tail end of a cyclone. It fought desperately and got in several savage blows with its hoofs; but the fellow was good grit and took the pounding until he was glad to release it. In the skirmish it got both its forelegs over the gunwale of the skiff as if it wanted to come on board and finish him; but as we had all the passengers we could accommodate at that time, and as we had no guarantee that it would behave itself if it came on board, he let it go again and we headed it toward the Illinois shore. When it got too near the shore for safety he made the second attack with the same result, and in both cases it came near swamping us, so near, in fact, that we began to think of the wives and babies at home. Oh, for a gun; any kind of a gun—flint-lock, percussion or pepper-box, anything that would shoot.

We drove it back and forth to and from the shore several times to tire it out, to take the edge off the animosity, so to speak. In the meantime both boat and doe were rapidly drifting down stream, when the bow oarsman in sheer desperation struck it across the neck with the edge of an oar blade and stunned it, when it was hauled alongside the skiff and knocked in the head with an old hatchet that happened to be on board. Then we towed it

ashore in triumph and cut its throat with a pocket knife. One of the party was so elated that he gave a long "Whoop-ee-ee, boys. This ain't the game we started for this morning, but it's a heap better 'n none."

Another occupant of the skiff just smiled all over his face, not because we had caught the doe, but because he was once more safe and sound on dry land and not on the bottom of the Mississippi with acres of ice running over him. He showed the white feather from the first, and violently, even pitifully, protested against the "foolhardy scheme; he didn't want to be drowned for any blanked deer that ever lived." He couldn't see where the fun came in. He was told to keep cool as there was no danger, that we were after venison and we would have that doe if we chased it till sundown, and that he could have his choice, either to stay on board or get out and walk to shore.

If ever a poor creature had earned its life and liberty it was that poor doe. It had probably been hard pressed by the hunters and hounds the greater part of the day, and as a last desperate chance for life had plunged into the river, trusting rather to its treacherous currents and grinding ice than to the mercy of its human foes from whom it was trying to escape. But its perils were not over, for after fighting its way through a mile of ice and drift, it fell into the hands of foes less merciful if possible than those it had left behind.

It was exciting sport for the men in the skiff, but looking at the other side of the picture it was cruel sport for the doe. It was a sight that might well call for pity, to see five unfeeling men trying to sniff out its harmless life when it was battling so gallantly against such fearful odds. No matter which way it turned there was no chance to escape, death was certain, the drifting ice was everywhere, and its pitiless pursuers were pressing it close, ready to take every advantage of its failing strength. Its helplessness excited no sympathy.

Is there not in all of us a trace of the original savage that dwelt in caves, that has come down through the ages tainting each succeeding generation: that centuries of civilization cannot eradicate nor repress, but only gloss over with thin film of custom, waiting only the opportunity and occasion to burst forth like a consuming fire?

The doe was a large one and in prime condition. We found a slight flesh wound on one of its hips, probably made by the hunter's farewell shot as it took the river for happier hunting grounds. As we had lost at least an hour's time in this adventure, we loaded our quarry into the skiff and commenced the remaining ten miles of our trip in better spirits.

When the sun went down we were still paddling our way through the ice, and it was nearly midnight when we reached our homes, cold, hungry and fatigued, but late as it was that doe must be hung up and dressed, and as we had with us an expert in that line this feat was soon accomplished. The next morning we breakfasted on venison steak and fought the battle over again.

ELSAH, Ill.

CAMERON.

AGAIN IN BRIAR LAND.

MAN is prone to return to his first love, despite his lively memory of scratches from her sharp-pointed claws. So we sought again the briars in Thanksgiving week of 1890, and were once more torn, pierced and mutilated—all for undying love of Dame Grouse and Bre'r Rabbit. I have told FOREST AND STREAM something of two of our previous trips, hence this letter may be regarded as in the nature of a serial story.

Had the reader stood on the wharf at daylight of Sunday, Nov. 23, he might have seen a party of four, Jesse M., Tom T., E. H. and the writer, pulling and hauling like tugs at a hawser, on the ropes and chains of six dogs, all setters save one, a noble hound of uncertain age and African descent. That we got the resisting brutes on board the boat and safely tied them in the fore-castle or some other place, goes without saying, but that we left to the roustabouts the loading of our heavy boxes of ammunition, etc., is a complaint to our foresight and experience. Then the noble Mattano—a slow, filthy, disagreeable side-wheeled scow—cast off, blew whistle, and puffed slowly, then faster and faster, till the muddy Virginia Rhine was churned into foam and great waves were sent ashore to endanger the castles *en route*. The officers of the scow are polite gentlemen, but how they tolerate the shell is the mud-turtle's own problem.

Well, we got there at last, after men and dogs had almost lost patience and hope. Shallow water compelled us to seek the sandy beach by means of a 7x9 float, which was dancing a hornpipe some thousand feet out on the waves of the two-mile broad river, with boxes, trunks and baskets "too numerous to mention," with sighing and howling dogs scattered here and there on, among and under them, with terrified women and some maudlin and noisy men, and an accompaniment of much "chin music," we got fairly ashore safe and duly grateful.

Our host's ox team awaited our baggage as usual, and at nightfall we were gathered around the supper table, all talking at once and each sure his talk was the only one worth listening to. Next day we began the hunt, with pancakes, pork and coffee, prepared by our host's selfsame pretty daughter, whose black eyes had shot so many darts into our hearts the previous years. In this connection it may be stated incidentally that E. H., the youngest member of our band, found his week's stay pleasurable and much too short. At first we couldn't understand why he retired reluctantly and late and rose cheerful and early (against his wont at home), but gradually the mystery cleared away, and after the manner of men we forgave him, for to use a modern classic, "we had been there too!"

Breakfast over and dogs fed, we sallied out conquering and to conquer; but alas for the fond hopes of mortal men! There comes sometimes, even in King George county, Virginia, a killing frost—of meanness and malignity—which nips the bud of promised birds and prospective rabbits. So it was that memorable Nov. 24.

The leading actor in our band was one known as G. G. About noon, as we were eating the bread, bacon and herring lunch earned by the sweat of our brows, he, the aforesaid G. G., appeared mounted on a fat charger and in commanding tone demanded to know what manner of men we were. We told him in somewhat haughty style. Then he announced himself the proxy lord of the manor by virtue of a duly acquired right to its hunting privileges, and insisted we were trespassers on said manor. This so astonished us that we remained seated on a log, but offered a placating symbol—in the form of a brown bottle,

Then we arose and girded ourselves, and said unto him that the true and good lord of the manor had permitted us to hunt thereon for these many years, and had also indicated he had no objection for this one; consequently we should hunt, hunt, hunt.

With doubts, denials, demurrers, etc., our noble friend rode away, and we feared he was forever lost to our fond gaze. But it was not so to be, for next morning an amiable constable appeared through the mist that enveloped the hillsides, and "warranted" us in the politest manner to appear at a country store, half a mile away, at 10 A. M. Upon appearing there we found bilious G. G. had ridden miles upon miles the night before, to seek a magistrate and hound us with King George county law. The magistrate was a polite, kind, reasonable and well-informed man—a true gentleman—whose memory we shall cherish. He read to us the special act of the Virginia Legislature, applicable to that county alone, by which an "informant" can become complainant, and if a huntsman has no "written license" to gun on a particular estate, he may be fined and his gun and dog confiscated. As in other years, we had no "written license," and hence were technically trespassers, being thus at the mercy of any maliciously-minded person who might choose to become an "informant."

To be fined and lose some valuable guns and "no-price" dogs would have been something more than an equivalent for two hours' trespassing, with not a dead bird or rabbit, nor even a chipmunk to attest our skill. The proxy lord, G. G., swore he had an exclusive verbal permission to hunt on the estate in question, yet admitted there was no consideration given. Here was then a *nudum pactum* that would have raised even Blackstone's massive wig. We quickly demurred, while admitting a technical trespass under the statute. The wise magistrate said we might pay the lowest possible costs, \$4.20, and go our way, which we did after treating all hands to cigars, save always the good G. G. He averred that he was prompted solely by hostility to our host, and had absolutely no purpose to injure us. He was simply determined to make it pleasant for our host by attacking his friends and guests. Our host was a hard-working, thrifty, prosperous farmer, who had moved there from Maryland some thirteen years before. And these things made him obnoxious to G. G., who had never moved (save when the Confederate army took him along), had never worked, and was neither thrifty nor prosperous.

Subsequent to the magisterial seance we received invitations from more than one of our host's neighbors to hunt on their farms, and every disposition was shown to prove that G. G. did not represent Virginian hospitality. For G. G. himself nothing but anathemas were heard, and we learned that he had long been one of the most unpopular men in the county, so that his last essay had merely confirmed his undesirable title to notoriety and dislike.

It is a great stretch from G. G. to innocent birds and rabbits, but it must be made, even though the latter subjects be summarily dismissed after a brief interview. My friends M. and T. "shot to kill," while I wandered o'er hill and dale, in forest and meadow, observing nature "in her loveliest mood."

The large basket trunk which they took home filled with dead birds was their coveted testimony to skill, which I naturally envied. But after all I got more out of the trip in fun over this and that in the way of ludicrous happenings, and for years to come I can tell with pleasure of my adventure with "that nigger's hound," which had so queer ideas and ways, was so indifferent to the change of masters, localities, sleeping quarters and diet, so stubborn and opinionated, so stupid and yet sly, and always so hungry and hollow even when stuffed with corn bread and rabbits. I can recall how he declined to hunt squirrels, though "warranted" for them, how he always refused to come to a trail, how I once threw him in a "briar patch," *vi et armis* (translated, by his tail), and after a rabbit that calmly awaited him therein; how he emerged with a *sang froid* which completely unnerved me, and must have surprised Bre'r Rabbit himself, and I can always explain my lack of luck by stating the fact, namely, that the hound always raced the rabbits into a hole, but suppress the concomitant fact that the said hole was his own throat. (It was not till the last day of my stay in Briar Land that I learned where the hole was.) So sly and "past finding out" are the ways of a hound educated in an American Ethiopia.

One week from our going we gathered again on the sandy bank of the river in the bright morning sun, and four hours thereafter the good steamer Wakefield bore us to Alexandria, whence Mr. T.'s smart team quickly took us to Four-Mile Run. There our good friend Charlie P. awaited our coming, and at dusk we sat once again around Mrs. T.'s groaning table; everything was cooked to perfection, and we ate and ate like starved men of turkey and "fixings" too numerous to remember. The reader will not blame us if, remembering the most notable experience of our trip, we sang:

"Old Grymes should be dead,
That bad old man,
May we never see him more."

POTOMAC.

"BANK-GRASS KNOLL."

Editor Forest and Stream:

In your issue of July 30 "Sand Hill" dropped on the writer of this quite heavily; but as a small boy once remarked to me when a bigger one knocked him down, "It did not hurt much." Firstly because it was done in a gentlemanly and courteous manner, secondly, taken in the abstract, what he says is quite correct; thirdly, judged as we are by standards at best arbitrary and uncertain, there are few of us whose conduct as sportsmen is not open to criticism, and lastly, I have a perfectly clear conscience.

About two miles from here lives old Oliver F., a man who some years ago discovered that seasoned shingles make good kindling and proceeded to strip them off his house for this purpose. As the shingle line gradually receded it was necessary to use a sharpened stake to punch the kindling, and it became the duty of George Tom, Oliver's eldest son, to see that the stake was in its place within reach of the door. One night he neglected to do this. Next morning, on his way in from the barn, he met his paternal parent in no very pleasant frame of mind. "See here, George Tom," says he, "what do you mean by neglectin' of your business in this way. There,

I had to go out in my sock feet this mornin' to hunt up a stake to git kindlin'. After this, when you have anythin' to do, you tend to it. No one 'll ever hire you when you git to be a man if there's no dependence to be put in you; and you're shiftless, I tell you, boy, shiftless, and if there's anythin' under the light of this here heavens I hate, it's shiftlessness."

Similarly we all hate unsportsmanlike ways, but they are mostly George Tom's ways, not our own. The sentence in my former communication, upon which your correspondent founds his objection, is, perhaps, somewhat loosely written; it certainly is open to a more extreme interpretation than is consistent with strict accuracy. The reader might possibly think that I lost four nights' sleep out of every week for three open seasons and killed thousands of ducks. This would be incorrect. I was at that time engaged in a brain-vorring, nerve-exhausting business. My day's work was usually finished by 4:30 P.M. Then, with gun and a couple of dozen cartridges, I strolled down to the Dugway, adjacent to which there is a large tract of intervals and marsh abounding in ponds, puddles and duck food. I would walk up perhaps half a dozen snipe, killing some and missing the rest. A little before sundown I would hide in my blind on the "Bank-grass Knoll" to wait for the ducks. Before long they would come. Some would pitch down far from any shooter and go to feeding, others in circling around would get killed or missed. Then, when dusk came and there was danger of failing to find if we killed, we left our stands—the Parson, Samuel, Chase and I—and walked home in the gloaming. One duck was a fair bag, two good, three extra and four a "whooper." The Parson and I killed less than 50 each a season, the other two exceeded that figure slightly.

The ducks would come quite early Monday evenings, and a little later each day till Thursday, by which time there would only be a few stray ones before it was too dark to shoot. Then we would leave them alone till the following Monday, when the shooting would again be good. Unquestionably the ducks came there to feed, and many of them did so. I have seen ducks feeding complacently in a little pond just north of my stand, paying no attention to the shooting in a blind 200 yds from them, but if I, at about half that distance and in plain sight, fired, they would leave in a hurry.

If I was a sinner then, I am one still—an unrepentant one. For I expect to occupy the old stand on Bank-grass Knoll again this fall for a few days after the opening of the season. I will probably enjoy it, even if I don't kill many ducks. Of the many pleasant memories associated with those three years, the ones clinging around Bank-grass Knoll are what I would care least to have eliminated. Even when I killed nothing there was something comforting and restful in sitting there in the after-glow and listening to the song of the wind through the bank-grass, so close to my ears. I think others have found it so, too. No one would make me believe that the Parson came a distance of two and a half miles for the sake of the ducks he got.

Perhaps we were sportsmen, perhaps not, but I think if "Sand Hill" could have known our little clique he would have pronounced us not too bad a lot. He would have found us content with very little and never cursing our luck, except when the guns missed fire, and then the worst the Parson ever said was "bother."

In conclusion, I may say that I would not shoot a duck on her nest; that's George Tom's way, and I despise it; but I did shoot ducks between sundown and dark, and would do so again. Twice I have fired at ducks after dark, and will not say that I won't do so any more. This may not be right, but we cannot all of us do right all the time.

L. I. FLOWER.

MCDONALD'S CORNER, N. B.

AN ADIRONDACK SQUIRREL HUNT.

THERE lies before me in my study a silvery rug made of 16 gray squirrel skins, which, as my eye catches it, turns my thoughts back to a cool bright October day spent on the edge of the Adirondacks hunting squirrels with a keen-nosed old hound.

For many years near Lake George a now old man by the name of Stevens has lived, and man's memory hardly runneth back to when his companion, a liver and tan hound, did not exist. The two are county characters, and their reputation for knowing just where the game was to be found was proverbial.

At sunrise we climbed out of the wagon at his cabin in the edge of the woods. The horse was placed in the little shed with a bunch of corn stalks to feed upon. The old hound, called from his kennel, barked and gamboled as he saw the guns drawn forth from the cases. We climbed over the bars and followed the cow path up across the white frost-covered pasture. It was a steep climb. Below gradually came into view the valley of the Hudson, the course of which was outlined, as the river wound across the plain, by great wreaths of rising mist, the edges of which the sun had tipped with rose. The old hound scampered through the wood lot, where the bluejays were crying and the chipmunks chattering around the brush piles as though they were glad again to see the sun. Pausing, pantingly, we gazed down upon the beautiful panorama framed by the great trunks and branches of the few remaining trees while waiting for the voice of the dog on a trail. The old hunter, as he leaned his 6ft. or more of spare frame on his ax handle, with scraggy gray beard and coon-skin cap, formed a strong picturesque figure.

The welcome bay came down the mountain side, and the old man with face alert bent forward to mark the direction of the running. A short "Come on!" and with rapid strides he led toward the heavy timber. The ringing music stopped, and an occasional angry bark told plainly the game was "treed" or "holed." The latter it proved to be, as we saw the dirt flying from the paws of the dog as he sought to reach his quarry under the roots. All the morning we tramped through the big timber. Only a single gray was shot, and he came tumbling out from the red leaves of a bough he was scampering along. The old hunter had predicted squirrels in plenty in the morning, and the keenness of his dog had been duly lauded. As the hours wore on both master and dog were chagrined, as their actions plainly revealed. About noon he proposed lunch and then to try a different ridge. High up on the mountain on a big moss-covered rock a fire was built. Stretched out at full length in the grateful warmth of sun and fire we rested. Down through the woods the sunlight touched with silver every trunk, branch and

twig. The oaks still held their flaming red foliage, the green of the hemlock showed here and there, and the white birches caught up the strong light in dazzling whiteness. The woodpeckers are working noisily close by, and away below a hawk is sailing in slow concentric circles. The hound slept at the feet of his master, who, with back against a log and cap well back, between the puffs on his short pipe told of a deer run in yonder ravine and of bear hunting further up, years ago, when this was well nigh a wilderness. Far out over the valley of farms and woods the eye rests on the blue ridges of the Green Mountains.

With new energy the second ridge is sought. Scarcely is it reached before the dog gives voice and leads us straight to the summit. Beneath a hickory he sits with upturned nose, and before the tree is reached a silvery body springs out for a neighboring tree. A gun rings out and the second squirrel is brought to bag. Off again went the hound, soon to give noisy tongue, and down to the foot of the ridge we hurry. This time beside a brook that purled along, an oak with a hole high up showed where the game was hidden. At the foot of the tree numerous little particles of bark gave evidence that it was a family tree. Off came Stephen's coat and an extra hitch is taken in his leather belt. Then the keen axe falls with a vigor into the hard wood. Up and down flashes the bright steel; right and left fly the white chips as the gash sinks deeper into the trunk and the blows ring out through the forest. The end is nearing, the tree slowly quivers, then sinks, then falls with a mighty crash. Out from its hollow trunk near the top comes a jumping mass of gray that instantly separates. Bang, bang, bang, bang, sound the guns, yelp, yelp, the dog, and the keen shouts of the old man as stick in hand he jumps after a wounded squirrel. Fresh shells are jammed in before the smoke drifts away. A flash of gray through the trees, I fire, a miss, again and down the squirrel comes, but only to scramble over a log. I crash through the bushes and as he jumps for a knotty chestnut the third shot lays him still. We gather round the fallen tree and five grays have been added to the now filling game bags. With lighted pipes we rest waiting for the new trail to be found. Soon it comes and then another as the afternoon wears on. At sunset on the far side of the ridge the hound treed the sixteenth squirrel in some saplings. Our approach starts him out, and as he jumped right across the glowing sky of the west the shot turns him in midair. We shoulder our guns and set out through the still gray woods for the wagon. The old hunter leads the way, erect with his axe on his shoulder and the hound sedately at his heels. As we descend the full moon pours its light down into the valley with here and there a glittering light.

My eye catches the rug again. Ah, poor little grays, you lived but to satisfy man's desire for sport. Is it not true of the killing of all animals what Frank Forester said of Bob White? "It is a singular proof how strong is the passion for the chase and the love of pursuit implanted in the heart of man, that however much, when not influenced by the direct heat of sport, we deprecate the killing of these little birds and pity the individual sufferers, the moment the dog points and the bevy springs, or the propitious morning promises good sport, all compunction is forgotten in the eagerness and emulation which are natural to our race." Yes, little grays, while I regret your killing I fear my love of sport would draw me again in pursuit of you and other game, and to wish all days were as happy as those with dog in wood and field. And from yonder fireside Bess wags her tail in assent as my reverie aloud wakes her from dreams, perhaps, of whirling quail or wily grouse. N. B. W.

CHICAGO AND THE WEST.

CHICAGO, Ill., Aug. 14.—There never was any fly-wheel so big it couldn't be stopped and made to run the other way, though sometimes that may be a long operation. The continuance of any evil which does not affect directly the general public's convenience is much the same way. It runs of its own weight. But it can be stopped also.

For years the sportsmen of the country have been talking a great deal and working a little, about the killing and selling of illegal game. They have not stopped the abuse. The fight has been a considerable one. Nowhere has this fight been so hard to carry on as in the big game selling cities. A little actual work in a rural district will stop illegal shooting. To stop illegal selling in a great city is more difficult. Nevertheless, that can probably be done. In all these years of talk the probability never looked as probable as now.

Now is the time, and this is the year, to increase the fight on illegal game. I don't know how or why this is, but the fact is unmistakable. For some reason the fly-wheel of this iniquitous machine is slowing up. The sentiment in favor of game protection has changed notably. Much of the evil lay in ignorance or apathy. Agitation has informed the public, and even those who are not sportsmen are beginning to see the evil of the old destructive ways. I am speaking now safely for this region at least. I believe Chicago has done more in actual game protection this year than any other city or section of the country. To-day the sportsmen here feel that things are coming their way. The organization of the Possum Club, the work of the Fox River Association, the organization and highly satisfactory work of the Kankakee Association, the passage of the bill stopping the abominable ice fisheries—all this was a good year's work alone, but it is not all.

It may be remembered that FOREST AND STREAM was the first to show up Brusewitz, appointed last year as a game warden for this city, and to move for his dismissal. This fellow's conduct finally got to such a point that the petition printed away last spring in FOREST AND STREAM was taken up and, with a heavy list of signatures, placed before the governor of the State, the meeting for this purpose being held at Mr. Low's office, as was duly reported. The sportsmen prayed the appointment of M. R. Bortree, of this city, as warden. The result was long in doubt, but this week the good news came that Brusewitz was deposed and Mr. Bortree appointed. This is one of the best things of the season, and is not less than a triumph for the sportsmen. Gov. Pifer did well.

Mr. Bortree received his commission this morning, and less than an hour thereafter had a warrant in his pocket for a noted South Water street law-breaker. The result will be given later.

I have already spoken, in the three preceding issues of the paper, of the cases inaugurated against the restaurants and hotels here by the sportsmen. In these the course of victory has thus far been unbroken. Mr. Abner Price, the quiet, faithful and conscientious president for this year of the State Sportsmen's Association, has been patient in getting the matter in trim, and is to be congratulated upon his administration already. It bids fair to be the most distinguished administration of them all in the matter of stopping illegal handling of game. If only he shall keep on, he has the chance now to make a record for all other associations, as well as this one. The popular sentiment now is with him. The tide has turned, and for once it is safe to say that things are coming our way. The iron is hot now, and I only hope that the striking will be incessant.

Thus far the restaurant cases have gone by default. Mr. Kern, county treasurer of Cook county, president of the Audubon Club, ex-president of the State Sportsmen's Association, etc., etc., has paid \$32 for the good of the cause. He has, however, failed to inform the Association where his six prairie chickens were bought. As a prominent sportsman, and more especially as one who has rushed into print and been rushed there, to the effect that he was ignorant and innocent, and only his new steward at fault, it now behooves him certainly to attest his ignorance by bringing up his steward and causing him to give the desired information. We want the South Water street merchant as well as Mr. Kern. There are two more straight cases against Mr. Kern, and it is now the sentiment of even some of the more conservative that these cases should be pushed at once unless he will so far conserve the interests of the Association as to locate the game dealer who sold these birds. We all know now who that dealer is, but have not testimony to prove it. It is certainly not unreasonable to ask Mr. Kern to show his hands if they are clean, and if they are not clean they need a little more washing.

The cases against the McGarigle Catering Co., the Leland Hotel, the Wellington Hotel and Rector's restaurant were not allowed to come to trial, defendants pleading guilty and paying the fine and costs. Justice Randall H. White, before whom the suits were brought, thought that \$25 and costs, or about \$30, was about right. This morning Billy Boyle's case was to have been tried, but his attorney said his wife was sick in bed and prayed a continuance for a week. When the case comes off the attorney himself will be sick in bed.

Last night, just to see what effect the late fines had had, I went down to Rector's for supper.

"You're not serving much prairie chicken nowadays, are you?" I said to the waiter.

"Well, not since the other day," said he smiling. "How much did those fellows stick the old man?" I asked.

"Twenty-five," said the waiter. "But, Lord! he don't mind that."

"Well," I said, "it's a shame they can't let a man alone. Can't a fellow get a little prairie chicken on the quiet, without their making such a fuss about it? I used to get a bird here once in a while, and here now I can't do it, all because of this foolishness."

"Oh, well, you see," said the waiter, "that \$25 fine is all right. We don't want it thought we're serving too much of that sort of thing. But we haven't got any prairie chicken to-night, but then, you see—"

"Have you got any teal duck?"

"Oh, yes, a nice teal."

I had before this ordered my supper, and so could not well order duck. I, however, tried to find some one to send down, and to-night Billy Farmer and a friend will try for some duck there. I hope they will get it. I think Justice White would stick a good heavy fine and a reprimand, too, on Mr. Rector if he were caught so soon again. There ought to be new men sent around again to all these places which have just been fined. I have always said that a fine for one bird was a bagatelle to them. They should be fined the limit on every individual bird, and as many cases brought as possible. They will quit selling when they find it is costing them too much to sell, and not before. Mercy is ill-placed with such men. The rougher this Association is the better. Mr. Low, the attorney for these cases, thinks the Association will get public sentiment against it if it is too severe. I do not agree with this in the least. It isn't a question of public sentiment, but a question of illegal game; and the men who sell it ought to be jerked as early and often and as thoroughly as that can be done. This talk at Rector's place ought to be proof enough of that.

At the close of the little gathering which attended the continued Boyle case this morning, State Fish Warden F. L. Buck, the same who has done the fishway work for the Kankakee Association, accompanied Mr. M. R. Bortree, the new Chicago warden, to the justice's desk, and there swore out a search warrant for the commission house of Fred W. Smith. Buck had been informed of 150 dozen prairie chickens now hanging in Smith's coolers, and had been promised a diagram of the store-rooms, so that these birds could be located at once. I wanted to see some of this, and so accompanied the two above to Mr. F. S. Baird's office. Here the statutes were examined carefully and all made ready. Mr. Buck then stepped out to get his diagram. He was gone about three hours, and came back without any diagram. He had traced his clue to the buyer for the Union Restaurant, Henry Erbe, who had said he bought a dozen chickens there last week. Mr. Erbe referred Mr. Buck to a gentleman who was lately in partnership with Fred Smith. This gentleman promptly declined with thanks to tell what he knew, though there was where the story of the 150 dozen chickens started. He said later, after Mr. Buck had left, that Fred Smith had no chickens in his place on Dearborn street, but that all his stuff was in the big cold storage warehouse down on Sixteenth street. So the 150 dozen chickens looked dim. At this stage of the game, 3 P. M. to-day, I left. It was then thought that on Mr. Bortree's return from home the search would be made of Smith's place at any rate. Of that I will learn later. Under the circumstances Mr. Smith will probably have been warned before the searchers get there. I see no reason why all the freezers on South Water street should not be examined, and also certainly the great cold storage houses. Many commission dealers have their stuff in the cold storage houses, and if they were thrown open it is likely that a terrible sight would be shown to sportsmen's eyes. As to the right of search the law protects the warden well, the clause permitting search read-

ing, "If he have reason to believe" that illegal game is concealed. He can not be proceeded against. It is safe to say that some of these "reasons for belief" will be sifted before long now. Brusewitz is gone. We've got a warden in Chicago now. Congratulate us.

Mr. Price, president of the Illinois State Sportsmen's Association, announces his appointments for the ensuing year as follows: Board of Directors, Dr. N. Rowe, Fred. C. Donald, B. B. Organ, C. S. Burton and F. A. Place; Law Committee, Wolfred N. Low, John Lyle King and F. S. Baird.

I should correct the types of last week's paper, which say that Mr. Low is "not at present a member of the Kankakee Association. I wished to say he was not at present a member of the board of directors of that Association.

An interesting question of insurance comes up. A certain game dealer on South Water street carries \$50,000 insurance on game the year round. Suppose he burns out in the close season, could he collect? This has been asked here lately. He is wasting his money. A thing illegal does not exist in law. He ought to call in some of his insurance.

A deplorable affair is reported from Dayton, O., Aug. 9, as follows:

"State Deputy Game Warden L. K. Buntain of this city fatally shot David McIlvain, who he caught with four others seining in Mad River, near Harshmanville, about midnight. Buntain had heard that a party had gone up the river to seine contrary to the State law, and at the request of Ben F. Seitzer, member of the County Fish and Game Protective Society, accompanied him to the spot, both being disguised. They came upon the party in the act of drawing the seine. A fight ensued, and McIlvain was shot."

In the above case the outcome is to be regretted, though the fault was doubtless the victim's, both in doing an illegal act and resisting the legal means of correcting that act.

Capt. J. W. Eddy, Capt. W. C. De Remer and Mr. James Brooks, last week again proved the virtue of the Des Plaines River, which runs right at the edge of Chicago. They caught 16 bass and 3 pickerel at Willow Springs. This point can be reached via Alton or Santa Fe Railway. Mrs. Nash has the only stopping place there.

Warden Buck reports all the fishways in on Rock River, all in on the Fox River, and all just as good as in on the Kankakee River.

The Illinois Valley Protective Association will soon be organized, on lines similar to the Fox and Kankakee River associations. The world do move.

Later, Evening, Aug. 9.—You can get a lot of courtesy and a whole broiled teal at Rector's Restaurant right now for \$1.50. As I was going home from my office to-night I passed by that corner, and could not resist the temptation to go in and see personally whether, in the face of the late conviction, he would actually continue to sell illegal game. I was alone. The waiter of last night was not at hand, but I found another, and gave him an order for a good supper, of which a broiled blue-wing teal was a part. The latter was listed at 60 cents on the bill of fare, and no discounts off. It came all right. The bird was three-quarters grown. Mistake was not possible. The odor of wild duck is not to be confused with any other, the more especially if the bird be a trifle "high," as this one was. I have killed and eaten too many teal not to know one, though it is not yet certain whether the Justice will accept my unsupported testimony to that effect. There will be a chance for that to be decided, as this case will be brought. I hope that Billy Farmer and his friend will also locate their cases there to-night. This ought to cost Mr. Rector \$75 and costs, not less. Is not this proof sufficient that a fine for one bird, a mere complimentary fine, is of no avail to stop this nuisance? Ought not the other Kern cases to be prosecuted? Ought not the Boyle cases to be argued for three birds, and the full penalty for each, and ought not the Hotel Richelieu case, which is yet to be tried, be laid for two birds, and argued for a \$50 fine? I say mercy is ill-placed with these men, and to-night I have proved it. If the Illinois State Sportsmen's Association had three men who were willing to get out and do a little steady hustling, it could prove this again and again in the majority of the cases in which action has already been brought. I venture to say this: The first fines amount to nothing in the bulk of these cases.

I must compliment Mr. Rector upon the quality of his service. When I first went in, tired and a trifle dusty, the waiter, before I ordered, brought me a glass of water with no ice in it and a section of butter also iceless. He, however, looked at my hat and umbrella and they seemed to please him. When I ordered a good supper, including the teal, his estimate continued to improve. He took away the iceless water and butter and brought a glass of water with ice in it and two "pats" of butter nicely iced and trimmed with parsley branches. I expanded the order yet a little, and presently he whisked away my cup of coffee and brought me another. "You'll find this nice and warm, sir," said he. Then he stood and fanned me and kept things in good running order. There were no flies about that table. I never enjoyed a supper more and never gave a waiter a half dollar with greater pleasure. He was such a good, pleasant, revised edition waiter. And besides he was doing me a favor. I should say in passing that two friends who tasted of Mr. Rector's teal, a portion of which was pocketed, agreed unhesitatingly to his character. Mr. Rector runs a good fence. He says he has teal and he does have teal.

No other newspaper has collected a jot of evidence in this work here. They may come trailing in after a while. By watching FOREST AND STREAM they may be able to get a story about it. I just say this a sort of off hand. News in a newspaper is great stuff, but some papers don't think so.

Aug. 15.—After so much racket about protecting game, I presume a good many shooters would like to think about shooting a little game for themselves, legally of course. The prairie chicken season will now soon be open, and inquiries are constant for good shooting grounds. Unfortunately the bulk of our Western prairie chickens are now reposing in Chicago freezers, or local freezers throughout the shooting country, but I should like to help some gentleman to a day after these fine game birds on their natural cover. I still think northwest Nebraska, north of the North Loup, is the best place to go to, though I have not heard personally from that season there, the amount of rain, etc. Last year that

country had the best shooting of any, and the shipments from there were simply terrible. Last year Minnesota and South Dakota were too dry and the shooting there was very poor. This year matters are much better in those States, the rainfall later in the season being more abundant, and yet not excessive in the early spring. Ottotail county, in Minnesota, ought to be a safe chance this year. I should not be afraid to risk Ortonville. Glenwood is mentioned, but I do not think so much of it. I hear from Minneapolis that the illegal shooting before the opening of the season has up to this time been much less than usual. A case or two of convictions at St. Paul helped matters in that neighborhood.

For Iowa advice is much more difficult, as that country was nearly depleted by market-hunters. If a party should go to Ruthven, Ia., they could by judicious inquiry get at shooting near there or around there.

On the whole, South Dakota, after northwestern Nebraska, is the safest country I know of to visit for upland grouse shooting this fall. Reports come in that the season there has been favorable in every way. Near Tracy the birds are described by a resident late from there as very abundant. Volga, S. D., is another good point, and I don't think one would miss it there. Huron is probably not so good, though much chosen as a starting point. Last year the sharp-tailed grouse shooting in the Turtle Mountains country, of Dakota, was magnificent, and this year it should be practically as good. Hitchcock, S. D., is good this year also, I am told.

In Illinois the shooting will be about as good or perhaps better than in most of the States further west. There will, of course, be this drawback here, that the shooting has begun now, and will be practically over by Sept. 5, though its opening date is Sept. 15. Nevertheless, Sept. 15 will show fine cornfield shooting, the hardest and finest sort, and clear above grass shooting on cheeping grouse, along the old Sangamon Marsh, 20 miles below Pekin. Mason City, near there, is another point closer. There will be some birds left not far from Jacksonville, not many. Near Bloomington there will still be some shooting left by the early thieves, and this will be better yet near Saybrook, just below Bloomington. At Mt. Pulaski, this State, there will be birds, and I think the boys there try to keep the law observed. I have heard of birds along the Kankakee, in Indiana, but could not recommend that. Near Moline, Ill., there were a few coveys this summer, probably eaten before this. Near Yorkville, on the Fox River, there was probably pretty fair illegal shooting for awhile this year.

I give any advice as to shooting country with a great deal of reluctance, for fear that some good fellow off on a vacation may through it be led into disappointment. It is not possible to speak with certainty for any country not personally visited, which is of course out of the question at this date. More than this, one's success in a strange country depends on himself. He must have the knack of making friends, and a disposition to hustle, and an eye for good ground, and a knowledge of his game. Moreover good "chicken dogs" are scarce, either local or imported along. The market-hunter never did a more deplorable thing than when he killed off, through death of *raison d'être*, that magnificent hunting companion and friend, the old fashioned "chicken dog."

Another thing. The dates of the open seasons should be looked up, not in rough and inaccurate newspaper compilations, and not in the slips of alleged "game laws" sent out by some of our sporting goods houses and manufacturing firms. I found the South Dakota date wrongly given in one of these affairs to-day. Mr. F. S. Baird, who is just about to start for that country on a shooting trip, called my attention to it. "All these publications have given that date wrong," he said, "you'd better write in and have your paper correct it."

"Is it wrong in the *Book of the Game Laws*?" I asked.

"Wrong everywhere," said he. I went to my desk, and found that the *Book of the Game Laws* had the date right, and just as he found it in the Dakota statutes. By a fault of the indexer of the statutes this reference is not paged in the back of the volume as regularly. So here the *Book of the Game Laws* was better even than a reference to the statutes, which to the ordinary searcher would have been misleading. I do not know of any other compilation of the game laws which is altogether accurate. It may be fallible, but I have not yet heard of a mistake that it has made. It is one of the most useful books a sportsman ever had in his hand, especially just about now. I don't know what I get for saying all this, but it is something which ought really to be said. E. HOGGH.

WESTERN WILDFOWL GROUNDS.

WEST of St. Peter, on the C. & N. W. R. R., is located the town of Tracy. It is a very nice town and many of the residents are fine sportsmen. Large prairies are on every side of the town, and the location is one of the best to start out from for some good shooting of any place I know.

South of Tracy is the celebrated Lake Shetek country, where may be found great quantities of ducks and geese. Should the sportsman be in the country during a flight of canvasbacks and redheads he would have very fine sport. Lake Shetek is the head of the west branch of the Des Moines River, and is located in the great "flyway" of ducks and geese from British America to the Des Moines Valley, and from there to the Mississippi Valley and from there on to the Gulf. This lake country is a great breeding ground for ducks and geese and all the snipe family. Wild celery and rice are found in many of the lakes. The native ducks decoy the flight ducks into the lakes when on their way south. Sometimes the feed is so plenty that they will stop a month or more. Then the sportsmen will get as fine ducks for table use as can be found in any part of the country. Good chicken shooting can be found anywhere west of St. Peter.

West from Tracy, in Dakota, we come to the great duck, goose and chicken country of Dakota. North of Watertown is located the Indian reservation. It is a great country for lakes, and quite a breeding ground for waterfowl. Great quantities of small grain are raised around Watertown, and when the flight of geese come down from the Devil's Lake country in North Dakota it is a sight to behold. At any place west of Watertown good shooting may be found. The Jim River country is a great place for ducks and geese. Near Columbia the Jim River forms quite a lake, and there is a grand chance for the sportsman to try his hand at pass shooting, the best of all shooting. The shooter who kills three ducks

out of five on a duck pass may be classed as an A No. 1 shot. I have seen but few shooters that could do so. A duck every other shot is good work.

I think more white-fronted, snow and Hutchins geese pass through Dakota than Minnesota and Iowa, but I am satisfied that there are more Canada geese in Minnesota and Iowa, and that more ducks pass through those States.

The sportsmen from the East will not need to bring loaded shells. Good ones can be found in almost every town, and they are sold very cheap. Good teams and drivers are always to be had at fair rates. These drivers know where the best shooting grounds are located.

There has been a great deal of rain in the Dakotas this season. The lakes and ponds are full of water. Splendid grain fields are to be found all over the States. With such large quantities of feed and water wildfowl shooting must be good. J. G. S.

WASHINGTON.—Seattle, Aug. 9.—F. Schramm & Co., the proprietors of the Rosemont cafe, pleaded guilty in Justice Von Tobel's court yesterday to a complaint charging them with selling grouse in violation of the game laws of the State. The representative of the firm said the birds had been bought and disposed of by an unauthorized employee without the firm's consent, and upon the motion of Assistant Prosecuting Attorney Caldwell, the minimum penalty, \$10 and costs, was assessed. An interesting point was brought out during an informal discussion by the attorneys that followed the disposition of the case. The prosecuting witness, Josiah Collins, jr., said that when he bought a grouse at the Rosemont there were a number of prairie chickens hanging from the same hook. Mr. Rademeyer, the firm's representative, said that they had been shipped from South Dakota, and contended that he should be allowed to sell them. Mr. Collins, who, besides being a sportsman, is the author of the game law now in force, insists that the simple act of disposing of game is an offense, and that it is necessary to include game brought without the limits of the State to guarantee the enforcement of the statutes, which would otherwise be rendered inoperative. Boyd & Chamberlain had their case continued until Wednesday next. They will contest the case.—*Post-Intelligencer*.

HE HAD HIS MEDICINE.—One of our most respected citizens wanted some prairie chicken last week (Aug. 5). We killed, dressed and sold him three prairie owls. He said that they were very tough for young birds. He has found it out; and we who vilely betrayed his confidence and trifled with his feelings do not care to associate with him. (His shotgun is good for 100 yds.)—D. (Cimarron, Kan.).

Camp-Fire Flickerings.

"That reminds me."

THE ALLURING CHARMS OF LINKVILLE.

Editor Forest and Stream:

The most unique locality to be found by the sportsman is probably that surrounding the town of Linkville, in Klamath county, Oregon. The town nestles at the foot of a large mountain, and lies right on the bank of what is locally known as Link River. This stream—which is quite large—connects the Upper and Lower Klamath lakes, is alive with thousands, and probably millions, of large fish, which are constantly passing to and fro between the two lakes, and are as constantly jumping out of water in sight of the town. They are of all sorts and sizes. Some of them appear to be cutting up these antics for the fun of the thing, and some to shake some kind of an eel-looking creature which attacks them in the water and becomes attached to their sides, causing the fish apparently much suffering. It is no uncommon thing for large fish to be taken there whose sides are all scarred up in consequence of these attacks.

It would not be surprising if many fish were thus destroyed. Probably there are not in the world two lakes more numerously stocked with trout than the Upper and Lower Klamath lakes. Judging by map measurement they each average thirty miles in length by ten miles in width. Many large streams empty into them, affording splendid fishing and spawning grounds. Lying east of the Cascade range of mountains, where genuine winter prevails in the season for it, the water is better and the fish healthy and solid—features which do not prevail on the western side of the mountains, where an almanac has to be consulted to accurately ascertain the season of the year.

But, to revert to Link River. There is another and very peculiar feature about its banks, they are a snake paradise. The blue ribbon—though it may have been consistently worn by the sportsman for the last decade of his life—will not prevent the seeing of tens of thousands of snakes in a walk of a mile from the town. They are of a harmless variety, and of all colors and sizes, six inches to six feet in length. On warm sunny days they lie twisted together in heaps of hundreds, and it is not uncommon to see three thousand of them in fifteen minutes' walk. If disturbed while taking their siesta in their effort to get away they become twisted into the form of a cable as large as a man's body and cannot move. According to an estimate made by one of the oldest and most intelligent inhabitants of that vicinity, there are snakes enough in that country to build a wall four feet wide and four feet high at least a mile long. Some of the farms there are fenced with walls laid up with round water-worn stones. These walls constitute the home of thousands of these reptiles. If one of these walls is approached, from nearly every interstice a snake's head will be projected with forked tongue forbidding trespass on their domain. What is singular about this whole affair is the protection afforded to these reptiles by the inhabitants there. They will not allow them to be killed or even injured. Their children, familiarized with them from their birth, have no loathing or fear of the reptiles, but pick them up and play with them, as any other child does with a toy, under caution of the parents not to hurt them. The reasons given by the farmers and others for this protection are three. First, the farmers could raise no crops without their aid in destroying various bugs, insects and vermin which would otherwise overrun the whole region with destruction of all living vegetation; second, the reptiles smell sickening enough living, but their stench is intolerable when dead; and third, they devour and re-

duce the number of frogs; and hereby hangs a tale, o'er true.

Perennially there descends upon Linkville and the surrounding country untold millions of little creatures, resembling a frog, and about the size of a small one, which are reminders of the biblical frogs of Egypt. Where they come from no one seems to know, but it is probable that they come from the rivers and lakes and Klamath marshes. Upon their arrival every door and window has to be closed against them, or they will invade the house in countless numbers and dispute possession of every part thereof, even to the bed. There is no standing upon politeness at these times. The entrance to, and exit from, a house is done with instantaneous celerity, and a resounding slam to the door which, under ordinary circumstances, would betray a passionate mood. Of course the streets of the town are full of them. And now the snake takes his annual feast, as that of the Passover, And thus is nature's law of supply and demand fulfilled.

Up among the mountains surrounding Linkville there are large quantities and many kinds of game. Quail, grouse, wildcats, mountain lions, deer, and an occasional bear are there. It is a region where much hunting has probably not been done, as it is situated sixty miles from any railroad, and nothing but an abominable stage road to make a connection. Thick cowhide boots are the correct thing for the sportsman there, as the rattler will dispute his way.

But if the sportsman desires to go afishing with the most economical of tackle, he may provide himself with an inexpensive pitchfork and pay a visit to Lost River, a sizeable stream a few miles east of Linkville. There he will find pickerel of enormous size, and so thick in the river that they fill it from bank to bank. The inhabitants never use any other kind of tackle.

More anon.

ALAMEDA, Cal.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

AFTER MASCALONGE IN ELBOW LAKE.

I'VE got to go to Park Rapids, Thursday. If you'll go along we'll go over to Elbow Lake and try the mascalonge. Will you go?" So said Stephens last Monday night, and Thursday morning at 5 o'clock we were on the Northern Pacific train bound for Wadena, where we would take the Great Northern line for Park Rapids. We had often talked of taking the trip to Elbow Lake, in Minnesota, but lack of time to make the trip, which included a sixty-mile drive to the lake over a road of incomparable roughness, and a return over the same road, had prevented. But the completion of the railroad line to Park Rapids Aug. 1, brought the lake within eight miles of the railroad. So Aug. 6 saw us off for a few hours fish in the renowned Elbow Lake. We breakfasted in Wadena. Here we met three "fishing cranks," one of whom was an old acquaintance, and with the other two we soon became acquainted, and then followed an exhibition of rods, reels and lines, and relating and comparing experiences. They all said they envied us our trip and wished they could go. Stephens and I had our light split-bamboos, and were going to use a small G line with a No. 8 Skinner spoon. It was to be all experiment with us. We had never caught a mascalonge, but we had always said that if we could get where they were we should use our ordinary trout tackle with the exception of the spoon.

At 9:30 A. M. we boarded the train for Park Rapids, the county seat for Hubbard county and the present terminus of the railroad. Trains had been running only five days and everything was of the essential essence of the "newness of the new." The railroad runs through timber nearly all the way; hardwood, interspersed with tamarac swamps at first, then the grand old pine forest. We reached Park Rapids, where a genuine boom is in full development, in time for a 2 o'clock dinner. We ordered a team to be ready for us as soon as Stephens should get his business done. Four o'clock found us on our way. Elbow Lake is eight miles east of Park Rapids, and the drive is a very pleasant one through the pine woods all the way. Col. W. H. Martin lives on the shore of the lake and we had planned to get a boat of him and stay all night if he could keep us. We found Mr. Martin at home, and after a few questions had been asked and answered, were made welcome. We sent the team back with instructions to come for us at 10 o'clock the next morning. We soon had our rods rigged up and on the advice of Mr. Martin put a piece of light copper wire about 6 in. long at the end of the line to fasten the spoon on to keep the fish from biting off, which they will often do if no wire is used. Mr. Martin has lived on the lake eleven years, and not only knows all the country thereabouts, but also where the gamy mascalonge abide. He gave us a few directions and we were off up the lake, leaving orders for an eight o'clock supper. The lake is very appropriately named Elbow Lake, as it closely resembles a bent arm. We turned the bend and went slowly along the west shore, keeping just out from the weeds.

What was that which gave such a tug at the line and caused my rod to bend so? Had the spoon caught on a log? No, for there was a succession of fierce jerks that caused me to call out to Stephens, "I've hooked one!" I had a very pleasant experience for the next few minutes, which resulted in bringing to the side of the boat a fish that could do more rushing and plunging and splashing, when seemingly played out, than any fish I had had on the hook in some time. Get him into our landing net we could not, so watching my chance I caught him in the gills with my left hand and jerked him into the boat—my first mascalonge, not very large, only 7 lbs., yet my first mascalonge.

"He didn't jump 10 ft. into the air," I said.

"No; nor jump over the boat," added Stephens.

"Nor run at us with his mouth wide open gnashing his teeth."

"But isn't he a beauty?"

And indeed the fish was very pretty, I had no idea that mascalonge were such fine looking fellows.

During the next hour we caught four more, three of them being almost exact mates to the first, even to a

very small fraction of a pound in weight, the other weighing only 4lbs. One of these fish went through a variety of gymnastic exercises, which were far and away ahead of anything in that line I ever saw any fish do. I had Stephens's rod in my hand with about 150ft. of line out when I hooked it. Immediately the fish broke water and just clearing it leaped away to the left, and at once repeated the performance, going to the right. I handed the rod to Stephens and watched the fun. When the fish was in about 75ft. from the boat it sprang straight out of the water about three times its length as though shot from a gun, and fiercely shook itself while in the air.

"Are you sure that is not a tarpon?" asked Stephens, as he saw the performance, contesting every inch with the fish meanwhile.

"No, I'm not sure of anything only that this is most glorious sport," I answered.

We had adopted a plan of getting the fish into the landing net after our struggle with the first one. We would back them into the net, or, as Stephens phrased it, "make them set down in it." By doing this we saved the net, as masalonge have an ugly way of going through a net if they have half a chance; and also saved getting the net, teeth of fish and hooks tangled in "confusion worse confounded."

In the twilight we rowed back to Col. Martin's. He was surprised at our catch of five fish. "I did not expect you'd get any, being strangers to the lake and to that kind of fishing. I thought I'd go out with you in the morning and help you get some, but you've done as well as I could myself."

We felt very well satisfied as we sat at the bountifully spread table drinking our coffee, eating broiled spring chicken, and blueberries and cream. Bed time came all too soon, as we sat listening to the Colonel's lively account of hunting and fishing in various places, and especially there when he first settled on the lake. He told of a masalonge jumping clear over the boat, and various other performances of the fish that were equally wonderful, and of the old veterans that no tackle would hold. He lamented the growing scarcity of game and fish, but as deer were seen every day, and sometimes several in a day, and a great moose had only a short time before come to the lake in broad daylight, but a few rods from the house, drank from the lake, and walked away into the woods again while Mrs. Martin and her daughter stood in the yard looking on, we thought some game was left yet.

We went to bed, saying that we would get up at daylight and go on the lake, coming back to an 8 o'clock breakfast. We were on the lake at 5 o'clock. The first fish I hooked I lost after getting it to the boat, the next one we landed, it was another 7-pounder. Soon after this Stephens was pulling along, I having his rod in my left hand and mine in my right, when I was most vigorously notified that a fish was on Stephens's hook. I handed him his rod. He gave a jerk or two and tried to reel in, but could not. "That's no fish. I've caught fast to a log or something," he said.

"It is a fish," I replied, and just then it broke water a long ways back. "Here, you reel him in," said Stephens, after he had struggled with him for a while, "while I try and keep the boat out of these rushes." I took the rod, and if any one had told me there was so much fight in an 11lb. masalonge, as we found it to be when we weighed it, I would have told them they did not know what they were talking about. Three times I brought that fish to the boat, and three times it took 150ft. of line off the reel. The surges, runs and plunges of that fish I shall ever remember. At last I told Stephens to row to the shore, about 40 rods away, and we'd land him on mother earth. I've led several varieties of animals in my life, but I've never led any that gave me so much excitement and pleasure as leading that fish. The slight bamboo rod was as pliant and bent and sprung as true as steel. I feared for the line, a light G silk one which had been used several times before. The way that fish disported itself on the way to the shore was wonderful, but at length it lay upon the sand our prize. We now started back for breakfast and caught two more on our way across weighing 3lbs. each.

When we reached the landing and showed the fish, the Colonel said: "You have far and away beaten every one who ever came here as you did, without knowing the lake or the habits of the fish. It's wonderful, and you haven't broken a rod or line either."

We felt very well satisfied. We had no large fish as masalonge run, but with our tackle it was rare sport with the size fish we had. We packed the nine beauties so we could take them home. There were two weighing 3lbs., one of 4, five of 7 and one of 11lbs. Soon after eating breakfast and packing the fish the train came to take us to Park Rapids, from whence we would take the train home. All too short had been our stay, and we are fully determined to go again and stay longer. We had always been told, and it was repeated by several in Park Rapids, that the masalonge were only to be found in Elbow Lake and Sand Lake, which is near by. I have read the same statement many times, but Col. Martin assured us that lying north and northwest from Elbow Lake, between the Fish-hook and Crow Wing rivers, there is a chain of 15 lakes, all of which have masalonge in them. "I have caught them in 10 of the lakes," he said, "and know they are in the others." What grand possibilities for rare fishing in that chain of lakes! The railroad making them so accessible now, doubtless they will be visited by hundreds in the future where one or two go at present. Yet Elbow Lake has been visited this season by parties from New York city, Boston, Cleveland, Chicago, and San Francisco. Park Rapids will also be the point of departure for the Itaska region until the railroad is extended on. It is rare sporting country all around there. Stephens and I had our 11lb. masalonge baked to-day for dinner. 'Twas a rare good feed—fit for a king.

MYRON COOLEY.

DETROIT CITY, Minn., Aug. 8.

MAINE FISHING.—Monson, Me., Aug. 15.—Many large lake trout have been taken in Lake Hebron this season and an unusual number of large spotted trout. Dr. A. T. Sanden, of New York city, who has spent the summer in this vicinity, has been very successful and is well pleased with this country for trout fishing. A Mr. Hull, of Boston, took a lake trout at Lake Onaway last week that weighed 18½lbs. with a 6oz. rod. He was engaged about two hours in landing it. Landlocked salmon fishing has also been good in Onaway, Long Pond, and that famous salmon resort, Sebec Lake.—J. F. S.

TAUTOG OFF MANOMET POINT.

A WRITER not long ago expressed an opinion that the blackfish or tautog was not usually considered a game fish. I should like to have that gentleman down at one of the "Gunning Rocks" off Manomet Point, some good day, and let him hook a "fighting bull" tautog of about 4lbs. on light tackle, say an eight-ounce bass rod, and see whether he would not change his opinion about the fish. I have just come back from spending a month at Manomet, where I managed to get two or three days' tautog fishing every week, and had very good sport. The tautog fishing there is certainly excellent. Although the fish are not so abundant as they are further south, they run very much larger, fish of 1½lbs. being the smallest usually taken, and these being rare, while 2, 3 and 4 pounders are numerous, and fish of greater weight, up to 7 or 8lbs. are not uncommon. Ten-pound fish are occasionally taken, especially in the latter part of the season.

Manomet is the northeast corner of the town of Plymouth, just where the Massachusetts coast bends to the south to form Cape Cod Bay. The point itself is a high bluff of glacial drift, from the seaward face of which boulders of all sizes have washed out from time to time, and the sea has eaten away the banks, so that they form a regular "bouldertrain," continuing the point out under the sea in the form of ledges and scattered rocks. Three of these rocks lying in a straight line parallel to the north shore of the point, only a few hundred yards from the land, and a fourth about a quarter of a mile further out to sea, are the only places where the tautog are to be found during the summer, until we reach the White Horse Rocks, a mile or two to the westward, or the Fishing Rocks round in Cape Cod Bay, an equal distance from the point.

After the middle of September, the fishermen tell me, the tautog are to be found all over the ledges, large male fish chiefly.

My fishing was confined almost wholly to the rocks north of the point, especially the three inshore rocks. Two of these, called respectively the North and South Gunning Rocks, are covered only by the highest tides, while the third and westernmost is submerged at half tide.

The fourth or off shore rock, called the "Bass Rock," is submerged at all tides and can only be fished early in the tides, as this runs very hard as it approaches high water. We only fished at this rock once and had no luck.

The "Gunning Rocks," and the "north rock of all," are best on the last two or three hours of the flood tide, and sometimes on the first hour of the ebb, though often the fish stop biting as soon as the tide begins to run ebb. The fish appear to go off into deep water with the ebb tide and gradually work in as the flood makes to the rocks, where on calm days you can see them circling round and round close to the rock, as if on patrol. Some days no fish at all seem to come in, and at other times, after biting briskly for a short time, they appear to go off for a while and then come back again.

My experience was not long enough for me to be at all sure of the conditions that influence the movements of the fish. Very rough weather and cold water seem to be unfavorable. Some of the fishermen say that the fish do not bite with an easterly wind, but we found a long continued fresh southwester quite as unfavorable. On the other hand, in very calm weather the fish seem to be afraid of the boat and are shy about biting. As a rule the fish seemed to bite better when the tide served in the morning than when high water came in the afternoon.

The fishing, of course, is all done from boats. I prefer to go out in one of the good-sized sailboats, such as the lobstermen use, though I have gone out by myself in a dory and caught tautog. The big boat, however, is more comfortable to stand up in, when casting or playing a fish, and it is a decided advantage to have a boatman along to lay the boat up to the rocks properly, as well as to prepare the bait, which is quite an art, especially when lobsters, the favorite bait at Manomet, is used. The boat is anchored within easy casting distance of the rock, and in such a position that the tide is running from you toward the rock. You then cast in close to the rock and let your sinker lie upon the bottom, with the line slack. The tautog usually seizes the bait with a rush, and starts off to carry it under the overhanging edge of a rock. This first rush must be checked by putting on all the strain your tackle will bear, for the fish is pretty sure to be lost if he once gets under the rocks; he will either saw off your line on a sharp edge of rock, or tangle you up in the rockweed and break loose. When the first rush is checked and you can gain line on your fish, he comes up suddenly, making you strain for all you take in till near the surface, when away he goes with a savage downward plunge that tests your rod severely, aiming for the weeds again. A good fish will keep this up for a considerable time before he is ready for the landing net. The tautog lacks the fiery dash of the black bass, but his bulldog style of fighting certainly gives most excellent sport. We thought this summer that the male fish—weight for weight—fought with more vigor and persistency than the females, and so got into the habit of calling them "fighting bulls."

Most of the fishermen, visitors as well as natives, at Manomet, fish for tautog with stout handlines, and "yank" their fish in hand over hand. I and some of my friends, however, found it better sport to use a rod and comparatively light tackle. My own favorite rig is one of Mr. Henshall's "Little Giant" bass rods (originally described in this paper), ash butt and lancewood tip, 7½ft. long and weighing about 8oz., with 50lbs. of braided linen F line on a plain multiplying reel. An ordinary reel will do, as long casts are not needed. I use No. 1 blackfish hooks on gimp to guard against rough usage from rocks and barnacles, as well as the tautog's hard mouth, and an egg-shaped tracing sinker weighing about 1½ or 2oz. close to the hook.

The bait commonly used, and which seemed to be the most attractive this summer, is fresh lobster. The fish will not touch lobster that is at all tainted. A "black-skin" lobster, that is one that is almost ready to shed its shell, makes the best bait, as the whole of it can be "shucked out," and it seems also to be more attractive to the fish. Besides, it stays on the hook better, and holds out better against the attacks of those notorious bait-stealers, the cunners, who fairly swarm round the rocks. Failing "blackskin" ordinary lobsters are used, a good-sized piece of the fleshy tail threaded spirally on the hook,

which is capped with a bit of "bone," usually the basal point of a claw. The large "sea clam" also makes a good bait, and the fish will sometimes take ordinary soft clams.

Codfish are also sometimes taken while fishing for tautog, but give very little sport. A 5lb. codfish will succumb and be easily reeled in after one or two sharp rushes. My best day's score was 11 fish, only one of which weighed less than 2½lbs. My largest fish weighed between 4½ and 4½lbs., and I had a number over 4lbs. Manomet is easily reached by stage from Plymouth, and has a good hotel, the Manomet House, and several boarding houses. There are only three or four boatmen, however, who have sailboats to take people out fishing.

Easily reached from the hotel are several ponds, which furnish a few black bass and pickerel, and quantities of white and yellow perch.

JOHN MURDOCH.

WASHINGTON, D. C., Aug. 13.

CANADIAN ANGLING NOTES.

NEARLY all the American salmon fishermen who visited Canada this season have now returned home. One of the last to go was Mr. James Grant, broker, of New York, and president of the St. Marguerite River Salmon Club. The members of this club report rather a better catch than usual in their river, which is a tributary of the Saguenay.

The finest fish taken out of Lake Beauport this year was caught last week by Major Geo. R. White. It weighed slightly over 2lbs., and took a yellow fly. Mr. John E. Hubbard, of Montpelier, Vt., a member of the Montmorenci Fish and Game Club, returned home yesterday after a week's fishing of the club's preserves at Beaver Meadows, twenty-eight miles from the city of Quebec, in company with Dr. Henchey, of Quebec. They took an immense number of trout, some of which turned the scale at 5lbs.; but complain very loudly of the flies. The same complaint is made by American anglers who have just returned from the waters of the Laurentian Club, north of Three Rivers, though the sport there has proved excellent. Mr. S. C. Lewis, of New York, and Mr. T. Q. Barstow, of East Orange, N. J., have just returned here from fishing these waters, and have now gone to Lake St. John after the landlocked salmon.

Reference was made in a former number of FOREST AND STREAM to the splendid success had by Mr. Myers, of New York, in the Peribonca. On his return to Lake St. John, Mr. Myers, accompanied by Rev. E. C. Sweetser, of Derby Line, Vermont, took another trip, ascending the Ashuapmouchouan to Lake Jeanne, and then by way of the Wassimiska reaching the Mistassini, by which they descended to Lake St. John. On this trip they took some very large ouananiche, including a few specimens over 6lbs. each in weight. This was the trip that Dr. Smith, of Brooklyn, and Mr. E. N. Hurlbut, of New York, spoke of making, but upon their arrival at Roberval they changed their plan and ascended the Little Peribonca for 36 miles, then crossed into Eagle Lake and by means of the river Aleck reached the Grand Peribonca, which they descended to Lake St. John, where the estuary of the river is two miles wide. They took any quantity of large trout in the small rivers they crossed, and a 14lb. pike at the first falls of the Peribonca, besides several ouananiche.

The Grande Discharge has furnished some extraordinary large fish of late. Mr. J. G. Grant, of Montreal, killed a 5lb. ouananiche this week, and Mr. J. Lewis Webb and Mr. Jas. L. Breese, of Tuxedo Park, took upward of 50 fish, one of which, weighing slightly over 8lbs., rose to the professor fly on a No. 10 hook, and was killed by Mr. Webb after a gallant struggle of 50 minutes.

Mr. Ripley Hitchcock, of New York, has recently made, in less time than a week, a splendid trip up the Mistassini to the fifth falls, and made a most successful catch of ouananiche, which averaged from 3 to 4½lbs. per fish all round. He has preserved a magnificent lot of the skins of the landlocked salmon to take home with him to New York.

The fly nuisance, which is so bad in most Canadian woods in the month of July and the first part of August, is now abating, and in ten days from date the angler will be very little troubled by this pest. For trout fishing in Canadian lakes September is by far the pleasantest and best month of the year. Anglers should bear in mind, however, that the close season for ouananiche commences on Sept. 15, and should govern their movements accordingly. The open season for Canadian trout continues until the end of September.

I should like, before closing, to express my dissent from the generally received idea, which I notice is firmly held by writers in FOREST AND STREAM, that the *Salmo sebgao*, as I understand the landlocked salmon of the Maine lakes is sometimes styled, is identical with the ouananiche of Lake St. John. There is certainly variety in the species, much more widely marked than that usually existing in different fish of the same species taken in different waters. There is quite a sluggishness in the manner of the Maine fish as compared with the rare fighting qualities and terrific battle offered by his Lake St. John cousin, and I doubt whether this is altogether attributable to the magnificently wild waters which form his habitat. At all events the survival of the fittest in the relative qualities of the two fish must have taken very many generations to become as richly marked as it now is. A very prominent and distinguishing point of difference is the greater width of tail in the ouananiche, and much more size and strength in front of the tail, where are to be found, I suppose, the muscles that are used as rudder chains. This may probably be a development, but must have been a far more gradual one than that which gives the ouananiche a slimmer body and more of a graceful, athletic form than its American connection, whose surroundings offer less resistance to piscatorial locomotion than do the seething waters of the Grande Discharge and the rapid currents of the rivers tributary to Lake St. John. But a rich contrast, that would certainly appear to date back to the origin of the species is offered by the dark spots upon the sides of the head, which are invariably much larger in the ouananiche than in the landlocked salmon of Maine.

QUEBEC, Aug. 8.

E. T. D. CHAMBERS.

BLUEFISH were off New London, Conn., Aug. 11, in force. A fishing party caught 115 in two hours, among them many 6-pounders.

LAKE SIMCOE, Canada, is suffering from over-fishing, and anglers in the vicinity are promoting a protective association.

ST. LAWRENCE RIVER FISHING.

CAPE VINCENT is probably the best fishing ground on the St. Lawrence River, and the present season has been a very fine one. Since the middle of July, when the influx of anglers began, there has been a great abundance of bass and pickerel (*Esox lucius*), and as the season advances the fish appear to be increasing in numbers. Live bait is plentiful, and this is almost universally used, either in still-fishing or trolling. Spoon hooks are sparingly employed by some fishermen, chiefly when seeking mascalonge.

Black bass is the species most sought after and most abundant. The fish weigh from 1½ to 2½ lbs. on an average, but 4½ and 5-pounders are also taken. The daily catch varies from about 30 to 120 fish. The "high-liner" so far this year is Mr. Snider, of Philadelphia, who on the 7th instant took 186 bass.

Pickerel are found in the deep channels, and are not often caught when fishing for bass, which take the bait nearer the surface. During the week of Aug. 9, catches of 20 to 30 fish were reported, the largest specimen being a 9-pounder.

The best months for angling at Cape Vincent are August and September, when this popular resort has a large advent of sportsmen from New York, Philadelphia, Jacksonville and other cities. X.

ANGLING NOTES.

MR. F. C. ANDREWS, a well-known Brooklyn angler, has just returned from a fishing trip in Maine and reports that the trout fishing at Grant & Soule's camp on Beaver Pond is excellent and confirms the statement that they rise well to the fly all through the summer months. This section is more easily reached by way of the Rangeley and Kennebeco lakes. By writing ahead to Grant & Soule (P. O., Rangeley, Maine), one of them will meet the visitor and save the expense of taking in a guide. A guide up there is hardly necessary, as any experienced fisherman can get all the trout he wants without one. Board \$2 per day, or \$3.50 including boat. Mr. Andrews states that deer were never so plenty; they were continually running across them or seeing them feeding along shore.

Black bass fishing is reported as being unusually good at Henderson Harbor.

The *Daily on the St. Lawrence* reports the capture of a 65lb. sturgeon on a hand line and states that it is the largest fish killed on a line on the St. Lawrence River. The *Daily* is mistaken. On June 11, 1885, Mr. Herbert R. Clarke, of Jersey City, killed a smooth-back sturgeon (on an 8oz. split bamboo fly-rod and single gut leader) that measured 66in. length, 29in. girth, and weighed 78lbs. This fish was hooked foul on a No. 2 fly, by a bass running under him. Mr. Clarke followed the fish in his boat for over a mile and killed him after a struggle lasting one hour and five minutes. The fight and capture were witnessed by a number of well known visitors at the Bay.

The people who go around with loaded fire-arms on fishing trips when there is no kind of game in season, are naturally ignorant and just the class who are apt to get into trouble. The last time I came out from the Blue Mountain Lake I met a stage load of cockneys who were blazing away with revolvers at telegraph poles, etc. It never occurred to them that they might kill some innocent berry picker. I was glad to hear that one of these gentry had to pay pretty well for shooting a calf which he mistook for a bear. SCARLET-IBIS.

CHICAGO AND THE WEST.

CHICAGO.—Recently I commented on the singularity of a catch of 15 small-mouth bass to one rod in the Kankakee River at Mak-saw-ba Club. At that time I had not seen any of the fish that were taken. A week later Mr. Mussey, Mr. Card and Mr. Dicks came back from another trip, in which they were even more successful than before. Mr. Card, for instance, taking eighteen fine bass and wall-eyes on Monday, including two wall-eyes that weighed 7½ lbs. each. The two former gentlemen brought in a nice basket of fish, and had in their catch a number of the Kankakee "small-mouths" which they had been catching earlier. These fish were not the small-mouth or genuine black bass, such as are locally distinguished as "tiger bass," having neither the red eye, the black, fine-scaled belly, dark color and unmistakable configuration of that fish. They were, upon the other hand, not to be described as large-mouths, though the general bronze color of the upper parts and whiteness of the belly would seem to so class them. Yet the mouth considered alone would class them as small-mouths. The angle of the jaw did not extend nearly back to the eye, and the total size of the mouth was about equal to that in a small-mouth of the same weight. These fish were the same as the bulk of the catch in the Fox Lake region, where many anglers call them "small-mouths," because their mouths are smaller than those of the big-mouths. Dr. Bartlett, I believe, says these are small-mouth bass, but this was not when a specimen was present. It chanced that in the same basket the angler had two specimens of *dolomieu*, the genuine small-mouth, such as could not by any possibility be mistaken. They had also a half-pound specimen of the genuine big-mouth. I wish *FOREST AND STREAM* would classify this common mid-way fish for us, and if necessary we will send photographs or a specimen. The discussion bids fair to tear up Chicago, and two factions, the big-mouths and small-mouths, are rapidly growing into Montag and Capulet prominence.

Another question I remember to have been asked of *FOREST AND STREAM* which was not answered, and that is, to what weight does the genuine pickerel attain? We would not look on the great Northern pike in this latitude, and yet, "pickerel" of over 20lbs. weight are not infrequent in the lakes of northern Illinois, in streams of middle Iowa, and also in rivers of Indiana below here. These "pickerel," indeed practically all the pickerel running from 3 to 6lbs. weight or over, such as fall in upon an average summer day's fishing, have the cheeks and gill-covers scaled only on the upper half. Are they pickerel, or pike? Does the genuine pickerel ever weigh over 10lbs., and if so, how heavy does it grow? I must ask pardon of Dr. Bean if these questions were answered definitely in his admirable articles on the *Esoxidae*, which

were most admirable in that they enable the reader to take a fish in his hand and come somewhere near telling what it is—a quality not possessed by many books on fish and angling. E. HOUGH.

[All of the pickerels have the cheeks and gill-covers completely scaled; in the pike the cheek is scaly and the lower half of the gill-cover naked; the mascalonge has no scales on the lower half of cheek and gill-cover.]

AN ILLINOIS CATFISH.—A live catfish weighing eighty-five pounds was caught in the river near Quincy last week by two moulders while in bathing, reports the *Meredosia News*. The moulders saw it swimming near the surface and threw a stone at it, stunning it so that it came to the surface. One of the moulders then got on it and paddled it ashore. Coming from any other friend of ours than the genial secretary of the Illinois Fish Commission, we should have felt inclined to doubt some of the little details of this exciting story. You see, in this region the stone catfish is a mere pigmy, just the size for black bass bait; but here is a giant that would make bait of a dozen black bass and still feel the pangs of hunger. No, in this climate such a yarn generally wilts, moulders and falls into a state of innocuous desuetude; but in the exuberant atmosphere of Quincy the boulder they throw the bolder they grow, till even the catfish comes up from below, with broadening smile, and listens while his esteemed fellow citizens blow.

SALMON IN THE MERRIMAC.—Concord, N. H., Aug. 12, 1891.—E. B. Hodge, of the Plymouth Fish Commission said to-day that there are now more salmon in the Merrimac River than at any time since the Lawrence dam was built 40 years ago, and he thinks, even further back than that. In one day he caught 23 fine ones at Plymouth. They are, however, being mercilessly slaughtered by the dozen at Garvin's Falls, at the mouths of the Suncook and Soucook rivers, and at other points. Speaking of the agreement existing between this State and Massachusetts, Col. Hodge said it was generally thought that its provisions cost New Hampshire considerable money, while the fact is that the matter has been so arranged that the general government has footed the bills, and it has not cost this State a cent. Moreover, it was this agreement with Massachusetts which alone made possible the establishment of the first fish hatchery in this State.—*Boston Herald*.

SAULT STE. MARIE TROUT.—The Sault Rapids and the small streams in the vicinity of the town have long been known as famous for trout fishing, but it remained for two American gentlemen from Memphis, Tenn., Mr. C. T. Brooks and Mr. W. Lee Beard, to discover one of the best, if not the best, trout fishing grounds in the district of Algoma, and that right on the boundary of the town, in the St. Mary's River in the vicinity of the Shingwauk Home. These gentlemen caught at that place, with fly bait, last week, a string of the finest speckled trout ever brought to the Sault, one of the beauties weighed 5½ lbs. and 3oz., they were all large fish. This is Mr. Brooks' second summer at the Sault, and he is delighted with the place as a summer resort.—*Sault Ste. Marie (Ont.) Express*, Aug. 8.

BLUEFISH were plentiful in Boston Bay last week, and some have been caught with hook and line. They have traveled as far to the eastward as Portland. They drove all the mackerel out of Gloucester Harbor through the canal into the Squam River. The best way to catch them here is by means of a droll. I have seen 13 bluefish caught in one hour behind a boat sailing 3 knots. The fishermen like eel skin for bait on the hook, leaving lin. of the skin dangling free. Some tie menhaden slivers on the hook, but eel is the favorite. The bluefish is considered a bad fish here because it drives all other kinds of fish off the coast.—S. J. MARTIN (Gloucester, Mass., Aug. 9).

MACKEREL have appeared in large schools on the Lathrop street beach, at Beverly, Mass., and amateur fishermen have caught hundreds of them with hook and line. Any kind of bait served to catch them, as they were ravenously hungry. Two men took about 100 in an hour.

A TATOG weighing 17½ lbs. 11½ oz. was caught by David Carruthers at Fresh-Water Cove, Gloucester, Mass., says the *Gloucester Times*. This was one of the largest fish of the kind ever taken in the locality.

A BROOK TROUT weighing 1½ lb. 13oz. and measuring 17½ in. in length was caught recently by Wm. Hills, of Ipswich, Mass.

Fishculture.

LATE SPAWNING SHAD.—While at Fort Washington, Md., on the Potomac River, last May, we found the United States shad hatchery about closing a season which was below the expectation of the superintendent in its yield of eggs. Cold weather and clear water in the midst of the run caused a very small catch of shad in the upper river, and it was then believed that late spawners would make their appearance when the conditions became favorable. We learn that on July 31, long after the fish are supposed to retire to deep water, a fine roe shad measuring 18in. in length and 6in. in depth, was caught in the Potomac and sold to a Baltimore firm. This is a confirmation of the theory held by Mr. Worth at the end of the Fort Washington season.—B.

HUNTING AND FISHING IN THE NORTHWEST.—Are you planning for an outing this summer? Have you ever looked up the famous resorts of the Northwest? It is not an exaggeration to say that the best hunting and fishing grounds in North America are found in the territory tributary to the Northern Pacific Railroad. The lake park region in Minnesota affords pickerel, pike, bass and mascalonge; rock bass are found in numerous streams, and deer, elk and bear abound in the forest regions; antelope are found in North Dakota. The Snowy, Bitter Root, Grazy, Rocky and Cascade Mountains are the home of moose, elk, caribou, cougars, Rocky Mountain sheep and goat and other large game, while all of the Northwestern States abound in feathered game. Rocky Mountain trout and grayling are caught in the Yellowstone, Gallatin, Madison, Jefferson, Clark's Fork and Green rivers, affording unrivalled sport. An interesting pamphlet, "Game Preserves of North America," can be obtained free on application to CHAS. S. FEE, G. P. & T. A. of the Northern Pacific R. R. at St. Paul, Minn. Descriptive publications concerning Yellowstone Park, Pacific coast and Alaska will also be mailed on receipt of application, referring to *FOREST AND STREAM*.—Ado.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Sept. 1 to 4.—Second Annual Dog Show of the Kingston Kennel Club, at Kingston, Ont. H. C. Corbett, Secretary.
Sept. 8 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.
Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.
Sept. 22 to 25.—Inaugural International Dog Show of the Montreal Exposition Company, at Montreal, Canada. Entries close Sept. 8. J. S. Robertson, Secretary.
Sept. 23 to 26.—Inaugural Show of the Blue Grass Kennel Club at Lexington, Ky. Rogers Williams, Sec'y.
Sept. 29 to Oct. 1.—Third Annual Dog Show, in connection with the Central Canada Fair, at Ottawa, Ont. Alfred Geddes, Supt.
Oct. 4 to 8.—Sixth Annual Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill.
Oct. 10 to 14.—Inaugural Dog Show of the Freeport Poultry and Pet Stock Association, at Freeport, Ill. T. E. Taylor, Sec'y.
Oct. 30 to Jan. 2.—Fourth Annual Dog Show of the Mohawk Valley Poultry and Kennel Club, at Gloversville, N. Y. F. B. Zimmer, Sec'y.

1892.

Jan. 5 to 9.—Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Benj. McInnes, Sec'y.
Jan. 13 to 16.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. F. Capers, Secretary, Greenville, S. C.
Feb. 9 to 12.—Fourth Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Sec'y.
Feb. 23 to 26.—Sixteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Supt.
March 1 to 4.—Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. E. A. Brown, Sec'y.
March 15 to 18.—Second Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Littell, Sec'y.
April 7 to 10.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Sec'y.
April 20 to 23.—Fourth Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. C. A. Sumner, Sec'y.
May 4 to 7.—Annual Dog Show of the California Kennel Club, at San Francisco, Cal. H. L. Miller, Sec'y.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.
Nov. 10.—Second Annual Trials of the International Field Trial Club, at Chatham, Ont. W. B. Wells, Sec'y.
Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.
Nov. 23.—Irish Setter Club's Field Trials, at High Point, N. C. G. G. Davis, Secretary, Philadelphia, Pa.
Nov. 23.—Gordon Setter Club's Field Trials, at High Point, N. C. L. A. Van Zandt, Secretary, Yonkers, N. Y.
Nov. 26.—Second Annual Trials of the National Beagle Club, at Nanuet, Rockland county, N. Y. F. W. Chapman, Sec'y.
Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.
Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

1892.

Jan. 10.—Second Annual Trials of the Bexar Field Trial Club at San Antonio, Texas. G. A. Chabot, Sec'y. Amateurs only.
Jan. 18.—Trials of the Pacific Field Trial Club, at Bakersfield, Cal. J. M. Kilgarriff, Sec'y.
Feb. 4.—Fourth Annual Field Trials of the Southern Field Trials Club, at New Albany, Miss. T. M. Brumby, Sec'y.

HAMILTON DOG SHOW.

Editor Forest and Stream:

As I shall not have another opportunity of doing so before the entries close for our coming dog show, I take advantage of this chance to make a final appeal to American exhibitors to lend us a helping hand by way of making our show a distinct and unquestionable success.

There has never been a dog show here, and I am anxious for that reason that the first one should be such as will awaken an interest and give satisfaction to exhibitors and visitors alike. If the show is successful and pays for itself, as I have every reason to believe it will, there will be no difficulty in making it an annual fixture, and this is an end to which I think I can legitimately appeal for help from our friends across the line who love dogs.

Our premium list has been carefully prepared and will bear comparison, I think, taken all around, with any other on the Canadian circuit. We have had some applications from friends who desired that alterations should be made and some of the classes added to, but we have decided to make no change, in the belief that having once issued our prize list it would be unfair possibly to some who might not see them, if we made additions or alterations thereto.

We will give a good show, the dogs will be fed and benched by Spratts, the prize money will be paid instantly, and exhibitors will have their comforts well looked after. The show has been well advertised in the American and Canadian papers; it immediately precedes the big show in Toronto, which is held only forty miles further away, and can be reached in an hour by rail or boat, and it affords therefore an opportunity for exhibitors not found elsewhere. The Hamilton Kennel Club fought a desperate battle single-handed lately with the Customs authorities in Canada in behalf of American exhibitors, and they can repay us now by helping our show along and making their entries as large as possible.

One thing I must repeat before closing this too long letter. It is well known, of course, that the exhibitor shows, not so much for the sake of the value of any prizes he may win, as for the advertisement he thus acquires for his kennel and stock. I have to point out that nowhere in America is there to be found a better market for dogs than in Hamilton, and breeders may rely confidently on not only making sales, but on booking orders for a time to come. I expect therefore very many American entries, and give the fullest assurance to exhibitors of a hearty welcome. A. D. STEWART, Pres. Hamilton Kennel Club.

HAMILTON, Canada.

MORE CORRECTIONS.

Editor Forest and Stream:

A note has just come to me from Mr. A. W. Purbeck, of Salem, Mass., in which he takes exception to my statement that Jolly Ranger beat Gem of the Season at Cleveland. I did not mean at the bench show. Jolly Ranger was in the open class. But at the time of that show the two dogs were pitted against each other to run a course of 150yds. on an avenue outside the show ground. They ran four heats, Jolly Ranger won three heats and the last was a dead heat. Mr. Purbeck's letter head shows a portrait of Gem of the Season, and he appears to be a very fine specimen of the breed. But at the present time Jolly Ranger is not in the pink of condition, but will be exhibited at the bench shows this fall and will be open to challenge from any other dog of his class. Mr. Freson will, however, allow his dog to run only in prize competitions, not for any wager whatever. J. MACKELCAN.

TORONTO, Canada.

[We trust that this matter is now settled to the satisfaction of all concerned.]

SKIN DISEASES.

WE are so constantly receiving inquiries about mange and kindred diseases that we cannot do better than publish Mr. A. J. Sewell's admirable article on sarcoptic mange which appears in this month's *English Kennel Gazette*. The description of this pest of the kennel is so plain and the remedies advised so simple, that the owner or kennelman should be able with little trouble, if he has also had the article on eczema by the same writer, to decide for himself what skin disease his dog is afflicted with:

This disease is also called scabies, and is most contagious. Mange is a form of artificial eczema, caused by a very small animal parasite (*Sarcoptes canis*), which, when seen under the microscope, is not unlike a tortoise. When fully developed, the acarus has eight legs, and the under surface is covered with hairs and short spines. The male is smaller than the female. The young parasite has only six legs, but it acquires two more after shedding its first skin. The male lives on the surface of the body, while the female burrows under the epidermis or outer skin, where she lays eggs in a small furrow or channel. The eggs take about a fortnight to hatch. The young parasites escape from beneath the epidermis, but the parent does not leave the channel, but dies after she has finished laying eggs.

The itching that always accompanies mange is increased as the patient becomes warm. It is partly caused by the irritation set up through the parasites burrowing under the outer skin, and partly by an acid matter excreted by the acari. The irritation in some bad cases is so great that a dog never gets any rest day or night, and the constant scratching and restlessness wears him to a shadow. I have seen dogs reduced to such a state, the result of the disease, especially when the appetite has failed, which sometimes occurs, as to die from the result of exhaustion, accelerated by a form of sympathetic fever. It is stated by some authorities that the acid matter excreted by the parasite does in some cases—that is when the disease is spread over a large surface of the body—induce blood-poisoning, and then the bowels and other internal organs become congested.

Mange affects all breeds, and also dogs of all ages. I have seen puppies at four weeks old—when the mother has been affected—covered with the disease. It is on these young subjects that the true nature and characteristic symptoms of the disease can be best studied, as puppies at this age cannot injure the skin by scratching, as is the case in older patients. Young puppies affected with mange are always fidgety, and whine and do not thrive. When picked up and carefully examined, the skin covering the belly is found covered with a number of small pin head vesicles or little blisters, which look like slight elevations of the skin. There are seldom any pimples or pustules present, as is sometimes seen in young puppies, the result of eczema or to simple heated blood; neither is the skin red nor inflamed, but it looks of a dirty gray scaly condition. The disease soon spreads to the skin underneath the chest, and then to the legs, and before long, more or less over the whole body, head and face. There is only one way for a dog to contract mange, and that is by coming in contact with the parasite (*Sarcoptes canis*), which causes the disease. It is not necessary for a dog to catch this complaint to come in contact with another one actually suffering from the disease, but a healthy dog, being put in a kennel where a mangy one has been, or on a show bench, or even on the same ground or floor, is sure to become infected. Besides, persons are frequently the source of conveying the parasites from one dog to another. It is not generally known, I believe, that people readily catch the mange from dogs; but such is the case, and I have known of several instances—in fact have seen whole families more or less affected.

Fortunately the *Sarcoptes canis* does not propagate on the human skin, therefore the disease soon disappears if means are taken to prevent fresh infection. Dog mange, when affecting people, differs from the ordinary human itch, in that it affects the face, besides other parts, which is not the case in the latter disease. Whether the disease can be transferred to other animals, such as horses, cattle or cats, I cannot say. I have never been able to prove that it can be. One occasionally hears it stated that keeping a dog dirty will cause mange. This is impossible, though, I believe, a dirty animal more easily contracts the disease, and it certainly spreads more rapidly over the body of one neglected than it does upon one that is occasionally washed and well groomed every day. In fact, with dogs that may have contracted mange and are regularly washed with soap containing a disinfectant like carbolic acid, the disease is often kept from spreading to any great extent for a long time.

Symptoms.—The first symptom is scratching, which begins a day or two after a dog has been affected. In adult dogs mange usually commences about the elbows or the outside of the hock joints, and if the skin be carefully examined at these parts small pimples and vesicles will be found here and there. In this respect mange differs from eczema, as in the latter disease the pimples and vesicles appear in clusters, often in different parts of the body at one time. Besides, in eczema a dog is inclined to lick himself a good deal, as there is a burning sensation with this disease. As a consequence, there are often large moist patches about the body. In mange the dog endeavors to relieve the irritation by scratching and rubbing.

It is important to be able to diagnose a case of mange in the early stages, especially when there are several dogs kept, as by isolation and early treatment the disease may be prevented from spreading to others in the kennel.

If one of the early vesicles of mange is carefully examined, a minute spot or streak may be observed. This is the aperture made by the insect on its first entrance within the epidermis, and from this spot a whitish fluted line may be traced, which generally runs in a slightly curved direction into the epidermis. This whitish line is called the cuniculus, which is the burrow of the acarus. It is generally about the twelfth of an inch in length, and it terminates under a slight elevation of the outer skin; this is where the insect lies. If this elevation of epidermis is removed with the point of a needle the parasite may be seen with a strong magnifying glass. The spot or streak just described is not found upon all the vesicles or pimples, as many are formed, the result of the irritation set up during the burrowing of the acarus.

The disease quickly extends from the elbows and hocks to other parts, especially to the outside of the ears, around the eyes, face, and, as time goes on, more or less all over the body. The hair falls off in patches, partly the result of the constant scratching, and also in part to the destructive influence of the parasites. The skin is dry and scaly, and has a thick corrugated appearance. Small dark brown and yellow scales form, due to the rupture of the pimples and pustules by the scratching. In many cases of long standing, the result of the irritation and scratching, eczema appears, especially in white dogs; and, as in ordinary cases of this disease, large moist patches then develop. But this is not of much consequence, for the eczema soon passes off when the original disease is cured and the irritation ceases.

Dogs suffering badly from mange become weak and emaciated, in spite of the most nourishing food freely given.

If the six following points are taken into consideration when examining a dog suffering from skin disease, there should not be much difficulty in arriving at a conclusion whether the complaint is mange or not: 1. The contagious nature of the disease—if many dogs are kept, several, or nearly all, will be similarly affected. 2. The great irritation. 3. The loss of coat. 4. The small pimples and vesicles, and the little yellow and brown scabs. 5. The steady progress of the disease from one part of the body to another.

6. And the most important and positive sign of the disease of all, the presence of the acarus. But the parasite in some cases, especially when the skin has been much injured by scratching, is difficult to find.

The treatment of mange consists in applying agents to destroy the parasite, and the only remedy, in my opinion, worth mentioning is sulphur mixed with some excipient as lard, vaseline, or oil to make it more easily applied to the skin. The sulphur treatment is most effectual, and, however much the dog licks the dressing it does no harm beyond acting as a slight purge. There are numerous other remedies recommended for the cure of this disease, such as the different preparations of mercury, which I never use or recommend, as they are very poisonous—also the different preparations of tar and its products, as carbolic acid (also very poisonous for dogs), oil of tar, etc.; and then there is that most stinking of all remedies, the lime and sulphur lotion. This lotion is certainly effectual, but when the skin is inflamed and tender it often increases the irritation, though only temporarily. This remedy may sometimes be applied with advantage to a sore that has been formed by a dog constantly licking or biting a part and which cannot heal in consequence, as a dog will seldom touch the place that has been dabbled with this preparation.

In using the sulphur preparation it is not necessary to make the ointment or dressing strong—one to eight, that is, one part of flour of sulphur added to eight parts of vaseline, lard or oil, and well mixed, is sufficient. For short-coated dogs I always use the ointment made with vaseline, as it is more easily worked into the skin, besides being, in my opinion, more easily absorbed than when made with lard. For dogs with long, thick coats the sulphur is best mixed with oil. Vegetable is the best; it is just as cheap as whale oil or train oil, and there is no unpleasant odor from it, as there is from the other two.

Whichever preparation is used, whether it is the sulphur and vaseline or sulphur and oil, to effect a cure it must be thoroughly and freely, but gently, rubbed into the skin, not only into the parts where the hair is off, but all over the body, legs, head and tail; not a part must be missed. So much depends upon the proper application of the dressing, for if it is not well applied, but only smeared over the hair, the case will last an indefinite time, whereas, if the dog is properly dressed, the worst case may be effectually cured in a fortnight.

The dressing should be used every other day for a week, then after a couple of days or so the dog should be thoroughly washed. Some writers recommend that the dog should be washed before commencing the dressing. This is not necessary. Besides, by moving the dog about and using baths and towels, you are running the risk of spreading the disease, and the person who does the washing is almost sure to catch the mange. About a couple of days after the washing the dog should be dressed again, as before, for another week, and then finally washed and put in a kennel that has been thoroughly cleaned and disinfected.

For dogs that are kept in the house the grease of ointment or the dressing made of oil is objected to. In such cases the balsam of Peru may be mixed with the sulphur instead of oil or vaseline and applied as previously recommended. This preparation is quite as effectual in its action as the others, and a good deal more pleasant for the dog, but the cost of the balsam is much against its being largely used. The dressing made of equal parts of castor oil, kerosene, olive oil and coconut oil, as recommended for general eczema, is also a very useful remedy for mange, but its action is increased by the addition of sulphur in the same proportion as recommended for the sulphur and vaseline ointment.

It is quite useless trying to get rid of mange from a kennel or even from a house without the place where the dog has been living during the attack has been thoroughly disinfected. To do this the dog should be removed from the kennel and the place first thoroughly fumigated for twenty-four hours somewhat after the following manner: All the crevices around the windows, etc., should be covered over with strips of brown paper, made adhesive with flour paste, so as to make the place as air tight as possible to prevent the sulphur fume escaping. Then an old iron saucepan or a tin containing about a pound of sulphur, which is sufficient for a kennel about 6ft.x10ft. and about 8ft. high, should be placed in the center of the floor. If a little methylated spirits be added to the sulphur it is more easily ignited. After this has been done it is necessary to leave the place quickly, the door closed and strips of paper pasted along the edges from the outside. After twenty-four hours the door and window may be opened so as to well air the kennel and to allow the sulphur fumes to escape. The wood work should then be thoroughly lime-washed, applied almost boiling hot and very freely, and the flooring well scrubbed with a strong solution (about one in twenty) of some disinfectant, hot. To make quite sure that the process of disinfecting is complete, it is a good plan, especially where mange has existed in a kennel for some time, to repeat the fumigating a second time, and, if expense is not objected to, to destroy the old benches and have new ones erected. All collars and chains, dog benches, combs, in fact everything that is used for the dogs must be also disinfected.

When a dog suffering from mange has lived in a private house, disinfecting is quite as necessary if the dog is to be permanently cured as it is in the kennel. Mats and baskets should be baked, and the carpets, chairs, etc., where the dog has been in the habit of lying, washed over with a strong solution of Sanitas, which does not stain.

It is much more difficult to eradicate mange from a place than distemper. When a dog is known to have been in contact with another one suffering from mange, a bath in a strong solution of Jeyes's Fluid (1 in 40) within an hour, that is, before the acarus has had time to burrow under the epidermis, may often prevent an attack of the disease.

A. J. SEWELL.

WHAT IS A "BELGIUM" SETTER?

Editor Forest and Stream:

Would you be kind enough to tell me if, in all your wide experience you have ever heard of a "Belgium" setter? My intimate friend and field companion owns a dog that is conceded by all who know him to be the best one in this neighborhood (and there are a number of good ones here). This paragon of dog flesh is a little under the average size, weighs about 45lbs., color black and white with a very faint tinge of tan mixed in the black along his cheek. This tan color is so faint as to make it doubtful even on close inspection as to whether it really is tan; it looks more like suburn. His head is rather short, with very long ears heavily feathered, is deep chested and just a little cat-hammed; tail long, and when in field at work carried straight, other times with quite a curl. The most noticeable characteristic is a hump on the nasal bone just back of the nose. He is very timid and affectionate. Has thrown several litters that run to lemon and white. This dog, twice in one day, a year ago last fall, performed the rare feat of standing a live bird with a dead one in his mouth. Is a natural retriever and the best I ever saw. One of his oddities is his great dislike for water. When not hunting he will not even get his feet wet if he can help it, though he will bring a game bird out if necessary, but can't be induced to touch anything else. This dog came from Pittsburgh, Pa., and positively refused to notice quail even when flying up all around him, or any other bird until nearly a year old, when, like the old dog Trim, it struck him all at once.

If you can throw any light on this dog you will confer a great favor on his owner, myself and all other sportsmen in this community, as we are all interested.

FRANK G. LUMAN.

EUTHANASIA—HAPPY DEATH.

Editor Forest and Stream:

I was pained to see a letter from your valued correspondent "Clumber," in the issue of the 6th inst., condemning the use of chloroform, and I can only think that the medical friend and the vet. did not know how to kill a dog with chloroform, therefore this letter. As I have used chloroform for the last 15 years for the purpose of killing dogs easily, and never having any trouble, I think I may perhaps save much trouble and impart information on the point in question by detailing my method. As every surgeon knows at this time that the actual operation is not the difficult part to bring the patient through, but that the proper means be taken beforehand and after to make the operation a success, therefore in producing death by chloroform the proper steps should be taken so that by no chance it can be a failure. My method, which I have used for many years, is the following:

For a large dog, say a St. Bernard, I need 3oz. of chloroform, and for small dogs less. I have a shot bag of coarse canvas which has one side ripped down about three inches, according to the size of the dog's muzzle, so that the entire muzzle is inclosed; no chance of biting allowed. I place in the corner of this bag a pledget of absorbent cotton sufficient to absorb the amount of chloroform I may think necessary. I pour one, two or three ounces of chloroform on this, and taking a firm hold of the dog by the back of the neck, I thrust the bag over his muzzle with no chance of biting by this means. In from one to three minutes the dog is asleep, then I lay him down, pour a little more chloroform over the cotton at the bottom of the bag, and cover the whole with a blanket or other dense covering to prevent the air getting in, and in ten or less minutes I have always found that death has taken place without a struggle, except at the very beginning of the anesthesia. Let "Clumber" and others try this method, where the lethal chamber is not to be had, and he will never say that chloroform is not the most euthanasic (if I may coin a word) method of getting rid of old favorites that they ever used.

As I am on the subject perhaps I may trespass a little more on your kennel column and give my experience of anesthetics in canine surgery. When I began to operate on dogs about fifteen years ago I always used chloroform and was tolerably successful, but in two or three instances my patients went through all right, but did not recover well from the effects of the chloroform. I then turned my attention to the other anesthetic—ether—and it I have found to be the proper fluid to be used in canine surgery. I have never had an accident nor never had a case in which I could not administer it in safety. The greatest difficulty I had was how to administer it easily, which I at length overcame by having a solid leather cone made, which is 6in. deep and large enough to place over the entire muzzle of the dog; this is lined with a double layer of thick flannel and holes are perforated through the sides and bottom of the leather to admit the air. I thoroughly saturate the flannel with the ether and place it over the muzzle, and if more ether is necessary it can be poured through the air holes. By this method the cone acts as a muzzle, so that there is no chance of biting, and as it is not necessary to remove it to give more of the ether, I consider it just what we want for operations, and in my hands has been most useful as well as successful. I have performed very many operations on dogs, but none of them ever succumbed to the anesthetic ether, which I cannot say of the other, chloroform.

J. S. NIVEN.

BARZOIS IMPORTATION.

DR. GRIMES writes us that the following-named Barzois for Mr. Hacke's kennels reached London from St. Petersburg, Russia, on the 6th inst.:

Abreck, all white dog, scar on left hindleg (wolf bite).
Viewga, all white bitch, with light lemon ears.
Ondoff, all white dog, with a light lemon tint.
Viola, white bitch, ears, forehead and left side of body fawn, and a small fawn spot on right side.
Pospeck, large white dog, with lemon tint.
Zanoza, white bitch, fawn patch on top of tail, fawn patch on each flank, both ears fawn, nose light, and has two scars on nose (wolf bites).
Armeda, white bitch, light brindle ears, brindle patch on top of tail, and a black spot on middle of back.
Ospek, white and brindle dog, white face, and is of the old Gustopsovy type.
Osmaée, white and brindle dog, brindle head and ears, and one side of the muzzle white.
Karai, white dog, with lemon ears, and a light lemon patch on right side.
Dr. Grimes numbers each dog, and corresponding numbers will be found on their collars, so that we may recognize them when they reach New York, which should be the last of the coming week.

Oudar, a fawn and white dog with a fawn head, and which stood 32in. at the shoulder, and Odinor, a white dog with fawn ears, two fawn patches on sides and back, and fawn on top of tail, having been jerked on their backs in the docks at St. Petersburg, and sustaining injuries to their spines and badly hurt, died two hours after arrival. As the following copy of telegram from Capt. Cole, of steamer Viatica, to Alfred Henley & Co., St. Petersburg, shows:

"Two dogs dead. Other queer." Signed, COLE.

Dr. Grimes adds: "The death of these two dogs is very much regretted, but we hope to replace them by something equally as good, which, when done, will make Mr. Hacke's kennel number nineteen full-grown Barzois, besides the large number of young stock on hand and anticipated, and constitutes his the largest and best in the world, outside of Russia, and second to none there."

As most of these dogs are workers and have been tried on wolves, it looks as if with a little exertion that in the near future we may add wolf coursing to our Western sports, and this will afford something new in the way of amusement for our biased sportsmen who feel inclined to incur a little danger. Mr. Hacke deserves the thanks of his fellow fanciers for his enterprise in getting together such a representative kennel, and it is to be hoped that future shows will experience the benefit of such an interesting exhibition as a dozen of these dogs will make.

SELF-SHOWING MASTIFFS.—Hulton, Pa.—*Editor Forest and Stream*: I cannot but think that Mr. Winchell is mistaken in saying that Beaufor's perfect carriage in the ring results from specific training for this point. Caution's Own Daughter is even a better shower than Beaufor, due probably to her youth and her being so much lighter weight and if I remember aright, Mr. Trickett told me that she always had that perfect pose from her puppyhood. Both dogs are thoroughly well balanced, full of vigor, and weight and power to handle that weight and are in exact proportions. My old DeBuch was another dog with these qualities, and all of them showed the same ease, power and grace of movement everywhere that they did in show rings. I fancy that it is (or was) their just proportions that made them good showmen, not their training.—W. WADE.

KINGSTON DOG SHOW.—*Editor Forest and Stream*: The executive committee of the Kingston Kennel Club's dog show, to be held Sept. 1 to 4, feeling they had imposed too many classes on Mr. H. W. Lacy, have divided the spaniel classes in view of the very large entry expected and given field and cocker spaniels to Dr. Wesley Mills.—C. H. CORBETT, Sec'y.

DOG CHAT.

THE great Princess Florence has met her first defeat in a regular class, and to Alta Bella belongs the credit of this achievement. The former bitch was thought to be almost invincible, and her owner confidently expected to be able to beat Sir Bedivere when she was fully matured. Alta Bella is a daughter of the late Alton, whose death was so regretted by St. Bernard breeders, who appreciated him at his proper value. This win places Alta Bella in the foremost rank in England. Mr. Gosling, the judge at Darlington, where this happened, is a well-known St. Bernard man, and must have the courage of his convictions highly developed. The meeting created great excitement. In Princess Florence's defense it may be well to remark that she was not in good coat; but the decision seems to have been indorsed by the *cognoscenti*.

Darlington show has always been one of more than passing interest to fanciers in England, and it is easily the best managed and largest one-day show in England. The secretaries of some of our easy-going four-day shows would be sorely put about to get through the work that the secretary of such a show must tackle. He is, however, ably aided by experienced committeemen, two of whom have officiated at every show for twenty years past. Of course, to get through the judging with dispatch, fourteen judges and six rings are provided.

We have received a pamphlet about how to train dogs for the field, written by the well known handler, Mr. J. L. Bevan, who is trainer for the Randolph Kennels, Asheboro, N. C. Mr. Bevan's well known ability in this work is proof that his ideas are worthy of imitation and his instructions are simple enough to be understood by any one. These kennels are situated eighteen miles from High Point, and nine from Lexington, N. C., and are owned by Capt. C. S. Wainman, an Englishman.

At a meeting held Tuesday, July 7, by the Southern California Kennel Club, it was decided to hold the next dog show in Los Angeles from Wednesday April 20, to Saturday, April 22, 1892, both days inclusive. Mr. C. A. Sumner is the secretary.

The following arrangements have been made with the railway and express companies for the Toronto dog show, held Sept. 14 to 18: The Lake Shore and Michigan Southern will carry dogs free. Detroit, Grand Haven and Milwaukee will carry one dog free. The Erie Railway system charge not less than 25 cents or more than \$1 per dog, according to distance. The Wabash, from one to one hundred miles 25 cents, one hundred and one to two hundred and fifty miles 50 cents, over two hundred and fifty miles 75 cents per dog. The Grand Trunk and Canadian Pacific railways charge regular charges one way and return dogs free, but certificates must be procured from the secretary at the show to enable exhibitors to secure the benefit of the return. The Canadian and Dominion Express Companies charge double rates going to show and return free. Mr. Stone tells us there are several railways to hear from yet. Entries close Aug. 29.

Colonel Ruppert, Jr., has thought better of his intention not to take an active part in St. Bernards. We are glad of this, as we want all such men to stay in the business, and New York is one of the best places in the country for a kennel of this breed, for two or three good stud dogs will soon pay for themselves here. Mr. Ruppert is not confining himself to dogs, for we see that he has just purchased a couple of good yearlings at a recent sale, giving \$1,500 for one and \$1,000 for the other.

James Abercrombie, a farmer at Waterton, Ont., being annoyed because a dog owned by John S. Cook killed one of his sheep, went to Cook's farm and shot the dog. Cook, seeing the act, got his rifle and shot Abercrombie, the wound he inflicted proving fatal shortly after. No time to argue about a first bite in this case.

Mr. Robert Leslie, late president of the Massachusetts Kennel Club, of Lynn, writes pathetically about being compelled to part with his well-known pointer Spot Dash, owing to lack of facility to keep him. He has not been home with him for several months, except when wanted for service. Spot Dash is an excellent stud dog, and a good one in the field, and whoever gets him will own a pointer. Mr. Leslie sends his noted Belle Randolph to W. K. C.'s King of Kent next week.

Although Mr. Lamb had decided on sending his newly imported bitch Margharita to Mrs. Smyth's King Regent some time since, unfortunately she was sent on just too late for the service, as the bitch was very cross at the first trial, and deciding to wait, the delay proved unfortunate.

We hear that Lord Bute will sail next Saturday for this country, and his advent is sure to be anxiously awaited by many who, knowing him so well by reputation, wish to see him in the flesh.

Mr. Sidney W. Smith writes to a friend in this country that he has just bought what he believes to be the tallest dog (St. Bernard) living. He is bigger than Lord Bute or Scottish Prince was at shoulder and 13 months old. At present he is all bones, but he has him eating well, so he will soon have him made up.

In the coming Irish setter trials the Claremont Kennels will run four dogs, to wit: Claremont Patsy, Rancho, Rose of Claremont and Frisco N.

It almost seems impossible for any one but a Welshman to pronounce properly the names of some of these Barzoi. It is to be hoped Mr. Hacke will select some more pronounceable cognomens for the dogs of his kennel when he gets them settled. Czar, Ivan, Zloem, etc., are all right, but Pwylai and some of those that he is importing only a man with a stiff neck could think of pronouncing properly.

The noted smooth St. Bernard Cavour, owned by Capt. Nicholson, of England, has fallen a victim to pleurisy. Mr. Reick made an offer for this dog last winter and came within an ace of buying him.

Mr. A. C. Jackson, the bulldog judge, relates a humorous story to the editor of *Stock-Keeper* about the difficulties of judging on the continent. The exhibitors there, like all those in other places, expect to win, and show their disappointment in a number of ways embarrassing to the judge. He says that one time a woman came into the ring with two little dogs in her arms. Not being able to notice them a pathetic scene followed. The lady sat down on the ground and sobbed hysterically, while a committeeman on either side offered her consolation and begged her to bear up. Later on he heard that to soothe her ruffled feelings two specials had been presented to the emotional exhibitress.

The Charlottesville Kennel pointers are all in good condition, writes Capt. McMurdo, and ready for their preliminary work in the field, and will be put down as soon as the weather cools off.

We have not room for the whole of "Conrad's" article in *Fancier's Gazette*, but he strikes the keynote when he says: "It is fortunate for the future of St. Bernards in England that American buyers have turned their attention to dogs

rather than bitches, for we have still left almost all our best, only one champion, Plevna, having been sent to the Far West, the sad tidings of whose death we gave last week. So long as our best bitches remain at home there is not so much to fear, and with ordinary luck we shall soon be able to replace the crack dogs which have been taken from us. Still it is a work of time, but with Princess Florence and Alta Bella before mentioned, Miss Dutton's champion Peggoty and Dorothy II., Mr. Norris-Ely's champion Bellegarde, Dr. Iuman's Winona, Rev. Thornton's Andromeda and Abyss, Mr. Harris's Lady Campbell, and the many other high-class matrons that might be named, there should be no difficulty in breeding another Sir Bedivere and a fresh supply of good St. Bernards to meet the wants of our enthusiastic friends across the herring pond, who are always ready to plank down the dollars when they find anything to suit their taste." And if they will listen to reason this is the plan they must pursue in future. Instead of "planking down their dollars" for dogs, let their dollars bring over some of the above named breeding stock.

Mr. J. W. Taylor, in retiring temporarily from the show ring, has sold his crack Irish terriers, among them the champion Breadenhill, to a Dr. Marsh. The price for Breadenhill is not given. Another of the cracks of the kennel is Jack Briggs, and as he has been sold to Mr. R. Toon, of Sheffield, this is most likely the good "Irishman" that Mr. Symonds is expecting, and which we made note of last week. He has won two firsts and specials at Dumfermline, first Gloucester, and first Southport.

Stock-Keeper (Eng.), by continuous effort and an average of opinion, has got the price of Sir Hereward down to either \$3,750 or \$4,000. It will be remembered \$6,000 was the price first stated, and according to our "Mann" it settled at \$5,000.

A sensational price has been bid at auction for a smooth collie. Entered at Darlington for \$75, she was claimed by five different people, and when put up to auction secured a bid of \$175.

Would it not be well for some of our reformers who are crying out about our kennel club, to make some efforts through the journals of their own country to have things explained as they want them and not keep writing to English journals, the readers of which cannot be expected to understand or take more than a glancing interest in the matter discussed. "Nutcracker," who has hit pretty hard, is taking a rest, and "Nuteater" is having an innings now. It strikes us the latter has a St. Louis flavor with it.

From the list of high class mastiffs which we find in the English papers and now for sale by Mr. Mark Beaufoy, the noted breeder, the friends of the breed in this country have an excellent opportunity to get some good breeding stock, especially on the female side. This gentleman, as we noted some time since, has decided to give up exhibiting.

The Kingston Kennel Club is busy getting together a list of specials for their show, Sept. 1 to 4. Dr. Wesley Mills, Montreal, offers \$5 cash for the dog or bitch showing best muscular development and in hardest condition. J. Henderson & Co., stationers, Kingston, offer a pair of pictures, valued at \$8, for the best English setter dog in the open class owned by a member of the Kingston Kennel Club. F. W. Spangenberg, jeweler, offers a silver mug for the largest number of fox-terriers entered by an exhibitor. A. C. Johnson & Co. offer a silver mug for the best pair of English setters owned by one exhibitor or kennel. F. Nesbitt, corner book store, offers an album, valued at \$5, for the best pair of St. Bernards owned by one exhibitor. W. Skinner, druggist, offers a silver mug for the largest number of cocker spaniels entered by one exhibitor. FOREST AND STREAM offers one year's subscription for the best Gordon setter bitch in the open class, and another year's subscription for the best wire-haired fox-terrier. P. Alke offers a steel engraving, value \$6, for the best pair of Clumber spaniels in open class.

The Montreal Exposition Company is out with an excellent list of prizes for their inaugural dog show, to be held Sept. 22 to 25. As far as the amount of money promised is concerned it ranks next to Toronto. Mastiffs, St. Bernards, greyhounds, pointers, setters, collies and cocker spaniels have kennel prizes of \$15 for four or more and \$10 for the best dog and same for best bitch in each breed. Challenge prizes in these breeds, for each sex, are \$10 and diploma. In the open classes \$10, \$5 and diploma are given, cocker spaniels having also \$7, \$3 and diplomas for other than black in both sexes. Great Danes have \$10 for the best in each sex, \$10 and diploma in both challenge classes and \$10, \$5 and diploma in the open classes. Fox-terriers have a kennel prize of \$10 with also the \$10 specials, in challenge classes \$7 and diploma and in open \$7, \$3 and diploma. Clumber spaniels are given \$7 and diploma in the challenge classes and \$7, \$3 and diploma in the open divisions. Field spaniels get only open classes with \$7, \$3 and diploma. Beagles, pugs, Yorkshire terriers and black and tan terriers get \$5 for the best in each sex, the two last named breeds are provided with challenge classes with \$7 and diploma and all have \$7, \$3 and diploma in open classes. All other breeds are given at \$7, \$3 and diploma in the open classes. In the miscellaneous class \$20 is to be distributed at the discretion of the judge. Special prizes of silver plate are promised and will be announced later through the kennel press. A special of \$15 is to be given to the handler showing best *bona fide* list of not less than 10 dogs in his charge. Entries close Sept. 8 and the fee is \$2 for a single dog and \$1 for every additional dog entered by the same owner. The show will close at 6 P.M. every evening and exercising dogs will only be allowed between 8 and 9 A.M., 12:45 to 1 P.M., and 6 to 7 P.M. The usual rates will be charged by the express company and no trouble need be expected from the custom authorities. The management draw the attention of exhibitors especially to their omission of puppy classes, so that the building may be kept as clean from disease as possible. Dr. Mills will superintend, and the judge for Clumber, field and cocker spaniels is Mr. P. G. Keyes, of Ottawa, while all other classes will be taken by Mr. John Davidson.

The Glenmore Kennels send us a very artistically-arranged catalogue of their Irish setters. Excellent pictures are given of Beau Brummell, Molly Bawn, champion Winnie II. and champion Ruby Glenmore. Great stress is laid on the fact that this kennel breeds primarily for the production of high-class field dogs. Bench form is an after consideration. If, therefore, this kennel will carry this out, the appearances of Irish setters in the field will, we trust, be not so much like angels' visits.

The fact that all dogs imported to this country must be accompanied by a certificate of registration in the kennel club stud book of the country it comes from, is very likely the reason that Mr. Thomas did not leave England last week as expected. This will cause the Anglo-American Kennels to be absent from the opening show of the Canadian circuit—Kingston. At Sheffield, England, Aug. 3, their greyhound took second to Annie Laurie II., said to be in better condition. In spaniels they took equal second to Young Batchelor with either Endcliffe Don or Street Arab, the new one said to be a bit high on leg. Beaconsfield won in black and tans, though, from reports, his coat seems out of order, having bare patches on his side; Prince Regent was vic. At Darlington,

Beaconsfield's condition put him back, as Broomfield Rose beat him in the challenge class. In the open class Mr. Lacy's Rhodes Oban beat Prince Regent again. In a hot class of field spaniels their Street Arab was bc., and is spoken of in one report as a little "on the leg," but a nice spaniel otherwise. Mr. Purbeck's dog Ornatius was not given a card, but *Stock-Keeper* says, "Ornatius was wrongly dispatched without a card, for he can boast of more substance and as much quality as Undercliffe Smoker, the recipient of third prize." In this class the great dog Henmore King was also put back. This seems a bit funny when Ornatius at one show was placed equal first with Jenny Jones, a greyhound bitch that all reporters seem to agree upon as just about perfection as a show greyhound. They were judged at Darlington by Mr. Thomas Graham, a well-known coursing man.

A correspondent writes us that it would be a wise move on the part of the Toronto people to make strenuous efforts to find and punish the miscreant who cut Why Not and poisoned White Wings, as there is a feeling of insecurity among greyhound men, and unless every precaution is taken this will affect the greyhound entry at Toronto next month.

Mr. H. P. Thompson, of Toronto, has lost by death his fox-terrier bitch Ebor Speedy.

The Kingston Kennel Club has assigned to Dr. Wesley Mills the field and cocker spaniel classes at that show, to be held the first week of September.

Peoria, Ill., seems to have a better opinion of Mr. Rabbits, Spratts' representative, now in the West, than the worthy citizens of Omaha had. We see by the *Peoria Journal* that he was given the bridal chamber at the National Hotel, much preferable quarters than those they would fain have placed him in at the other town. The *Journal* therefore takes this opportunity to indulge in a little sarcasm at Omaha's expense and incidentally remarks that there is a possibility of Spratts Co. putting up a factory in some Western city, and of course Peoria would like to have it. We are glad to hear, however, that Mr. Rabbits is all right.

At a special meeting of the members of the United States Field Trial Club, held in Indianapolis, Aug. 13, which was presided over by the president, the reports of the secretary and treasurer showed the club to be in a very satisfactory financial condition. The club is entirely out of debt and has over \$1,200 in the treasury. Mr. J. M. Freeman, who lives at Bicknell, where the trials will be run, was present at the meeting, and reported the grounds to be in splendid condition, with an abundance of birds. In order to protect the grounds a motion was passed prohibiting all persons from shooting, hunting, handling or exercising dogs on grounds south of the railroad for three miles, east and west, and four miles south of Bicknell. Disqualification is the penalty for disobeying this rule.

In one of the evening papers we find a column article which describes what is said to be a "puppy walker." A pretty young woman, dressed in the height of fashion—a "summer girl" if at a watering place—is depicted as walking in Central Park four dogs in four-in-hand fashion; one of the dogs is a greyhound, another a collie, another a bull-terrier, and a Dandie Dimont completes the quartette. This miscellaneous class is said to be held in hand by four straps that converge into one, which the lady "puppy walker" holds in her hand. She is supposed to keep all these going straight ahead on the gravelly path of virtue. This sounds very pretty in theory, but in practice we fancy the puppy walker would have rather a contrary time of it. Of course the young woman has had a wealthy father who failed a couple of years since, and this is the way she strikes out for herself. These dogs are owned by different people, who are too indolent to do the walking themselves, so she kindly does it for them at the rate of \$1 a day for a two-hours' jaunt, and while taking a rest, complacently informs her interviewer that this brings her in an income of \$7 or \$8 a day. What bosh some people do write about a subject they know nothing of, and we pity the young lady who, led away by such a plausible tale, would endeavor to turn an honest penny in such a way, especially in this heated term.

It is gratifying to know that the prospects for a large and successful show at Hamilton, Ont., are of the highest. Although over 2,000 prominent lists have been sent out the demand is still kept up. Most of the large kennels have signified their intention of exhibiting, and all the classes are likely to be well filled. No pains will be spared to make the visit of exhibitors a pleasant one, and the fact that Mr. A. D. Stewart is to superintend the show is of itself proof that it will be well worked, down to the smallest detail. The entries close positively on Aug. 24, so that those who have not yet sent in their names have still time to do so.

Straws show which way the wind blows. Mr. Patterson, who owns some good St. Bernards among other breeds, writes: "Stop my advertisement and send me bill. I am flooded with letters." He also adds that the St. Bernard bitch Maritana II., which he recently imported and that was bred to Lord Bute before coming over, has missed.

F. H. Hayes, Dexter, Me., has purchased from R. D. Perry, Braintree, Mass., the noted foxhound Major O'Rourke, a winner in the Brunswick Fur Club trials of 1889 and 1890. Mr. Hayes will put him at stud.

The Irish Setter Club's field trials will be held near Cookstown, Co. Tyrone, Ireland, Sept. 16 to 17. The trials include pointers and setters and the dogs will be shot over, the trials being run on the moors near Cookstown.

As soon as Mr. Sidney W. Smith saw the paragraph in *Stock-Keeper* that we referred to recently about the condition Prince Regent and Scottish Prince were in when they arrived here, he went to London and laid his side of the case before the editor of that paper. He does not, however, disprove our assertion. We saw the dogs when they landed, and we have had sufficient experience among dogs to know the difference between nail scratches and eczema. In the case of Prince Regent it is folly to say that the sore on his tail was the result of knocking in the kennel. It was in the wrong place and fully 6 in. long. Prof. Liantard, our noted "vet.," gave it as his opinion that it was eczema of not less than one month's standing. The spots on Scottish Prince were as large as the palm of one's hand. Mr. Mann, who brought them over, objected to the boxes as too small and found them full of protruding nails, and Altonette was landed suffering from distemper. As the two dogs are dead now perhaps it is no use going into the matter any further.

Mr. Reick was not long in consoling himself with another Regent dog. On Wednesday we journeyed with him to Staten Island to have a look at the dark horse, which turned out to be Kingston Regent. This dog was owned by Mr. Julius Smith, of Port Richmond, S. I., and is by Prince Regent out of Lady St. Gothard, and is therefore royally bred on both sides. He was whelped Jan. 26, 1889, stands 33 in. good at the shoulder, and is a very heavily built dog, weighing in condition near the 200 lb. mark. Though he lacks a distinct blaze, his solid orange body and beautiful head shadings make him an extremely handsome dog; and as he is all

right on his pins and very well off for bone, he is a very taking dog. His head is massive and much shorter than his lamented sire's. He measures over 42in. round the chest, 18in. in muzzle and 27in. round the skull. He was sold at 12 months old to Mr. Smith by Mr. Geo. Booth, of Hull, Eng., who bred, we believe, this dog, Marquis of Ripon, Lord Dante and Lady Gladwin, all in the same litter. He has never been used at stud, and is therefore a very vigorous, active dog, and one that should prove invaluable in the stud, especially on account of his rich coloring for light-colored bitches. Mr. Reick paid a long price for him, but we do not think that with ordinary luck he will regret his purchase. He will be placed at stud at once, as he is fully acclimated.

We spent a pleasant afternoon at Mr. Reick's place, at One Hundred and Thirty-eighth street and North River, last Sunday. It is an excellent situation for a kennel, ample grounds, with plenty of shade, and easy of access, being in the city. This gentleman is getting together a good kennel, and when he has got things as he wants them, we will have to describe the New York Kennels in our articles on "American Kennels." Old champion Hector evidently appreciates his new quarters, for he was still as lively and vigorous as ever.

It is rumored that Mr. W. S. Clark will be one of the judges at the forthcoming beagle trials. This ought to be a wise choice and one that will help to fill the entry list.

An excellent picture of a pug appears on the front page of *Canine World* this week. It is one of the daintiest pieces of work we have seen for some time.

Premium lists of the Blue Grass Kennel Club's bench show, to be given Sept. 23 to 25, at Lexington, Ky., can be had by addressing Roger Williams, secretary. In all the most prominent breeds \$10 is offered for first and \$3 for second. In the others \$5 for first and \$3 for second. The entrance fee has been placed at \$2 and 25 cents extra for unlisted dogs. The specials are seventy-five in number and all in silver. Application for admission into the American Kennel Club is now pending, and as all the necessary conditions have been complied with they will without doubt be admitted at the next meeting, Sept. 17.

We are glad that Mayor Grant has undertaken the job of teaching New York dog catchers manners. He has suspended one, Michael Crowley by name, for one month for being saucy to a Mrs. Wallace. Now, will some one undertake to teach this class of public servitors the rudiments of morality and honesty.

Every one who visited the dog show in New York will probably remember the beautiful Parisian dog that took vhc. reserve in the miscellaneous class, the property of Mrs. Horace Stokes. There were a number of people who tried to buy the dog at the time of the show, but to every one Mrs. Stokes replied that she wouldn't part with the dog for several thousand dollars. One day last week as it was crossing the street at Saratoga Springs it was run over and instantly killed, a heavy wheel of the carriage passing over and mashing its skull.

There is a talk in Toronto of having a banquet to be given by the Toronto Kennel Club and the Canadian Kennel Club jointly, during the Toronto show, to dog fanciers of Canada and visiting exhibitors.

Friend Dole writes us that the two dachshunde, Windrush Rieter and Janet, arrived from England last week for Mr. Maurice. Janet is due to whelp to Pterodactyl some time next month. The bull bitch Countess of Norfolk also arrived for Mr. Sackett. She is in whelp to Fair Prince. Mr. Hatch's bull bitch Maggie was also among the lot. This bitch is said to be always near the front in good company. All the dogs arrived in good condition, although they were twenty days on the road. Mr. Dole has sold his bull-terrier bitch The Star to Mr. H. Fred Church, who owns Prince Bendigo.

We are told that Mr. P. G. Keyes, of Ottawa, one of the committeemen of the Ottawa show, measured the greyhound Sir Launcelot's mouth and found him 5-16 of an inch over-shot. Next!

Mr. James W. Whitney is very well pleased with his new mastiff bitch Exeter Dirce, which arrived Aug. 14 by the National Line, and he is delighted with the care that they took of her. While not, of course, the equal of C. O. D., she is an excellent mastiff. This kennel has also purchased Linkwood Queen from Mr. James Thompson, Washington, D. C. She is by champion Beaufort out of Gerda. As this bitch has a good head and is grandly bred, she should do well for the Flour City Kennels. Mr. Whitney tells us his kennel is about full. This kennel will exhibit at the fall shows.

Col. North is wise in retiring the undefeated greyhound Fullerton; a record such as his should run no danger of being tarnished with a defeat. He is now at stud. From what we gather there are several of our greyhound breeders who would send bitches to him did they know how to go about it, amount of fee, and so on.

We have received the English Kennel Club Stud Book for 1890, and take this opportunity to give praise where praise is due. Our A. K. C. Stud Book for 1890, with a larger number of registrations, made its appearance in February last, and the English one is delayed till July. America ahead again.

Enfield Grabber, the noted bulldog, has joined the ever-increasing majority. He was a most promising dog and the loss is a severe one. The dog was sent to be set up, and when taking the skin off, the taxidermist found a plaice sticking in its throat, the evident cause of death.

Somebody whispered to us that a crack bull-terrier would soon make its way over here if it could be bought right. Now we see by *Canine World* that Mr. Harry Thompson has concluded the sale of the champion Streatham Monarch, but price and name of purchaser have not transpired.

As a rule our exhibitors are humane enough to ship their dogs in crates that are amply large enough, but sometimes we meet with exceptions. In England, it would seem, they cannot do just as they please in this respect without incurring the consequences. The owner of the dachshund Indiana sent her to a show in a box too small to stand up in, and then crowded eight pups in with her. Arriving at the show the bitch was found dead as well as some of the puppies, only four recovering. It is refreshing to hear, however, that the inhuman owner was fined \$25 and costs for the cruelty to the bitch and \$1.25 and costs for the cruelty to the pups. This ought to have a wholesome effect.

We draw the attention of St. Bernard breeders to the advertisement of the New York St. Bernard Kennels, placing their Kingston Regent at stud. A large list of dogs are on sale this week. Among the new ones we find that Otto Bevering has a spaniel for treeing partridge, Glenrose Beagle Kennels offer beagle pups; Killarney Kennels some choice Irish setter pups by Elcho, Jr., and others; F. H.

Hayes, trained foxhounds; F. B. Echlin, St. Bernard pups; John Hargreaves, fox-terriers; H. C. Graff pointer pups and trained setter; J. H. Ten-Eyck Burr, St. Bernard pups; E. H. Osthaus, several well-bred pointer pups; Box 10, pointer pups; Robert Leslie, the noted pointer Spot Dash; Geo. H. Holtham, Nick of Nasso pups; J. H. Schwack, rabbit hounds; and Frank F. Dole, choice bull-terrier pups. Fred. P. Kirby advertises that he will handle dogs at Lexington show.

In a letter just received from Dr. Inman, the owner of Siegfried (late Salvador Rosa), he says he had three American inquiries last week about selling the dog. He adds, and this will put an end to further unnecessary trouble, "I do not intend (at least at present) to sell the dog."

A bombshell will fall on several prominent members of the kennel world and two kennel clubs, if certain A. K. C. rules are not complied with in the course of a couple of weeks. Non-payment of the prize money due at two shows last spring is the cause of the trouble. Suspension is the penalty.

The St. Bernard Jim Blaine, lately owned by Mr. H. Halsey, arrived in this country three weeks since and is now owned by Mr. F. C. Hatch, of Arizona.

The Westchester Fair Association will hold a dog show in connection with the fair at White Plains, N. Y., Sept. 29 to Oct. 2. Nearly all the breeds are provided for, and prizes are \$2 and \$1. A large building, 100' long, has been erected for their accommodation.

The death of Mr. J. H. Murchison removes one of the oldest exhibitors in England. Though principally interested in fox-terriers at a time when Old Jock, Grove Nettle, Belgrave Joe and champion Olive were the cracks of the day, he also dabbled in black and tans. We well remember Mr. Lacy's old champion Queen being sold to him somewhere about 1871 for the then remarkable price of \$416, little Pam being thrown in to make the bargain good.

Mr. Rawdon Lee, whose connection with the London Field is well known, is, we hear, to be an exhibitor again.

According to *Canine World* Lord Bute was sold to Menthon Kennels for \$3,750, and Mr. Shillcock offered afterward \$125 to call the deal off.

BEAGLE TRAINING.

A MAN let loose his beagle
To make the bunnies hump,
The beagle hunted where he pleased
And the man sat on a stump.

The dog ranged far and wide,
He would not be controlled;
And when he'd sat six hours
He got exceedingly cold.

A neighbor riding through the woods
Saw where he'd taken root,
"Your dog," said he, "is hunting
Two miles beyond Mt. Foote."

Mt. Foote was fifteen miles away,
So with the man he'd met,
Our friend rode sadly homeward,
But that beagle's hunting yet.

BRADLEY.

DRUGGING DOGS FOR SHOWS.

Editor *Forest and Stream*:

In "Dog Chat," a few weeks since, I noticed a strong and well-founded protest against the practice of drugging dogs with arsenic, etc., to get them into show form. Only excessive occupation at the time prevented me from enforcing these remarks then. Some months since in the English journals this subject was treated week after week. Many veterinary surgeons and others testified to the evil effects and the prevalence of this abuse of arsenic. As shows are much more numerous in England than here, and many dogs attend a large proportion of those held, the difficulty of keeping the animals in form and the consequent temptation to use drugs is very great. I have reason to believe that the condition of some of the dogs shipped to America is owing in part to the fact that during the voyage the accustomed drug is withheld, naturally.

A little chapter from my own experience may be more useful than abstract discussions. Last winter a dog was brought to the canine clinic of the Faculty of Comparative Medicine and Veterinary Science of McGill University, of this city, of which I had charge, for skin trouble. Though a mass of disease I at once was greatly struck with the high quality of the dog. He was greatness in ruins, as I had never seen it before in a dog. Inquiry brought out the fact that he had been a great English Crystal Palace winner.

After trying various kinds of treatment to little purpose I liked the dog so much that I took him to my own kennel to be treated. Many remedies were tried, but he could only be kept in moderate condition by pouring into him constantly enormous doses of arsenic. Evidently this dog had become so used to this drug that he could not do without it. I fear that the drugging of dogs for shows is a growing evil in the United States and Canada. I wish to warn all against this abuse of a useful remedy. It should be given to dogs with specific troubles only, and never as a general tonic or to improve "condition."

Reliance should be placed on dieting, exercise, grooming, massage and an occasional wash to keep a dog in condition. The neglect of some handlers and owners of dogs at shows after the judging is over is deplorable, and indicates how little real regard they have for this noble animal. A dog should be taken off the benches at least twice, and better three times, daily. He should receive more rather than less attention than at home, for the trials are severe. At a future time I will indicate when arsenic really should be used. Provision is made at Montreal and Ottawa shows for removal from the benches thrice daily.

WESLEY MILLS, M.D., D.V.S.

THE DOOM OF TROEVEETIE.

AN obliging correspondent informs us: "I have in my possession a copy of an old judgment, dated 1595, which perhaps may interest you: 'The Sheriffs of the city of Leyden.—Whereas the demand and conclusion done and taken by Lot. E. Huygengael, Mayor of this city, against and on account of the dog of Jan Janz van den Poel, named Troeveetie, or by any other name it might be called, whether by name or surname, at present being in prison. Whereas the information given by M. Eysler for this purpose, as well as the prisoner's own confession, given without torture or rack. Giving sentence and justice, we have of high authority and on behalf of the county of Holland and West Friesland, condemned it (the dog), by these presents, to be brought into the yard of Graefstyn, in this city, where criminals are usually punished, and that it may there, by the executioner, be hung by means of a string on the gallows, between heaven and earth, so that death may ensue; further that its dead body be dragged on a stretcher into the gallows-field, and that there it be suspended to the gallows in horridification for all other dogs, and as an example to everybody. We further declare all his assets, if it owns any, to be forfeited and

confiscated in favor of the county of Holland and West Friesland. Actum in the public court of justice—the 'Doomstool'—in the presence of all the aldermen, May 25, 1595.' This dog had bitten J. J. van den Poel's baby when playing at his uncle's house, where the child was holding in his hand a piece of meat, which the dog had seized, and so bitten the child, and thus inflicted a wound on the two fingers of the right hand, 'through the skin to the flesh, making the blood pour out of the wound, and causing the child to die from this world by the terror thus produced within a few days afterwards.'"—Hartshorne's "Hanging in Chains."

TORONTO KENNEL CLUB'S SHOW.

A SHOW of members' dogs was held at Toronto, in Richmond Hall, the evening of Aug. 13. It created a great deal of interest among fanciers, and some dogs known to outside fame were the recipients of honors. It was a bad time for a show owing to the absence of many members, and the near approach of the show next month. Mr. James Luckwell, the well-known spaniel man of Woodstock, Ont., donated the ermine, and made his work all the more interesting and instructive by instructive discussions of the dog's good points. A vote of thanks was tendered him at a meeting of the club, which was called by President Boyle after the judging. The awards were as follows:

IRISH SETTERS.—1st, C. Campion's Belle; 2d, T. J. Mitchener's Shaun Rhu.

COCKER SPANIELS.—CHAMPION.—1st, Geo. Bell's King of Obos.—OPEN.—Dogs: 1st, Geo. Bell's Obadiah; 2d, T. J. Mitchener's Dono. Bitches: 1st, G. Bell's I Say; 2d, J. Elder's Muse; 3d, P. J. Keating's Jennie.—OTHER THAN BLACK.—1st, T. D. Fitzsimmon's Mollie. Puppies: 1st, J. Bell's I Say.

FIELD SPANIELS.—Vhc., P. J. Keating's Raven.

KING CHARLES SPANIELS.—1st, 2d and 3d, Yorke & Forshaw's Ruby, Duke and Topsy.

PRINCE CHARLES SPANIELS.—1st, Yorke & Forshaw's Romeo.

BLACK POODLES.—1st, R. Wright's Friday.

"CHURN-DOG" STORIES are always in order. A city man who used to live on a farm, as so many city men did when they were boys, sends us this: "At home on the farm we had a number of cows, so many that churning was too heavy a task for even the men folks, so Mr. L. rigged up a dog churn, an inclined wheel, a sort of canine treadmill. It became the duty of Ponto, a large white mastiff, to tread that monotonous cycle, and notwithstanding the toothsome bit of meat that was fastened on a lath within four inches of his nose, he was not at all proud of his position and responsibility. He made several attempts to shirk his task, and twice succeeded. He got to know when churning day came around as well as any one in the house. On the morning of that day he would loiter about the kitchen door until he was fed, and as soon as he heard the note of preparation—the bringing of the cream jugs, preparing the churn, etc.—he would put for the woods and would not be seen again until night. The day of churning was changed, and next morning a more crestfallen and astonished dog was never seen when he was collared and harnessed to the beam which set the dash in motion; he looked positively foolish. He did his work, but with lowered head, and in cogitation evidently. On another occasion he tried another dodge. When they were about to put him on the wheel he ran up to his mistress holding up one paw, affecting to be lame. She thought much of the dog, and was inclined to let him off that day. The next instant he was seen churning over a high fence after a neighbor's cat. 'Well,' said the old lady, 'if he can go after a cat like that, he is able to churn.' And he did, and never tried to shirk his work again.—J. D. J."

THE MONTREAL DOG SHOW.—Editor *Forest and Stream*: The new building for the bench show is now completed. It is 170x36ft., and it is estimated that 600 to 700 dogs can be comfortably benched. Two neat offices, one for exhibitors and the press, the other for the judges and officers of the show, have been erected. In order to economize space for the exhibits, these offices have been elevated. The building is pronounced first-class in every way by all who have seen it. It is admirably ventilated and lighted. A large number of premium lists have been mailed. Those who have not received them should apply to the secretary, J. S. Robertson, 56 St. Peter street, Montreal. We expect a very large entry, but shall not crowd even if we have to decline entries.—WESLEY MILLS, M.D., Superintendent.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Onawa. By Chas. D. Roberts, Dexter, Me., for liver and white ticked pointer dog, whelped May 5, 1891, by Trinker's Bang (Crockett-Trinker) out of Juno King Don (King Don-Meteor's Dell).

Corktown Bebe. By Corktown Cocker Kennels, Ottawa, Ont., for black cocker spaniel bitch, whelped Feb. 5, 1891, by Bounce (Bob Obo-Tough) out of Enone (Obo, Jr.-Tough).

Corktown Crusoe. By Corktown Cocker Kennels, Ottawa, Ont., for black cocker spaniel bitch, whelped Feb. 5, 1891, by Bounce (Bob Obo-Tough) out of Enone (Obo, Jr.-Tough).

Royal Rosey and Leah Lee. By F. B. Zimmer, Gloversville, N. Y., for white, black and tan beagle bitches, whelped Aug. 6, 1891, by champion Royal Krueger (champion Bannerman-Cora) out of champion Twinkle (champion Lee-Juliette).

BRED.

Prepared Blanks sent free on application.

Kilmarnock Winnie.—Renown. Kilmarnock Collie Kennels, (Boston, Mass.) collie bitch Kilmarnock Winnie (Kilmarnock Chief—champion Winnie) to their Renown (Metchley Wonder—Daisy Miller), Aug. 7.

Flora—Dad Monarch. Mr. Dunn's (Providence, R. I.) English setter bitch Flora to S. B. Allen's Dad Monarch (Roy Monarch—Blue Jennie), Aug. 5.

Tough—Bob Obo. Corktown Cocker Kennels' (Ottawa, Ont.) cocker spaniel bitch Tough (Wildair-Belle) to Rideau Kennels' Bob Obo (champion Obo—Farrow's Nellie), July 22.

Wanda—Obo, Jr. Corktown Cocker Kennels' (Ottawa, Ont.) cocker spaniel bitch Wanda (Bob Obo-Cleo) to Rideau Kennels' Obo, Jr. (champion Obo—Farrow's Nellie), Aug. 5.

Rattler III. J. C. Crawford's (Chicago, Ill.) beagle bitch —to W. S. Gates's champion Rattler III, May 5.

Queen of Lee—Rattler III. P. Donaldson's (New Richmond, O.) beagle bitch Queen of Lee to W. S. Gates's champion Rattler III.

Damper, Jr.—Rattler III. C. H. Jintz's (Philadelphia, Pa.) beagle bitch Damper, Jr. to W. S. Gates's champion Rattler III.

WHELFES.

Prepared Blanks sent free on application.

Twinkle. F. B. Zimmer's (Gloversville, N. Y.) beagle bitch champion Twinkle (champion Lee-Juliette), Aug. 6, three (one dog), by Cornell-Harmony Kennels' champion Royal Krueger (champion Bannerman-Cora); dog dead.

Mystic II. E. H. Bragg's (North Sidney, Me.) beagle bitch Mystic II. (Ross-Spot), Aug. 10, six (four dogs), by his Chubb (imported Blue Boy-Mystic).

SALES.

Prepared Blanks sent free on application.

Jack Bannerman. White and tan beagle dog, whelped September, 1888, by champion Bannerman out of Kate, by Ray Hillebrant, Johnstown, N. Y., to F. B. Zimmer, Gloversville, N. Y.

Major O'Rourke. Foxhound dog, by R. P. Perry, Braintree, Mass., to F. H. Hayes, Dexter, Me.

[illegible]

CAMP ORNAMENTS.—The various decorations and devices in shells and pebbles are entirely missing this year, there being little attempt to make the camp at all ornamental.

THE A. C. A. SEA SERPENT.—The great A. C. A. sea serpent which attacked the camp on Monday is a novelty, and has excited a great deal of curiosity. There is no trace as to its origin, but a wandering pair from Squaw Point report that on a stroll far beyond the camp they found in a wheatfield some remnants of canvas and wood, some pots of paint, brushes, nails and similar debris, with a number of very large footprints, evidently those of a human being and not a dragon.

THE A. C. A. MEET OF 1891.

- | | |
|-------------------|----------------------|
| 1890—Lake George. | 1886—Grindstone. |
| 1891—Lake George. | 1887—Lake Champlain. |
| 1882—Lake George. | 1888—Lake George. |
| 1883—Stony Lake. | 1889—Stave Island. |
| 1884—Grindstone. | 1890—Jessup's Neck. |
| 1885—Grindstone. | 1891—Lake Champlain. |

FOR twelve years the American Canoe Association has held its annual camps in these locations, this year coming for the second time to Lake Champlain. The first eight of these camps were practically under the management of the Association as a whole, but for the last four years the division scheme has been in operation, each division in succession holding the meet in its territory and having the main part in its management. The present meet completes the first full round of divisions, the order having been Central, Northern, Atlantic and finally Eastern. As a matter of fact the first canoeists to take advantage of the new scheme and organize themselves as a separate division of the A. C. A. were the New England men, the Eastern Division having been organized at the local meet at Calla Shasta, on the Connecticut River, in May, 1886, and the first meet under the new arrangement should have been held in the Eastern Division. In that year, however, 1887, Mr. Butler and Mr. Barney, the leading men of the new division, declined the office of commodore, and the division waived its turn, leaving the main body of the Association to hold the meet, as in the past, which was done at Bow-Arrow Point, on this lake.

The next year, 1888, may really be set down as the first A. C. A. meet under division auspices, the commodore and secretary-treasurer being chosen from the division and not from the Association at large, and after completing the round of all the divisions, it must be said that what was looked upon as a doubtful and even dangerous experiment when begun in 1886, has proved in all ways a success. Instead of dividing the Association, or causing a decrease of membership, the four local bodies have been able to reach individual canoeists more effectively than the one original body; while the friendly rivalry between the divisions has stimulated each to special efforts to excel the others, both in the management of its meet, when the turn comes, and in attendance at each meet.

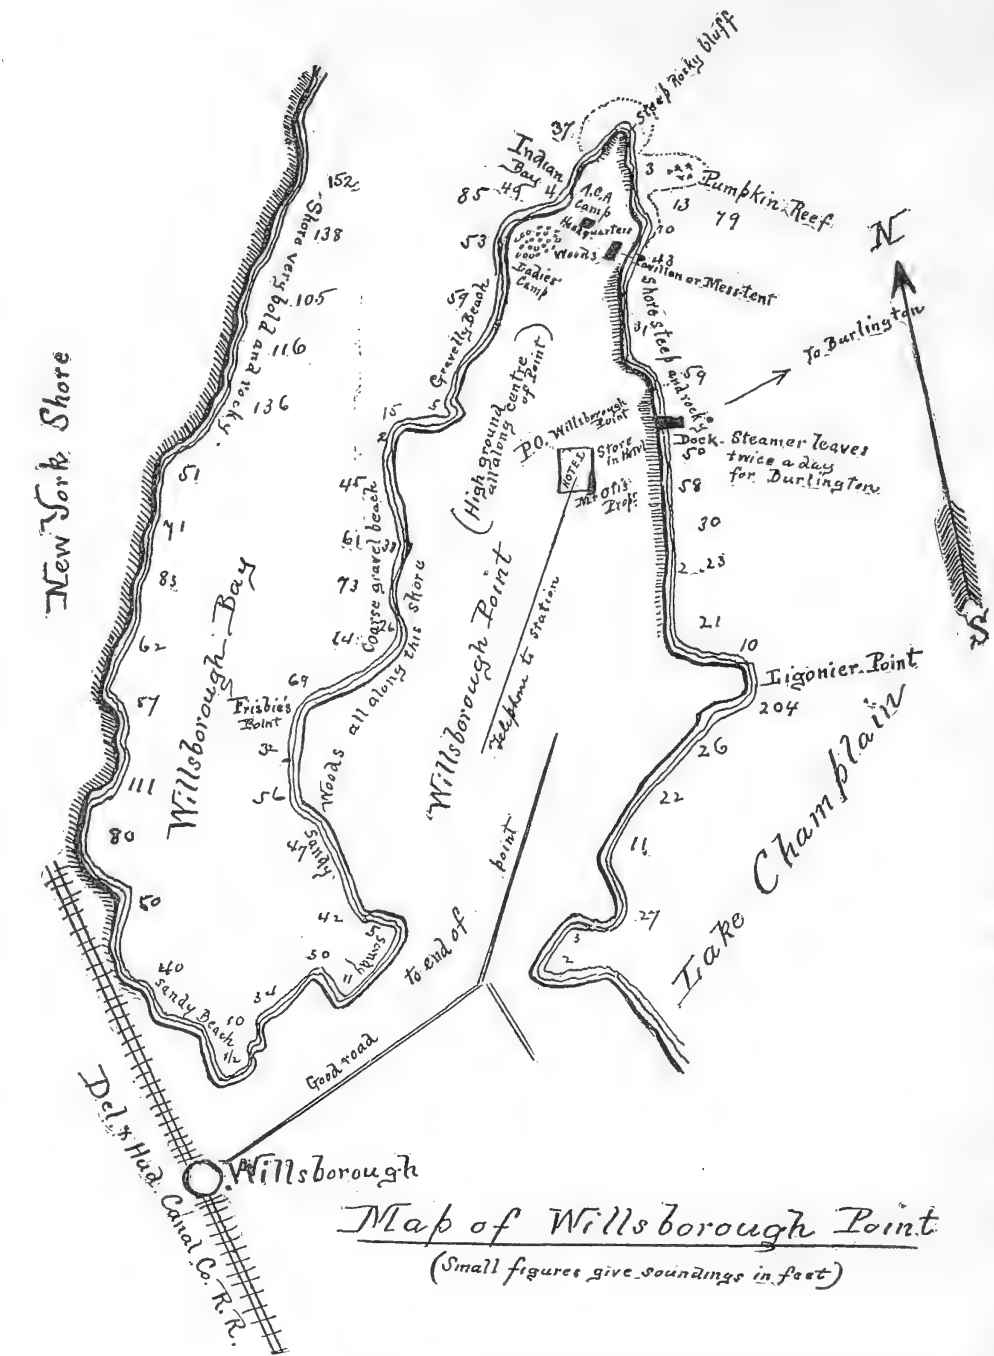

While the first salt-water meet, that of the Atlantic Division at Jessup's Neck last year, was in many respects a most delightful one, there were several serious drawbacks which served as warnings to the present executive, and with the experience of 1890 to guide them, the present camp has been made one of the best, so far as site and conveniences are concerned. The view at the head of this column includes the most picturesque scenery of the eastern portion of the United States, Lake George, Lake Champlain, Long Island Sound, and above all the famous Thousand Islands of the St. Lawrence. It is no wonder that each of the nine separate camp sites has its special beauties and its enthusiastic partisans, and that a comparison is very difficult, but in beauty of location the present camp is unequalled. The view is far wider and more extended than on Lake George, being like Grindstone and Jessup's Neck in this particular, but in each of the latter the distant mountains on every hand which make such a charming background for Willsborough Point, were entirely absent. Wooded hills and mountains, the Adirondacks on the west with the Green Mountains of Vermont on the east, together with clear green water, shady nooks and bays, sandy beaches and islands green and rocky, make the view in all directions a most charming one.

Not only is the outlook all that could be desired, but the camp site itself is in keeping with the surroundings. Taken as a whole, the location offers a most admirable combination of convenience and beauty. The land is mostly high, and in all places sufficiently dry to make good tent sites. Shade or open space can be had at will in any part of the camp, and the water is everywhere at the beach level. The beach in many places, especially on the eastern side, is of pebbles, but in parts is rough and stony. Considering the amount of shade, the signal station is conveniently visible, though to make it so headquarters were located at a distance from the main camp.

Two great features of the camp are the hotel and the mess. The former is a cozy and comfortable place, offering every convenience for ladies and chance visitors who do not care to camp out. At the same time it is free from the objections of most summer hotels, which turn loose on the camp a host of sightseers. It is in charge of a gentleman who has done everything possible to accommodate the canoeists, and who is giving them a table that has never been equaled at any camp mess. The meals are served in a large summer pavilion, the sides of which are of canvas, with a board floor that is perfect for dancing, as has been fully proved. The tables, covered with clean table cloths and real napkins, are served by neat trim country girls, and the bill of fare is most satisfactory in quality and quantity. The scale of prices is \$1 per day, or 35 cents each for breakfast and supper and 50 cents for dinner. There are tables and seats for probably 200 persons, each table being reserved for a party of five. Many tables are decorated with flags on small stands, and the pavilion is a most comfortable camp store. Throughout the camp a number of small cooking outfits are seen, but there are few large camp messes, nearly every one patronizing the general mess. The only disadvantages of the camp arise from the fact that nature has laid it out on too large a scale for the number who are likely to attend, and as a consequence the familiar social intercourse of Grindstone and Jessup's Neck is absent to a certain extent. Casing the ground, the available space is far in excess of any previous camp, there is ample room for a meet of 600 or 800, and naturally the 200 or 300 who will make up the camp this week are broken up into groups instead of forming one united community. There is hardly a limit to the variety of tent sites, a man may choose between the woods and the open, between the beautiful rocks, high up on a rocky ledge, and overlooking the lake, the shelter, gravelly beach, with a low bank at the back, or the open hillside with its unobstructed view. The result is that the men are widely scattered. Wherever one may be he is certain to have a long walk to half a dozen points of interest, either the mess shed, the headquarters and post-office, or the bluff from which the races are to be seen. From the Toronto camp to the mess shed is a very long distance, and from the main camp to the mess shed is a still longer one, and the mess shed is a long way from the lake, and the lake is a long way from the mess shed. All this interferes greatly with the usual familiar, everyday intercourse of camp life, and especially with the smaller camp-fires and impromptu sports, no one knows what may be going on in other parts of the camp.

The location of the dock is also unfortunate, as may be seen from the map; it is a long distance from all parts of the camp, the consequence being that no one can go to the dock for a day or two, and one may be camp two or three days without knowing who of his friends are present. In this respect the camp is like Stave Island and Long Island in Lake George; and very different from Jessup's Neck, where the arrivals at the main dock were seen and quickly announced through camp. One of the pleasantest features of a meet is the daily arrival of the steamer and the meeting of old friends; and much of this is lost when the dock is far from the center of the camp. In this case, however, there is a strong compensation; by using the existing dock the Association saves a heavy outlay.

The courses for the races are two, an inner course off Indian Bay, and an outer, to the N.E. of the point. The former is visible from the main camp, but not from Squaw Point; to see the outer course it is necessary to go to the point or to the "steep rocky bluff," or half a mile from the landing, and the distance is still longer if it is a still longer sail from these landings to the starting line. The camp site committee, Messrs. Buddington and Butler, have worked very hard and with good results, the preliminary arrangements being excellent. Tent floors have been built in advance when ordered, also the usual landing stages, the grounds have been put in good order, and special care has been given to the sanitary arrangements. The camp is a most comfortable one, and the transportation is fairly good. The connection with the trains from the south, from New York and Albany, is hardly perfect, entailing a wait of nearly five hours at Port Kent. In the hurry and bustle of everyday life, a few hours of serious thought and deliberate introspection, communing with one's self as it were, are never thrown away. At the same time, one would hardly select the stringpiece of the Port Kent train for an August camp, for such a trip is a most disagreeable one. Absolute quick transit for the last five miles of the long journey to camp is something of the first importance, but which has been seldom realized. It was in 1884 at Grindstone and in 1888 at Lake George, but at Bow-Arrow in 1887, Stave Island in 1889, and particularly at Jessup's Neck in 1890, the period of purgatorial probation was anywhere from six to twenty-four hours for the men and an indefinite time for ladies.

Map of Willsborough Point.
(Small figures give soundings in feet)

gage. The first essential in the way of transportation is prompt connection with the railroads from New York and Albany at Lake George, Lake Champlain or the St. Lawrence, from half to two-thirds of the attendance is from this quarter. It seems now that a better connection could have been made from Willsborough Station, but this is a matter that can only be learned by experience, and the committee have done a great deal of work, and it has been well done.

The final arrangement of the camp is somewhat different from that in the map before published. Indian Bay is a deeper indentation than there shown, and the headquarters is nearer to the end of the point, near the first of the three letters A. C. A. Here are Com. Lawson's tents, the A. C. A. tent, with post office and secretary's office, the flag and signal poles, and two cannon. To the north, on the high ground of the extreme point, is the Canadian side, where the members of the Toronto C. C. Following the shores of Indian Bay, on which, if the truth must be told, the beach is by no means perfect, being partly muddy and soft, with holes and rough stones in plenty, to the westward of headquarters is the Brooklyn C. C. camp on the beach, with Springfield just back of it on the high ground.

The main encampment is in the grove on Indian Bay, opposite to the figures 4 and 4 on the map. This grove, mainly of trees, extends for a mile along the shore of Willsborough. The first suggestion was to make this the ladies' camp, and it is so marked on the map, but the location was finally changed, Squaw Point being on the east shore of the Point, near the figure 3 on Pumpkin Reef.

The tents of the main camp being scattered among the trees, there are this year no defined club camps, such as those of the Vespers and lanterns at Jessup's Neck, while the fine display of club flags that graced the bluff there is also missing. The club attendance this year is thus far smaller than last, the register will probably show a greater number of clubs represented, but by only half a dozen members each. The Mohican C. C. will probably have more men in camp than any other. The older clubs are not well represented in point of numbers. Rochester has only two representatives, Capt. Rogers and his son in telescope, Newburg has one member, Oswego none, Rondout none, Pittsburgh none, Buffalo none, Peterboro none, Red Dragon none, Rome none. The Toronto, New York, Yonkers, Knickerbocker and Brooklyn average about half a dozen members each. A great many new faces are seen, and thus far comparatively few of the old men who made up the camps of 1887 to 1889.

Among the latter are Gibson, Whitlock, Vaux, Stephens, Fernow, Rev. Dr. Neide, Knappe, Butler and W. B. Wackerhagen. Gen. Oliver is expected for a few days, also Dr. Chas. A. Neide. Mr. Shedd is in Tacoma, Mr. Mix and Dr. Masten are in Europe, Mr. French is detained by business, as are Dr. Gage and W. G. Mackendrick, of the present regatta committee. The most distant representative this far is Mr. T. J. Kirkpatrick, of Springfield, Ohio, at an A. C. A. meet for the first time. A rumor has reached camp that Mr. Warder, now of Oakland, Cal., is on his wild and woolly way to camp, being last reported at Tacoma, where he stopped to visit Mr. Shedd. Mr. Barney is expected, but without a canoe.

At Squaw Point are of course the Seaveys, with Miss Dartnell, a large lantern party, Mr. and Mrs. Miss Palmer, Mrs. and Miss Winsor, Miss Fredrick and the Misses Douglas, and Mr. and Mrs. Belmont. Mr. Scott, of Ottawa, has a party of five; Mr. J. N. Mackendrick, of Gal., is present with his wife; the Misses Sherwood are also at Squaw Point; while Mrs. and Miss Vaux and Mrs. Gibson are at the hotel.

Those who have read Mr. Poe's "Thunder Storm Cruise" on this lake, published in the FOREST AND STREAM, will not be surprised to learn that the thunderstorm is something of an established

institution on this part of the lake as well as further north; and that camp has been favored with several very sudden storms of wind and rain, alone or in company. There has been but one real "rainy day," but a small and unobtrusive black cloud may be seen at almost any time above the hills, which may at a few moments' notice either sprinkle or drench the camp. The weather has been very pleasant, warm enough, but nothing like the high temperature and moisture of the coast, and it promises to continue pleasant for the remainder of the meet.

The usual duration of an A. C. A. meet is nominally two weeks, actually 10 days, the men breaking camp immediately after the conclusion of the racing, but few remaining the full time. This breaking up has been apparently governed by no special law, a few are called away by necessity, others see the vacant tent sites and the boxes on the dock and a stampede begins, the whole camp sometimes disappearing between sunrise and sunset. This year, for the first time, the attempt has been made to "continue the surroundings" for a third week, the date announced being Aug. 6 to 27. It has been impossible to lay out a full programme in advance, as so much depends on the attendance, but the general plan was for a preliminary week with no set events, but the pitching tents, renewing and making acquaintances, short cruises and regattas. The second week, or from Aug. 13 to 20, will be the principal week, devoted to races and visitors' day, while the third would be filled up with such cruises and entertainments as might be practicable. There is no doubt that a very pleasant meet can be had and the camp kept together for nearly three weeks, but it will in all probability prove desirable to begin the races on the Monday, instead of Thursday, of the second week.

One member of the site committee, Mr. Buddington, has a residence at Port Kent, and so has been enabled to spend much of his time about Willsborough Point, with the aid of his steam launch, giving personal attention to the thousand and one details which go to make a successful meet. Com. Lawson and Mr. Butler have also made a number of trips from Boston, and Vice-Com. Winné, from Albany. The camp was fairly opened as per programme on Aug. 6, the men drifting in slowly from all quarters. The headquarters tents were pitched, the flag poles set and a very good dock built. In the course of the next three days a number of tents were pitched, many of them at Squaw Point. For a day the rain proved troublesome, and on Wednesday night a very heavy squall struck the camp, but, with these exceptions and a few odd showers, the weather was most pleasant.

Toward the end of the week many new men arrived, making 150 in all. The camp thus far has been a quiet one, our old friends "Annie Laurie" and "Annie Rooney," too, together with "All Over," are buried beneath the deep blue waters of Peconic Bay. "Comrades" has not yet become epidemic to any considerable extent, and a strict quarantine is maintained by the patrol. The newest vagary is a request frequently made in a loud voice by one man or another to "Let the animals growl," which is invariably answered by a series of howls, growls and yells from all quarters which

wake the distant echoes. A second request, of "Louder, for the ladies," always follows, awaking a response which shakes the whole Point. In the short intervals during the day in which quiet reigns in this menagerie, a steam launch which haunts the bay, and is possessed of a most villainous whistle, makes itself as much of a common nuisance as possible by a long-drawn series of discordant shrieks.

This year the A. C. A. has added to its personal property and available assets the copyright of a "yell" as follows:
 Ricoty ax, Co ax, Co ax,
 Ricoty ax, Co ax, Co ax,
 Hi Ro, Hi Ro,
 Hi Ro, Hi Ro,
 Whoop Her Up,
 Whoop Her Up,
 (Two syllables of club name of "yeller" repeated.)
 A. C. A. A. C. A.
 Growl.

The camp orchestra shows out in good numbers, over a dozen, and the usual varieties this year, banjos, guitars, mandolins, a violinello, but no bugle. The youthful contingent this year included three small boys, the bright little nephew of Com. Lawson, the nephew of Vice-Com. Winn, and a youngster from Lowell.

One pleasing feature of camp decoration is missing this year, the club totems and various designs in nebbies and scollop shells, which added so much to the camp of 1890, but the conditions here are unfavorable, apart from the lack of shells. But few attempts at the usual burlesques of street names, etc., are seen.

Only one of the regular committee, Mr. L. B. Palmer, is present, but the place of Dr. Cragg is filled by Mr. Palmer, of Lowell, while Mr. R. J. Wilkin takes the place of Mr. W. G. MacKendrick, Mr. McMillan, of the Toronto C. C. is clerk of the course. The programme of the races is as follows:

REGULAR EVENTS.

- No. 1. Paddling and Sailing Combined.—One-half mile alternately, 3 miles.
- No. 2. Paddling.—Half mile straightaway.
- No. 3. Sailing.—Four and a half miles, same rig and ballast as in Race No. 1. (These three races to constitute the record races.)
- No. 4. Trophy Paddling.—One mile straightaway. Exempt from one-man canoe rule.
- No. 5. Unlimited Sailing Race.—No limit to rig or ballast. Time limit, two hours and a half; 6 miles. Starters in the trophy race to be selected from this race. See Rule 5.
- No. 6. Trophy Sailing.—No limit to rig or ballast. Time limit, three and a half hours; 9 miles. Starters to be selected as by Rule 5.
- No. 7. Novice Race.—No limit to rig or ballast; distance, 3 miles; open only to men who have not sailed a canoe prior to Sept. 1, 1890.
- No. 8. Sailing, "The Pecowic Cup."—Four and a half miles; no limit to rig or ballast. Winner of trophy barred.
- No. 9. Sailing, Club Race.—To be sailed on an L course, one leg a mile and the other leg half a mile, to sail twice over the course; distance, 3 miles. First three members of any one club to count; no club can be represented unless it enters at least three men; to be sailed early in the meet.
- No. 10. Cruising Race.—Open only to "General Purpose Canoes;" distance, 6 miles. Details to be posted. To be held early in the meet.

OTHER EVENTS.

- No. 11. Paddling War Canoe Race.—For crews of not less than ten; half mile straightaway.
- No. 12. Paddling Tandem.—Half mile straightaway.
- No. 13. Paddling Club Race.—Club Four, mile straightaway.
- No. 14. Sailing Upset and Maneuvering.—Open only to "General Purpose Canoes." No special appliances to sails, no limit to ballast; at signal, throw over and recover paddle; second signal, canoe to be tipped over until top of foremast touches the water. Canoes to be righted and cross finish line under sail.
- No. 15. Paddling Upset.—Usual conditions.
- No. 16. Canoe Gymnastics.
- No. 17. Gymnastics.

The buoys for the courses are oil barrels covered with white and red cloth in strips. As they float high they make excellent marks.

The usual arrangements for entries, starting, etc., are in force, the two regulations for starting and finishing all races, which were published last week in the FOREST AND STREAM, being adopted by the committee. Mr. Buddington's launch serves as a judge's boat, the races being timed from it.

The first races were called on Saturday, events 7, 10 and 15, novice sailing, general purpose sailing and upset paddling. The day was rather cloudy with a little rain, the wind being very light until late in the afternoon. In the evening an impromptu dance was given in the mess shed, the music being furnished by the Yonkers men and other crew members. The evening was passed very pleasantly, the party breaking up about 10:30.

During the night a fatal capsize took place at the mouth of the bay, the canoeists fortunately playing only the part of rescuers. Three men, Joe, an Indian who has a tent at Port Kent and sells small canoes, etc., with two white men, Wells and Murphy, started to sail to Willsborough Point in a small boat owned by the Indian, carrying all their tents and luggage. They pitched camp on the east end of the main line of tents. Services were held in the pavilion by the Rev. Dr. Neide, assisted by Dr. Cragg, of Burlington, a new member; and in the evening a service of song was held around a camp-fire at Squaw Point. During the day a number of men came into camp.

The racing fleet this year shows comparatively few new craft. Mr. Butler is sailing the Bee, his latest canoe, built last winter. Ford Jones has Canuck unchanged from last year. Knappe has the Ruggles Trout, used by Mr. Elliott last year. Schieffelin still sails the Leda. The two Swens from Toronto, sail their old canoes Christmas and Gwen. Murphy has a new canoe by a Rochester builder of the same construction as the Ruggles boats,

but much fuller model and inferior finish. Cartwright is sailing the Imp, used by Forbush last year; has no canoe present. Whitlock has Hornet and the new "City of Paris." Quick and Oxholm are using their old boats, Uno and Beta. Among the new Ruggles boats are the handsome Dawn and Tornado, owned by Gessler and Moore, of the Knickerbocker C. C. Douglas is sailing the new Tempest, designed and built by himself, and Palmer has the Ruggles Teaser of last year, re-named Cricket.

The paddling men are out this year in full force for the trophy, which Mr. Harry MacKendrick will not defend, being absent. Canada sends a strong paddling contingent, Johnson, the well-known paddler, who has not raced at a meet since 1888; Tilley, who made such a good showing last year; Muntz, a new man, of the Argonaut Boat Club, of Toronto; while Carnesie, of Cobocook, has a very handsome new boat to help him to first place again. A large entry is promised for the paddling races, and the States will also be well represented. The paddling racers are very handsome craft, the old open canoe having given way entirely to finer models. Messrs. Tilley and Carnegie have two specially fine boats, designed by Mr. Tilley and built by Rice, of Toronto. The Canadians will use in the paddling races these specially built racers, while Palmer, Knappe, and probably all the men from the States, will paddle their Ruggles sailing canoes, Cricket, Dawn, and the rest.

Not enough has been seen of the racers under way to show anything definite as to rig, but it may be said that there is nothing specially novel in the shape or rig of the sails this year, while the racing rig promises to greatly outnumber the standing.

The entry list is smaller than last year, including 40 names, as follows:

No.	Canoe.	Owner.	Club.	Builder.	Length.	Born.	Depth.
1.	Gwen	W. S. Sweny	Toronto	Plebeian	16	30	5
2.	Uno	W. S. Sweny	Toronto	Plebeian	16	30	5
3.	Beta	W. S. Sweny	Toronto	Plebeian	16	30	5

40.	Argonaut	W. S. Sweny	Toronto	Plebeian	16	30	5

The first race called on Saturday was event No. 7, the novice, 3 miles on the inner triangle, the wind being very light. The winner was Hornet, sailed by Mr. Smith, of the Shulz-Shub-Guth C. C., who has never sailed a canoe prior to coming to camp. The second race was for the general purpose canoes sailed on the outer triangle, 6 miles, wind light, won by Gwen, Mr. Roy Sweny, winning. The men were all very slow in regaining their canoes.

The first race on Monday was the paddling record, 1/2 mile, inside course, 19 starters, won by L. H. Belle, with 19 minutes second and Cricket third. The next race, event 8, Pecowic cup, was started at noon over the outer triangle, 5 miles. Canuck won easily, with Bee second, but Bee fouled the first mark. In the afternoon event 5, the unlimited, was started in a light wind, like the preceding race. Bee won by a good margin, with Beta second, Canuck third. No fourth and Leda fifth. The complete details of all the races will appear next week.

While watching the Pecowic Cup race, on Monday, the camp was thrown into a state of wild dismay and consternation by the appearance of a strange and horrible monster far up the Bay. As he came down, his eyes flashing fire, his huge jaws clashing together, and his many scaly coils rising above the water, the bravest quaked with fear, and the timid sought the shelter of the woods. As the monster disappeared, his remorseless way it became evident that his destination was Squaw Point, in search of the beautiful maidens which all tradition tells us is the chosen food of dragons and sea serpents.

A few bold spirits courageously manned the battery on the bluff, and a number of shots were fired, but with no apparent effect. As the monster turned to round the point, a forlorn hope, Messrs. Rogers and Kirkpatrick put out from shore in the old Hiawatha and attacked him with lances and harpoons, the gore flowing freely after each determined thrust. The combat was fierce and desperate on each side, and it was not until just abeam of Squaw Point that the serpent, badly wounded but not killed, was taken in tow and safely beached at the pavilion dock. His length is over 100 ft., and he is of the true summer-hotel variety, probably the only one ever captured alive. It is supposed that he has been attracted to Lake Champlain by the reports which have reached him of the great number of pretty girls in camp this year. A very funny incident occurred as his snakeship approached the camp, a small brown dog in the bow of a canoe espied him and at once set up a terrible barking.

CANOE-YAWLS AND CANOE-YACHTS.

THE necessity for a class of sailing craft of small size, but of greater power and stability for sea-going than a canoe, and yet retaining many of the good points of a canoe for cruising and handling on water, and for transportation and housing on shore, has for some time past been acknowledged and carried out by canoeists, and has prompted the class known as canoe-yawls. At the same time, practically the same wants have been asserting their existence, at the small end of yachting, and have generated what is known as the half-rate class, in England. Americans, always awake to improvements, have also caught on to the canoe-yawl type as a useful and probably "coming" class. In both countries, up till quite lately, the class has not been clearly defined as to its guiding or governing principles, or definition. The result, as might have been expected, is, that in one direction the class has imbibed many of the features of small yachts, and in the other, the equally objectionable tendency to develop skimming dish form for the sole purposes of speed.

The American paper FOREST AND STREAM very neatly christens the yacht-natured craft as "canoe-yachts," defining them thus—"keel craft with a large percentage of outside ballast;" and the canoe-yawl as "centerboard craft of moderate draft, and with inside ballast all movable, such boats, as by their draft, model, and ballasting, may be heached and housed;" and, further, it considers that the rating rule "seems peculiarly adapted for the class at large."

That the Y. R. A. rating rule does bring the two types, canoe yawl and canoe yachts, very fairly together, in ordinary circumstances, for racing, by its proportionate limitation of sail area to length, has been amply proved on several occasions this season, where boats of equal rating, but of different type, have met in sailing competition. But, though the sailing power or speed ability may thereby be correctly gauged, and the functions of the rule as a racing gauge fully maintained, there are other features demanded for special service or utility which no pure racing rule will fully grasp and maintain.

The truth of this is most clearly and unmistakably exemplified in the feature of depth, *i. e.*, fixed draft versus alterable draft. The rating rule, pure and simple, allows any "draft," hence the 1/2-rate rule of the latest pattern has permitted a permanent draft of at least 3 ft., in the form of a half ton lead "fin" (in some extreme craft the draft is even as much as 4 ft. 6 in.), whereas the canoe-yawl type has a draft of from 6 in. to about 1 ft. 6 in., supplemented with a drop-plate keel, whereby the same area nearly of effective lateral resistance may be obtained. But, question, assuming the length to be equal, does the sail area of 15 1/2 sq. ft. need a half ton lead fin of such depth to carry it? The answer is, no, it will not be the shallower and more useful type of craft, reefed for the breeze, sail equally well?

The answer from the canoe side of the question is decidedly in favor of the canoe-yawl type versus the yacht type; always, be it remembered, rating being equal.

Experience may now be called in, and the past week has furnished that which we could only speculate upon previously; a canoe-yawl has been at work in the Solent with the 1/2-raters and has beaten them, and has also saved her time on the 1-raters. We will give the plain facts as reported, and not claim too much for her or her class even. She herself is of a model we do not believe in for, aught except reaching speed, and we shall be surprised, should the rating rule, so if she does not get a bad beating in the first meeting with 1/2-rating yachts, in which there is a beat and run in a sea and strong wind; it should be so—but will it be?

The Spruce, canoe-yawl, raced at Hamble, July 17, in the 1-rater class, came in 1m. 1s. astern of Samona (1-rater), thus saved her time for first prize and beat all the 1/2-rater yachts. On the 21st she sailed in the Castle Club, Southampton, in the 1-rater class against 19 boats, she came in third boat, saving her time for first prize off Samona (1-rater) and Pup (0.8-rater), and beating the next boat (a 1/2-rater) by 5m. 48s., etc. She sailed again last Saturday against the 1/2-raters and took first prize at Southampton.

The general report of her performance, and which we also saw at a distance, being in another race, was that in the beat to windward, the rating rule, especially Balm, beat her easily, but, on the reach she left them easily, and in running they were about equal. —London Field.

RED DRAGON C. C.—Philadelphia, Aug. 11.—At a meeting of the Red Dragon Canoe and Boating Association, held Friday evening, Aug. 7, the following resolution was adopted: Resolved, That the name of this club be changed to the Red Dragon C. C. of Philadelphia.

A. C. A. MEMBERSHIP.—Atlantic Division: C. Frank Kireker, Paterson, N. J.

ANSWERS TO CORRESPONDENTS.

R. M., Mr. Sterling, Wis.—I intend to purchase a 12-gauge hammerless gun, about 8 1/2 lbs. weight, for duck, goose and grouse shooting. Would you advise 30 or 32 in. barrels? Does the extra 2 in. perceptibly increase the range? Will a heavier load than can be used in a 2 3/4 in. shell improve the shooting of a gun of weight mentioned at long range? Ans. A 32 in. barrel will be more satisfactory for long range in such a heavy arm. Use the 2 3/4 in. shell, and for harder hitting use a sharper grade of powder.

F. A. S., Seneca Falls.—What is the difference between pickerel and muskellunge? Ans. The name pickerel is often given to the pike. The true pickers are of several kinds and all of them small, the largest not exceeding 8 lbs. in weight. All of them have the cheeks and gill-covers completely covered with scales. The muskellunge grows to a very large size—50 or 60 lbs. It has no scales on the lower half of the cheeks and gill-covers. See FOREST AND STREAM of April 2 and 9, and May 14, 1891, for detailed accounts of all these fishes.

M. C.—I control a natural trout stream whose waters have been largely depleted of trout by persistent fishing. The stream is a grand one for breeding and growing trout. It is 1 1/2 miles long and is fed by springs at intervals throughout its entire length and discharges not less than half a million gallons of water per day. There is in the stream an abundance of food for trout. I intend to restock the stream and wish to ascertain: 1. What growth will trout make in their first, second and third years? 2. From the above description of the brook, what number of trout of good size (after the brook has become well stocked) should you think could be taken from the brook each year? In other words, what is the producing powers of such a brook when well stocked? Ans. 1. Yearlings will average about 2oz.; two-year-olds 4oz.; three-year-olds 8oz. according to Mr. Answorth's experience. Sometimes, however, two-year-olds will weigh 1lb., or stunted individuals only 4oz. No fixed rule can be given; much will depend upon the amount of food furnished and its quality. 2. It is impossible to tell the producing power of the brook in advance of trial. The best guide known to us is the report of the Caledonia station of the New York Fish Commission and that of the Southside Sportsmen's Club.

For Harness, Buggy Tops, Saddles, Fly Nets, Traveling Bags, Military Equipments, Etc.

Gives a beautiful finish, which will not peel or crack off under any conditions. Does not lose its lustre by age; dust will not stick to work finished with it. IS NOT A VARNISH. Contains no Turpentine, Benzine, Naphtha, Alcohol or other injurious articles.

SOLD BY ALL HARNESS MAKERS.

RODS.

Mr. JAS. WYHTE writes to us from Nova Scotia, saying: "I took two grilse and three salmon on the Lancewood trout rod you sent me. How is that for a light rod! It is as good as new yet."

The 9lb. 15oz. bass recently taken in Greenwood Lake was killed on one of our 7oz. Greenheart rods.

We invite Dealers and Sportsmen to call upon us and see how ADVANTAGEOUSLY they can purchase Sporting Goods. Our stock covers the following lines in their fullest varieties: GUNS, RIFLES, AMMUNITION, Fishing Tackle, BASE BALL, TENNIS, FENCING, BOXING, CYCLING, Etc. Send 5 cents (to cover postage) and we will mail you our new Illustrated Catalogue, covering above goods. Will also enclose a "Canvas Pocket Book."

BOOK OF THE GAME LAWS:

A COMPENDIUM OF THE LAWS RELATING TO GAME AND GAME FISH. REVISED TO DATE, AND EDITED BY CHARLES B. REYNOLDS, OF THE FOREST AND STREAM.

The scope of the work embraces all the laws relating to game and game fish of every State and Territory in the Union and the British Provinces. The better to insure accuracy, all the important sections are given in their full text, as they appear on the statute books. Errors which might arise from abstracting or paraphrasing are thus avoided. The preparation of the work has involved an examination of more than 800 distinct original and amendatory acts, scattered through multitudinous volumes of the compiled statutes and session laws of the fifty-nine States, Territories and Provinces here represented. The labor of compilation has been largely increased by the often careless and sometimes seemingly contradictory nature of the legislation. The BOOK OF THE GAME LAWS is the result of a painstaking and conscientious endeavor to furnish an accurate and reliable compendium. Price 50 cents. For sale by

ANSWERS TO CORRESPONDENTS.

"THE WANE OF THE ADIRONDACKS."

THE title of Mr. Charles Hallock's paper published to-day has been changed, on its author's suggestion that with their ever increasing hosts of summer visitors the Adirondacks cannot well be said to be on the wane. Nevertheless, a perusal of this second special Adirondack number will convince most readers that the Adirondacks, as known to the sportsmen, are in large measure passing away. It is not at all surprising that most of the papers we print to-day, coming from older visitors to the North Woods, should be of a reminiscent character and tinged with natural regret at the changing conditions in the Northern Wilderness.

No one who has known the region in its primitive condition, when the sportsman might go wheresoever his own sweet will prompted, fish in any and all waters unmolested, follow his deer without let or hindrance, and camp where fancy dictated, on jutting point or beside pleasant rivers—no visitor of those years, now returning, can contemplate existing conditions without such comparison, nor without involuntarily sighing for the old order of things. The Adirondacks of to-day stand largely for a district of vast private parks and preserves, posted with trespass notices and guarded by private police; of lakes plowed by steamboats and dominated by huge summer hotels: of sickening woodland wastes devastated by the ax and by fire.

There is no need of visiting the North Woods to learn all this. The newspapers regularly devote a share of their space to the Adirondacks, as to other summer resorts of people who because of their wealth or social or political position are entitled to have their sitting-down and their rising-up chronicled by the press. These people

are not at all dependent on fishing or shooting for their amusement. The record of Secretary Noble's catch of 109 trout in a day takes up but two lines in a half-column letter, which is for the most part concerned with the more popular North Woods amusements of balls, lawn tennis tournaments, church fairs, charity fairs, trotting meetings and rifle matches for silver trophies. Paul Smith's was once in the wilderness; but note the record of a recent gala night there:

While the charity ball at Paul Smith's on Tuesday was not as large as the annual charity dance in New York, yet it lacked little in brilliancy. The company of distinguished ladies and gentlemen gathered on the shores of St. Regis for sweet charity's sake would have done honor to any ballroom in the world. The silks, satins, laces, diamonds and fine clothes generally made the woods-men's eyes stick out with wonderment at the fortunes thus displayed. Some of the ladies went so far as to send to the city safe deposit companies for their jewels. Paul Smith beamed on his guests, as a genial host should, and pointed to them as proof that they represented \$150,000,000 of cold hard cash.

When the man with the fishing rod encounters an orchestra in a North Woods hotel making music for an occasion of this sort, how is he to avoid falling into a reminiscent mood, and why may he not be indulged in his plaint that the glory of the Adirondacks is on the wane?

A CAMP-FIRE RUN WILD.

SOME wooden tent-pins inclosing a few square yards of ground half covered with a bed of evergreen twigs, matted but still fresh and odorless, a litter of paper and powder smirched rags, empty cans and boxes, a few sticks of fire wood, a blackened, primitive wooden crane, with its half-charred supporting crotches, and a smoldering heap of ashes and dying brands, mark the place of a camp recently deserted.

Coming upon it by chance, one could not help a feeling of loneliness, something akin to that inspired by the cold hearthstone of an empty house, or the crumbling foundations of a dwelling long since fallen to ruin.

What days and nights of healthful life have been spent here. What happy hours, never to return, have been passed here. What jokes have flashed about; what merry tales been told; what joyous peals of laughter rang where now all is silence.

But no one is there to see it. A crow peers down from a treetop to discover what pickings he may glean; and a mink steals up from the landing that bears the keelmarks of lately departed boats, both distrustful of the old silence which the place has so suddenly resumed; and a company of jays, flit silently about, wondering that there are no intruders to assail with their inexhaustible vocabulary.

A puff of wind rustles among the treetops, disturbing the balance of the crow, then plunges downward and sets afloat a scurry of dry leaves; and out of the gray ashes uncoils a thread of smoke and spins it off into the haze of leaves and shadows.

The crow flaps in sudden alarm, the mink takes shelter in his coign of vantage among the driftwood, and the jays raise a multitudinous clamor of discordant outcry.

The dry leaves alight as if by mischievous guidance of evil purpose upon the dormant embers, another puff of wind arouses a flame that first tastes them, then licks them with an eager tongue, then with the next eddying breath scatters its crumbs of sparks into the verge of the forest. These the rising breeze fans till it loads itself with a light burden of smoke, shifted now here, now there, as it is trailed along the forest floor, now climbing among the branches, then soaring skyward.

Little flames creep along the bodies of fallen trees and fluffy windrows of dry leaves, toying like panther kittens with their assured prey, and then grown hungry with such dainty tasting, the flames upbust in a mad fury of devouring. They climb swifter than panthers to treetops, falling back they gnaw savagely at tree roots, till the ancient lords of the forest reel and topple and fall before the gathering wind, and bear their destroyer still onward.

The leeward woods are thick with a blinding, stifling fog and smoke, through which all the wild creatures of the forest flee in terror, whither, they know not—by chance to safety, by equal chance perhaps to a terrible death in the surging deluge of fire. The billows of flame heave and dash with a constant insatiate roar, tossing ever onward a red foam of sparks and casting a jetsam of lurid brands upon the ever-retreating strand that is but touched with the wash of enkindling, when it is overrun by the sea of fire.

The ice-cold springs grow hot in its fierce overwhelming wave, the purling rills hiss and boil and shrink before it, then vanish from their seared beds.

All the living greenness of the forest is utterly consumed—great trees that have stood like towers, defying the centuries, with the ephemeral verdure of the woodland undergrowth; and to mark the place of all this recent majesty and beauty, there is but smouldering ruin and black and ashen waste.

Little farms but lately uncovered to the sun out of the wilderness, cozy homesteads but newly built, are swept away, and with them cherished hopes and perhaps precious lives.

What irreparable devastation has been wrought by the camp-fire run wild!

Meanwhile the careless begetters of this havoc are making their leisurely way toward the outer world of civilization, serenely noting that the woods are on fire, and complacently congratulating themselves that the disaster did not come to spoil their outing; never once thinking that by a slight exercise of that care which all men owe the world, this calamity, that a century cannot repair, might have been avoided.

Campers, "Put out the light, and then—put out the light."

FOR "FOREST AND STREAM" READERS.

NEXT week we shall begin the publication of a series of illustrations, "Among the Wildfowl," drawn for the FOREST AND STREAM by Mr. W. Townsend. These sketches are capital delineations of wild duck ways as studied by the artist during his ducking excursions on Virginia coast waters. Their truthfulness to nature will be appreciated by all old duck hunters. The series will extend through several weeks.

From Capt. F. S. Dugmore, R. N. R., a falconer of thirty years' experience, we have secured a series of chapters on the "Art of Fishing with Trained Cormorants." Capt. Dugmore has not only successfully followed this sport himself, but has taught others the art, having numbered among his apt pupils the late Crown Prince Rudolph of Austria. Whether or no the instructions which he has prepared for the readers of FOREST AND STREAM shall lead to the introduction of the Chinese fishing methods in America, we may at least give assurance that the instructions themselves will be found vastly entertaining. Their publication will begin shortly.

One of the "Snap Shots" the other day suggested that we proposed some time to have a special number made up of forest and stream reminiscences of boyhood days. The hint has been acted upon by several favorite contributors; and there has been sent in a goodly supply of happily told youthful experiences well worthy the telling. It is in store for a future number.

RESCUE OF NATIVE FISHES.

THE work of transferring fishes from the overflow ponds in the Mississippi Valley has been going on for several years with excellent results. Hundreds of thousands of adult fishes have been saved from drying up in pools and sloughs during the heat of summer and the effect upon the supply is clearly seen. The State of Illinois and the United States have joined forces in this undertaking and pushed it vigorously forward. Illinois owns a swift steamer, the Lotus, which is specially fitted up with fish tanks on the outer guards, into which sprays of water can be thrown by pumps run by steam from the boiler, through pipes extending the entire length of the boat on each side. This insures safe transportation and rapid distribution. The United States sends out its Fish Commission cars in August to extend this highly successful work into remote portions of Illinois and many other States. It is certain that the results of systematic stocking with mature fishes of the kind here distributed are never in doubt and always prompt, and the industry, therefore, never fails to receive public sympathy and support.

We regret to note the death of H. F. Bingham, a well-known lawyer of Portland, Oregon, who, while fishing on a cliff of rocks at the beach Friday, fell into the water, was carried out to sea by a huge wave, and drowned. Mr. Bingham was interested in FOREST AND STREAM subjects and frequently contributed to our columns.

THE first special Adirondack number was issued June 18.

The Sportsman Tourist.

KATYDID.

IN the cool, crisp nights of autumn,
When the woods are dark and still,
Loud above the hisping crickets
Rings in accents clear and shrill
That never-ending wrangle of the green-winged katydid:
Katy did!
Katy didn't!
Yes she did!

From twilight until rosy dawn steals softly o'er the hills,
These disputatious insects, who inherit stubborn wills,
Are nagging one another with voices rasping rude:
Who was it broke the bottle?
And at once the restless brood:
Katy did!
Katy didn't!
Yes she did!

When frosty nights have chilled the fierceness of their rows,
And only faint, weak stragglers still cling among the boughs,
'Tis sad to hear their faltering song,
Thin echo of the past,
Still keeping up the family feud, though life be slipping fast:
Katy did!
Katy didn't!
Yes she did!

W. TOWNSEND.

A COLORADO OUTING.—I.

IN this country we never consider how hot it is until we find a thermometer, then 86° F. becomes impressive, and we get out of patience with the flies. The Colorado fly is exasperating to a degree impossible in any other quarter; the bald-headed man must be, I conjecture, at a disadvantage when the house-fly is in pursuit of business or pleasure; he has a way of clinging with his fore feet to the bare scalp and dragging the other four feet over the glistening surface, he does it in a leisurely world-without-end sort of way, as if he had poisoned his toes with ivy and they itched and he had struck witch hazel or other antidote against irritation. But with the heat and flies, there is always a "custom of an afternoon" for the south wind to blow, and that gentle breeze makes life a luxury if one keeps in the shade, its hypnotic influence after lunch is irresistible, even with the racket in the busy thoroughfare under the window—a thoroughfare where we could kill antelope twenty-five years ago.

Under this influence I look out and down into the display offered by a candy and cake bakery across the street, not omitting an invitation to "ice cream" done in letters of irregular sizes and original designs. I imagine the ice cream to be watery and devoid of temptation while I brush a fly off my nose and recognize a cake in the baker's window. The cake had white icing once, but the flies have communed with the cupid that ornaments the center and have left tokens of their adoration here and there, and the sunlight has burned brown patches in the surface, so that the wedding cake is no longer appetizing—but it was a very gay cake at one time and gave promise, just as a wedding cake does, of a more satisfactory fruition. In its best estate and even later—the wedding cake having been subjected to a closer inspection than the present distance affords—I am advised, of course, touching the fly specks as well as the texture and shape of the cupid's wing—they, the wings, reminded one somewhat of a trout's pectoral fins, and now that they have been tarnished the color adds to the illusion.

With the combination of the house flies, the cake and its adornments, the lunch and the mercury, an easy chair and the soft south wind stealing in at the open window, you can imagine the result: I am momentarily startled by a slight crash of something coming in contact with the floor and faintly realize that the briar root has slipped from my fingers, but I also realize that it was quite smoked out, and a lingering spark a mere possibility, and that the pipe is accustomed to hard knocks—then I have a faint notion of a wish to be out of town, notwithstanding I believe Denver to be the most delightful city on the continent. But for this I may be forgiven and justified as one may be for loving the young men and women whom he has watched growing from babyhood to maturity, when one has a hand in the bringing up; one does not often have the opportunity of seeing a village of 2,500 develop into a city of 150,000—souls, I was going of say, but I am skeptical in some things, and this same doubt is at the bottom of the wish that moved me from the window.

The grip, better called a capacious leather satchel, with a change of clothing, an empty creel swinging from my shoulder and the rod case leaning against the back of the seat in front, where I can keep my eye on it, a confused notion of men, women and children hovering about phantom-like, and all strangers, except a shadowy impression of Brother Byers reading a newspaper, intermingle it would seem with the noise of the falling pipe. The sweet savor of the south wind vanishes and the atmosphere is stuffy and smells of oil until the windows are raised. There is the ringing of bells, the shuffling of feet, the buzzing of strange voices, then every sound suddenly ceases and I am moving. The sensation is pleasant and the surroundings familiar for a little way; then there is an impression of outlying shanties and here and there a tall brick smoke stack not so familiar. The shanties are depressing, they denote poverty, the poverty that haunts railroad tracks in the suburbs of cities, the poverty that always comes in the company of rats. It is a queer paradox that what we consider the main instrument of progress always brings in its train poverty and rats—the fact leads one to doubt the integrity of the progress, or whether, indeed, it is progress at all. Presently the surroundings grow familiar again, the south wind has found me out and streams through the windows and the car, and is freighted with sweetness as usual. It takes a little time before I realize the freshness, because the suburbs are elastic, and five miles an hour the lawful speed. Certainly Denver is a city.

Away to the right rise the plains to the foothills and beyond are glimpses of the range, with patches of snow lingering on the bosom of Mount Rosa. Only a little while ago the fourteen miles stretch of country between the Platte River and the foothills presented a green car-

pet through the July days, unbroken by any evidences of man's occupation; now there are fences and farm houses, and fields of golden grain ripe for the harvest. But the mountains show me their old-time landmarks and help to keep me at home until the Platte Cañon is reached. The river looks smaller than it used to, but get off the train and down to the water line and it will require more than the skill of the tyro to send the coachman successfully to the opposite bank. Get into the current and you will recognize something of the old-time vigor. The Platte is not "played out" by any means, but the trout are not so large or abundant as in that "little while ago." I dreamily recognize many a turn of the once beautiful river, here and there a point of rocks or a mountain; but the pools, the still reaches and the riffles have become demoralized, have changed places or disappeared. It is not the old river, but I find enough of the oldness lingering about it to remind me of the old love for it. Pine Grove, as it is called—"Brown & Stewart's ranch" it was thirty years ago, with a solitary log cabin—is quite a summer resort, with all the airs of a pleasant village. Indeed, the river for seventy miles or more of its way through the hills to the lower cañon is little else than a summer resort, dotted with bits of houses, and made strange by the presence of broad-brimmed hats tied out of shape over rosy cheeks; every face, it seems, is a smile—an out-of-doors smile; there is a bewildering flash of bright colors, not from the wild flowers; and now and again a bit of music, as sweet as the note of a meadow lark, will come rippling through the car window, giving no hint of style or tubercles. A little further on I recognize a pile of granite reaching down to the edge of the stream; there was a pool just at the base, but now there is a rifle in its place. I remember the pool and the trout I have lifted out of it, and I remember also falling into it, owing to the treachery of a dead limb on a pine log. I remember apostrophizing the log and the low temperature of the water until the latter choked me off—the pure crystal was not shocked at my exclamations, but took me into its embrace laughingly, as if it had been on the watch for a lover whom it understood to be a little reluctant.

Further on it was Schlats, and it is Schlats now, with a difference in the association only. Now it is civilized and a resort, but in the early days it was a haven between Tarryall, Buckskin Joe and adjacent mining camps and Denver, in which one was glad to find shelter, especially of a winter's night. A hint of the freighters and the miners would tax the nerves and the delicacy of the present habitués. At the foot of Kenosha Hill I single out from among the phantoms in the car a man with a bilious complexion and a Roman nose—he is chewing gum; in his company is a sallow woman, his wife no doubt, she is chewing gum, and in the company of both and exercising grandmotherly supervision is another woman, with gray hair and gold glasses, and she also is chewing gum; there is a little boy with a long slender neck, pale face and brown eyes—he is chewing gum. These people have no business in a railroad car; they should be on foot, or on horseback, or bowling over corduroy in a lumber wagon, or in any situation where they could exercise other than their jaws and shake off the dyspepsia. But they won't, they will die in ignorance of the sweet smell of mother earth and the fragrance of pine boughs in their bed chambers. No doubt they believe that a night under the fretted roof with only a blanket between their city-nurtured bodies and the gorgeous canopy would be the death of them. They prefer dying of gum by rail. At Como, in the South Park, where an excellent dinner is served, they pecked, ate oatmeal and drank water. I wanted the boy—in him I saw a possibility, notwithstanding he sat with his hands in his lap and was not tempted by pie or orange.

By and by the road winds up the Breckenridge Pass. Down below a thousand feet or more, men, looking like midgits, are working in Tarryall Gulch, the oldest placer camp in the State. It has given up its millions of yellow metal and still pays. Salver Heels, looming up on the left, has a bit of cloud for a cap this afternoon, and beyond is the Mount of Three Waters. We are on the backbone of the continent, and may look down into the valley of the Blue River and see Breckenridge, another old mining camp that has added its share to the millions of the world's wealth. From this point of view the town seems very quiet nestled among the towering hills. But all is not peace there, especially on Saturday nights, yet it is milder than in its younger days. Down the Blue a dozen miles, still by rail, and Tom Hamilton takes one in charge at Dillon, provides a good supper and bed where I am dreaming double. Did you never dream double? It is a novel psychological experience, sometimes ludicrous and again harrowing. I am in a chair in my office in Denver and also in bed at Tom Hamilton's, while the scent of the pines floats in at the window and the music of Ten Mile invites me to linger. I can feel myself under the blankets and realize the difference in the temperature, and while I draw the covering a little closer around my neck confess to myself that there is good troutling in Ten Mile.

"Yes, there is good troutling in Ten Mile," and Brother Byers, my briar root in his hand, stands over me in my office chair a long way from Tom Hamilton's. I am irritated at the sudden transition and find something exasperating in the broad smile which my disturber bestows upon me.

"Pshaw! why did you awaken me?"

"To let you know that I agreed with you, as I always do, You said there was good troutling in Ten Mile."

"But you don't always agree with me. Here I was on the way to Black Lake and had got as far as Tom Hamilton's, then you must come around and wake me up."

"We'll start for Black Lake to-morrow morning—the train leaves at eight o'clock."

"I shall not go on it. I shall start from Dillon."

"And miss the grand scenery along the Platte, over Kenosha Hill, through the South Park and over Breckenridge Pass, down?"

"Hold up, do—I have been through it all during the last fifteen minutes and I shall start from Dillon."

There is a United States mail from Dillon down the Blue; it goes in a spring wagon drawn by a thin team, and takes the grade of the Union Pacific, which makes a splendid road. The post offices along the way are not maintained by the government, but every ranchman has his own. The place of deposit may consist of a box, an old boot, or, as in one instance, a decayed hand-satchel stuck on a pole by the road side. No one would think of disturbing the contents any sooner than of despoiling the iron boxes on the lamp posts in town. One of these re-

positories consisted of a wooden box with a shelf and a canvas cover to protect the contents from the weather. In this particular post office a bluebird had made her nest and was rearing her young—two little innocents mostly head and eyes and exhibiting a lack of feathers. They expressed no trepidation at his daily visits, the driver said, and that spoke well for the owners of the post office and the carrier, who is an ex-sheriff and accustomed to the use of the revolver.

The road has familiar landmarks as we proceed. Big Ute Mountain is one. Brother Byers and I discuss it. We came into the Blue Valley from Hot Sulphur Springs, up William's Fork and over the pass by an Indian trail at the northerly end of Big Ute Mountain. But that was fourteen years ago, we were there on horseback, with a frying-pan and two tin cups, together with three days' rations of coffee and sugar, a loaf of bread each, and a little salt. Our destination was the same then as now, but the trail is a thing of the past. We reached the mouth of Black Lake Creek about noon, and found a carriage in waiting to take us to the summer retreat of our genial U. S. Marshal, A. H. Jones, who is now the owner of the lake, and at whose table, in company with him and his charming family, we took lunch—what a contrast to the experience of fourteen years ago, under a poncho!

Our host has a beautiful little steam yacht and boats galore, and the old log rafts went out with his advent. The lake is as charming as ever and as full of trout; the log cottage on the point near the outlet adds to the attractiveness and seems home-like, without intruding upon the old-time romance. Catching trout from a steam yacht affords a luxury undreamed of in the rafting days, the amusement accommodates itself to the later stiffness in the knees and the falling off of activity developed in fourteen years. The sound of a tiny steam whistle on Black Lake, under the shadows of the huge heaven-kissing granite of the Gore Range, while we skirt the pine-covered foot of Mount Powell at ten miles an hour! It seems preposterous at first, but then the luxury of it! It is like the sudden transition from the plum-bush pole to the aesthetic bamboo, and I convert the change further into a delicate tribute to the aristocratic denizens of the crystal waters, who are entitled to the best that skill and good taste can afford. There is an exquisite harmony in the combination not often achieved, and it should be accepted and treated as a sort of holiday in the holidays, the Sabbath, as it were, of the outing.

Toward evening our host turned us into a yawl and took us in tow, and we tied up at the inlet and caught trout for an hour or more. We had a fish well, of course, and there was no fear of waste. The lake has been stocked and restocked, not only with natives and rainbow, but with the Eastern brook trout, and they are all doing well. This afternoon, however, the natives are the more active. A half-pound young gentleman shows himself on the surface at the prick of the Sproat; he shakes himself savagely, and not finding any relief, darts quickly into the swift current of the inlet, but circles back, not being given any line, leaps half out of the water, and repeats his efforts to tear himself from the fatal restraint. His efforts are in vain, however, and he is lifted into the boat, still struggling. From the beginning to the end there has been no cessation of defiance; he comes intrepidly into the sunlight while he advises one of his mettle and fights it out on that line as if fighting were his mission in life. Again there is a rise to the coachman and a strike, just on the edge of the current, and the ripple prevents one seeing the quarry; but a new experience is in store for the angler who has never caught any save the Rocky Mountain trout. This stranger disappears, but the light silk line cuts the water with a force approaching to viciousness. Hither and yon it sweeps, and the bamboo maintains a steady, graceful curve, and soon proves too much for this gentleman, who prefers to avail himself of the full advantage of his battle ground. Your Eastern brook trout is finally brought to the surface, and with all due respect and tenderness relieved from the hook and consigned to the well. A strong fighter, but he lacks the dash and brilliancy of evolution common to his black-spotted congener. And for this, I presume, I shall be trampled upon by both feet of the votary of the *Salmo fontinalis*. But understand me, I draw a distinction simply between their methods, not between their beauty or their courage; each is perfection.

While we have been amusing ourselves a black cloud has been climbing to the summit of Mount Powell's mate and shows itself over the peak; the shrill notes of the yacht's whistle breaks the silence, and our host is steaming for the inlet at the little craft's best speed to rescue us from the impending shower. But we do not escape. The big drops strike us and then multiply, and Brother Byers takes his medicine standing and with a smile on his face that has no malice in it. He would not have forfeited the hour's pleasure for a triple baptism.

That night all slept under the shingles with the patter of rain to soothe us during our infrequent moments of wakefulness. I could not but contrast the comfort with lying out on the banks of the Blue with nothing over me but the canopy and the rain beating down, and thought that there is much to commend in our civilization, and that such an obliging host and friend is a rare jewel; and I was also inclined to believe that every man, woman and child in Denver had a soul.

L. B. FRANCE.

Camp-Fire Flickerings.

"That reminds me."

A NUMBER of years ago, while visiting in a small town in central Missouri, I witnessed the return of a party who had been down on the Gravois River fishing, bringing home several hundred pounds of fish. As soon as they arrived word was sent for all to come to the blacksmith shop and get a mess of fish free. A St. Louis drummer, who had been trying to sell the storekeeper a bill of goods, observing so many women and children go to the wagon and take what fish they wanted without paying for them, walked up to the wagon and inquired of the boy who was holding the horses, "Are these fish gratuitous?" "No," said the boy, "they are pretty much all buffalo and catfish."

JACK.

COLUMBUS, Ohio.

ADIRONDACK LIFE.

ADIRONDACK MEMORIES.

IT is a good many years, seventeen at least, since I visited the Adirondacks in *negligé* costume, though I have channeled all around them by rail of late, and only as recently as Decoration Day passed through Boonville and Lowville, where I fell in with such a multitude of fishermen and anglers coming out of the wilderness with rods and baskets, that I have ever since felt a realizing sense that but little effort is needed to popularize this much-vaunted summer resort. Of course the Adirondacks of to-day are different from what they were in the genesis of Pol Smith and old "Saugermong," and I am frank to say that I am sorry for it. No doubt, were I to go in now, a glimpse of their modern appointments and attractions would be as much of a revelation to me as St. Paul's vision of the menagerie let down from heaven in a sheet, but with more paucity and less variety of animals indigenous to the country; for, by all accounts, panthers are obsolete, and bears and deer are becoming scarce. The bare idea is startling!

When the wilderness was primitive, catamounts were not uncommon; and I remember once, when pulling leisurely around the Oxbow in the Raquette, with old Steve Turner at the oars, of barely escaping a misadventure with one of the varmints which lay extended at full length on one of the thick branches which protruded horizontally over the river, ready to drop on us when we passed under. Fortunately I was keeping a lookout for up-coming boats, and so I happened to ask Uncle Steve what was that queer-looking lump on the limb just ahead; and when he rested his oars and turned to look the "lump" rose up, and wheeling about, gave one tremendous spring over the tops of the brush which skirted the river and took to the depths of the jungle.

Good old Steve! I am wondering if he is living now? At sixty years of age he could pack a 70-pound boat over the three-mile Sweeney Carry with the best of the boys, and he didn't mind the mosquitoes and flies on the St. Germain any more than would an ironclad man-of-war. He was short and sturdy rather than great and mighty, and so I used to wonder at his prodigies of strength, for he seemed an old man then. But here am I, verging on the self-same steps of time, still hale and blooming, and thankful for preservation of health and manhood, though I cannot carry off a load—like that.

"Adirondack Murray" had his camp then on Raquette Lake, down river (was it in 1867?), and his comely wife was with him, attired in a Tam O'Shanter cap and a mountain suit of red and crimson plaid. How jaunty she looked! How hamadryadic! They kept open house in those days, with the latch string out, and a halo of welcome was luminous about the rustic roof. By my halidome! (whatever that is) those were halcyon days for all of us, ere yet the hair had grizzled or the pitcher been broken at the fountain, for vicissitudes had not ripened. How we have scattered and wandered since.

My attention was first directed to the Adirondacks some time in the '40s, by reading Rev. John Todd's "Long Lake," a sprightly book printed about the time that Mr. William C. Prime wrote his inimitable "Owl Creek Cabin" letters. Dr. Todd was a companion of Audubon at times, occasionally visiting him in his hermitage when he was making his painstaking studies of birds. Of course, we know that there has always been a representative Long Lake hermit, whose cabin is shown with deferential index to the newer-comer, but I have the word of Sabattis, Sr., the old pioneer guide (dead now, I suppose?) that Audubon was the original and only simon-pure recluse of that region. Whoever wishes to read the earliest reminiscences of the Adirondacks should examine Dr. Todd's book. It is in the libraries. As for Audubon, I am rejoiced to learn that the praiseworthy movement inaugurated by the New York Academy of Sciences to place a suitable monument over the grave of the great naturalist in Trinity churchyard, is likely to prove successful. I used to know old Sabattis pretty well, and once he pulled out of the woods for a fortnight and found me at my residence in Brooklyn. Alas! the trail that he followed is cold enough now.

In the time of my periodical visits to the North Woods I had to take a stage road of forty-seven miles to the hostelry of Paul Smith, which had just been located on St. Regis Pond. It was a pretentious structure for the time, but was subsequently enlarged considerably, and at last bloomed out into a full-blown modern caravansary. Few ladies ventured in in those days. There were no railroads then until the short spur was completed from Plattsburg to Ausable Forks, and I wish there were none now, with all deference to the ladies, and the lazy, who think a long drive too much of an undertaking. So, "if wishes were fishes, we would have some fried." Nevertheless, railroads now penetrate to every mountain crevice and ravine, and that is perhaps why I do not go there as of old. Pleasure and transportation are made too easy in these days. Desires are too easily gratified to be valued.

Martin's on the Lower Saranac Lake was my ideal of a wilderness snugery. It was built with an axe of split logs—a pretty large house of its kind. It was the pioneer hotel of that region. Bartlett's was a favorite resort of mine at the outlet. It was there that I caught my first lake trout on the fly. Then there was old Mother Johnson's pancakes, Graves's Lodge with its cream toast, its wild honey, its venison steaks and its baked trout selected to average a half pound on the platter, and done to a turn. Fenton's, Number Four and Big and Little Tupper. Only to think of putting steamboats on these secluded waters! It is sacrilege; and old Tahawus, shorn of his ancient name and prestige, bends his proud head with sympathy and resentment. Eheu! their glory has departed.

Let those who like innovations be content with the present, and happy with the outlook. To my eye there are clouds upon the mountain peaks, and "Baldy" himself cannot raise his head above them. Conservatives like myself will never forget the days of auld lang syne. Perhaps I shall never visit the Adirondacks again. If I should happen to do so, I know where there is a cache of old reminiscences, but I must not mention them now. Modern society will dub me a crank more gloomy than Poe's raven. So I leave it to take its chances among the railroad men, the lumber speculators, the land monopolists and the promoters of the National Park. For the present I must keep silent,

CHARLES HALLOCK.

THE CRANBERRY LAKE COUNTRY.

THERE is yet a region of the Adirondacks which has not been overrun by tourists, though sportsmen have pretty thoroughly explored it. I refer to the northern part, bounded on the south by Beaver River and on the east by Raquette River. Cranberry Lake is situated nearly in the center of this territory, and diverging from it are trails and old roadways to many of the smaller lakes and various rivers. The lake is said to have an altitude of 1,649ft., is some seven miles in length, with varying widths, as shown by the shore line of more than twenty miles. Originally, where as nature made it, the lake was a widening of Oswegatchie River, but some twenty years ago a dam was erected on its outlet for mill purposes below, which raised the water about 15ft., killing the timber on the margin and rendering the shore unapproachable. There is a belt of flood wood entirely around the lake, unsightly in appearance, preventing the landing of boats, and objectionable in every way. But for this it would be a majestic lake. In the southern distance small mountains invite attention, while in the vicinity of the lake are several hills which bear the name of mountains.

The lake is accessible from DeKalb Junction, on the Rome and Watertown railroad, a distance of thirty-six miles by livery. W. R. Bishop has the only camp upon it, and his hostelry very comfortably and satisfactorily accommodates thirty or forty people. The fishing is all some distance from the house, and in springtime is very good; but at this season of the year the catches are not large, for no rest is given to the "spring holes," when the trout seek cold water and only can be found. Undoubtedly there are many spring holes in and on the shores of the lake, but the guides have never made search for them, perhaps fearing that fishing so accessible might interfere with their vocation, and yet this could hardly be, for there is but one boat here, which, like the proverbial toothbrush, "belongs to the house." As it is, they find plenty of time for thought and reflection, for it costs \$4 a day to employ one of them—an extortion which every sensible person, however wealthy he may be, will rebel against.

Chester S. Lord, of the New York *Sun*, who recently left here, made an excellent sportsman's record. He caught several large trout, several of weights of 5lbs. and more. He is always active and has studied the locality until he is quite as familiar with it as most of the guides, and his outfit is always thoroughly complete.

Justice Irving G. Vau, of the Court of Appeals, has been here with his family since early in July. He casts off the ermine for the corduroy and looks the accomplished woodsman that he is. His outfit embraces every article that can be desired, and he entertains his friends royally at his superb Big Rock camp, which he occupies occasionally for several days at a time. He has spent many vacations here, being the chosen locality of several which he has visited, and is familiar with every lake and stream for many miles around. He is also a student of natural history, and in a quiet unassuming way becomes very entertaining while relating observations which he has made. He is a successful angler, having studied the conditions which one must understand if he would know how to succeed. Among others who are spending time here are R. K. Dana and family, of New York; Judge Northrup, C. H. Lewis, C. G. Baldwin, E. M. Allen and family, and D. H. Brun, of Syracuse; and Dr. Reeves, of Long Island. Another judge and several more lawyers will arrive this week. So that it may be possible to promptly try any offender of the game laws; but it is to be hoped that the guests and guides of this locality are law-abiding people. There are many deer in this vicinity, and when the season for shooting them opens, the larder of the camp will reek with luscious venison.

Divertisement for an "off day" is found in chartering the steam launch A. Ames Howlett, and going here and there about the lake as the freaks of its passengers may suggest. A noonday lunch in some pleasant shade and near some one of the many remarkably cold springs (some as low as 42°) is one of the occasional enjoyments of the place, though we have not as yet had such pleasure. There are days, you know, when zest gives way to indolence, especially when the weather is clear, the sun hot, and the general conditions wholly opposed to activity. There are plenty of trails to follow for him who goes out only for exercise, almost any one of which abounds in nature's best gifts to the thought-woodsman. The change from his daily life at home is so great as to invest him with surroundings of a character to almost entirely change the bent of his mind, and when he thinks, it is of the teachings of the new book opened before him. Most people whose minds are occupied with law cases and business affairs during ten or eleven months of the year, cease thinking when they come here, giving their minds as well as their bodies opportunity for recuperation. It is a splendid place for perfect rest.

I wonder how it is that people who need rest which the vacation season is supposed to give, can spend the time at Saratoga and fashionable seaside resorts, or even go to Paul Smith's, Loon Lake or the Ampersand, where society's laws and customs are unrelaxed and hold all in restraint. At such places as this one is, the barber, boot-black and laundry may be neglected without causing criticism. I do not mean by this that the law of cleanliness may be set aside, and it is not. Flannel takes the place of linen, and there is a kind of foot wear which without blacking looks best here. The barber may become an ally of fleas if he removes the beard and gives the insects opportunity for freely lancing the face. Where there are so few people, and all of one mind, sleep is quiet and undisturbed, though it is a universal practice at such secluded places to have breakfast at 7 o'clock. But good appetites are ready for every meal.

"Mercy, how the boarders yell
When they hear the dinner bell."

I have said that this northwestern region of the North Woods—or Adirondacks, though somewhat distant from the mountains of that name—is all that is left to the woodsman. And this region is rapidly going the way of all the rest. The havoc of lumbermen is seen on every hand and is constantly increasing. A railroad was built from Carthage several years ago to Benson Mines (iron) some forty-three miles in an easterly direction. It is now proposed to extend that road northerly nearly to this place solely for the purpose of opening several lumber camps. This would soon result in a further extension to some point on the railroad from Moira to Tupper's

Lake. Such a railroad would very thoroughly open up a large part of this tract to the masses, driving the sportsmen elsewhere. He has been driven about much as the American Indians have been made to seek new resting places from time to time, as made necessary by the avarice or pleasure of the white man. But let us hope that it will be many years before annihilation shall come to him. Let us rather hope that the people of the State will awaken to the fact that they owe it to those who are to come after them if not to themselves, to see to it that the 3,500,000 acres which constitute the Adirondack region shall constitute a State Park and become the property of the people for their proper uses forever.

By his purchase of 250,000 acres, Dr. Webb has possessed himself of the very heart of the forest, and the story goes that he will inclose it with a wire fence to prevent ingress and egress to people and game. The entire purchase is even now under police surveillance, to the great disgust of the many people who would enjoy the pleasures and comforts which its beautiful lakes and rivers have for so long heretofore extended so invitingly. We must meet the question as to whether this forest shall be controlled by capitalists or the people very quickly and decidedly if the people are to have any right to enter upon these millions of acres in the future. The law of eminent domain can be made to do the work, and every acre of private land ought to be condemned to the uses of the State without delay. There are hundreds of thousands of acres which could not be sold for twenty-five cents an acre, while there is considerable acreage of greater value; but the cost of the all that is owned by individuals is not of such consequence as to be considered. The present waste of the State for a single year would go very far toward paying the entire sum under a condemnation award.

But I have run off from the general subject of this letter. The Beaver River country has long been regarded as the most prolific of game; but as that begins to fail from an abuse of privileges, this locality seems to be the most favored in this respect. Deer are very plentiful hereabouts, and the guides freely admit that there has been a large percentage of increase since the enactment of the law regulating the shipment of game. Bears are occasionally seen and killed, but panthers do not seem to have made a home here, though they have a fondness for deer and are generally supposed to abound where deer are plentiful. Although it has become an historical fact that Gov. Seymour killed the last moose slain in these woods, there are guides here who will tell you that they saw moose as late as twenty years ago, some time after the last one is supposed to have disappeared.

I hope some time to write you a chapter of Recollections of Adirondack Life, in which I shall have considerable of incident and experience to relate. Here in this stillness, surrounded by health-giving evergreens, an atmosphere laden with balsams for many ills, with springs of water everywhere of perfect softness and purity, with all conditions to give rest, restore health and extend enjoyment, here, I say, I have spent some of the most profitable periods of my life. Those who have spent vacations in this wilderness as I have spent them, know what benefits nature affords most bountifully; those who have not been so privileged cannot too soon pass some one of the many gateways to this great Eden.

CRANBERRY LAKE, AUG. 6.

D. H. B.

THE ADIRONDACKS IN 1858.

HAVING heard much and read more concerning the wonderful scenery and the numerous and beautiful lakes and streams of the great North Woods, together with the reports of the great abundance of deer and trout in its mountains, lakes and streams, such an interest was aroused that nothing short of a personal experience would allay; and being a first experience, its scenes and impressions have remained with me during all these years, and later visits have but intensified them.

Late in July of 1858 (thirty-three years ago next month—a full generation) a party of three—of whom the writer alone remains—started for the northern part of the North Woods.

On arriving at Whitehall we took passage on the steamer Canada, in command of Capt. Lot Chamberlain, and who ever has traveled on his boat has met a gentleman and knows what a clean boat is. The steamer in those days took passengers at the village of Whitehall instead of Ticonderoga and landed them at Rouse's Point, a most delightful sail over beautiful water and amid grand scenery.

From Rouse's Point we went by rail to Chateaugay village, thence team to Bellows' Hotel on lower Chateaugay Lake. There we met the then venerable sportsmen Drs. Adams and Bethune, of Boston. Twenty-eight years later I met Dr. Adams on Upper Chateaugay, still hale and hearty and the most persistent fly-caster on either lake.

On the evening of our arrival at the hotel quite an excitement was created by the report that "there was a bear in the lake swimming for the shore." It took but a short time to unpack and load our rifles, when all started for the lake, some twenty rods, determined to have that bear's pelt. It was growing dusk, but the bear could be plainly seen and was making fair progress, but quite too far out in the lake for us to open fire; so we lay close, waited and watched with cocked rifles and bated breath. But the longer we waited and watched the feebleness grew our hopes of capturing the bear, of having a pelt to show and steaks for breakfast. Its nearer approach did not increase its magnitude, and it was decided to be but a cub, which we must not shoot, but take alive. To this all agreed, for a live cub was better than the skin of a dead bear to take home.

In the meantime the bear held on its course, reached the shore, climbed the bank, shook itself, looked at us, and lo! it was a black dog returning from a deer chase. As our rifles must be unloaded—no breechloaders in those times—we gave the dog a generous salute for its exploit.

Learning that deer and trout were in great abundance at Ragged Lake, some twelve miles over the mountain, where Mr. Bellows had built a log shanty for the use of his guests, we decided to make that our headquarters for a week or ten days.

Accordingly we engaged guides, procured the necessary supplies—but no whisky—made a pack for each, and having been set across the lake, took up our line of march, a faint trail indicated by blazed trees, no team or horse

ever having been there before us. Being unused to such loads our locomotion was not rapid, and our rests were frequent.

While upon our tramp we came upon a porcupine, killed by lightning—or in modern phrase, electrocuted. How did we know the lightning had killed it? Although there were no Indians in our party to interpret signs, the proof was before us. Lightning had struck a tree splintering it to the ground, and at its foot lay the dead porcupine.

At Figure Eight Pond our guide had a boat hidden in the bushes, and on it we piled our duffle, as "Ness-muk" would call our equipments.

Figure Eight Pond, a celebrated resort for deer to feed—where I saw seven at one time but killed none—is on a branch of Salmon River, which here runs south through Lilypad Pond, Ragged Lake, etc., and then turns nearly north, emptying into the St. Lawrence below St. Regis.

Being relieved of everything except our guns, we made better progress, and in due time reached the shanty on Ragged Lake, where we found two excellent guides, who soon had a welcome repast of trout and venison, which our long tramp enabled us to enjoy to the full.

One of the guides that came with us became so lonesome and homesick for a certain damsel he had left behind that he was allowed to return, and his place was much more than filled by the two guides found at the shanty on our arrival.

Our party of six consisted of J. R. Wiltzie, of Newburgh, N. Y.; Jas. G. Wood and the writer, of Poughkeepsie, N. Y.; with A. Sprague, H. Bellows and Burt. Blatchley, three most excellent guides, though Burt would swear awfully and drink all the whisky he could get, as we particularly learned afterward.

Here we passed seven days of real enjoyment, taking trout—real salmon-colored ones, and highly flavored—by day and floating for deer at night. Each of us had more or less severe attacks of "buck fever," but our rough tables never lacked either venison or trout. Neither was the surplus of either allowed to spoil. Our trusty and active guides, who understood the business, built a stone smoke-house of small but sufficient dimensions, laid sticks across the top, and on these the meat, cut into strips, with the trout properly dressed, and slightly salted, were laid, and the whole covered with thick bark. A slow fire was kindled in the pit and kept burning till all were partly cooked and well dried. In this condition either will keep for months, and when eaten at home is a pleasant reminder of camp scenes and life.

The exact number or pounds of trout we took I cannot give, but of deer we killed but five, which no one can say was extravagant, and to prove that none was wasted, my recollection is that we packed out of the woods some 70 lbs.

During our stay we had many pleasant, and some not so pleasant, experiences. I well remember taking Wiltzie in the little tub of a dugout and going down the lake some distance to look for a deer that I felt sure I had killed the night before. In order to get on shore the little dugout was pushed upon a bog, from which I stepped to another, and so on to hard ground, leaving W. in the stern. The contents of the lake at this point was neither water nor earth, being too thick to drink or wash with, and too thin to walk upon, color black, and rather thicker than molasses.

While out in the thick bushes looking for my deer, a smothered cry for help reached my ears. I rushed back to the shore, and in spite of the situation was compelled to indulge in a hearty laugh. There was W. in the black muck, having upset the dugout, vainly attempting to right the boat, or get on to it, holding on with one hand and fighting mosquitoes for dear life with the other, and no ground to stand upon, looking more like a bear than the one we attempted to catch on the other lake. By our united efforts the boat was righted, and we paddled back to the shanty. But such a looking object I never saw before nor since, black from head to heels, while the thin muck had saturated every article of clothing, filling both boots and every pocket about him. As we did not have many changes of clothing he was allowed to keep his bunk while his clothes were cleansed and dried. No more tub dugouts for him. The writer has but little to say as he came near having a much more, if not fatal, experience, in that same thick composition of water and muck.

Having satisfied our most sanguine hopes as to the sport, health, scenery, etc., we returned to the hotel and thence to Upper Chateaugay Lake, which at that time was in a primeval state with the exception of a single shanty—long since a ruin and its location almost unknown.

I thought then, and still think, it the most beautiful body of water, with its surroundings, I ever saw. High hills nearly all around it, with thick forest down to the water's edge which no axe had ever touched, nor steamer plowed its waters.

We made no attempt for deer, but trout were nearly as abundant as in Ragged Lake, but not of the same color or flavor.

I visited Ragged Lake in 1859 for the last time, for soon after the lumbermen built a dam which ruined its waters so as to destroy the old localities and ruin it for sport for many years to come. It is now owned by a chartered club, I believe.

The waters of Upper Chateaugay have also been raised considerably by a dam at the lower lake, where several charcoal furnaces are running and consuming the forests of the surrounding mountains, so that barrenness has taken the place of living verdure.

Perhaps in the aggregate more pleasure is obtained on the Upper Chateaugay at the present time than when our party was there, for now it has its thousands of annual visitors, where it then had its tens.

There are more hotels and near a dozen villas and cottages now surround it. Still I know of no more delightful place to spend a vacation than there. Fishing is fairly good, while bear, deer and partridge in their season are occasionally met with.

I have said so much concerning this my first visit that I must omit all notice of later visits to these waters and to other portions of the Adirondacks.

J. H. D.

POUGHKEEPSIE, June, 1891.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

CIRCUMNAVIGATING THE ADIRONDACKS.

I HAD promised that without fail I would "report in a person" on or before the 29th of July at Potsdam, N. Y. This involved a long and so often made railway journey from my abiding place in Brooklyn that my resolution to make it was subjected to considerable strain, when shortly after making the promise inducements of a very tempting nature were held out to me to make a different journey at the same time. The business which called me to Potsdam could be successfully transacted even if I were not on hand, so long as the other parties to it were. The other business I was assured would fall through without me.

With a slight, very slight hope that I might so arrange that I might miss neither, I suggested to the friends whom I was to meet at Potsdam a postponement, presenting vividly the hardship to me of being compelled to give up the first and only chance for an outing in the Adirondacks that has come to me in a very long time; that it was nearly three years since I had smelt the balsam or "wet a line;" that the trip was "really necessary for my health," etc. But I made no impression upon them. The answer was this: "We would be very sorry indeed not to have you present, but the day is fixed, the cards ready for mailing, the clergyman engaged, and we intend to be on hand at the appointed hour, high noon."

That settled it. I cleared for my den, lit my pipe and cogitated. Of course I would go to Potsdam—but, and the brilliant idea switched on to my brain circuit—why not go the woods also? Why not carry out both schemes?

Considering the Adirondacks as a big cyclone, I am in its southeast quadrant, Potsdam in its northwest; from S. E. to N. W. is a straight line; a straight line is—on paper—the shortest line between two points. It would be plain sailing from here to the neighborhood of the center—say Blue Mountain Lake; thence out, if I could believe the "Health and Pleasure" book of the New York Central, for there in "Excursion 768" to "Blue Mountain House and return to New York," the mode of travel and cost is given; and part of the route is from Norwood, very near Potsdam and on the same road. But as I gathered up my reminiscences of travel in this section, or rather in what I so thought, I was puzzled not a little. I have years ago gone through to the only Blue Mountain House that I ever heard of, that on the north side of Blue Mountain Lake, in Hamilton county, and my route to it involved many miles of boating and tramping, lucky when now and then, here and there, I could piece out with a buckboard or woods wagon over genuine woods roads.

Stoddard's map did not help me. What I wanted was on it, but I didn't see it, for I failed to look in the right place and contented myself with a search all around Blue Mountain House for any road or any place that a road could be put, except the one to Long Lake. Nor could I find within stage range any "Spring Cove" as given as starting point for stage.

So I gave up that route and wrote to Mr. Stoddard for a solution of my puzzle. His reply, received since my return, has enlightened me. There is another Blue Mountain, and a newer Blue Mountain House in Franklin county, to be reached by the new route to Paul Smith's, the Northern Adirondack Railroad, but it was not the one I wanted. The Prospect House, Hollands and the easy route to the Raquette and its delightful resorts are "not in it," and the Blue Mountain House, that I have had good times in, is not that one but another one, and I'm glad that I didn't save money by buying excursion No. 768 ticket. There is a Rome in Italy, and one in New York, yet when one speaks of a winter in Rome, one doesn't generally speaking mean the New York city of that name.

Losing confidence in time-tables, of which I had obtained too many, representing apparently opposing interests, I cut adrift from them, and determined to go it alone; and as I planned and cogitated, an attack of spring fever came to me, and I resolved to start at once, and if the center of that cyclone could not be quickly crossed I would do as I've had to do in real cyclones, trust to Providence and the impulses and chances of the moment to come out safe on the other side.

Thus I planned: I must be in Potsdam on the evening of the 25th; it is now the 23d. I have six days. I can have a splendid time if I start at once by the sleeper to North Creek, leaving this evening 7:30; turn out at 6 A. M., catch the tally-ho or perhaps a seat on a buckboard if I can't get the top seat with the stage driver, breakfast at North River, if as good as the dinner I got the last time I came out will suit, reach Hollands after a "glorious drive" in time for dinner; then if Henry Taylor has got telegram and is not employed he will be there with his skiff, and we will spend the afternoon of the 24th rowing down to the Raquette; and there's many a deep hole in the big lakes, and spring hole in Eagle and Utawanna, and the river that I, and many more that Taylor knows; and the chances are that when we pull out at Ned Bennett's, Under the Hemlocks, we will have a few—not many—good-sized trout, and the certainties are that I shall have greatly enjoyed the exercise of casting for them. Even if our basket is bare (and I can hardly believe that the rapids around Bassett's Carry will fail me altogether) Bennett's larder seldom is, and I am reasonably sure of a supper of good trout well cooked.

Then for a loaf and smoke on the pleasant front piazza, a comfortable night's rest, and an early morning start on the 25th for Forked Lake. We will dine at Fletcher's, and if he gives me a poor dinner it will be his first attempt in that line; then down the lake to the carry to Raquette River; and I'll go over again—in memory—an adventure I once upon a time had on that carry, when I encountered a tornado; and that part of it will be pleasant to think of and remember than it was to go through. A whole forest of trees of all sizes standing quietly on their bases has no terrors for me, but when trees of all sizes, from saplings to big ones, begin a skirt dance that soon develops into aerial flights, and rain every drop a bucketful precedes and follows, trees have no charms for me. We will probably have time to get down as far Buttermilk Falls, and even if we stop short there are several No. 1 spring holes; and if he is still living and there, the old fellow who runs the stoneboat carry for skiffs (whose name I forget, but know he was tall, for the trousers his very deaf wife loaned me while she dried my soaked outfit, would button around my neck), will, I feel sure, give us a cot in the attic, and cook my trout for supper and breakfast. And then the

morning will be the seventh day, and I will either rest, go fishing, or more likely start for Tupper's Lake, through it and the other one, and if I can't get through to Paul Smith's for the night I can, I think, to Childwood, on the dear little Massawepie, where, nearly thirty years ago, under the guidance of one of the Gale family, I saw and killed my first and only deer (for I don't like to kill them; I like venison, and I like beer, but I would rather see one else would do the butchering). And whether it be Paul Smith's or Childwood, I shall be sure of a pleasant evening, and will still have Monday and part of Tuesday to "pull and haul on," and the Northern Adirondack Railroad will "do all the rest," with a little help from Rome & Watertown.

Thus, and lots more thus, I planned, and the whole journey seemed as easy as an ordinary one.

I made up my mind on the jump; confided to my wife's care and trunk such of my costume as would be needed at the wedding, to which she too was going, but by the ordinary route; got my gripsack packed, and at about 6 P. M. demanded of the Delaware & Hudson R. R. ticket agent, "A ticket and berth to North Creek, by 7:30 train."

He looked at me a moment in a way which coupled with what he said, displeased me, "There's no such train."

"But there is, I have been over the route before."

"Yes, that may be; lots of people went over it last year." And he handed me a time table to confirm his statement, and pointed out that I couldn't start until 11:59 P. M., which to me meant that of my seven days' leave of absence, I could use but one minute of one of them.

I retired to a corner with the time table, a disgusted man; and my disgust was not reduced when I found that at the very best I could not help being just one day behindhand on all of my itinerary. I could loaf away the evening till midnight—and I had seen "Wang" and all the other shows worth seeing; I could turn out at Albany 6 something A. M.; leave Saratoga at 10, and by good luck reach Hollands just about the time I had hoped and expected to reach Bennett's; and not an inch of boating nor a minute's fishing. Not a trout! It was "tolerable and not to be endured."

Another idea came to me. As my supposed thorough knowledge of the entire woods to the westward of the Adirondack Railroad had proved a dead failure, I began to think that I didn't know anything about it, and made up my mind to learn something. And to do that I would explore new fields, and this is the trip which in mind I substituted: Go to Schroon Lake instead; trust then to some one who knows something (I was sure I could get to Schroon Lake alone), and find a way to get over to the Delaware & Hudson Canal Co. road, to strike it if possible at Baldwin; thence by boat or train, whichever seemed most feasible, and spend the night and next day at Ausable Chasm; then from Port Kent by rail or boat, according to which I didn't take before to Plattsburgh. Then by the Chateaugay road, a novel woods trip into the heart of the grand old Adirondacks, enjoying every mile of the journey to Paul Smith's and onward. This plan, with some modifications, I carried out; but the "grand old Adirondacks" which that little narrow-gauge took me through gave me the blues from the start. For miles and miles we went through and by acres of stump-covered rocks, covered with an inch or so of soil; millions of boulders, piles of iron ore, and worst of all, flock after flock of beehive-like structures, surrounded by thousands of cords of timber to be transformed to charcoal. It was a dismal ride; and the clearings of years ago as we neared Paul Smith's were like jewels in an ugly setting. If Dante had met me that day and asked my opinion as to a good model for his road to the Inferno, I think I should have recommended a trip over the Chateaugay.

I reached Albany, Saratoga and Riverside at appointed times, 6 A. M., 7:30 A. M. and noon. Staged it to Pottersville, 8 miles, where a very poor dinner did not cheer me up much; then came a pleasant trip up the lake in the little steamer Effingham, which I enjoyed until at one of the hotel landings a large party of people with hook noses swarmed aboard, and got my campstool and my place in the bow, for as they didn't seem congenial I moved aft. I was drifting and not perfectly sure where I should be to-morrow; but as we drew up for one of the hotels, the Grove Point House, I admired its location and pleasant surroundings, and went to it, intending to go on to-morrow—this was on Friday. Monday morning found me still there, and I would not have left then but my time was growing short. I liked my room, which was well furnished, with a comfortable bed; the view from my window of the mountain across the lake, the table, the attention, the service, the class of guests I found, and in short, the whole surroundings.

On Saturday I took a trip to the village, a mile distant, in the Effingham, the fare from this hotel being simply "Thank you." In the afternoon I rowed on the lake and fished, catching numerous fair-sized perch and a couple of black bass. On Sunday I went to church, this time tramping with a party, and each evening, for it had grown cold by nightfall, we assembled in the spacious parlor, where a bright wood fire made cheerfulness, and were entertained with delightful vocal music by a gentleman and wife and two young ladies from Albany, Mr. and Mrs. Franklin and the Misses Gilligan and Malone, and the rendering on Sunday evening of "Gloria in excelsis," by one of the young ladies, was superb. On Saturday evening there was a little dance as well, for *Mirabile dictu!* there were more young men than women at this favored resort, and all of them apparently good fellows. They were members of a New Jersey Athletic Club, who take their vacation here. Youth so far favored those young men that they got as much fun out of catching a big string of perch, as I used to before trout cut them out.

The only drawback to pleasure was sympathy with the landlord, who although far better off than those of most of the others on the lake, was suffering from empty rooms. He had about forty guests; can take care of about three times as many; but every hotel on the lake was similarly afflicted, and all but one, I was told, were worse off; and the fact that the seaside resorts and nearly all of the watering places have this season been comparatively empty don't help any. Even at Paul Smith's there were lots of rooms vacant. We talked this over on the piazzas. All agreed that the abnormally cool summer was principally at fault, but there were those who sought to find special causes; I for one. Some damned the McKinley bill, others the New York Central Railroad, which it was claimed was, by making access by

its own roads easy and by others hard, very much hurting this part of the Adirondacks.

To me another reason presented itself. The hotels in the Adirondacks are no longer in the woods. There are no woods where there are railroads a year old. We have stumps and dead trees in lieu of forest; hotels with electric lights and Chicago beef in lieu of hunters' camps and venison; steamboats and railroads in lieu of skiffs and buckboards; pickerel and perch instead of trout and salmon trout; conventionalities in place of freedom from outside contact and influences. The charm has departed. To those of us who contrast from our own experience the woods of thirty years ago and their resources with those of to-day, this is plain; but for those who are just beginning, let them spend a day roaming around in the deep sand at Paul Smith's, noting down the comforts and luxuries of the city which are at their disposal, then jump into a skiff and row up through Spitfire into the Upper St. Regis, and see the difference. The fortunate ones who have camps there are really in the woods. As the season is but six weeks long, the improvements are making poor men of the landlords.

The proprietor of the Grove Point very wisely utilizes his winters, the last one in keeping a hotel in Florida; and this winter he and many of his steady guests are interested in a hunters' camp and family hotel which he is to keep on the sea coast of South Carolina, where there will be no end of quail and bay bird shooting, and "all the comforts of home." He intends, I believe, to transport all of his Adirondack staff, and I with lots of his guests have promised to come to him. Just when and where this Mecca is to be I have yet to learn. If he keeps his promise to advertise in the FOREST AND STREAM I will try to go to his place.

On Monday evening, when the concert was over, all of my newly made friends bade me good-bye, for I was to start early. I had found that I could take a stage from Schroon to Iron Mountain, then by the Iron Mountain Railroad reach Crown Point at 11:15, but examination of the Delaware & Hudson Canal Company time tables showed that this was about half an hour too late to catch the train for Plattsburgh, and I was compelled to hire a private conveyance for a 25-mile drive. The livery man offered to drive me over for \$8, but Mr. Mackenzie, my landlord, secured me a good horse and buggy for half the money, and at 6 A. M., after an excellent breakfast, I was off. If anybody wants to buy a good-looking horse that can take two men over a woods road twenty-five miles in three hours and a half they had better communicate with Mr. Cornell, the shoemaker, of Schroon, who starting (to be accurate) at 5:50 A. M. from Grove Point, landed me at 9:18 at the Crown Point depot, after a twenty-five miles drive in three hours and twenty-eight minutes, with more go left in the horse than he appeared to have had when we started, and not a hair turned. In one respect it is not to be wondered at, the morning was simply perfect, a good rain the night before had hardened the roads and the drive was an episode, taking in as it did some pretty water and landscapes, Paradox Lake and Iron Mountain. But although I enjoyed the drive, it nevertheless seemed strange with a railroad not overworked running right to the Crown Point depot, or near it, that it was not so arranged that tourists could use it. Is this also a little squeeze to help boom the late Rome & Watertown, now New York Central?

At Plattsburgh I took the Chateaugay Road, and I have already described how my anticipations of pleasure were thwarted. Of course there is more sentiment than sense in my views. The people have got to have lumber and iron and charcoal; and undoubtedly the material prosperity of the country is greatly increased by this road, for on it there are a number of apparently thriving, prosperous settlements started and lots of business is being done, but what the settlers will do when the timber gives out I cannot see. A bushel an acre would be a large crop to expect from some of the land.

Of course I enjoyed the little time I had at Paul Smith's, principally though because I spent much of it on the bosom of Upper St. Regis Lake. On Tuesday I took the stage to Paul Smith station and reached Potsdam that evening by 8 o'clock; from there to New York by Rome & Watertown and New York Central. So I made my woods trip—circumnavigated the Adirondacks and went to the wedding. PISECO.

TWO WEEKS AT SPRUCE LAKE.

OUR party numbered four, all under twenty years of age, namely, Shonk, Zack, Steen and the writer, whom the boys had nicknamed "Kansas Jake" on a former trip, which name stuck by me (don't infer that we are dime novel fiends) because I greatly resembled a party who played that character in the "Bandit King" a well known border drama. The name was afterward modified to plain "Kansas." This was our fourth annual camping trip.

For this trip we had been collecting duffle for months; every day added some little trinket to our vast collection until we had collected 316lbs. of luggage besides our guns, rods, etc., which we expected to tote twelve miles into the woods. We did not have the pleasure of reading "Nessmuk's" "Woodcraft" until after we came home from this trip. Had we read it before we would have saved a great deal of fun at our expense. After weeks of waiting Aug. 15 came at last, and on that day we arrived at Abraham's hotel, at the head of Piseco Lake. Aug. 16, we rose at 5:15 A. M. to find it raining hard. This was a damper, for we were anxious to be on the twelve-mile walk to our camping quarters. It stopped raining at about 9 A. M. We had to walk about half a mile from the hotel to meet Ceylon Clark, our guide. We had divided our 316lbs. of duffle as equally as possible. This with our guns made quite a load. When Clark saw our duffle he gave us a big laugh and said that we did not need one-half of it. We immediately sorted out what we could really need in the woods. He told us that we could get a fellow who owned a pack horse who would take the balance of our luggage in for \$8. This we gladly assented to, for we had enough of it at the half-mile pole. Here we were introduced to a gentleman from Franklinville, N. Y., who had spent several vacations with our guide, and if we did not object, he would like to go in the woods with us for a few days. We had no objections, as he looked and proved to be a jolly good fellow, although he was twenty years our senior.

We set out for Spruce at 11:20 A. M. The trip through

the woods was a hard one, but we pressed on, knowing that we would be repaid for our labor. Clark said that we were taking a very moderate gain. I concluded that if he called our present rate of speed moderate, he could count me out on anything faster at the quarter pole. Every mile that we left behind us we would thank Clark that he had not let us carry that duffle. Any one who has followed an Adirondack trail knows how grateful we felt toward him for relieving us of 79lbs. of luggage. At 3:45 P. M. the blue waters of Spruce Lake shone through the trees, and in five minutes we were executing a waltz around Clark's well-built log cabin, where we were to make our headquarters. We next inspected the interior of the cabin, and were surprised to find that Clark had a good wood cook stove and kitchen outfit in his mountain retreat. He informed us that he had brought the stove in the woods by piece meal on horseback. We found sleeping accommodations for eight people, consisting of four double berths, arranged two on each side of the cabin. The bedding was composed of woolen blankets, deer skins and balsam boughs. In about one hour after our arrival at the camp Clark called us to a very tempting meal.

Aug. 17.—It rained nearly all day, and our time was spent in swapping stories, reading and playing seven-up around Clark's stove, for it was damp and cold.

Aug. 18.—The morning dawned bright and clear, and Clark, Steen and I went down the outlet of Spruce Lake to try our luck at trout fishing. Our knowledge of trout fishing was very limited, while Clark is an expert with the fly-rod. Steen and I had a full line of flies, leaders, etc., when we started out, but when we returned we did not have half of our fine collection left. The flies had flown heavenward and lit on the boughs of the numerous trees that infested the banks of the brook. Clark and Steen were on the lead fishing down the stream, while I must have been a quarter of a mile in the rear when they began calling for me to come up to them. I started up, but had not gone far when I slipped on a large flat rock and fell head first in the water. I managed to get out without a dry stitch on me. I heard the boys calling me again, and made another start; had not gone 50ft. when I repeated my previous performance, this time breaking my rod near the butt. I picked myself up and sat down, and soliloquized as follows: And this is the trout fishing that I have heard so much about. Here I am, a poor, miserable wretch, soaking wet, with no companion to share my misery. Hearing the boys calling, I once more started down the center of the stream, for the center of the stream was the easiest place to walk, for on either bank the alders were so thick that it was almost impassable. When I finally came up to the party I presented a pitiable appearance. The only consolation that I got was, "that I ought to have had my bathing suit along."

We took an inventory and found that our combined catch amounted to eighty-six fine trout. Clark caught the largest fish which weighed 2½lbs. We took a trail for camp; on our way we saw one of Clark's bear traps with the decomposed remains of a black bear in it. Clark did not go to the trap until the bear was badly decomposed, therefore the hide was no good to him. Steen got one of his claws. We reached camp in about one hour. I was surprised to find that my clothes were nearly dry. Zack, Shonk and Case (the gentlemen who came in with us for a few days) returned from a fruitless trolling expedition.

Aug. 19.—The day being Sunday we were not very active. We took a sail on the lake. Steen saw something moving on shore, and when we got within about 25 rods he shot and killed it. It proved to be a large hedge hog. We all went picking red raspberries and got three quarts of that luscious fruit. At noon Mr. Case took his departure for home; we were all very sorry to see him go, for we found him a most agreeable gentleman.

Aug. 20.—Zack, Shonk and Clark went fishing for trout on the Jessup's River. They returned about noon with 107 fine fish, Shonk taking the lead with a 2½-pounder. While the trio were fishing, Steen and the writer were trying our .44-cal. rifles on the spry little red squirrel, which animal is found in great numbers here. Our rifles were too large for these small creatures, if we had a .22 Winchester we could have killed scores of them. We saw deer paths a foot wide, and signs as if the woods were full of deer.

After supper Clark told us to draw cuts to see who should go with him and float for deer. Steen drew the lucky stick, and at 9 P. M. he and Clark started out for the upper end of the lake, where the deer came in to feed on the lily pads. We waited in breathless suspense for the report of a gun. At last, about 10 P. M., the welcome sound came thundering across the lake. We were all excitement, and were hoping and praying that Steen had not got that terrible disease known to hunters as buck fever. The minutes seemed as if they were hours. At last we were relieved from our suspense, when Clark and Steen arrived at the landing with a big buck. Cheer after cheer rent the air as we crowded around Steen and shook his hand nearly off. We then inaugurated a green corn dance around the poor unfortunate buck. It was after 2 A. M. when we concluded our festivities.

Aug. 21.—We arose at 6 A. M. with our mouths all ready for one of those juicy venison steaks that we had read so much about. We found that Clark could cook venison as well as he could trout. We now had fish and venison on hand in great abundance, but the groceries were running low from the constant inroads made by the voracious gang. This necessitated Clark's going to Piseco for a new supply. He left us after cooking us a good dinner, to cook for ourselves. When supper time came Steen volunteered to act as *chef de cuisine*. He prepared us a supper equal to the best; but as a breakfast cook he was a dismal failure. His coffee was a villainous concoction, black as ink, and his potatoes would have tried the patience of Job.

Aug. 22.—We arose to find it raining, and it continued to drizzle nearly all day. Clark arrived in camp at noon with a large supply of groceries. In the afternoon Shonk, Clark and I went down the outlet of Spruce Lake for brook trout, in the rain. We returned with 75 fine trout, Clark taking the largest fish which weighed 1½lbs. Shonk duplicated my former performance by falling in the water and getting very wet.

Aug. 23.—Zack and I went trolling for lake trout, but did not catch any. Shonk shot and badly wounded a mudhen, and by hard work managed to catch her. It was great sport for us to see Shonk chase the poor hen; he hit her the first shot, but it took three shots more before he got

her, and then he caught her. Shonk insisted on having the hen cooked, and his wishes were complied with. The meat looked as if it was good, but Shonk could not go it.

Shortly after dinner two hunters who had been camping on West Canada Creek arrived in camp. They were hungry, so Clark cooked them some dinner; he also brought out the remainder of the mudhen which was left over from dinner. They devoured the mudhen with great relish, though one of the hunters said that the partridge was quite tough.

Aug. 24.—Zack and Shonk arose at 4 A. M. and went out on the lake to try their luck at trolling for lake trout. They had got about one mile from camp up the lake, when they saw something black moving in the center of the lake. They rowed as quietly as possible and soon saw that it was a large buck. As luck would have it Zack had his shotgun along, loaded with buckshot. They rowed for the buck, which was making for the shore. When the deer struck the bottom he started at a furious pace for the woods. Zack gave him one barrel of his gun and knocked him down. Shonk got out his big knife that he bought for such occasions, saying that if he could not shoot a deer he would cut one's throat. We were aroused at camp from our slumbers by the loud cries of Shonk and Zack and the reports of Zack's gun and Shonk's revolver. We got up and dressed as soon as possible and started up the lake to find out the meaning of so much noise. When we came in sight of them we saw Shonk and Zack embracing each other in great shape. We reached the boat in a few minutes and were overjoyed to see a large buck lying in the bottom of the boat. Clark said that it would weigh over 200lbs. Clark, Steen and Shonk went fishing for trout on the Jessup's River and returned at noon with forty-six fine trout. Clark said that as long as we had so much venison on hand we would not hunt deer until we had eaten up what we had, as he did not believe in wastefully slaughtering game, and we agreed with him.

Shortly after dinner a fellow with his pack horse arrived in camp with two hunters and their baggage. They were going to the big Stillwater on the West Canada Creek for a week. When the pack horse arrived in camp we saw a chance to get rid of some of our surplus venison. We sent half of the buck that we killed in the morning to a friend of Clark's who kept a hotel; he would have sent it to our friends at home, but the railroad would not carry it unless one of us accompanied.

About 7 P. M. four chumps arrived at camp, without any guide. They acted as if they intended to stay and made themselves at home. Clark had guided one of the party in former years. They were very tired and hungry from their twelve-mile tramp. Clark got supper for them. We played the good Samaritan and cut balsam boughs for their beds. When we demanded an explanation as to what they expected to do in the woods without a guide, they said that they were informed by the hotel keeper at Piseco that we were coming out on the morrow (which was not so). We informed them that Clark was under pay for five days yet, and we expected to stay our time out. They were very sorry that they had intruded on us. Clark was compelled to vacate his berth and sleep on the floor, which he did very gracefully.

Aug. 25.—The clergy arose at an early hour and went out trolling for trout. After breakfast we conferred with the clergy. They said that they did not want to intrude on us, but as they had walked twelve miles to get in the woods they did not want to face that twelve-mile trail so soon. We also thought it was pretty hard for them to take the back trail without catching a fish or getting a shot at a deer, all because of a misunderstanding. Of course they could stay at Spruce Lake as long as they wished, as the woods are free to all in this country, but the boats and cook are not. We proposed that Clark should bake up a batch of bread for them and leave them to shift for themselves at the cabin, while we concluded to go to the West Canada Creek, to a camp on the Little Stillwater. This camp belongs to the Barkers, who keep a sportsman's resort at Jock's Lake. Clark said the camp would probably be unoccupied, but if it was not we would build a shanty.

We got started at 2 P. M., and after a hard walk reached the camp at 4 P. M. We were happy to find it unoccupied. We all went fishing, while Clark was busy getting supper. We returned in about an hour; our combined catch numbered forty-three good trout and about 10,000 chubs, the still water seems alive with these pests. After supper Clark told me to get my nerves steady for it was my turn to float for deer. At 9 P. M. we started out. I sat in the bow of the boat, while Clark sat in the stern paddling. Not a ripple could be heard as we glided over the smooth surface of the still water. We had not gone far when we could hear a splashing in the water, which Clark said was made by a deer. I could feel something creeping up my spine. I forced it back, for I knew it would lead to "buck fever." As he kept drawing nearer and nearer I could hear my heart beat, and was afraid that the deer would hear it also. As we rounded a bend in the stream, about four rods off stood a young deer. I gave him a charge in the side, near the shoulder, he ran out of the water, but Clark said he was a dead deer. We went to the spot where he went out of the water, here we found blood in large quantities. Clark said he was lying down a short distance away, as he could hear him moving. We kept quiet for about half an hour, then we took up the trail of blood and found the deer about six rods from the shore, stone dead. I was surprised to find him so small. I thought he was as big as a horse when I saw him in the water. Clark said that he would weigh about 140lbs. I was somewhat chagrined to find that I had killed the smallest deer that had been killed (for I was the largest of the party).

Aug. 26.—We were aroused from our slumbers early this morning by Shonk, who came running into the shanty saying that he had seen some wild pigeons down by the creek; he caught up a gun and ran out, shot two shots in rapid succession. He came in again all excited and said, "Give me another gun, quick. There are two more left yet."

"Here," Clark said, "let me go with you and see if you haven't been shooting little Molly birds instead of pigeons." They went out, and as we did not hear the report of Shonk's gun we concluded that it was a bad case of pigeon fever. In a few minutes Clark returned with a broad grin on his countenance. It proved as Clark had said, the pigeons turned out to be Molly birds. After breakfast Zack and Clark went out on some woodcock grounds to try their luck with a dog, while Shonk, Steen

and the writer went down the West Canada Creek to try luck at fishing. Shonk was in the lead, fishing down the stream about 10 rods from the writer, while Steen was the same distance behind me, when suddenly I heard a loud shout from Shonk. We knew that something important had happened by the noise he made. Steen and I hurried forward and found Shonk had hooked a large trout; he was giving Shonk and his 8oz. fly-rod a severe test. Shonk reeled him up within 10ft. of the shore several times, each time he would make a rush taking the line off the reel with a vengeance. Steen got so excited that he commenced to undress, and was going into the water to catch the fish with his hands, but Shonk said to let the fish alone, that if he could not save him with the rod he would let him get away. Shonk succeeded in landing the trout in a few minutes; he weighed 3½ lbs. live weight. As the fish did not take to the fly we returned to camp. Our combined catch numbered eighteen fish. Zack and Clark returned at 2 P. M. with five game birds that they called woodcock.

After dinner Clark informed us that we had better make tracks for the camp at Spruce Lake, as we had devoured our supply of sugar, butter and coffee, and all we had for breakfast was half of a loaf of bread, venison and trout. We held a council of war, and concluded that we would stay over night and give Shonk a chance to float for deer (for he had not shot any) that night, and dine on bread, water and venison for breakfast. Shonk and Clark floated for deer and scared four out of the water, but did not get a shot.

Aug. 27.—After breakfast we broke camp, and after a hard walk of two hours we reached our headquarters at Spruce Lake. We found our friends the clergy still at the lake in good health and spirits. We passed the balance of the day in picking berries and reading. In the evening Shonk and Clark started out to float for deer, but found the lake too rough for paddling, so they had to abandon their expedition.

Aug. 28.—As we were going out of the woods on the morrow, we were very anxious to get a deer to take home with us. Shonk and Zack said that they could follow the trail to West Canada Creek, and they would go and float for deer on the still water, while Clark, Steen and I would go to Ottar Lake, which was about three miles up in the mountains from Spruce Lake. We all got off at 9 A. M. After two hours of hard tramping we reached Ottar Lake. The trail to this lake is marked by blazed trees, and is very hard one to follow. We found Clark's boat in good shape. Clark and Steen went out and fished with the fly for about an hour; they returned with 28 fine brook trout, which Clark cooked by stringing them on a little birch stick and placing it across two crocheted sticks before a bed of coals. After they were roasted he spread a little butter on them.

About 10 P. M. Clark and I went out on the lake and fished with a fly and caught forty-three trout, the largest weighing 2½ lbs., which Clark caught.

Aug. 29.—After breakfast we broke camp and started for Spruce Lake once more, where we arrived after a hard walk of two hours' duration.

The boys came in without any deer, but they had nine brook trout that would weigh on an average 1½ lb. each. They reported that last night they scared three deer out of the water, but did not get a shot at any of them.

We at once began packing our duffle to go out of the woods in the afternoon. Just before dinner time our man arrived in camp with his pack-horse to take out our luggage. Being very tired after our hard day's walk we retired early at Abraham's. After a very delightful drive the next day we arrived at Northville just in time to catch the train, and 3:30 P. M. found us at home, all very much benefited by the trip. A word about our guide, Ceylon Clark, will not be out of place here. Besides being an intelligent and painstaking guide, Clark is a first-class cook. He was always ready to please, and not a lazy hair graces his head.

KANSAS.

AMSTERDAM, New York.

THE UPPER ADIRONDACKS IN '56.

"GOD bless the old Adirondacks!" spoke Uncle Isaac, as he glanced at FOREST AND STREAM and noted there was to be an "Adirondack Number." "Tell them how I spent several weeks out there in the woods in '56 along the stream and floating on those beautiful lakes, and saw during that time no face of a white man, save that of my guide or perhaps my own reflected back from the quiet depths of some of the pure waters," he said.

I arrived at Dannemora on June 21. My old friend seized my baggage and sent it to his house and then gave me my choice to follow it or quarrel with him. We had been friends too long to quarrel, so I followed my trunk and made my headquarters with him.

The next morning I struck into the woods after having procured a guide who was perfectly familiar with all the wild region which I proposed to visit and who carried a large pack of provisions and other things necessary for our tramp in the woods.

We arrived at the Chazy after about three hours. It is a beautiful sheet of water, five miles in length by one or more in breadth. Above it to the south and east tower lofty mountains covered with gigantic timber, while to the west and north the old forest stretches away in all its primeval grandeur.

Here first I cast my fly to tempt the silvery denizen of the lake; here I watched him as it skimmed like a living insect along the surface, dart from his hiding place and rush upon the tempting but deceitful morsel, and laughingly observed his astonishment when he found the hook was in his jaw. Then followed break and turn, flash and dive, give and take as the slender rod bent "like a reed shaken by the wind," in his noble efforts to free himself; and then yielding sulkily, at last succumbing to the skill carefully pitted against his strength, he is reeled to the hand net and deposited in the basket, true spoil of the good right arm.

From Chazy to Bradley's Pond, some five miles deeper in the woods directly in our course to the Upper Chateaugay, we found the well beaten paths of deer, and leaving Bradley's we followed the outlet, which was very crooked in its course, and trout were to be had for the catching.

Resting at the Upper Lake that night, I started next morning for Ragged Lake, some ten miles deeper in the wilderness. Ten miles in the forest of a hot June day with a rifle, rod and basket, is a journey which must not be lightly considered. Yet when this most magnificent lake was reached I could but feel amply repaid for the

weary jaunt. Having rigged my rod and line I stepped carefully to the margin of the lake, overshadowed at this point by a huge jutting boulder, and threw my fly. It had scarcely touched the water when it was seized by a speckled trout weighing perhaps a quarter of a pound. I caught five or six more as fast as I could throw the fly, and could have caught any quantity; but we needed only enough for dinner and I forebore. When skillfully broiled by the guide I found that no keener relish was necessary than the ravenous appetite afforded by the long tramp to their immediate consumption.

Ragged Lake's waters swarmed with trout, and we rested by its shore for two nights. Here we found the deer, too, more numerous than we had seen them before. Long before the night shadows had gathered around us we saw them stealing out from the thickets that skirted the lake. They would walk stealthily and warily into the water, and after stooping their graceful necks to drink would swim away as if to indulge in a cooling bath to saturate their red coats, then return and feed quietly by the shore, secure alike from the annoyance of insects and the heat of a summer sun. In the night we went out among them with a light in the bow of our canoe, and the number we frightened into fits was not small. But to our credit be it told we left them unharmed, save by the terrors of our transient presence. We returned to our shanty and fell asleep under the lullaby of nature's midnight serenade.

Next day we coasted the lake to explore its hundred quiet and secluded nooks, and as we lay to under the cool shadow of a huge fir that leaned out from the rocks to rest a while and enjoy the beauty of the scenery around us, we saw a fine deer step into the lake from a point just ahead of us, and after stooping to drink, wade forward and strike out apparently for the opposite shore. We waited until he had got so far from the shore that we could cut him off, and then put out in chase. The lake was calm as a mirror; not a ripple disturbed its glassy surface, save the long wake made by the deer. Hearing the sound of our paddles, he turned his head and discovered us. For a brief moment he appeared to hesitate as to what course to take. He looked first in one direction, then in another, as if to ascertain the surest point of escape. We were now between him and the shore, and with energy born of despair he struck boldly forward. Our craft was as clumsy as a frail, and we gained on him but slowly—still we did gain on him. It was no boy's play to overtake that deer. In the excitement of the race, however, we forgot the labor and burning heat of the sun. Yet we had no thought of taking his life, that we might have easily done, for my loaded rifle lay in the bottom of our little craft. Our object was a trial of speed. A stern chase is said to be a long one, but when about two-thirds of the way across the lake our canoe was at his tail. Had we been less excited it would have seemed cruel to us to witness his fright. He would plunge forward with extraordinary efforts, raising his sleek body half out of the water, and then settle down again desperately to his work. With a look of genuine wildness, and distended nostrils, he struggled forward. Once we shouted a wild hullo as our canoe touched him, and the poor animal, regarding himself as lost, bleated out in the extremity of his terror. Still he pressed nobly forward until his hoofs touched the bottom, then the chase was up. A few desperate leaps brought him to the beach, and he plunged triumphantly into his native wilds. We heard his long bounds and the crashing of the dry brush growing fainter and fainter, until they were lost in the distance and all was still again.

Another night in camp and at early dawn we were off for Indian Lake, another beautiful sheet of water, about eight miles deeper in the forest. Here we constructed a raft, and remained for two days fishing for the lake trout which were to be caught in abundance; in fact, neither here nor at Ragged Lake was I able to discover any other species of fish than trout. On the morning of the second day we started almost directly west, designing to reach Meacham's Lake and the Saranacs later. Our dinner was composed of some beautiful brook trout and two partridges shot by the guide about noon, interspersed with sundry provisions from the pack of the guide.

A weary jaunt, indeed, yet one to be long remembered from the many new objects of interest observed on every hand. The day had been exceedingly sultry, and a bank of dense dark clouds rested on the western horizon, behind which the sun was fast sinking. My guide soon peeled from the trees around us a quantity of bark sufficient to completely cover the roof of the shanty, and we procured an elegant bed of green boughs.

After our supper of trout, rabbit and partridge, we stretched ourselves before the fire in the full enjoyment of our pipes, listening to those sounds peculiar to the deep, primeval forest, in the still night air, just before the storm. Here an owl solemnly hooted in answer to a neighbor across the lake, the tree toad piped his mournful trill, and the darkness became profound. About 10 o'clock the bank of clouds from the west had overspread the heavens. The lightning began to play most vividly, illuminating both forest and lake for an instant with perfect distinctness, and then leaving all in obscurity, impenetrable as Egyptian darkness. The deep voice of the thunder growled and rumbled like an earthquake in the distance. A low, mysterious moaning was heard in the forest around us, such as always precedes a storm, as if the old forest trees were whispering of the danger that was approaching.

Louder and louder grew the voice of the thunder. The lightning flashed and played along the surface of the lake, almost in a continuous blaze. Anon the pattering of the big drops of rain upon the forest leaves and upon the surface of the water was heard, and in a few minutes the storm was upon us. The rain poured in torrents, the lightning flashed around us, while the booming thunder echoed and reverberated through the mountains, sublime yet awful in its detonations. We were securely sheltered, and there was indeed a sublimity in the warring elements around us. In an hour the storm moved on. Its roar receded into silence. The stars peeked out again in their brightness and the night voices were again lifted up, as if rejoicing that the tempest had passed away. That following morning was the most beautiful that I ever witnessed—so clear, so cool and bright, and such freshness upon all things around us. The trees wore a brighter, greener mantle, the little forest flowers a richer hue. The birds sang more joyously, and the deep voice of the frog had a note of gaiety in it that it did not possess before. The lake was perfectly calm, not a ripple disturbed its

waters, save where a trout leaped above the surface. It was a glorious sight, the rising of the sun that morning; to see him gilding with his beams the tops of the mountains, while in the valley, where that lake lay sleeping, the grayness of twilight still lingered; to see the light chasing the shadows down the sides of the mountains; the rays, first resting on the tops of the tall forest trees, and then peering through the opening among the foliage, throwing bright spots upon the surface of the water, and then, as he rose above the grand old pines, giving his beams wantonly on the still bosom of the lake.

Many were the happy hours I spent while taking that trip, listening to the yarns of my old guide, who had, since early childhood, been a frequenter of these scenes. He was a man in every tissue and fiber of his brawny frame.

BYRON.

ADIRONDACK HOSPITALITY OF THE OLDEN TIME.

TWENTY-THREE years ago this summer, when I was a boy of seventeen, with three companions and no guide I essayed to "do" the Adirondacks for the period of three weeks.

We were not novices at camping, but woods life in the wilderness we found to differ decidedly from what it was within reach of some farmer friend's house, and after two weeks' experience we were reduced to a fare of hard tack and coffee, the latter with sugar but without cream or milk of any kind, and such fish or game as we were able to capture.

While the deer were thick about us and the larger game was present by "sign," often near our camp, we, having no knowledge whatever of hunting in the timber, were able to add fish only to our bill of fare, and the monotony of the table was beginning to pall upon our young palates, when one day, for the first time in a week that we had seen a strange face, we enjoyed a call from Jack Sheppard, then and now a noted guide in the Fulton Chain region, who came to ask for his camp, situated some distance from us on Lake No. 4, the loan of some coffee, offering to exchange tea for it or in fact anything else in the way of edibles.

We were well supplied with coffee, having more than enough to serve three times a day should we have remained for two weeks more, and, therefore, were able to accommodate him; but we did not care for tea in return, and told him so, at the same time setting forth our empty larder in all its bareness, and asking if we could get anything in the way of meat or vegetables at his camp, which we stood greatly in need of.

Sheppard was unable to tell us what his party could do, but promised to return during the day and let us know.

And he was as good as his word, for a little before night he appeared with both meat and potatoes, and better still, an invitation from his party to dine with them next day.

Time was of little account to us the next morning, and long before the hour named we appeared at the hospitable camp of the gentlemen whom Sheppard was with, who proved to be two Ithaca men, whose names I have unfortunately forgotten in the lapse of years. We were as pleasantly received as if old friends, and shortly asked to the table.

And such a table! Remember that we had been living alone for more than two weeks, more than half of the time upon hard tack and coffee, with occasional fish as our diet, and that none of us were cooks or had had much experience in that line, then you will understand what this dinner was to us. It ran as follows, and I remember it as if it were served me but yesterday: Soup—Frog's legs with potatoes as the vegetables. Meats—Venison, roast, with apple jelly and sherry. Fish—Lake trout, stuffed and baked, with butter dressing. Sweet and Irish potatoes, baked; fresh biscuit, pickles and olives, canned green corn, tomatoes and peas, with as good butter as I ever ate. Fresh huckleberry pie, and then coffee, crackers and Rochefort cheese, and lastly, Havana cigars and a bottle of port.

Perhaps the wine was not the best after dinner wine, but I promise you that we did it justice just the same, and that was the dinner in the heart of the "big woods" that we enjoyed almost a quarter of a century ago at the hands of gentlemen who were to us, as we to them, perfect strangers.

I have visited the Adirondacks many times since then, and have been "used white" by scores of campers, but I doubt if I ever received such open-handed hospitality as on that August day three and twenty years ago. H.

Natural History.

THE MANTIS SHRIMP.

WE note in a recent issue of the Waterbury (Conn.) *American* that "T. Fitzpatrick caught a peculiar 'fish' in Little Brook, back of his place, some time ago. It is now on exhibition and attracts a great deal of attention. The fish has a back shell, eyes, tail and two claws like a lobster, only that the shell is softer; its color is white; it is about 6 in. in length and 1½ in. thick; it has three legs on each side of its body about in the center; three-quarters of the under side of the creature is covered with a thick growth which looks like feathers, and, in fact, it is a curiosity. Hundreds of people have seen it and hundreds will see it, but no one has told Mr. Fitzpatrick what kind of a fish he has caught, and he is of the opinion that no one will do so."

If Mr. Fitzpatrick and the hundreds of visitors who have seen his "fish" will examine plate 274 of the "Fisheries and Fishery Industries," U. S., Section I, they will probably agree with us that the curious animal above described is a mantis shrimp, or sea shrimp, a burrowing crustacean about whose habits little is known. A related species in Europe is highly prized for food and the American forms might be utilized in the same way. The growths on the belly resembling feathers are merely the swimmerets similar to those found on the lobster.

POISONING FROM SHARK'S TOOTH.—Mr. S. F. Denton, the well-known artist, who is making the flexible casts of fishes, reptiles, etc., for the Fish Commission exhibit at the World's Fair, pricked his thumb and finger with the teeth of a shark which he was preparing and was obliged to suspend work entirely for several days.—B.

THE WOODCOCK'S TWITTER AGAIN.—There is no doubt that the general impression is that the woodcock, as it rises in flight, produces its whistle by the motion of its wings, especially as the sound appears not to be of a vocal character. But I have asked myself the question, if the noise was caused by the wings, why the bird sometimes takes to flight in perfect silence? Upon the authority of Mr. John S. Chilton, of Spring Hill, W. Va., I am more than ever convinced that the whistle is entirely vocal. Mr. C. was a strong advocate of the wing-sound opinion, and did not agree with the views of Mr. Trumbull until one day, as his dog was attempting to retrieve a bird, he heard the exact sound as it was jumping about that it makes while flying. He thinks this test conclusive. Some one, however, may say that the wings being more or less in motion while the bird was hopping, makes the opinion that the sound is vocal still questionable. I think not, however.—N. D. ELTING.

KILLED BY A DEAD SNAKE.—Florence, S. C., Aug. 12.—I inclose you a clipping from the *News and Courier*, of Charleston, S. C.: "Little Rosanna Lynch, daughter of Mr. John Lynch, was bitten by a piece of snake (a water rattle) on Friday at Little Salem Church, in Florence county. The people in the community were cleaning off the church yards preparatory for a protracted meeting. Mr. Lynch found the snake and cut it in two and threw it out of the way, but unfortunately his little daughter, about 7 years old, accidentally stepped on the head part and was bitten on the foot near the heel and died that night." The sad event occurred in my neighborhood and the account is correct. It might be of interest to some of your readers in showing that a snake cannot be trusted until dead a week at least.—W. M. BROWN.

CARRIER PIGEONS KILLED.—Ponkapog, Mass., Aug. 15.—I saw in your paper a short time ago something concerning carrier pigeons being shot, and caught by cats. The other day a carrier was brought to me that had flown against the telegraph wires. It lived a short time and then my brother skinned and preserved it. Around its leg there was a metal band with the letters and numbers F. C. C. 96. Thinking that the owner would wish to know about his bird I thought the surest way of his doing it would be through the *FOREST AND STREAM*.—J. H. BOWLES. A homing pigeon, apparently young, was found floating in Raritan Bay, Aug. 15, exhausted but alive. On one leg is a metal tag stamped "91, E. C. 884." The owner may have it by applying to Miss Mabel King, Water street, Perth Amboy, N. J.

WOODCHUCKS IN TREES.—Milwaukee.—Yesterday I shot a very large specimen from a young straight tamarack, the diameter about 25ft. up, where the woodcock clung, was hardly 2in. He was evidently driven there by a shepherd dog accompanying me and succeeded in reaching that height by making use of the small regular branches with fore and hindlegs.—H. D.

WHITE MUSKRATS.—Canton, N. Y., Aug. 15.—About white muskrats: Some boys killed one on the Grasse River about four miles above here one day this week. I did not see it, but quite a party of campers did. After all had looked it over they threw it in the river and let it float off. It is the first one I ever knew of in this section.—J. H. R.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

NEW HAMPSHIRE MOOSE, DEER, CARIBOU.

THE new deer law of New Hampshire reads: "Act of March 26, 1891.—SEC. 1. If any person shall at any time, except between the fifteenth day of September and the first day of November, hunt, kill, destroy or capture with dogs any moose, caribou or deer, or between the first day of January and the first day of September in any manner hunt, kill, destroy or capture any moose, caribou or deer, within the limits of this State, he shall be fined fifty dollars for every such animal so hunted, killed, destroyed, or captured, or be imprisoned not exceeding six months, or both. SEC. 2. If any person during the open season of any year shall catch, take, kill or destroy more than one moose, two caribou, or three deer, he shall be punished as provided in section one of this chapter for every moose, caribou or deer destroyed in excess of said number, and if any person shall have in his possession more than the aforesaid number of moose, caribou, or deer, or parts thereof, such possession shall be *prima facie* evidence of having unlawfully killed or destroyed the same." The text of the law as above is given in full in the July number of the *Book of the Game Laws*.

A CHICKEN HUNT IN THE NATION.

SEDALIA, Mo., Aug. 18.—A party of six of us left here at 6 o'clock P. M. on the 14th inst. bound for the Indian Territory to have a day's shooting with the prairie chickens of that far-famed country. Our destination was forty-four miles from the Kansas line on the main line of the M. K. & T. railroad, a distance of 270 miles from our starting point. We arrived there at about daybreak the morning of the 14th. As had been prearranged everything was in good shape, and the prospects for an early start were flattering. Breakfast was soon ready, but we got very impatient waiting for the team that was to take us to the hunting grounds. Finally the master of ceremonies was prevailed on to go and hurry up the team. He soon came back with a long face saying, "I have always heard it was no use to try to hurry these natives and I guess it's about right." In about an hour the wagon came; and water, ice, guns, dogs and men were loaded; and we were off to the stubble fields, which were about three miles off.

The day, up to 11 o'clock, was an ideal one; it was cloudy and pleasant, with a southerly wind. We were unloaded about 2½ miles from town, the driver pointing out to us the fields in which we were likely to find chickens. The wagon would have to go several miles around on account of wire fences. He pointed out a house, about 3 miles to the north, where he said he would go and order dinner for us. Everything being understood, we scattered out and started across the prairie. We had four dogs, none of which had ever seen a chicken, but each owner

was backing his dog and was satisfied that his dog would soon make a record for himself when we found the game. We crossed a beautiful creek, and on the north side was a very large field with wheat shocks standing all over it. We took a quarter of a mile of this field and went straight north. Every man kept his eyes on the dogs, expecting every step to see his dog stop staunch and rigid on a covey of young hens. On we went slowly, giving the dogs time; and they hunted beautifully, but when we had gotten to the north end of the field we had not seen a chicken. Here we divided, three going with two dogs to the east, and three with the other two dogs to the west. The writer was with the west crowd. As we started west through some high prairie grass an old cock got up wild and went about 300 yds., and was marked down in some very high grass. We followed him up. The grass was too high for the dogs to work, so we walked on, hoping some of us would start him, and we did. He got up within 20ft. of the writer, and made as much racket and looked as big as an old gobbler. He came down though in response to a load of No. 8s, in 20ft. from where he started. This gave us new hope; and going west on a big ridge along the edge of a cornfield, we found a small bunch and got three more.

The other boys, who had gone east, heard us shooting and came to us. As they got within some hundred yards of us one of our dogs made a beautiful point and was nicely backed by the other. Several chicks got up scattering and we bagged four. An Irish setter in the other party made a fine stand about this time and her owner killed a single. Soon another dog stopped and a single was scored. We hunted on this ridge until eleven o'clock, but failed to find any more birds.

By this time the clouds had disappeared and the sun came down very hot. We then started to the house for dinner. We arrived there to find no one at home, nor was our wagon in sight; but we soon found the well, and the water was fine. In about half an hour our wagon came up and the driver told us we would have to go on about a mile and a half further to get dinner. We arrived at this next place about 12 o'clock, some of us as near dead as alive from the heat. Here we had in a short time a very good dinner, for which we paid 25 cents each. After dinner we started west, and hunted faithfully until night, but only found one more covey of chickens, some of which we killed. Our principal work during the afternoon was in one stubble field of two thousand acres. The owner had threshed about 12,000 bushels of wheat and had about 6,000 more to thresh.

We got back to town about dark with 19 chickens all told. We reached home the next morning at 8 o'clock. Those who are anticipating a trip to shoot chickens in the Nation, I would advise to wait until September or until it gets cooler. Our trip was a failure so far as the hunt was concerned. We found no chickens to speak of. That there are chickens there there can be no doubt, but there is lots of country for them to be in and I dare say that ours is not the only party that will meet with disappointment this year. The country is the most beautiful I have ever seen, and I passed through several fields of corn that were far ahead of anything I ever saw, and it would have been hard for any one to have made me believe that corn could grow so large and fine. There are legions of quail there; we found covey after covey, and none seemed to have less than 40 or 50 birds in them, the most of them well grown. L. S. E.

STILL-HUNTING DEER WITH BIRD DOGS

Editor *Forest and Stream*:

"Still-hunting deer with bird dogs," says "H. L." in the *FOREST AND STREAM* of the 13th inst., recalls to mind my experience in hunting deer with a bird dog.

Three years ago our party, consisting of Reams, Kizer and Foreman, of Osceola, and Thorn Moore and myself, of this place, arranged for an October hunt in the "Green Woods." The Osceola party was to meet us at our camp. Reams had written us to take along a good hound or two and he would do the same. On the morning that we were to start something turned up that Thorn could not go, leaving me to hunt another companion and also to look after the dogs. Our old standbys, Drum, Dan and Cal, had made their last chase and I must look elsewhere. Sport was a dog owned by a neighbor. He was a cross between a cocker and an English setter and looked just like an overgrown cocker, and his owner said he would hunt anything. I loaded Sport into the wagon, and at 6 o'clock was ready to start to camp. I had no companion and did not care to drive the twenty miles alone. Just across the river I had to pass the house of a neighbor boy, Percy Showers, who was only fifteen years old, but a good all round shot with the shotgun. Percy had never seen a live deer, but I was willing to trust him; so I threw my old Parker and a dozen buck shells into the wagon for Percy and started. My young friend was delighted when his parents told him he might go with me, and away we went.

When we reached camp, Reams first looked at my bird dog and then at Percy, then he said, "Where is Thorn and the hounds? You will play the devil hunting deer with a bird dog and a boy and a shotgun." We did play the devil, as the story will show.

Our first chase was made on Winter's Ridge. Foreman, Percy and myself were placed in line across the ridge covered with very heavy timber, while Reams and Kizer took the two hounds and Sport, our bird dog, to make a drive. The leaves were mostly on the trees, and the wind blew so hard that it was almost impossible to hear the hounds if they should start a deer. The watchers had stood upon the crossings for some two hours, but no chase came. Thinking that no deer would be raised, Percy and Foreman came over to my stand and were discussing the failure of the drivers, when above the noise of the trees and coming down the wind was heard in the distance and very indistinctly the yelping of Sport. Leaving Percy where he stood Foreman and I started to other crossings. We had got but a short distance away when we heard Percy's gun. I turned to see what he had shot at, and had just time to get one shot at a four-pronged buck as he went over some brush and out of sight. I walked over to where the boy stood, and said to him, "I'm sorry now I didn't stay here. I might have had a better shot." Percy said in reply, "I'm sure I hit him, for he just stopped long enough to allow me to get the sights on him, and I put the lead right into his shoulder." I walked over to where I had last seen the deer, followed the trail some 30 yds., and found the buck dead with two

buckshot through his heart, two in his neck and one in his shoulder.

I bled the deer and laid him across a log, and turned to listen for the dogs, when I heard Sport giving tongue for all he was worth. In less time than I can tell it, he came up and took his position by the deer, the proudest dog you ever saw. In a short time the two hounds came up on the trail and attempted to claim the deer; but Sport was master of the situation, for it was his game, and in about one minute he had thrashed both those hounds and had again taken possession of his deer. Sport had raised the deer on the south side of the ridge and without any help whatever from the hounds had driven it to the boy with the shotgun, who did his work like a veteran.

We made many chases with Sport, and he proved himself the equal of any hound as a hunter and a trailer of deer; and I have never heard Reams speak of that meet without praising the bird dog and the boy and his old Parker. FRANK Y. HARRIS.

CLEARFIELD, Pa., Aug. 17.

A SHORE BIRD INCIDENT.

THERE are some prospects for shooting in Massachusetts when the law is off. The Restocking Committee of the Massachusetts Fish and Game Protective Association have encouraging reports from the quail and prairie chickens they put out last winter and spring. The committee has, in all, over 50 reports, and scarcely one is unfavorable. They have reports of 12 broods of prairie chickens, and all appear to be doing well. There is a complaint from one of the islands stocked that the birds have flown over to the main land, as indeed the committee rather expected they would. The quail appear to have reached a larger size at this time than they had by the middle of September last year. Mr. A. Tompkins, of Waltham, has been "up to camp," eight miles up the Sudbury River, and there in the meadows he saw, the other day, two good broods of quail. The birds were larger than he expected to see and remarkably tame. He got very near them and they did not seem to be alarmed. Residents say that they have been in the meadows all summer. Mr. Tompkins is quite sure that the quail are from the birds that were put out last winter. When any of the old birds are shot it will be known, for the birds that were put out in that section each had a little section of rubber tubing around the leg.

Some of the boys are trying for shore birds, summer yellowlegs, plover, etc., but not yet with very marked success. Two boys from the Chamber of Commerce—they object to the use of their names and may hardly like to be called boys—have been practicing with bird calls and getting decoys ready for some time. Monday morning they were ready. They both live at Beachmont, and down by the shore and across the creeks, a mile or so is a good location for flights of shore birds. They resolved to be there early. There are one or two booths there to shoot from, and the first man to get in has the booth at his command till he chooses to give up shooting. Only one of the booths is of any particular use, for the birds can be called down only to this one. The boys started before daylight, and after some paddling in an old boat with a broomstick and a shingle, and the wading of one or two creeks, they were near to the best booth. They started for it only to see another man a few steps ahead of them making for the same booth. Then began a race for position, but the stranger got the booth just a few feet ahead of the Chamber of Commerce boys. He rushed in with an exultant "Not this time, my hearties!" He had the position, and daylight was just breaking; so the boys were forced to take the upper booth, from which only a few birds have been shot. They began to call, and soon the birds came, but each time to swoop down directly in front of the boys' rival. He got several shots and a number of birds before our friends gave up in disgust, not having got a shot. They started for home and he invited them to come a little earlier another day, and get there in time to get the booth—if they were able. He also thanked them for calling the birds down. The boys say that he is shooting birds for the market, and that one has got to get to the booth pretty early in the morning in order to beat him. SPECIAL.

MICHIGAN DEER RESORTS.

CRYSTAL FALLS, Mich., Aug. 16.—Editor *Forest and Stream*: I will give you the best points for deer in this section.

The vicinity of Fortune Lakes stands first. These lakes, three in number, are four miles from town, reached by a good wagon road. Camp grounds are splendid, runways between the lakes. The best place to camp is at the dam at foot of last lake. The hunting is excellent in every direction from this point.

Chicago Lake and the Brulé are next in order. The lake is ten miles from town, is five miles long, and the Brulé is only three miles from the foot of the lake. Splendid camp grounds. Canoes can be rented from the Chippewas for 50 cents to \$1 per day. The best ground is on the south and west side of the lake.

Next is the south side of the Mes-que-cum-e-cum, or Paint River, with headquarters at Camp 4, L. W. & V. S. Co. This camp is eleven miles by "road" from town. I cannot recommend the road to a rheumatic patient. It's rough. Between Camp 4 and the Chicago River there is lots of game.

The Hemlock and Michigamme River districts are good, but are being hunted to death now, so that by Sept. 25 the game will be scared out. The other places named are easily reached and the deer are there.

The livermen will take parties on to any of these grounds with their camp outfits at very reasonable rates, \$5 for the trip at the outside. The best equipped stable for these trips is Hollister & Co.'s; they will meet parties at train on receipt of message at any time. C. & N. W. R. R. is the only line reaching this place. There is a scarcity of guides here; the only ones I think of are Elon and Milan Stowell, Marion Buskirk, H. G. Fribley (lives at Chicago Lake) and Mr. Carr, care of J. E. Bower. These are the only reliable ones unless an Indian will do. The Chippewas live at the lower end of Chicago Lake. I will see these parties at any time and engage them for any persons you may suggest.

I would like to take a couple of hunters out for a week or two myself for sport and not for pay if I could get away. When the season opens I will probably be in the woods near Camp 4. H. H. P

CHICAGO AND THE WEST.

CHICAGO, Ill. Aug. 21.—Thus far the sportsmen have won victory without a struggle in their restaurant cases. A pretty fight with the Richelieu Hotel was looked for, but was not to be. Manager Bemis went to Mr. Low, prosecuting attorney for these cases, and made some inquiries.

"Mr. Low," said he, "what sort of a case have you got against my hotel? What proof have you, anyhow?"

"Well," said Mr. Low, "two of our folks went to your café, wrote out an order for two prairie chickens, got them, paid for them, and brought away a portion which will be produced in evidence against you. You have no case."

"Great Scott!" said Mr. Bemis, I shouldn't think I had. I don't want to defend any such case as that. I'll pay my fine, and go home and give my steward a— I don't want to sell illegal game."

The poor stewards, how they are catching it these days. Mr. Bemis paid his \$25 and costs, and let us hope he gave his steward the promised article as aforesaid.

Billy Boyle still says he will fight, and we hope he will. His case comes off Monday next.

Last week I spoke of finding illegal game at Rector's restaurant after he had been prosecuted once. Mr. Rector will learn wisdom later on. On Friday last, Aug. 14, Messrs. F. A. Place, T. W. Pattison and C. W. Lapham went to Rector's place and ordered three teal, and got them. Mr. Place asked if they were not afraid to sell this game, and the waiter said his orders were to sell game at any and all seasons. Mr. Place asked him to note that he would prosecute, and made a record of the date and circumstances.

One would think that Mr. Rector would have had better sense than to go ahead after this, but it seems he did not. A week ago I asked Billy Farmer to take a friend and go to Rector's after duck. Yesterday at noon, Aug. 20, Mr. Farmer and Mr. C. W. Ashton went there, and ordered two teal, as per the bill of fare.

"How long will it take?" asked Billy.

"I'll see if we have any duck, first," said the waiter. He returned and said they could get teal, and they did get them. I saw the leg of one of them and no question about it is possible. This would seem to locate about six new cases against Mr. Rector, which at \$32 each would foot up \$192, just what Mr. Kern ought to have paid, and just what Mr. Rector probably will have to pay. One or two fines like that, and a restaurant man is going to learn a whole lot of sense pretty quick, whereas \$25 might not serve that purpose.

These cases have, however, done good unquestionably. Last night, for instance, I found that the Stock Exchange restaurant had taken duck from its bill of fare, and I could not get any. To-day I dropped in at the Lakeside restaurant and asked for teal.

"We haven't got any game," said the waiter. "There's been half a dozen men fined \$25 for selling it lately, and we don't dare sell it."

"Is that so?" said I, "who was it got fined?"

"Oh, Bemis, and Kinsley and a whole lot of them," said the waiter, with an inaccuracy which I could have corrected, for Kinsley has not been fined. The head waiter then came along, and I asked him if he had any game. He said:

"Game? Why of course we've got game. Here—"

"No we ain't," interrupted my waiter. "Boss says he's afraid to serve it."

"Oh, that's only prairie chicken," said the head waiter. "We've got woodcock and duck and all that."

"I don't care, it's all game, and all game is out of season now," said the waiter, stoutly, though inaccurately, so finally I did not get any game here. The effect of the late cases was evident.

There is a member of a big hardware firm here, which latter also sells some sporting goods, who has been down in Indiana hunting, and who killed half a dozen prairie chickens there. His partner says that such was his own admission. I know the name but dare not give it, for I have no direct proof that he killed the birds, more's the pity.

Here is a nice special-car-railway-official sort of an item to be in the dispatches, isn't it?

"Danville, Ill., Aug. 16.—[Special.]—E. A. Peck, general superintendent of the Cincinnati, Cleveland, Chicago and St. Louis Railroad; A. G. Wells, superintendent of the Peoria Division; J. W. Simmons, station agent at Paris, Ill., and Dr. George Blackman, of Indianapolis, came over in a special car from Indianapolis yesterday to hunt quail and prairie chickens. Late in the evening they were arrested by officers Rittenhouse and Kinney for violating the game law. The Vermillion County Fish and Game Association will take a hand in the prosecution."

More power to the Vermillion County Association! The sportsman's day dawns.

Aug. 22.—Messrs. Place and Lapham have gone to Minnesota after chickens. Mr. Place's hay fever always breaks out on Aug. 20, which somehow happens to be the chicken date in Minnesota.

Mr. C. S. Dennis and Mr. Clark of the Hibernian Bank of this city have gone to Detroit Lake, Minnesota, for a six weeks' stay. This will give them a fine trip in a magnificent country. They will be joined in early October by Mr. W. L. Wells, of the Shober & Carqueville Litho. Co. of Chicago. The latter gentleman is known by thousands of sportsmen who do not know his name, through the fine lithographs, "Mallards" and "Teal." These marsh scenes could be drawn only by an artist and a sportsman.

By the way, Mr. Wells was up at Detroit lakes two years ago, and had magnificent wildfowl shooting. He spoke of this to that veteran market hunter, Bill Griggs, well known along the Illinois River, and perhaps as well-posted a shooter on fowl as any of the land, he and Abe Kleinman having prospected together for new country many a time. Griggs did not say much, but last fall, when Mr. Wells again appeared at Detroit for his fall shoot, he found Bill and his partner there ahead of him. These men shot that fall in and around that country, and Griggs later said that he had never seen mallards so plentiful in all his experience, except in the earlier days on New Madrid marsh. As water and feed are generally good in the Northwest this fall, it is likely that the fowl shooting around Detroit will be good. The bass fishing in the adjacent lakes is too well known to need mention here. Chicken shooting I do not know much about in that region, but Mr. Wells says they got some birds not at west of Detroit.

Messrs. F. S. Baird and M. R. Bortree, the latter our new game warden here, are absent on their annual chicken trip to South Dakota, and will not return till the middle of September.

Week before last, Aug. 10, a gentleman killed eighteen jack snipe at Fox Lake. Ed. Howard says there were numbers of snipe in. This would seem pretty early for that bird in this region.

Woodcock shooting cuts a small figure in Chicago sport, but once in a while one hears of a bag. Earlier in the season Henry Ehlers killed 20 cock near Thayer, back of the Diana Club grounds, on the Kankakee, and week before last, in a day and half of not very hard work, he got 16 woodcock and 83 bass, a very good mixed bag.

The Kankakee looms as a fishing stream. Mr. Mussey joins Mr. Card for a week of it at Mak-saw-ba now. Mr. Card got 15 bass last Thursday. I do not hear of such fishing anywhere around in this hot weather. The gentlemen who are founding the new club down at Koutts, Ind., on the Kankakee, tried the fishing near their proposed grounds and made some exceedingly heavy catches. Mr. J. W. McAuley is prominent in the work in getting up this new club. Some of the best snipe ground in the West lies just back of Koutts, and the grounds are well chosen for shooting purposes, as well as for fishing, which last is only a side issue.

By all means the most considerable shooting party of the city on Sept. 1 will be that which will go to the Horicon marsh, in Wisconsin. This event is awaited with interest, and will be fully described, as earlier mentioned.

Mr. M. J. Eich, the meteoric trap shot who has been shedding effulgence around here for the past year or so, will depart for the Illinois River, Hennepin way, as soon as the season opens for ducks. Indeed there will be a general exodus for the marshes at that date. The Chicago boys are great duck shooters.

Dr. H. C. Buechner is back from his pleasant European trip. It would seem that he did not go afield there, but abode mainly at Munich. The Doctor says that at Munich, for 26 pennige, or 6 cents, you can get a glass of beer as long as your arm.

Dr. J. M. Hutchinson won the Ft. Dearborn Club medal yesterday with a straight score of 15. Cumberland Lodge shelters a number of shooters, field and trap.

Mr. Alex. T. Loyd and Mr. J. L. Wilcox have been having a little trial or so of their ability at the trap, to the disappointment of the latter gentleman, as see trap scores. Their first race, over a week ago, resulted 42-37 out of 50, in favor of Mr. Loyd. Mr. Wilcox then offered \$50 that he could beat Mr. Loyd's first score, and another \$50 that he could beat his next score. Mr. Loyd cheerfully agreed, and the next match, shot last Saturday, resulted 43-41 out of 50 for Mr. Loyd, Mr. Wilcox thus losing both wagers. Alex. Loyd is not safe to go against, for you can't tell what he is going to do; but a gamer loser or more gentlemanly winner does not live in Chicago, at least.

Mr. W. L. Shepard was going after trout and didn't go, and may be going after deer later on. Apropos of this they tell an interesting story of Mr. Shepard's last year's trip after deer in the North Peninsula. It seems that he hired a couple of guides to take out some hounds to start a deer for him. The guides stationed him on a runway, and went off. Mr. Shepard staid at his post half a day, and then started home, not having heard a sound of hound or deer. On his way in he blundered over an old logging camp, and peering in saw both the guides fast asleep, with the hounds chained up near by. This made Mr. Shepard angry, and he came home. Maybe the guides knew it was illegal to hound deer, and so let Mr. Shepard down easy. Anyhow, this is the story.

The many friends of John Gillespie are grieving over his condition. He has been stricken with total paralysis of the lower limbs, and no hopes are given for his recovery of their use. No better known figure of Chicago sportsmanship than John Gillespie. The boys go out and visit him at his home and comfort him as they can.

A sad affair occurred at Lake Marie, one of the Fox Lake chain, last Saturday, in which a lad named Dunlap, of Oak Park, lost his life. He and another youth were on the lake with a boat; Dunlap, who could swim but little, holding on to the boat and paddling with one hand, further supporting himself with one of the oars under his body. All at once he lost his hold on the boat, sunk with the oar, rose once and then disappeared forever. Three days' faithful search failed to find the body, which is doubtless tangled in the heavy weeds which cover the mud bottom of these truly dangerous lakes. I was there the day after the disaster, and they were firing cannon and using dynamite in the effort to raise the body. This may be effective so early after drowning, though I don't see why. Then a diver was brought on from Chicago, and rigged in his heavy armor went down to the bottom of the lake. He came up at once, saying that the attempt was useless, as he sunk to his waist in the weeds and mud. The body was not found. When I looked at the distance out these boys had gone over the deep and treacherous water, I was more strongly than ever impressed with the foolhardiness and carelessness sometimes shown by boys. Lake Marie is dangerous enough for the strongest swimmer. The fisherman who goes out of his boat into the weeds of these lakes, is lucky if he ever regains shore or boat.

Major Maitland-Kirwan, of the English army, has passed through, en route for his eighth annual hunting trip to the Rocky Mountains, where he anticipates repetition of earlier success.

Mr. A. W. "Wiley," or Mr. Bruner, of Riverside, California, goes back to the Golden State without the scalp of the redoubtable J. A. R. Elliott, of Kansas City. The two shot last Monday at Kansas City, Mr. Elliott scoring 47 out of 50 birds, and Mr. "Wiley" 44.

Great interest is current to-day in the match between the Milwaukee and Chicago teams, now in progress, as see trap columns.

A little more trap shooting before the fall field season. Elkhart, Ind., shoot begins Aug. 26. The thirteenth annual of the Central Illinois Sportsmen's Association opens on the 25th and lasts four days, at Jacksonville, Ill., Charlie Strawn and Jim Stice's town. Both good events.

Mr. Oscar Blomgren again asks me if I know about the pickerel's tail, and again I must ask if anybody else does. "In Sweden they showed me," said Mr. Blomgren, after his return from a tour of that country, "that when

pickerel are biting well you will find that the split in the tail, between the two lobes or forks of the tail, runs deep, and almost clear up to the flesh. When the fish are not biting much this split is nearly grown up. The boatmen would look at the tail of the pickerel we caught, and say, 'Now they will bite well,' or 'They will bite well in a week, or two weeks.' I do not know whether or not a pickerel's tail fluctuates with his appetite. Do you?"

If it does I don't know it. But this reminds one how careless is the common observation of the fishes and birds we are accustomed to handle. I confess I have always looked rather more closely at the other end of a pickerel, but must look for that split tail the next time.

The best fishing since June will begin now in two or three weeks, but will be lost sight of in the shooting. Fall is the best time for pleasure in Upper Wisconsin. No trout then, but no mosquitoes either, and plenty of mascalonge and deer.

Mr. C. M. Townsend, of Knox, Ind., secretary of the Northwestern Indiana Shooting Association, in sending in scores of the late pleasant Crown Point tournament, unfortunately too late for use, remarks, "We had in use one of Paul North's electric traps, which was a most pronounced success, not causing a balk during the day." Electricity in trap pulls, both for live bird traps and targets, is a foregone conclusion.

Aug. 23.—I notice FOREST AND STREAM is good enough to reply partly to my query as to the weight of the pickerel by recounting the characteristics of the cheeks and gill covers. These were already in mind, and it was only the question of possible weight that bothered; therefore I was glad to see in the correspondence columns of the same date the reply to "F. A. S.," that the largest true pickerel does not attain a weight of over 8 lbs. In Iowa we always used to call these larger fish by their right name of "pike," though I fear we included also the pickerel under that name. Here in Illinois and Indiana and Wisconsin everything in the pike or pickerel line is called "pickerel," no matter how big. We have still a few men left around here who insist that the mascalonge is "only an overgrown pike or pickerel," but these are men who never saw a mascalonge. The latter fish, placed alongside the pike, no more resembles it than it does a catfish, or at least it is as easy to distinguish. The question of a 3 lbs. "pickerel" or "pike" is harder to determine. Mr. H. B. Frazier, who first started this question of the weight of the real pickerel, caught an 11 lbs. fish at Power's Lake this spring, and a wager was laid by his friends as to whether it was or was not a pickerel. No description of the cheeks or gill covers could be had, and it remained only a pure question of weight to decide. Now it seems, as per FOREST AND STREAM of Aug. 20, that the fish could have been a true pickerel, but was a pike. The big Kankakee and Fox River "pickerel," naugher a look at their cheeks, may also be pronounced off-hand to be pike and not pickerel. This will relax many wrinkles of thought around Chicago.

175 MONROE STREET.

E. HOUGH.

HINTS ON HANDLING GUNS.

Editor Forest and Stream:

Having been asked by friends frequently for advice for their boys in handling guns, I send you a digest of same. Perhaps, as the shooting season will now be on soon, you might think them worth publication:

1. Empty or loaded, never point a gun toward yourself or any other person.
2. When afield carry your gun at the half-cock. If in cover let your hand shield the hammers from whipping twigs.
3. When riding from one shooting ground to another, or whenever you have your gun in any conveyance, remove the cartridges, if a breechloader, it being so easy to replace them. If a muzzleloader, remove the caps, brush off the nipples and place a wad on nipple, letting down the hammers on wads—simply removing caps sometimes leaves a little fulminate on the nipple, and a blow on the hammer when down discharges it.
4. Never draw a gun toward you by the barrels.
5. More care is necessary in the use of a gun in a boat than elsewhere; the limited space, confined action and uncertain motion making it dangerous at the best. If possible, no more than two persons should occupy a boat. Hammerless guns are a constant danger to persons boating.
6. Always clean your gun thoroughly as soon as you return from a day's sport, no matter how tired you feel; the consequence of its always being ready for service is ample return for the few minutes' irksome labor.

BOSTON.

REINGOLDS.

WORCESTER NOTES.

WORCESTER, Mass.—Everything has been so quiet the past season that material for a letter does not seem to be forthcoming, still, lest you think we have all retired from the field, I will skim over the season's happenings just to keep Worcester on your map.

The trout fishing has been unsatisfactory on the whole. A few nice baskets were taken, but lack of water closed the season unusually early and the season's catch has been far below that of 1890.

The plover shooting was also poor on native birds, one bag of 11, two guns, being high. The bulk of the flight should be here now but I have heard of no good shooting, though a few have tried the Princeton hills the past week.

Trap shooting has held its own, and a good crowd turn out to the weekly shoots. A friendly match shot last Monday between A. B. F. Kinney and W. R. Dean at 50 clays, \$25 a side, the entire stakes to go to the club treasury, created considerable interest and sport. A strong wind caused the birds to behave badly and a good score was impossible. Dean managed to break 36, but Kinney was not in the race at all, only breaking 17. The coming tournament of the club should bring out a large field of shooters as good purses are guaranteed for each day. A few of the boys attended the New London tourney but failed to increase the size of their "pile" to any considerable extent.

At present all interest centers in the approaching bird season, and Sept. 15 is probably looked forward to with more eagerness than any other day of the year.

Reports from the young birds indicate a fair supply. Woodcock have probably bred better than usual, and we should have some native bird shooting the first of the season.

Partridges have bred only fairly well. The young birds are well-grown and strong flyers now, but the broods

are small, one brood of 8 being the largest I have heard of, and most of them running from 2 to 5.

Quail wintered unusually well, and if they have bred well we should have better quail shooting than ever before. The land posting craze is on the decline, at least it is making no headway, which shows a weakening. A little foresight and decency on the part of all sportsmen would in a short time eliminate the nuisance, as the better class of farmers are already tired of driving off friends and neighbors, many of them allowing their postings to go to ruin or tearing them down.

One of the worst evils we have to contend with at present is the unwarranted prominence given minor shooting and fishing events by local newspapers. To the unsophisticated it must appear at times as if one-half the inhabitants of the county spent their entire time hunting or fishing. This doesn't help matters with the farmers any.

THE BRIDGEPORT GUN IMPLEMENT CO. have brought out a tool which they call the "handy closer cup." It produces a round or square crimp, and is especially intended for dealers or gunsmiths, being adapted for use in an ordinary foot or power lathe. This new closer cup has reversible steel pins, and in combination with the automatic expanding follower and burnisher produces a crimp that is remarkable for beauty of finish and closeness. Every shell is finished exactly alike. The cup will turn down and burnish smooth the interior surface of

shell, thus restoring the broken fibre of the paper, producing the close, even crimp so much desired by users of nitro powders. The end of shell being turned in evenly all around, resting squarely upon wad and burnished closely to side of shell at this point, gives resistance and uniform pressure so desirable for accuracy. The steel pins are reversible, so that the cup will crimp either round or square by simply changing position of pins. The company tell us that they shall bring out shortly a straight feed closer with this cup for sportsmen's use.

INDIANS AND GAME.—Wood Mountain, Moose-jau, Northwest Territories, July 31.—*Editor Forest and Stream:* It is regrettable that Indians should be allowed to take ducks' eggs in the way they do. A game guardian detected a party of Indians last week taking eggs on the Wascana near McIntyre's, and in one cart between 400 and 500 eggs were found, some of them hatching. As the ordinance stands he could do nothing. This kind of thing is going on all the time and should certainly be stopped. Owing to the new railway in northern Montana, large quantities of deer and antelope have been driven into Canadian territory, which are being hunted by Indians, who kill bucks, does and fawns. Two Sioux Indians and their families returned lately from a hunt which lasted about ten days. They brought with them no less than thirty-four antelope hides which these two Indians had shot, also quantities of wildfowl and prairie chicken eggs. And this is the so-called close season. These are non-treaty Indians, belonging to the other side of the boundary, and there are lots more of their kind hunting now. What chance has a law-abiding citizen of the Northwest of having legitimate sport, when it is so effectually destroyed in close season? If some means are not soon adopted to prevent this state of things, there will be in a few years but little game for any one, black or white, to shoot. I know of one Indian alone who has shot fifty-three deer and antelope this spring and summer, and there are other hunting parties out yet. I am afraid that the residents will not wake up until everything is exterminated.—RED ANTLERS.

EARLY CHICKEN KILLERS.—St. Louis, Aug. 19.—In-closed find a clipping from this morning's *Republic*: "DANVILLE, Ill., Aug. 18.—Justice W. C. Hollowell issued warrants to-day for the arrest of J. W. Simmons, superintendent of the Claire division of the Big Four Railroad, and Dr. Graves Blackman, of Indianapolis, for killing prairie chickens. E. T. Peck, general superintendent, and A. G. Wells, superintendent of the Peoria division, through their attorney, pleaded guilty, the former to killing three birds and the latter one bird. Their fines and costs aggregated \$45. Blackman and Simmons must have been better hunters, as the quartet bagged twenty-two chickens." It would seem that such men as those named would be above breaking the game laws.—P. H. H.

NOTES FROM MEXICO.—Dove shooting is pretty good now and cottontails are as usual abundant. We have had but little rain in this section so far. Farmers are suffering and I fear the ponds will be rather low for the ducks. There were heavy rains in this month last year, however. Local hunters are on the look out for a plover, *Aegialitis montana* perhaps, which appears here in August or September. I have never seen the bird myself. They call it "gauga," which is in Spain the name of a *perdix*. Another case of the misapplication of the Old World names.—AZTEC (San Luis Potosi, Aug. 14).

TO POLISH DEER HORNS scrub them with a brush and sand to take off the dirt and loose fiber, then polish with rouge and rotten stone and a cloth, and varnish with copal varnish.—*Scientific American*.

TENNESSEE.—Greenville, Aug. 12.—The prospect for quail, our only reliance for sport, is exceedingly good, and it is no unusual thing to find a mother with two or three dozen young.—J. M. M.

FOREST AND STREAM, Box 2,632, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Spiveller," "Sybilena" and other competent authorities to be the best treatise on the subject extant.

"Forest and Stream" Nursery Rhymes.

v.
There was a young boy with a gun,
Who said he'd have r-o-o-dles of fun—
But he blew in the muzzle—
* * * * *
Another boy knew he had sense,
So all he blew in was his pence;
But the gun which he bought,
Just as us-u-al caught,
And blew into the boy, from a fence.
A hunter there was who was queer;
He shot "what he thought was a deer."
'Twas a man that he shot,
Who turned on the spot,
And made a bulls-eye of his ear.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

A NOVICE IN PIKE COUNTY.

Editor Forest and Stream:

I wish to thank Mr. J. B. Mayer, of Hawley, Pa., for sending me to Pike county and advising that I stay with Mr. J. H. Thompson; also the FOREST AND STREAM for referring me to Mr. Mayer. I found what I was seeking, and if Mr. Mayer makes as happy a hit in all his suggestions then indeed is he a most wonderful man. As for Mr. Thompson, it seems to me that I shall never succeed in discharging the many obligations under which he placed me, and when I say Mr. Thompson I likewise include his entire household—his good wife, Grandmother Thompson, and even little Dick, the four-year old son and heir, who would insist on going afishing with us and who caught a bass too lively for his chubby hands to manage. Bless me, what a fisherman that boy will make. Before we reached the shore he earnestly insisted that his bass was as long as his arm. When taken out of the boat it was as large as Fanny, a six-months-old hound pup, and when at the supper table he told his mother and grandmother, his eyes sparkling with excitement, that he caught a bass "as big as the house!" What a future is before that boy!

I have no tale of record-breaking to unfold, nor of a huge bass that took me just so many minutes by the watch to land. I am a greenhorn or tenderfoot at freshwater fishing. The gentle art is to me a tantalizing and inviting mystery. I have got it all to learn. I know now, since I have had time to think it over, that I handled too roughly the bass I did hook. To state the case plainly, I yanked them, and generally lost them. But I am going to do better next time, or at least try very earnestly. Mr. Thompson will see when next we meet that his good advice has not all been thrown away.

Mr. T. has a lovely little place up on the mountains, nearly all woods and water. Some people might call the water a pond, and show a disposition to treat it with "sniff," but to me it's a real lake with clear, cold water, rocks and yellow lilies, with the trees and bushes at the very edge of the water, just as if they had come down from the hills to have a look at themselves in nature's mirror. And the rocks and boulders also have slipped their moorings from the heights above. Some halted at the bank, but most of them must have tumbled in, for nearly every bass I hooked went straight off to look for a rock, and he found what he was looking for with great suddenness, much to my sorrow and regret, and usually the loss of a hook or leader. What a collection of fishing tackle the bass and pickerel of that lake must have secured in the course of time. I contributed liberally. And what a heap of fun those fishes had with me. I know they are longing to renew the sport. One bass, a big dark-complexioned fellow of the gypsy type, came out of the water to look at me, and when he saw that I had my line tangled around the reel he laughed so heartily that the hook dropped out of his mouth.

I cannot help but admire the pickerel. He is a fish of a very even disposition, and his composure under the most trying circumstances is something truly wonderful. I saw one approach a sunfish that was hooked through the lips, and gently but firmly grasp it crosswise in his mouth. I was all excitement while the sunfish was paralyzed with fear and pain, but the pickerel appeared as calm and self-possessed as you please. He swam around in an aimless sort of way for what seemed to me at least three minutes, but really about half a minute, making no effort whatever to swallow the fish till he got good and ready. Then he turned the fish in his mouth and commenced to swallow it, head first. At this stage of the game my patience became exhausted, and I attempted to fasten the hook in him by a quick movement, but it was no go. He held on for awhile and then let me have the sunfish. There is nothing like experience to graft facts to a man's memory. In the first place I should have let the pickerel run a little longer and then pulled in gently. I had been told that before. Just wait till I meet that fellow again.

There are quite a number of bass in the lake. In the evenings they could be seen breaking around the lily pads and well out toward the middle of the lake. I tried casting the fly. In making this statement I feel that I owe an apology to every fly-fisherman of even ordinary ability; but then, I suppose, they were all beginners once and their efforts as awkward as mine. However, it does smack somewhat of presumption to see a tenderfoot tackle the fly on his first trip. By the way, I came near forgetting to say that I caught no bass with the fly.

After all, how very important are the unimportant things of this life. After you return from a fishing or gunning trip how the trifles and small happenings loom up, and what pleasure it gives to review them. The most exciting thing that transpired on my trip was the hooking of a large bass or pickerel while trolling alone and my frantic and unsuccessful efforts to save him. Yet where I recall this once, I muse a dozen times over the little red squirrel that ran along a fallen tree at the edge of the water, or the ground hog that mounted a rock and surveyed me so earnestly while I sat motionless

in the boat, or the wood duck that made the circuit of the lake with such an easy, graceful flight, or the hen partidge calling in the woods. These and a hundred other little things come to me now, and I love to think upon them.

Each has its individual history, and some way or other has been more or less associated with my past life. The red squirrel is an old friend. Curiosity has often led him to approach quite near to me, where he would clatter away for deer life, no doubt asking all sorts of questions and working himself into a rage over my provoking silence. Yet the slightest movement would send him scampering. What formidable looking teeth that ground-hog displayed while gazing at me from the rock. Little will they avail him when Spider and Ruby, a pair of fox-terriers at the house, once strike his trail. No matter how early I got about in the morning those two dogs were always off on a hunt, and Mr. F. told me they killed any number of groundhogs. As to the hen partidge and the woodduck, I hope to cultivate their closer acquaintance in September or October. They are both old friends, especially the woodduck.

I wish to go on record as living one week in Pike county without seeing a rattlesnake. Nearly everybody who visits that county returns with a snake experience. At first I stepped around mighty careful and expected every minute to hear a snake sound his rattles; but my expectations were not realized, although I tramped through some very likely-looking snake territory.

A promising-looking trout brook runs from the lake and finds its way to the Lackawaxen River through a very thickly wooded country. I should say the brook was about 10 miles long. A number of small brooks feed the larger one. These do not carry enough water for trout of large size, but Mr. Thompson and myself noticed quite a number of small trout in one of them, and Mr. T. suggested that it would be a good scheme to place the young fish sent up every year by the Fish Commission in these small streams instead of in the large one as is now done. This would prevent such a large per cent. of them being devoured by the big trout. As they increase in size and become better able to shift for themselves they would run into the main brook.

W. L. HALL.

FALL FISHING IN CANADA.

Editor Forest and Stream:

Now that a few cool nights have almost entirely removed the discomfort arising from the fly pest that makes life almost unbearable in most Canadian woods in the early part of August, the leading American fishermen having trout and bass preserves in this country are returning for their fall fishing. Among these are members of the Metabetchouan and Springfield fishing clubs, and of the Penn Club, of Philadelphia. Friends of these clubs in Quebec, including U. S. Consul Ryder, who fished the trout waters of the Metabetchouan River and neighboring lakes about the middle of August, succeeded in doing very little this year. The mid-summer fishing is not usually good in these waters, but look out for big fish and large catches during the whole of September. I would strongly also recommend the fishing in the lower part of Lake Edward, and especially in its discharge, the Jeannotte River, for large trout in September. This is only to be excelled in Canada, I believe, for fall fishing by the Mistassini and Peribonca rivers and connecting waters. The balmy air and bright invigorating climate of a Canadian September, as well as the absence of insect pests, make this the month *par excellence* for visiting Lake St. John and its tributary waters.

Of course if ouananiche fishing is desired, it must be done before the 16th of September, and I might, perhaps, indicate where this obstinate warrior now most generally disports himself. Those fond of fishing in the Grande Discharge of Lake St. John will do little in September below the rapids. The fish are now making for the rivers, and numbers of them are to be taken at the commencement of the lake's outlet, in the vicinity of the Island House, having surmounted the heavy rapids of the Discharge. A few favorite September pools for ouananiche are near the mouth of the Metabetchouan River, to reach which anglers disembark from the railway train at Chambord Junction. But even better sport than this is obtainable in either the Peribonca or Mistassini or Ashuapmouchouan rivers, guides for either of which may be had at Roberval, either Indian or French Canadian, as anglers may prefer. Fifteen to eighteen miles from Roberval, on the Ashuapmouchouan River, is what is known as the Salmon River chute—picturesque falls, where the entire stream, here about a thousand feet wide, leaps over a ledge of rocks extending from shore to shore, and forming a kind of natural dam.

There are a couple of pools just below the falls where the ouananiche congregate before leaping the obstruction above, and here a number of splendid fish have been taken within the last few days, running from 2 to 7 lbs. apiece. I am now speaking from personal experience and observation. On the 10th of August in company with Mr. Patterson, formerly of the Hudson's Bay Company and now a fur trader at Lake St. John, I killed four ouananiche in the morning's fishing, of which three weighed 13 lbs. Notwithstanding that 7 lbs. sturgeon killed on an 8 oz. split bamboo fly-rod and single gut leader (see FOREST AND STREAM of Aug. 20), I am free to confess that my 8 oz. lancewood was subjected to quite a severe enough strain before I had killed my best ouananiche, and he was under 5 lbs. too. If he had confined himself to his native element it might have been different, but his skyward somersaults and aerial contortions were something tremendous.

Bass fishing is now fairly good in Lake St. Joseph, which is only twenty-four miles from Quebec by Lake St. John Railway. It ought now to improve every day.

E. T. D. CHAMBERS.

QUEBEC, Aug. 22.

NO MORE FISHING THERE.—New Haven, Aug. 21.—The "old marsh" lake at Ferryville, Litchfield county, which had been a favorite fishing place in the northwestern part of the State for two centuries, has passed out of existence, the ancient dam being torn away because it was considered unsafe. The lake was two miles long and a mile and a half at its greatest width. The ledges about the lake were noted as hiding places for Tories during the Revolutionary war. Fish were taken away by the barrelful when the water was drawn off.—*New York Times*.

ANGLING NOTES.

MANY disappointed fishermen who frequent the Great South Bay are growling over the scarcity of fish in that favorite piece of water. A few weeks ago the fishing was excellent, but lately it has been very poor, and the fishing boats lie idle at Babylon, Bay Shore, Islip and Patchogue while their captains curse the pound nets, seines and fish traps which they, no doubt justly, claim ruin their business. It seems hard that hundreds of people should suffer in order that the few should profit. Still there is a fair supply of the coarser fish such as sea bass and flounders, even if the bluefish and weakfish are not to be caught. Saturday is always a great day on the bay and if the weather is pleasant and there is the slightest show for fish, the sloops and catboats swarm around the fishing grounds. About the youngest fisherman I have yet seen on the bay, is Master Douglas Hartshome, and if there was ever an enthusiastic fisherman, he is one. His struggles with a flounder nearly as long as himself on a light rod were very funny. But it is a good thing to encourage youngsters to take up fishing, and it is sure to keep them out of mischief, particularly as they grow up, for they will never give up angling if they once acquire a taste for it.

For the benefit of those who wish to try the fishing in the Great South Bay, I add a list of such boatmen as I happen to know of personally, but I wish it understood that there are very many others, only these I happen to know of: John T. Doocey, P. O. address Bay Shore; Frank Phelps, Monroe Ryder, Bartlett Horton, Charles Still, William Dayton, all of Patchogue. The usual charge is \$5 per day. "Bunkers" (menhaden) are \$1 per 100. Saturday they are always busy and must be engaged several days ahead.

Messrs. James M. Breese and J. Louis Webb have been trying the landlocked salmon at the Grande Discharge. They report the fishing excellent, though many up there were meeting with poor success from want of proper flies. The salmon were feeding on a small natural fly and wanted a close imitation. Most of the anglers were fishing with large salmon flies and could do nothing with them. Mr. Webb took the largest fish that has been killed there this season, weight 8lbs. He used a 7oz., 8-section bamboo fly-rod and it took 36 minutes to kill the onananche in the swift water. They saved some specimens of these flies and sent them to Messrs. Abbey & Imbrie to be copied.

SCARLET-IRIS.

FISH IN MAINE WATERS.

MR. DANIEL GUNN, of Boston, one of the best known printers of the Hub, is a veteran trout fisherman. The FOREST AND STREAM has already heard of him. It is he of whom it is related that he caught at one of his outings in Nova Scotia, a trout, a perch, a haddock, a halibut and a sea serpent, all at one cast—the first three are true. But he dearly loves to fish, and he contrives, in the midst of a very busy life, to snatch a few days from the cares of business each season, to spend with rod and line. This year he took a Boston friend with himself, and a Philadelphia friend of both also joined them. They went by train to Montreal, thence down the St. Lawrence to the mouth of the Saguenay by steamer. They stopped at Tadoussac, and there they obtained a guide and a sailing and rowing craft for up the Saguenay. They found that the wonders of the Saguenay had never been half told them. The depth of the river is something surprising, 1,000ft. having been sounded only a few rods from the shore. The shores are lined with the most wonderful cliffs. From their boat they could look upward, almost perpendicularly to the height of 500 to 1,000ft., where there were huge boulders, wanting but the action of a single crowbar, apparently, to send them bounding and crashing down into the boat. But it was sea trout, as well as seeing that they were after. In the coves and under the bold shores, as they moved up the river, either on the flood or ebb of the tide, they would cast their flies, and they secured all of the gamey sea trout they desired. Three pounds was not an unusual weight for individual trout, and they caught one of five pounds weight, and several that weighed over four pounds.

This was not Mr. Gunn's first experience with the sea trout, as the readers of the FOREST AND STREAM doubtless remember; but to Mr. Tuttle, of the Standard Bottling Co., his friend, the sport was entirely new. The sensation of a 3-pound trout leaping out of the water, as Mr. Tuttle threw his flies toward some beetling cliff around which the tide was rushing, was a new one to this gentleman, who had heretofore been familiar with small trout in the fresh-water lakes and streams. And then when the monster became impaled on the hook by a well-directed strike, the sport was rare in the extreme. But the strike of the season was reserved for Mr. Tuttle. It seems that in his outfit he had a large multiplying reel, with some 150ft. of heavy line, and that at first he began using this reel on his fly-rod—a rig altogether too heavy. Mr. Gunn chaffed him somewhat on the size of his tackle, and remarked that a smaller reel and less line would doubtless answer, since they had taken nothing that required a very great amount of line; the sea trout not being noted so much for running as for fighting on the spot, as it were. Mr. Tuttle finally came to the same conclusion, and about the third day out he appeared with a smaller reel, on which he had about 50ft. of small line.

The next day they were well up the river, where the sport was good. Mr. Gunn was fishing from the boat, while Mr. Tuttle was casting from the rocks nearly opposite. Mr. Gunn heard a great splash. Then Mr. Tuttle's reel sang out with a perfect buzz. A great fish whizzed by the boat and down the stream till Mr. Tuttle's line was all out in no time. Mr. Gunn looked. Mr. Tuttle stood erect upon the great rock, holding the very end of the line in his fingers, actually detached from the reel. He had caught it as it snapped from the fastenings, and he was holding the great fish that was leaping and gyrating like nothing they had had on the trip. Mr. Gunn suggested to the guide that he go where the fish was leaping with the net and render all the assistance possible. Mr. Tuttle held on the best he could, and as good luck would have it, the line did not part again, and the guide, a skillful fellow, worked the net under the fish. It proved to be an 8lb. salmon. Mr. Tuttle wanted to start directly home to tell his friends of his good luck. But the other persuaded him to stay a few days longer. The

party returned a week ago, happy with their fishing and full of praises of the wonders of the Saguenay.

The Rob Roy Canoe Club, of Boston, has been spending its vacation at Great Pond, about 12 miles south of Waterville, Me. The members of the club have been camping on an island in the pond, where they have camped for several seasons past. It is getting to be a feature of Maine lakes and ponds that their shores are lined with tents and cottages in the midst of the summer season. The Rob Roy Club have selected Great Pond as their summer camping place because there are a number of ponds and lakes in the vicinity, in the towns of Belgrade, Wintrop and Mounmouth, that are reached by easy portages. These ponds are nearly all stocked with bass and pickerel. On the shores of Great Pond a number of Waterville prominent citizens own cottages. Among these are Mr. Frank Webber, of the firm Webber & Philbrick; Messrs. Hayes, Cornish and Bassett, Judge H. W. Stewart, Dr. Crosby, F. F. Graves. Mr. Webber has this season put a \$500 steam launch on the pond for private use, and with Captain Blanchard as pilot, the party enjoy many fine outings.

A genuine sea salmon has lately been taken in the Piscataquis River, Maine. Young salmon were put into a stream, tributary to the Piscataquis, above the dam at Foxcroft several years ago, since which time nothing has been seen of them till the one mentioned above was taken the other day at a point known as Ryder's Cove. It was believed generally that the many dams in the river had proved too much for the fish, but the taking of this one will give those interested in stocking the river new courage.

SPECIAL.

SMALL-MOUTHS NEAR CHICAGO.

I HAVE had experiences this June and first week in July that gave me more sport and more bass than I have had for many seasons, and that only two hours' ride from the city. Frank Kuhns and myself took a run out to McHenry, Ill., on the Fox River, June 12, fished one day, capturing 17 fine small-mouth bass. On June 20 we repeated the trip, and met with even better success.

The McHenry Hotel is blessed with a proverbial old salt, who has fished the Fox River 30 years, and has a penchant for telling those bent on the sport that they can't get fish unless they follow his principles and fish as he fishes. The sample of bait he displays to us was in shape of a fly (his own product, thank fortune), and when it strikes the water you would think some one had winged a canvasback. We didn't use it, and, contrary to his predictions about our wrong bait, methods and weather, we made the finest catch, we think, of the season. I will say here, that all of our catches have been the famous tiger bass, only when Kuhns gets a pickerel streak.

June 27 I extended an invitation to Mr. Antoine (of the sporting goods firm of Von Lengerke & Antoine) to visit these grounds, and we made still a better catch, with weather, methods and all, according to the proverbial, against us. July 3 Mr. von Lengerke accompanied me, where we spent the 4th and another day. We took 24 bass, all small-mouths, and one pike in the two days. The size of the fish caught every trip ranged from 4lb. to 3½lbs. I have caught gamy fish, but the ones we capture at McHenry, in the Fox River, are the greatest fighters I have ever had the pleasure of angling for. We tried all kinds of bait, and had fair success with minnow; but when Mr. Antoine introduced a bait he called the patent bait, then we threw up our hands. The bass seemed to recognize something in it new and delicious. Saturday next a party of four will make the trip for the fifth time. We will show our credentials—when we return.

The writer wishes to say to the angler who can only drop out for a day or so, Don't pass McHenry if you want sport. Work the river down anywhere to Algonquin, 20 miles below, and you will find such sport as few dream of, it being so close to Chicago. But you must work, for the bass are not captured by sitting in a boat, anchored. I have sat in boats with many of our fine Western anglers, but have never before met a more perfect master of the rod than our genial friend Mr. Antoine.

C. E. KENYON.

FISHING IN ILLINOIS.

FISHING with hook and line has been superb in Illinois River. Very fine bass fishing has been the rule through the season at several points. I believe that in some localities on the Illinois in this State better catches have been made than at any of the famous fishing places of the Northern lakes. At Lagrange locks, four weeks ago, a party of three took with rod and line 175 black bass and striped bass (*Roccus chrysops*) in a morning's fishing. The bass are the small-mouthed species. The striped bass weighed from 1lb. to 1½lbs. and were very gamy. A large number of wall-eyed pike, weighing from 2lbs. to 7lbs., have been caught here. At Harawa fine fishing has been the order of the day at Copperas Creek locks and Spring Lake near by. The bass fishing was as good as could be wanted, a single rod taking 25 to 30 in a few hours. On Kankakee River I am informed that bass fishing has been excellent at Momence; on Fox River it is better than for years. I look for the best fishing for years this fall along the river. I do not get time to do much myself, but take a lively interest in the sport and keep myself posted.

S. P. B.

QUINCY, ILL., Aug. 14.

AMBER FISH AT CAPE COD.—Among the occasional summer visitors to Cape Cod is one of the amber fish of the Southern States and the West Indies, belonging to the genus *Seriola* of the books. There is native to the waters around Cape Cod a small banded fish of this genus, but the one here mentioned is very much larger and rarely found so far north. In August, 1890, Mr. Vinal N. Edwards obtained in Buzzard's Bay the first seen in the vicinity of Woods Hole. On Aug. 1, 1891, a very large example, 3½ft. long, was caught at Menemsha, on Martha's Vineyard; its weight is 25lbs. This was kept alive for two weeks, and has now been sent to Washington, where it will be used to make a flexible cast to form part of the Fish Commission exhibit at the World's Fair. The collection of casts now in process of making by Mr. F. S. Denton for the Commission will undoubtedly prove one of the most attractive features of the exhibit at Chicago, and it will be capable of transportation without breakage—a desideratum never realized heretofore. An amber fish resembling the one here referred to is figured on Plate 108 of the "Fishery Industries."—B.

MADISON RIVER GRAYLING.—Editor Forest and Stream: I have noticed in FOREST AND STREAM, lately, several articles on grayling in Montana. In the fall of 1889 I was camped in the Madison Basin, near Marshall's Ranch, a few miles from the Park. While there I caught a good many grayling with a fly in the Madison River very near our camp. The flies with which I had the best luck were brown-hackle, black-gnat and coachman. At evening they rose quite freely to these flies and afforded good sport. I inclose a photograph of the largest one I caught, it weighed something over 2lbs., and you can see for yourself that this fish was no whitfish, but a true grayling.—HARRY N. CANDEE. [The photograph represents the grayling (*Thymallus ontariensis*), as our correspondent states. This fish is known to be abundant in the Madison below the junction of the Firehole and Gibbon: it is said to occur also in Gallatin River.]

MERRIMAC RIVER SALMON.—Nashua, N. H., Aug. 19.—Friday, Aug. 14, two salmon were caught at Nashua, weight 8 and 10lbs.; Monday, Aug. 17, two of about 8lbs. each. I did not see the fish, but my informant did. He stated that they were caught by Mr. Chas. Davis with a fly, at Cromwell's Falls, about four miles from this city. Mr. Davis also raised and hooked another one as large as the other two put together. He was fishing from the shore and lost him after playing him some time. Salmon are seen here each year, and occasionally a small one has been taken, but these are the first I have heard of as taking a fly. The river is very low at present.—B.

MARKED BASS.—Dr. E. H. Cook and F. W. Sanborn of Norway, are persistent fishers for bass. Some 150 bass have been caught by them and returned to the waters of Lake Pennessewassee. That they may know their fish if taken again each puts a different mark on the fish he takes. Dr. Cook's brand is a notch cut in the upper part of the tail, and that of Mr. Sanborn is a notch in the lower part of the tail. If you take bass with these brands or notches on them you will know who they belong to.—Leicester (Me.) Journal.

BASS FOR PRESIDENT HARRISON.—Lake View House, Vt.—Mr. Francis Kain, of the U. S. Treasury, New York, and Mr. Harry C. Ives, of Bridgeport, Conn., guests of Samson's Lake View House, St. Albans, Vt., have the honor of donating their morning's catch of twenty-three large black bass to ex-Gov. Smith, of St. Albans, Vt., and they will be served on the occasion of the visit of President Harrison and Redfield Proctor, Secretary of War, on Tuesday, Aug. 25.—H. L. SAMSON.

BAINBRIDGE, Pa., Aug. 12.—There has been no fishing in the Susquehanna River at this place for a month or so on account of high and muddy water; but the stream is now getting down to fishing order. I was out yesterday and to-day and caught only two bass; but if the river continues falling and clear it should soon be in good condition.—J. T. B.

MANOMET, Mass., Aug. 23.—Miss Alice Davis, of Chicago, eleven years old, caught the biggest tautog of the season at this place last week. It weighed 7½lbs., and she landed it without assistance.—J. M.

TARPON IN LONG ISLAND WATERS.—Mr. Thos. H. Terry caught a tarpon at Long Beach, Long Island, N. Y., last week. It measured 3ft. 10in., and weighed 81½lbs.

Fishculture.

FISHCULTURE IN MEXICO.—The department of Fomento is giving special attention to pisciculture. It has had the streams and lakes of the country examined and reported on by competent persons and made arrangements for the acquisition of large quantities of fish and fish eggs. The breeding will be commenced at once under government auspices and private individuals who desire to engage in pisciculture will be supplied with fish and eggs. Mexico is not particularly well supplied with water courses, but there are numerous lakes in the country, but even in the latter fish are scarce and not remarkably palatable. The stocking of all the streams and lakes of the country with palatable fish would add immensely to the food supply and be the means of promoting a trade which would give employment to thousands of people and which is at present unknown except on the coasts. It is sincerely hoped that the government experiments in pisciculture will prove successful in every respect.—The Two Republics, City of Mexico.

A city boy who went to spend a few weeks with his uncle, a Leominster farmer, was instructed how to catch woodchucks in a steel trap for his amusement. The first morning the boy brought one all right. The second morning he came into the yard and called out: "See here, uncle, I have got a black and white one this time, and it smells dreadful. It is awfully pretty, but I can't stand it to drag it any longer." The boy changed his clothes in the barn.—Fitchburg Sentinel.

FOR years past a stork and his mate have regularly built their nest in the park at Schloss Ruhleben, near Berlin. In order to ascertain whether the stork was always the same, the owner of the Schloss ordered a steel ring, with the name of the place and the date, 1890, engraved on it, to be fastened round his left leg. This spring he returned with a ring on the other leg, too—a silver one—bearing these words: "India sends Germany her greeting."

HUNTING AND FISHING IN THE NORTHWEST.—Are you planning for an outing this summer? Have you ever looked up the famous resorts of the Northwest? It is not an exaggeration to say that the best hunting and fishing grounds in North America are found in the territory tributary to the Northern Pacific Railroad. The lake park region in Minnesota affords pickerel, pike, bass and muscogone; rock bass are found in numerous streams, and deer, elk and bear abound in the forest regions; antelope are found in North Dakota. The Snowy, Bitter Root, Grazy, Rocky and Cascade Mountains are the home of moose, elk, caribou, cougars, Rocky Mountain sheep and goat and other large game, while all of the Northwestern States abound in feathered game. Rocky Mountain trout and grayling are caught in the Yellowstone, Gallatin, Madison, Jefferson, Clark's Fork and Green rivers, affording unrivalled sport. An interesting pamphlet, "Game Preserves of North America," can be obtained free on application to CHAS. S. FEE, G. P. & T. A. of the Northern Pacific R. R. at St. Paul, Minn. Descriptive publications concerning Yellowstone Park, Pacific coast and Alaska will also be mailed on receipt of application, referring to FOREST AND STREAM.—Adv.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Sept. 1 to 4.—Second Annual Dog Show of the Kingston Kennel Club, at Kingston, Ont. H. C. Corbett, Secretary.
Sept. 8 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.
Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.
Sept. 22 to 25.—Inaugural International Dog Show of the Montreal Exposition Company, at Montreal, Canada. Entries close Sept. 8. J. S. Robertson, Secretary.
Sept. 23 to 26.—Inaugural Show of the Blue Grass Kennel Club, at Lexington, Ky. Rovers Williams, Sec'y.
Sept. 26 to Oct. 1.—Third Annual Dog Show, in connection with the Central Canada Fair, at Ottawa, Ont. Alfred Geddes, Supt.
Dec. 4 to 8.—Sixth Annual Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill.
Dec. 10 to 14.—Inaugural Dog Show of the Freeport Poultry and Pet Stock Association, at Freeport, Ill. T. E. Taylor, Sec'y.
Dec. 30 to Jan. 2.—Fourth Annual Dog Show of the Mohawk Valley Poultry and Kennel Club, at Gloversville, N. Y. F. B. Zimmer, Sec'y.

1892.

Jan. 5 to 9.—Annual Dog Show of the South Carolina Poultry and Pet Stock Association, at Charleston, S. C. Berj. McIntosh, Sec'y.

Jan. 13 to 16.—Second Annual Dog Show of the South Carolina Kennel Association, at Columbia, S. C. F. E. Capers, Secretary, Greenville, S. C.

Feb. 9 to 12.—Fourth Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Sec'y.

Feb. 22 to 26.—Sixteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Supt.

March 1 to 4.—Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. F. S. Brown, Sec'y.

March 15 to 18.—Second Annual Dog Show of the Duquesne Kennel Club, at Pittsburgh, Pa. W. E. Littell, Sec'y.

April 7 to 10.—Seventh Annual Dog Show of the New England Kennel Club, at Boston, Mass. E. H. Moore, Sec'y.

April 20 to 23.—Fourth Annual Dog Show of the Southern California Kennel Club, at Los Angeles, Cal. C. A. Summer, Sec'y.

May 4 to 7.—Annual Dog Show of the California Kennel Club, at San Francisco, Cal. H. L. Miller, Sec'y.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Hicksville, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 10.—Second Annual Trials of the International Field Trial Club, at Chatham, Ont. W. B. Wells, Sec'y.

Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.

Nov. 23.—Irish Setter Club's Field Trials, at High Point, N. C. G. G. Davis, Secretary, Philadelphia, Pa.

Nov. 23.—Gordon Setter Club's Field Trials, at High Point, N. C. C. L. A. Van Zandt, Secretary, Yonkers, N. Y.

Nov. 23.—Second Annual Trials of the National Beagle Club, at Nanuet, Rockland county, N. Y. F. W. Chapman, Sec'y.

Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.

Dec. 1.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

1892.

Jan. 10.—Second Annual Trials of the Bexar Field Trial Club, at San Antonio, Texas. G. A. Chabot, Sec'y. Amateurs only.

Jan. 18.—Trials of the Pacific Field Trial Club, at Bakersfield, Cal. J. M. Kilgariff, Sec'y.

—.—Fourth Annual Field Trials of the Southern Field Trials Club, at New Albany, Miss. T. M. Brumby, Sec'y.

IS IT NOT WORTH CONSIDERING?

WE do not mean now to discuss the past, to say anything as to the motives of the parties concerned, nor to point out how under a different management the present condition of the American Kennel Club affairs might have been avoided. Sufficient for our purpose is it to note briefly what that condition actually is, and the purpose is to suggest a possible remedy.

What is the situation? Certain men, whose names have been published under the disqualified and suspended list in the American Kennel Club, feeling themselves aggrieved, are bringing suits for heavy damages. The over-ruling of the defendants' demurrer in one of these suits at Albany has determined that the publication of the names in the *Gazette* is a libel, and the case must therefore go to a jury. The rendering of this decision has been a signal for numerous other suits of like character. The American Kennel Club officers and various associate members have been made defendants. Other suits are apprehended in which other associate members will be sued before the affair is settled. If allowed to go on in this way, every associate member who has any property that can be attached will probably be sued. The juries may award no more than nominal damages, but even in this event there will be the costs and interminable annoyance. Besides this, as we understand, the liabilities of the club and of the associate members are being daily added to by the sending out of new copies of the libelous publications. The material for suits is thus far greater to-day than it was last Thursday, and in all probability it will be greater next Thursday than it is this week.

There are frequent notices in the newspapers regarding these libel suits. The American Kennel Club is acquiring an unpleasant notoriety, in which the associate members are sharing, since their names are published as defendants in suits for libel. It must be remembered that many of these men are prominent and influential dog owners. They are becoming disgusted with the whole business, and talk of giving up their dogs and their interest in the kennel world. They are men who cannot well be spared. It would be a tremendous pity to have them alienated simply by reason of such unnecessary litigation.

In a word, the American Kennel Club is being plunged deeper and deeper into expensive law suits. There is every prospect that the end of the litigation will be disastrous. If things continue as they have begun, suits will be piled on suits, until the expenses of defending them will be more than the club or the members can stand. Many of our best dog men see for themselves nothing but annoyance and vexation; and those who are not already leaving the kennel world must in time do so if the thing goes on.

Now, is it not possible to find a remedy for all this? May there not be some sort of a compromise? May it not be reasonably demanded of all who are actively and with responsibility engaged in this kennel war that each side shall concede something to the other, submit their differences to

arbitration and accede to such adjustments as the best interests of the dog world shall dictate? We appreciate fully that it will be asking a great deal of those who have been libeled to recede from their present position. Nevertheless we have confidence to believe that if they are rightly approached they may abandon at least some of the suits now under way. How can this be best accomplished and most speedily?

Is such a plan not worthy of consideration by every man who has at heart the best interests of dog owners not less than of the American Kennel Club? Notwithstanding the length to which the imbroglio has gone, we believe that it is not too late to rescue the American Kennel Club from its difficulties, and under wise management to restore it to stability, to the respect of the public and to the confidence and support of all dog men. We shall be very glad to have any suggestions from any person who (foregoing criticism or blame of either side) may be disposed to point a way out of the entanglements of the present.

EFFECT OF CLIMATE ON DOGS.

Editor *Forest and Stream*:

The obituary column of the sporting papers have set me thinking, and my thoughts have turned me back over fifteen years, when I first began to bring dogs from beyond the water, and as I have never seen anything in print concerning the point I wish to bring before your readers, I thus trespass on your kindness.

The first dogs I imported were Gordon setters; these I brought out in September, and I had no trouble with them till the following summer, when the two importations both got sick, or at least got off their feed, and looked like nothing for the whole summer; but picked up in the fall and were as they ought to be. The next dog I got was old Blossom, the Gordon setter; he came to me about July, and a sicker dog to live for four or five months I never saw; but with patience and many relapses he got through and was as good as the best. Then I got a black field spaniel from the Beverly Kennels, Billy by name, in October; he died in November after being here four weeks, never got over his trip; loss \$200. Next was another spaniel in March; he didn't do well till the following winter. Then I got an English setter for a friend. He was not worth anything for four or five months. This is my own experience, and has led me to think that the change of climate, feeding, etc., have a great deal to do with the health of dogs imported from England, especially the dogs with anything like long coats.

The terriers that I have imported did well; in fact never seemed to go back. From this I am led to believe that the reason so many of the imported dogs die is that they do not acclimatize, and it takes quite a year to bring them up to anything like show form.

I may be wrong, but it is worth while for importers to take note of this and not endeavor to force on their new importations, but just to try and keep them alive till such time as nature accustoms them to their new surroundings. It is not feed and care they will do it, but rest and time. I suppose not many of your readers, but some of my medical brethren, have read Hilton's work on "Rest and Pain." Although a medical work, it is worth every man's while to read it. It is so interesting that it won't weary, and the information gained will far repay the time. There Hilton elaborates what rest will do either in disease or health, which without our attention being drawn to it no one would ever think of. Therefore in conclusion, with every sympathy for the owners of the big ones, I would commend to them and their kennel men the necessity of waiting on nature, and not to endeavor to give fictitious strength till nature has properly counterbalanced the infinite change which takes place in removing an animal from an air so different from this—i. e. the damp, muggy air of England charged with the salt breezes of the ocean which surrounds it, to the dry air, free from salt and ozone of this continent. I would commend these thoughts to the importers of high-priced dogs, and if they are of any benefit, and they wait on the natural acclimatization of their dogs and not force them, I think the death rate will be much lowered; and the writer will be more than repaid if such a happy issue should follow.

J. S. NIVEN.

EVEN A WORM WILL TURN.

Editor *Forest and Stream*:

I wish some smart medical dog man would discover or invent a worm medicine that wouldn't smell to heaven, and taste as far the other way. Can't there be a concentrated essence of something or other put up in capsule form that can be disguised in a little wad of meat, that would slip down unchewed and unbeknownst, carrying its own purgative with it? If there is such a medicament, will some dear brother tickle me to death by divulging it. I have tried these loud medicines until I'm tired. One dose goes partly down and partly somewhere else, under vigorous protest and struggle, but there is nothing funny about administering the next. It is fraught with difficulty and danger. I don't want to abuse my dog and cause him to lose confidence in me by forcing him into a corner, if perchance by much deceit or wheedling I can lay hands on him, and prying open a case of lock-jaw to pour a nasty dose of compound turpentine, jimsonweed, santoline and areca nut disguised in asafoetida. It hurts my feelings and his. And then if one succeeds in getting the necessary number of continuous nauseousness down the aggrieved and suffering beast, he needs to be abused more yet with castor oil. It's all very well with yapping puppies, but when it comes to a mature, reflecting, sensitive and vigorous dog, "dat's anoder ting." I suppose the farm-smelling remedies would kill worms could they reach them. They are vociferous enough to kill anything. Will some good Samaritan calm my perturbed spirit and relieve my dog at one fell swoop?

O. O. S.

PAINLESS DEATH.

Editor *Forest and Stream*:

I was pleased to see a letter on this subject from so sound a source in your last week's number. As the mode of disposal of dogs whose life is a burden to themselves or their friends is occasionally a problem most breeders have to solve, I beg to add a few hints to what has already been well set forth. To get rid of dogs by poison is neither a certain nor humane method. Very often the animal will vomit the poison, which may then be eaten, mixed with food as it may be, by some pet, and get follow. Prussic acid is a very sure remedy, but it is dangerous stuff to handle; for while it makes sure work of the dog it may be equally sure for his master. No poisons for dogs are as a rule to be absolutely condemned.

Chloroform is safe, easy of application, humane and need not be either uncertain or expensive. The following method will give entire satisfaction: Obtain some cheap German chloroform. One ounce will kill if properly used, though it is better to have four to six at hand. The idea is to give the dog chloroform vapors to breathe with as little air as possible. It is well to construct such a cone as will cover the head, ears and all, which may be readily made by folding up a stiff towel, etc. Over this should go some impervious material, as oiled silk, old table oilcloth, or even a piece of oiled brown paper.

But when all has been got ready in the absence of the dog,

he should be brought into some closed apartment, gently laid down and so bound that he cannot rise. His forelegs and his hindlegs may be banded or tied with handkerchiefs in pairs and then all four legs fastened together. Using soothing tones, all this may be done almost without the dog's knowing what is happening; and I would never think of administering an anesthetic to a dog for any purpose without his being secured in some such way.

From 1 to 2oz. of chloroform may now be poured on some cotton wool, or a folded piece of rag which has been placed in the bottom of the cone and clapped tightly over the animal's head so that no air can enter. The dog is almost sure to struggle more or less, but moderate pressure over his shoulders will suffice to keep him down, and soon death will result. The cone should be left in place for some time as a matter of precaution. Of course this procedure may be modified, provided the same principles are observed.

I do not think chloroform should ever be given to a dog at the beginning of an operation, and at no stage by one without a good deal of experience. Ether is the anesthetic for the dog. It may not be generally known that dogs take large quantities of opium or morphia without risk, and these dull sensibility sufficient for some short operations, though they make the dog sick at the stomach, especially if given by the mouth.

If the barbarous cutting of ears, etc., is to be continued, either ether by inhalation or morphia (1 to 2drs.) should be given by the mouth, or better, injected beneath the skin. There is practically no danger of killing a dog with opium or morphia, though of course very large doses, as over 2drs., are unnecessary in any case, and usually $\frac{1}{2}$ to 1dr. answers every purpose.

WESLEY MILLS, M.D.

BEAGLE FIELD TRIALS.

Editor *Forest and Stream*:

Although somewhat premature, yet for the benefit and information of those contemplating making entries or otherwise participating in this fall's field trials, to be held at my place, I beg to offer a few preliminary remarks now.

After a very mature deliberation of the National Beagle Club, it was decided to hold the second annual field trials at Nanuet, Rockland county, N. Y.

Nanuet is my home, and also that of the Rockland Kennels. It is a small village of perhaps 500 inhabitants, and located in the heart of a strongly wooded and rolling land county. While birds are comparatively scarce (as in most other localities in the East), yet the gray cotton-tail rabbits are plenty and numerous. Our kind are all runners, and ordinarily furnish the small hound with large contracts. Unless a very strong spurt is made, they rarely take to cover, which, if they do, is some old stone fence or hollow tree. A little switch usually creates a fresh start, and away we go again.

The last run that I had with my pack for a bag was on New Year's morning last. Six dogs, my man, myself and two guns. We started from the house at about 8 o'clock, with a light drizzly rain falling, it having snowed a trifle during the night. We had not fairly got together and started before they had one going, and in a few minutes I heard the crack of my man's gun followed by the cry of "all down."

Inside of four hours we had run fourteen rabbits, and when we returned at about 12 o'clock for our New Year's dinner we pulled nine big fellows out of our pockets. At no time during the four hours' hunt were we over three-quarters of a mile from home.

I have been out frequently with a party of friends and been met at a given point by my sister with a wagon, when we would unload from our jackets and cover the tail end of the wagon with rabbits, squirrels and birds. So much for the supply of rabbits. For covers, there is no end to them. It is one continuous "here's a taken place."

The ridges and hills are all taken in with ease. The lower lands in some places are wet at times, but with a pair of boots on will give you no trouble. During early season we find game, mostly in open fields or on borders of small woods. Later on they take to more secluded covers, and as it were prepare for their winter campaign. While our own acres afford but a limited field for operations, I am fortunate in having the good will of my neighbors and their consent for the promotion of the sport, in which they frequently join me.

Later on I will be pleased to furnish more direct information as to reaching Nanuet and facilities there for taking care of man and dog during the trials next November.

H. L. KREUDER.

DOG CHAT.

OUR illustration this week, taken from the *English Stock-keeper*, shows the type of beagles now winning on the other side. If the drawings are correct, and they are by Mr. Moore and in his best style, the type of head is hardly what our critics call for. They seem long and light in muzzle, but in bodies and legs there seems nothing to desire. The one standing up is champion Lonely, said to be the best beagle in England. She is by Careful out of Lovely and was whelped in June, 1886. She is 13½ in. at shoulder and is a beautiful hare pie color. She has been beaten but once and that time by her kennel mate Princess Countess, the one lying down. This, however, was not a just decision, as the latter is too wide in front. Princess Countess has beaten the great Ringwood and is by champion Ringwood out of Newhaven Countess. She is now rearing a litter by champion Ringwood. She is a beautiful blue mottled hound and was whelped January, 1888, her breeder being Mr. George R. Krehl. The owner of these two handsome bitches is Mr. Joachim, who is one of the principal beagle breeders in England.

A writer in the *Epoch* says: "A lady friend of mine owns a Skye terrier, now eight years old, of which she is very fond. When the little fellow was about a year old, a very savage cat jumped at him without the slightest provocation and scratched his left eye, from the effects of which a cataract formed and after two years caused blindness in that eye. From sympathy a cataract formed gradually over the other eye, and last summer he became totally blind. Some years before the second eye became affected the owner took Teddie (such is his name) to an eye and ear hospital of this city and had an operation performed on the eye which the cat had scratched. One of the physicians attached to the hospital was the operator, and he was surrounded by other physicians, assistants and nurses, all of whom were deeply interested. The owner held the dog in her lap, cocaine was administered, and Teddie did not move until a deep cut caused him to give a little cry. The operation was a failure; the cataract was so hard that the instrument slipped. It was like working on a piece of marble. Later on, the same doctor performed the operation painlessly on two different occasions on the same eye, with no better success than the first time; but he was willing to try it again and cut off the cataract entirely, but it would be necessary to chloroform the dog, as the pain would otherwise be too great. Teddie's mistress was at the same time informed that he might die from the effects of the anesthetic, and she would not take the risk of losing her pet. A few months ago, however, she changed her mind and determined to allow it to be chloroformed, preparatory to the fourth operation. The doctor, upon examining the eye, told her that nature had done what the three operations had failed to do. Teddie had evidently struck himself against something which had loosened one of the corners of the cataract, which now swings to and fro like a curtain, and enables him to see enough to get around without hurting himself. So the fourth operation was not necessary."

Mr. Reick, now that he has lost the progenitor of the Regent line of St. Bernard blood, is doing the best thing he can to replace him by getting dogs of the same blood and as near to him as possible. Besides purchasing Kingston Regent, he has now cabled for Marquis of Ripon, another good dog of the same litter, and a prize winner. Marquis of Ripon was owned by Mr. Booth, of Hull, and will arrive in this country shortly.

Whether Mr. Chapman, who is now in this country, is going out of St. Bernards or not is not known, but he has placed Sir Hereward, Princess Florence and Bessie III. on the market. We hear that the three are held at \$10,000.

We draw the attention of our readers, especially those interested in collies, to the advertisement of the Seminole Kennels. Judging from a pleasant half-hour's chat with Dr. Sauveur we were convinced he has the best interests of the breed at heart and will do whatever lies in his power to help the breed along. He proposes to allow members of the Collie Club the privilege of sending their bitches to his stud dogs at a reduction of thirty per cent. on the advertised rates. With such dogs as The Squire, Roslyn Wilkes, Roslyn Conway, etc., the influence of his kennel on future litters should be very perceptible, and it is only by patronizing such dogs, which have shown themselves good sires, that the collie breeders can hope to breed dogs that will be a credit to the country.

From a letter that Mr. Eberhart sends us we gather that a bench show will be held in Cincinnati this fall. He will take quite a string of dogs after Toronto, down to the Lexington show, which promises to be quite an interesting one, judging by the accounts received about it. They have marked out a new line, and if more of our agricultural shows will follow suit and have fox hunts, collie trials, etc., in which dogs take a part, they would draw better, and afford the *blase* circuit shower a little excitement which is sadly wanting, as a rule, after the first day and the judging is over. The Eberhart Pug Kennels feed the Lexington show with Austin & Graves biscuits.

We mentioned the fact some time since that Mr. Hedley Chapman, who is known to St. Bernard breeders as the owner of Princess Florence and Sir Hereward, and who sold Hepsy to the Maryland Kennels for the largest price ever paid for a dog of her sex, was coming to this country on a visit, and now we hear that he has sailed and is en route to Victoria, B. C.

A letter from Mrs. E. S. Avis tells us that her husband, Lieut. Avis, has parted with his promising young pointer bitch Duchess of Kent, by King of Kent out of Louise Byron, selling her to Mr. C. M. Rounds, of San Antonio, Texas, on account of his being ordered to Fort Clark, Texas. Mrs. Avis adds: "A little far out of dogdom, but not too far to lessen my interest in dogs, and three beautiful pups and our fine pointer, Chief, Jr., you spoke so kindly of last spring, will accompany us." Duchess of Kent has been well trained by Henry Christ, of Belmont, O., and as Mr. Rounds is an ardent sportsman and consequently fond of good dogs, he will do justice to her fine field qualities.

Mr. Geo. Smith's new English setter purchase, Sir Frederick, left England on the Helvetia and is already in this country. His list of winnings is very large and his appearance in the ring over here is sure to be of interest to setter men.

Pedro—"I hear that the Anglo Club fellows talk of expelling Gawge Van Leah for cawwyng a pawkage on the avenoo."

Cadley—"Aw, but that's off, y' know. The pawkage turned out to be a sick fawx-terrier rolled up in a blaw-net."—*Exchange*.

We acknowledge the receipt of some excellent examples of Mr. Clarence Rathbone's characteristic work with the camera among his fox-terriers. "Beverwycks At Work" and "Touch Me if You Dare" will be recognized at once as typical scenes in the experience of every fox-terrier man, and show that Mr. Rathbone has a happy knack of pressing the button at the right moment. Such pictures are far more interesting than the stereotyped way in which most of our dogs are taken.

Mr. Sewell, the noted English vet., who has examined a dog that bit a man, who afterward died of supposed hydrophobia, sends to *Stock-Keeper* a copy of the certificate he gave to the lady who owns the dog, which is still alive and which she has been urged to destroy. As it is very sensible and to the point it will bear repetition: "This is to certify that I have this day examined a short-coated collie dog with a white left forefoot, white chest and front of neck, and a white mark in right eye, the property of Madame Bourgingnon, and I find that the said dog is quite healthful. I may point out that it has been proved beyond doubt by very eminent men, such as Pasteur and others, that hydrophobia cannot result from the bite of a healthy dog. I may also point out that a dog once affected with rabies or hydrophobia, as it is commonly called, never lives more than eight days, and during the incubative stage, that is, from the time the dog was inoculated until the development of the disease, he cannot induce hydrophobia by biting or otherwise; in fact, the bite of such a dog is perfectly harmless. Some people even suppose that if a dog bites a person, and though he may be perfectly healthy at the time he inflicts the bite, but should subsequently go mad, the person that was bitten is sure to have hydrophobia. This is absurd and impossible. (Signed) A. J. SEWELL, M.R.C.V.S., V.S. to the Kennel Club, Dogs' Home, etc."

There has been considerable talk lately in the English kennel papers about all-round judges and specialty judges, in which Mr. Krehl, of the *Stock-Keeper*, has come in for some knocks. This week he comes out very explicitly and explains his ideas of the two positions, with which most of us will agree in the main. The specialist is generally an

amateur, and because he does not accept pay for his work, if his decisions do not meet with approval all we can do is to shrug our shoulders and say he did his best; but a professional all-round judge, as he is paid, should be held to a strict account and not accept work for which he is not capable. We fancy, however, that *Stock-Keeper* goes a bit too far when it says: "If the amateur undertakes to judge breeds of which he has an imperfect knowledge, he is not conscientious; if the professional does the same, he is not honest. *Voilà tout!*" That is all very well in a general way, but in this country, and we expect that it is the same in England to some extent, there are few shows which could afford to have judges for different breeds, and consequently the all-round judges, who are also very few in number, must perform be complaisant and take on several breeds which they may not entirely feel at home in. It may be wrong to do so, but what are they going to do about it? Again it says: "The victims of the irregular professional judging system are the show promoters, and they ask us how can they know when a man touts for their judging orders whether he is efficient or not? Ah, there is the difficulty! When talking this question over with a prominent member of the kennel world, he smilingly observed that it was a pity the Kennel Club could not institute competitive examinations and give certificates to applicants for the breeds they passed in. These certificates would be a perfect security to show promoters, and if the competitions could take place in public they would be a perfect treat to doggy men." The question at once arises: Who is competent to examine the would-be judges then?

Our readers should carefully note Dr. Niven's letter on the effect of climate on dogs in this issue. We have spoken of this matter before, and feel sure if breeders will exercise a little patience and more judgment, the result will materially increase our list of good dogs.

Mr. F. E. Lamb tells us he is importing another good rough St. Bernard bitch next month, and this one has been

The Grand Trunk Ry., N. Y. C. & H. Ry., West Shore Ry., New York, Ontario and Western Ry., New York, Lake Erie and Western Ry., Delaware, Lackawana and Western Ry., Lehigh Valley Ry., Central Ry. of New Jersey, Philadelphia & Reading Ry., Pennsylvania Ry., Baltimore & Ohio Ry. and Chesapeake & Ohio Ry.

We hear that Mr. Washington has sold the Irish setter Kildare for \$575.

We received a very pleasant visit from Dr. Sauveur, Tuesday last. This gentleman is the owner of the well-known Seminole Kennels, and impresses one as an enthusiastic fancier and one willing to help the best interests of the kennel world.

Mr. Boggs did not keep his Irish setter Finglas, of apology fame, very long, as we hear that Mr. E. G. Bishop has purchased him. From all accounts this dog will do well for the Glenrose Kennel. This gentleman has also purchased another noted Irish setter field trial winner, but further than this we are not at liberty to state anything, if we have not already said too much.

Among the dogs offered for sale this week Dr. C. E. Stanley offers an English setter; C. C. Gaines, choice Irish setter pups; Isaac Collignon, beagle pups; John E. Weston, cocker spaniels; G. Douglas, black cockers; C. E. Lewis, black cocker dog; R. H. Burr, Irish setter Red River Glencho; J. H. Parrott, English setter dog; M. A. Hanchett, pointer pups; Seminole Kennels, Irish setter. Seminole Kennels place the collies, The Squire, Roslyn Conway, Roslyn Wilkes, Roslyn Dandy, and Sir Kelpie; the pugs Treasure and Kash, Jr., and the Irish setters Seminole and Eleo at stud.

Our esteemed contemporary *Sports Afield* is rather misleading in its statement that Sir Bedivere, by a recent decision of the English Kennel Club, is champion of England. There is no such title. While Sir Bedivere is easily the first of his breed, he is only "a champion among others."

The Blue Grass Kennel Club have secured Brassfield's Pavilion for their exhibition hall. The building, we are informed, is particularly well adapted to the purpose, being all on the ground floor, circular in form, and one-eighth of a mile in circumference, with large courtyard in the center for judging and exercising. It adjoins the elegant grounds of the Kentucky Trotting Horse Breeders' Association, containing several hundred acres, and which have been secured for the purpose of giving a series of fox hunts and deer chases in connection with the bench show. Arrangements have been made to have all the celebrated packs of foxhounds in the South present, including Gov. Wade Hampton's, of South Carolina; Messrs. Young & Taylor, of Mississippi; Quinn, Redd, Walker and Whitlock, of Kentucky, have signified their intention of being present with their packs, and as a large number of red foxes and deer have been secured some excellent sport is assured. Mr. F. C. Wheeler will judge the non-sporting classes, and Messrs. Austen and Graves will do the benching.

Mr. Fred Kimball, of Brockton, Massachusetts, has claimed the name of Ringwood Beagle Kennels for his kennel of beagles.

A dog which no doubt was better known to New Yorkers than any other in the city has succumbed to pneumonia. It was a familiar sight to those who passed the southeast corner of Broadway and Thirtieth street to see Bull-terrier Jack's intelligent face looking appealingly to passers by as if urging them to buy matches from his blind master. Regularly every afternoon at 3 o'clock in winter and 6 o'clock in summer this faithful dog brought his master to the old stand. Although the faithful beast preferred his old friends and constant customers, yet the most utter stranger could approach him and say, "How goes it, old fellow?" and Jack with a whole heartedness would give his paw and then turn his big brown eyes suggestively to the tray of matches which his blind master held. Woe betide the stranger who was so obtuse or so mean as not to accept the suggestion. Jack would bark and growl and create no end of excitement. The great intelligence of the animal made him an object of envy to many, but his blind master refused many most liberal offers, and is now inconsolable. The *Herald* has started a subscription to replace the dog with another or to help the now friendless man in some other way. We are sure there are some among our breeders who out of their plentiful litters can cheerfully spare the old man a pup, which may eventually become another friend and guide to him. Jack was given to him by some kind stranger when a pup, eight years ago.

Mr. J. Otis Fellows (Uncle Dick), of Hornellsville, N. Y., is to judge the dogs at the Fulton County Agricultural Society's fair to be held at Johnstown, N. Y., Sept. 7 to 10. Mr. F. B. Zimmer, Gloversville, N. Y., is the superintendent.

We hear that Mr. Jarrett, of the Chestnut Hill Kennels, will judge some of the classes at the Wilmington, Del., show next month.

Mr. W. H. Hyland writes us that he has purchased from Mr. T. G. Davey, London, Ont., the black and white pointer bitch Fan N. A.K.C.S.B. 15,598. He says: "I consider her about the best light-weight pointer bitch in America to-day, and I believe her record will justify my claim." She has won the following prizes, without a single defeat, viz.: First Boston, first Chicago, first Buffalo, first Detroit, first Toronto, first London, 1890; first challenge Chicago, 1891, defeating champion Queen Fan.

Mr. Shillcock writes to *Stock-Keeper* that in justice to himself he must make known the fact that it was Mr. Chapman's desire that he state the price at which he sold Sir Hereward as \$8,000.

THE BEAGLES CHAMPION LONELY AND PRINCESS COUNTESS.

Owned by Mr. E. B. Joachim, England.

mated to champion Keeper, he of the wonderful head. His Clydesdale Nell—Lord Bute litter is doing well, and of course are the handsomest "babies" in the world.

Mr. John H. Matthews has a very sensible and temperate letter in *Stock-Keeper* defending the Bulldog Club and Mr. Cuzle against the attacks made by "Nutteracker" in that paper. He says in one part, in answer to the accusation that this club had "spluttered" at New York and then gone out, that they intend to confine their efforts principally to the annual meeting to be held each year at New York, the rallying point for all American dogdom, and for the next few years to come this meeting will very likely be held in connection with the regular dog show of the Westminster Kennel Club. Next in the order of dog show work they select for special favor a point in the East (Lynn last year), one South (usually Baltimore), and one West, Chicago.

Mr. J. B. Dale has sold the fox-terrier Deputy, that has done so well lately in England, to Mr. C. H. Jolliffe, Stratford on Avon; and Newcome, Mr. Tinne's crack, goes to Mr. Astley's kennel.

Mr. L. P. C. Astley, who is well known to fanciers on both sides as an expert in the judging ring and as a dog show reporter, has been very ill lately. It seems he had to have an intricate operation performed in having an abscess taken out of his side, and, under chloroform, Dr. Bedell Benison, who owns the bulldog Forceps, removed the cause of trouble. Mr. Astley has lost 29lbs. in weight, but is now, we are pleased to note, well on the way to recovery.

The Barzois that we spoke of last week as coming over for Mr. Hacke have arrived, and will be on exhibition to-day at the Spratts Kennels. Accepting Mr. Clether's kind invitation to visit their kennel, we shall have more to say about them next week. Speaking of Spratts Co., they have brought out something that is well spoken of in the English papers as a "preventor." One of the annoyances of keeping a dog in the house will henceforth be overcome and my lady's favorite curtains and other corners which seem to have an attraction for some dogs, will now be safe from destruction. This preparation is a powder which is scattered over the favorite spots and effectually forces the dog to move on.

The secretary of the International Bench Show of Dogs, to be held at the city of Toronto from the 14th to the 18th of September, has received a letter from Mr. Wm. Fleming, secretary of the Trunk Line Association, stating that the following railways will carry three dogs free in baggage cars (at owner's risk, when accompanied by owners or caretakers who present for inspection the necessary identification papers) to Toronto during the holding of the show:

It is the generally accepted idea among those who are ignorant of the breed, that the ownership of a bulldog carries with it something derogatory to one's character. It is simply a tough relic of old associations, for the bulldog of to-day is as much an animal worthy to be man's companion as a St. Bernard or a mastiff. This is the way many estimable people think in England, and only last week the Marchioness of Stafford tried to buy the crack dog Forceps from Dr. Benison, after it had won first prize at Newport, Monmouthshire.

In speaking of the death of Prince Regent and Scottish Prince Fanciers' Gazette says: "Twenty years ago St. Bernards were shown in condition; now they are exhibited like fat prize pigs, often unable to stand up during the process of judging. Common sense dictates that this cannot be right, and we have often referred to the matter before. The putting on the fat, and the means that are had recourse to, to do so, must lead to an unhealthy state of existence, and renders dogs so treated susceptible to all sorts of diseases. Change of climate and feeding soon show their effect, and find out the weak spot when the constitution is impaired." This only bears us out in what we have lately written on this subject, which is one that will have to receive proper attention at the hands of St. Bernard and other large dog breeders.

Mr. John Lewis has sold the noted pointer Nick of Naso to Mr. Homer B. Aldin for \$350. This dog is well known on the bench and in the field, and when we saw him the other evening he looked fit to go in the ring any time. Nick remains in Mr. Lewis's hands for the present.

Before another issue of this paper the Canadian shows will have commenced with Kingston. A word of warning to exhibitors may not be out of place in view of the heat we shall probably experience. Baggage-masters nowadays have had more or less experience in taking care of dogs in their cars, but it is better to be on the safe side and make it impossible for a heartless baggage-master to so cover the crate that the dogs will be smothered. There is nothing better than a hamper or basket to ship a dog in, but when these are not available have boxes made in such a manner that it is impossible for trunks and other boxes to be set so close that fresh air is excluded. Allow the roof to lap over the sides and leave plenty of ventilation space under the eaves and your dog will be safe. Avoid overcrowding; better leave your dog home than lose him for the sake of saving a few dollars on expressage. Facilities for watering and feeding will of course suggest themselves to every careful and humane owner of dogs. The above notes are suggested from reading the account of the death from suffocation of one of England's best Bassets, Mr. H. Jones's Fresno, on the way to Spa, Belgium show.

Last week we noted exclusively that a crack bull-terrier would shortly come to this country. Now we see by *Canine World* that champion Streatham Monarch has been purchased from Mr. Thompson by Mr. Toon, who sends him to this country; in fact, he sailed Aug. 15. This dog made his debut at Manchester in 1890 when eight months old, and just a year after at the same show he gained his championship. Another bull-terrier, weighing 30 lbs., called Cherub, will also sail shortly to add strength to Frank Dole's crack kennel.

The same paper informs us that Mr. T. S. Bellin, a noted fox-terrier breeder and occasional judge, was to come over on the Teutonic with the intention of settling in this country. Mr. Bellin has bred many noted dogs, among them Rustic Result, Rustic Reclayton, Merry Queen Rustic, and the novice winner at Blackburn, Tin Foiler. The fox-terrier ranks will be further strengthened by this gentleman's change of country.

We draw attention to our suggestion in another column regarding the present state of things in the A. K. C. It is time that the dog men came to their senses and reflected on the harm that is being done to kennel interests by allowing these suits to go on. The A. K. C. is laying itself open to further trouble every day by allowing the sale of copies of the *Kennel Gazette* containing the alleged libels in the printed list of disqualified members. In view of the interlocutory judgment rendered by Judge Maygan the other day, it would seem the parties wisdom to hold these numbers in abeyance until these suits have been decided. Every copy sold constitutes a separate cause for a suit, and suits are being sent to the A. K. C. rooms to buy the *Gazette* for that purpose. But the club is either blind or will not see it in the serious light that it strikes other men. Why cannot a committee of representative men—breeders such as Messrs. Thayer, Childs, Terry, Fay, Sears, Whiton, Dr. Perry, there are lots of them—men in whom we all have confidence, be agreed upon as a committee by the two parties, and let them investigate both sides of the case and effect some compromise. If men are compelled, through fear of these suits and the damages they may entail, to sell dogs and property, how long is the associate membership going to last?

Mr. J. H. Winslow, the popular pointer judge, in a friendly letter tells us he has some good pointer pups coming on, and that his little setter bitch Nellie Belton is going to be a good one. She is sister to Albert's Duchess, winner of P. K. C. Derby last year, and Albert's Nellie that did so well at the Rossmont, Pa., and having a delightful time and surrounded by lots of dogs. He says: "I was killing a few bear, moose, etc., in Maine for a while, but as nobody will believe it I simply ignore their requests to furnish affidavits."

Dr. Wesley Mills, of Montreal, Canada, is bringing out a little book on "How to Keep a Dog in the City." The work no doubt will be acceptable, as Dr. Mills will speak from experience.

A movement is on foot in Canada with the object of removing the existing duty on thoroughbred dogs. At present, since a law made in November, 1888, all dogs imported, except from Newfoundland, are dutiable. A letter from Mr. Bowell, Minister of Customs, to Mr. S. F. Glass, secretary of the Canadian Kennel Club, who is circulating the petition, states that nothing can be done this year, but if tariff changes are made next year the subject will receive attention.

One of the regulations at Toronto will be that only prize cards of the Industrial Exhibition Association will be allowed to be tacked up over the dogs in the stall, though exhibitors may post a list of winnings if they wish. This is a good move, for otherwise it misleads the public to a certain extent.

Mr. Geo. Thomas will sail on the Bostonian for Boston, and among the new ones added to his team is the greyhound Bestwood Daisy, a brindle and white, and which won at the Boston (Eng.) show over Lily of Gainsboro. As both of these bitches will very likely belong to Mr. Purbeck, it will be seen he will have a strong kennel of longtails. Mr. Toon has also purchased the bull-terrier Queen of the Dale and Common. The St. Bernard we spoke of as coming over is Young Alton, and though only fifteen months old he has already done some winning, we believe, and is expected to do well over here. Two new black and tan terriers are Prince Raglan and Rosette, the latter being in whelp to

champion Beaconsfield. A wire-haired fox-terrier, Barton Sting, is also in the string, and Mr. Mercer's Lady Belle, the Clumber, will come over in Mr. Thomas's care, in whelp to the noted Hot Pot, and we trust Mr. Mercer will have better luck than usual. We were right after all in the surmise that Jack Briggs, the Irish terrier, late the Western Ambassador, would eventually find a home in the Salem Kennels. He has beaten his noted sire and other Ambassadors of note. We gave his winnings last week. Another dog, Valley Boxer, is also in the list of coming ones, as well as a smooth fox-terrier. To make room for all these dogs the Anglo-American Kennels are enlarging their accommodations. Some of the dogs that are owned by this kennel will be left behind to win fresh laurels. As the Canadian shows have not catered very well to the Irish terrier breed, the bitches of this kennel will also be left in England till ready for the New York show, when the exhibit of Irish terriers will, we hear, be very large and of great merit.

At the Spa, Belgium, show Mr. Comstock's purchase, the Irish terrier bitch Crate, had an easy win. Mr. Dole's bull-terrier Hannah should have been there, but for some reason did not turn up.

An executive meeting of the National Beagle Club was held Aug. 22. The meeting was called to order by Dr. W. A. Power at 9 P. M. Minutes of last meeting were read and accepted. Messrs. Brooking, Berry, Turpin and Rutter absent. Mr. W. S. Clark was selected as one of judges at the N. B. C. trials this fall. It was then voted to lay the question of another judge on the table. The date of the closing of entries will be Nov. 1, and it was voted to get entry blanks, etc., printed. A show of dogs entered will be held before the dogs are run in the trials, and first, second and third prizes in all classes will be given, the same judges to judge both show and trials. Everything points to a successful meeting, judging from the communications received so far.

In the libel case of Gallup vs. Belmont and others, for publishing plaintiff's name in the disqualified list in the *American Kennel Gazette*, the defendants have appealed from the decision of the Special Term to the General Term. Sept. 8 proximo has been set as the date on which their demurrer will be argued in the Town Hall at Saratoga Springs, N. Y., and it is expected a decision will be rendered within a month afterward.

Through inadvertence the challenge classes for field spaniels were omitted from the premium list of the Montreal bench show. They have therefore decided to make the classification for this breed the same as for Clumber spaniels, i. e., they will have class 54A, challenge dogs, with \$7 and diploma; 54B, challenge class for bitches, with the same prizes.

TAYLOR'S CLEO FALSELY REGISTERED.—North Tarrytown, N. Y.—*Editor Forest and Stream*: I wish to inform the party who purchased a pointer bitch named Taylor's Cleo from M. T. Mason, Northampton, Mass., that they have been badly imposed upon in regard to same bitch's breeding. Mr. Mason claimed her to be by Pommyery Sec—Larnock Elsa, whelped May, 1889; breeder, F. E. Atkins, and so registered in the A. K. C. Stud Book. As the bitch is not by Pommyery Sec—Larnock Elsa, and was not bred by F. E. Atkins, I notified Mr. A. P. Vredenburg, secretary A. K. C., that the breeding claimed for Taylor's Cleo was false, and he has cancelled the registration. Larnock Elsa had no puppies by Pommyery Sec in 1889. Mr. F. E. Atkins, Waterbury, Vt., now owns Larnock Elsa, having purchased her from me in January last, and I am in receipt of a letter from him stating that he knows nothing of M. T. Mason or of the bitch Taylor's Cleo, and adds that Larnock Elsa whelped a splendid litter by Pommyery Sec on the 8th inst. —WM. H. HYLAND.

ROCHESTER NOTES.—A late acquisition to the canine community in this city is Jocko, a black and white setter, by Kent, he by champion Count Howard out of Geno. she by Sportsman, he by champion Gladstone. Jocko came from the kennels of Wm. Blair, of Pontiac, Mich., and is the property of Mr. Krug. W. H. Case, of Lockport, was in town to-day, and we met at the Flour City Kennels; he is interested in pointers and English setters, and expects to exhibit some of his dogs at the Canadian shows. Mr. Krueger, of beagle fame, and Mr. Lee, of the FOREST AND STREAM, called at the Flour City Kennels last Saturday, and complimented Mr. Pritchard on the form of the dogs he will star with this season. Cardinal Beaufort continues to improve and gives promise of great success on the bench. —O. STEWART BAMBER, M.D.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (turned free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Pitts Sing II. By Mrs. E. S. Avis, Morgantown, W. Va., for pug bitch, whelped October, 1890.

Chiquet Zola. By Mrs. E. S. Avis, Morgantown, W. Va., for pug bitch, whelped March 20, 1889, by champion Dude out of Tessa.

Penrice, Jr. By Mrs. F. S. Avis, Morgantown, W. Va., for pug dog, whelped June 18, 1891, by imported Penrice out of Silksworth Monk.

Alma. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug bitch, whelped June 9, 1891, by Eberhart's Cashier (champion Kash—Lady Thora) out of Mabel E. (champion Kash—Lady Thurman).

Twister, The Count and Str Bob. By Eberhart Pug Kennels, Cincinnati, O., for pug dogs, whelped July 1, 1891, by Spokane (champion Kash—Lady Thora) out of Nelly T. (Spokane—Lalla Rookh).

Dick Leslie, Cap Leslie, Prince Leslie, Duke Leslie, Max Leslie and Frank Leslie. By W. B. McCord, Hyattsville, O., for liver and white pointer dogs, whelped Aug. 3, 1891, by Leslie (Spot Dash—imported Belle Randolph) out of Mack's Juno.

BRED.

Prepared Blanks sent free on application.

Bradford Lill—Bradford Harry. P. H. Coombs's (Rangor, Me.) Yorkshire terrier bitch Bradford Lill (Tinkle—m—Judy) to his champion Bradford Harry (Crawshaw's Bruce—Beal's Lady), Aug. 25.

Little Lad. J. E. Weston's (Utica, N. Y.) cocker spaniel bitch — (Sir John—Cassy W.) to his Little Lad (Newton Abbot Beau—Dinah Bennett) July 13.

Charmion—Hector. H. Scherloh's (New York) smooth St. Bernard bitch Charmion to New York St. Bernard Kennels' champion Hector, Aug. 18.

Rosa Graphic—Spot Naso. C. D. Roberts's (Dexter, Me.) pointer bitch Rosa Graphic (champion Graphic—White Rose) to C. W. Winslip's Spot Naso (champion Naso of Kippen—Boski), Aug. 18.

Meteor's Flirt—Graphic III. C. D. Roberts's (Dexter, Me.) pointer bitch Meteor's Flirt (Meteor, Jr.—Mamie) to J. A. Herther's Graphic III. (champion Graphic—champion Blossom), June 3.

WHELPS.

Prepared Blanks sent free on application.

Starlight. U. G. Chadeayne's (Sing Sing, N. Y.) English setter bitch Starlight (Rock, Jr.—De-bing Kate), June 26, eight (three dogs), by Ben Lewis's Lewis's.

J. E. Weston's (Utica, N. Y.) cocker spaniel bitch — (champion Black Pete—Black Meg II.), July 13, six (four dogs), by his Black Dash (Oberon—Susie).

Onota Belle. R. H. Burr's (Middletown, Conn.) Irish setter bitch Onota Belle (champion Chief—Bizzreena), Aug. 10, nine (six dogs), by his Red River Glencho (champion Glencho—Lyda Belle),

Speckle Gown. Posten & Burdell's (Columbus, O.) English setter bitch Speckle Gown (Count Noble—Naunie Gladstone), Aug. 18, six (five dogs), by Gladstone Boy.

SALES.

Prepared Blanks sent free on application.

Sir Bob. Silver fawn pug dog, whelped July 1, 1891, by Spokane out of Nelly T., by Eberhart Pug Kennels, Cincinnati, O., to John Mott, Jr., New Harmony, Ind.

Virgie E. Pug bitch, whelped June 8, 1891, by Spokane out of Lalla Rookh, by Eberhart Pug Kennels, Cincinnati, O., to W. R. Jones, Cincinnati, O.

Penrice, Jr. Pug dog, whelped June 18, 1891, by Penrice out of —, by Howard Bros., Columbus, O., to Mrs. E. S. Avis, Morgantown, W. Va.

Blaze—Gladys B. whelp. Red Irish setter dog, whelped April 12, 1891, by R. H. Burr, Middletown, Conn., to Alfred Neff, Higganstown, Conn.

Barris, Jr. Orange tawny smooth St. Bernard dog, whelped April 23, 1891, by Barris out of Queen Anna, by New York St. Bernard Kennels, New York city, to Thos. Kelly, same place.

Lord Lincoln. Tawny and white smooth St. Bernard dog, whelped Feb. 3, 1891, by Pilgrim out of champion Flora II., by New York St. Bernard Kennels, New York city, to James Hingston, Brooklyn, N. Y.

Hectorine. Tawny and white smooth St. Bernard bitch, whelped Aug. 27, 1891, by champion Hector out of Trojan Dick, by New York St. Bernard Kennels, New York city, to James Hingston, Brooklyn, N. Y.

Prudence. Orange and white rough St. Bernard bitch, whelped Sept. 3, 1887, by Helvellyn out of Zephyr, by New York St. Bernard Kennels, New York city, to W. H. Auld, Strathroy, Ont.

Zana. White and orange rough St. Bernard bitch, whelped Feb. 14, 1888, by Duke of Wellington out of Krona, by New York St. Bernard Kennels, New York city, to Jas. Chaney, Clifton, N. J.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to attempts of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will receive careful attention.

W. A. S.—See our kennel business columns in issue of July 18.

A. D. G., Canada.—No. All depends on time of closing entries.

C. T., Ottumwa, Iowa.—Have forwarded your letter to a reliable person.

C. H. C.—The only way you can do is to advertise the fact in an English kennel paper.

H. F. C., Philadelphia, Pa.—Will you please give me the address of the best kennel of light-weight bull-terriers in America? Ans. It would be invidious on our part to answer your question. There are several good kennels of this breed, for instance Mr. Dole's, Mr. Harris's, etc.

A. R. C., Ottawa, Canada.—Would you kindly give me the address and name of the master of the hounds hunted near Rochester, N. Y.? I think the name of the place is Rosemont, but am not sure. Ans. The hunt club near Rochester, N. Y., is the Genesee Valley Hunt Club, and W. Austin Wadsworth is M. T. H.; his address is Genesee, Livingston county, N. Y.

Rifle and Trap Shooting.

RANGE AND GALLERY.

AMERICA'S SCHUTZENFEST.

REPRESENTATIVES from all the German Schuetzen Bunds of New York and Brooklyn met Aug. 23 in the New York Sangerbunde Hall, No. 12 St. Marks Place, to consider the arrangements for the great international shooting festival which it has been decided by the German societies to hold in this vicinity in 1892. The meeting, which numbered close upon one hundred delegates, was presided over by Adolph Ludwig, the President of the United Association of Schuetzen Bunds.

The committee of finance reported that assurances had already been received of substantial support which rendered it altogether certain that the sum of \$150,000, which it was estimated would be required as a guarantee fund, would be forthcoming when it was needed. With this assurance as a basis, the association determined that the international festival should be held in the month of July, 1892, and cover as many weeks as might be necessary in order to give opportunity for the contesting of the numerous shooting events which it is proposed to put on the programme.

As this will be the first great festival of the kind projected by the originators of the undertaking ever held in this country, it was decided to defer final action as to the details of the programme for another week. The scheme, so far as it has been outlined, contemplates a programme of events which shall combine not only all the prominent features of the national shooting festivals of the Fatherland but also those of the famous Tir National festivals of Switzerland, together with features of a distinctively American character.

Champion shots from every part of Europe will compete in these contests with the experts of this country, and for each prize and trophies aggregating not less than \$50,000 in value. To accommodate the great throng of entrants in the events, it is calculated that no fewer than seventy shooting booths will be required and as many ranges, all of which, in compliance with the conditions under which the matches will be shot, will have to be substantial covered buildings.

A committee on site was appointed, with power to decide upon the location of the festival grounds, consisting of President Ludwig and Messrs. G. Kuhlman, N. Benjamin, Louis Stich, L. Lorch, W. Weller, B. Schlimmer, Charles Harth, and the permanent officers of the association. This committee is to report at the next meeting a programme of events, together with a plan of the rules and regulations for the government of the festival.

It was also decided to publish a paper during the period covered by the festival, which shall give a daily record of the progress of the shooting, the names of the prize winners, and such other information as may be of interest to the general public. This paper will be printed in German and English.

Aug. 18.—The New York Schuetzen Gilde, one of the oldest German societies in this city, held its annual festival and prize shooting at Washington Park to-day.

The officers are: E. Holtz, Captain; J. D. Dickeschied, First Lieutenant; R. Henke, Second Lieutenant; B. Wintermyer, Treasurer; H. Vayhl, Secretary; H. Storck, Orderly Sergeant; and J. Lorch, Target Master.

Winners at the king target were: H. Storck, R. Henke, C. Iba, B. Wintermyer and A. Stolzenberg.

CREEDMOOR, Aug. 22.—The fourth sharpshooters' match of the season was shot to-day. The weather was fair with a very light five to six o'clock wind. Non-commissioned Staff Officer Frank Stuart, of the Sixty-ninth Regiment, made the fine score of 49. It was the first time it has been made on the range this season. The following is the summary:

Seventh Regiment—H. V. D. Black, Co. B, 43; A. Stein, Co. C, 43; R. M. Mallock, Co. M, 44; W. N. Bayler, Co. A, 47; J. W. Halstead, Co. C, 47; C. H. Caldwell, Co. 47; R. Udwin, Co. A, 44; L. G. Hoffman, Co. H, 47; G. L. Stebbins, Co. K, 44; R. M. Dunn, Co. G, 42; J. W. Cleveland, Co. L, 42; E. R. Richards, Co. D, 43; H. B. Thompson, Co. C, 42; A. S. Spencer, Co. E, 42.

Eighty-ninth Regiment—J. F. Tracy, Co. H, 43.

Sixty-ninth Regiment—J. F. Stuart, N. C. S., 49.

Cavalry Regiment—A. M. Jacobs, Troop A, 46; E. J. Chase, Second Battery, 45; L. G. Reed, Troop A, 43.

Twelfth Regiment—T. J. Dolan, N. C. S., 45; A. B. Van Hueson, Co. B, 46; J. McCaulay, staff, 45; George Doyle, Co. G, 47.

Thirteenth Regiment—T. M. Harvey, N. C. S., 42; G. E. Constable, Co. F, 42; J. McNevin, N. C. S., 42.

Twenty-second Regiment—N. B. Thurston, Co. F, 43.

Twenty-third Regiment—G. S. Shepard, Co. D, 42; R. O. Oliver, staff, 45; F. E. Hamlin, Co. I, 47; R. Findlay, Co. G, 42; R. W. Simmons, Co. A, 45; H. M. Field, Co. F, 42; George Ball, Co. F, 45; C. L. Scofield, Co. H, 43; C. S. Pirie, Co. I, 47; W. A. Bayer, Co. D, 42; W. A. Stokes, Co. H, 43; G. F. Musson, Co. C, 43; B. G. Saunders, Co. C, 43.

Seventy-first Regiment—A. H. Paul, N. C. S., 42; W. H. Canter, Co. H, 45.

AUGUSTA, Me., Aug. 19.—The Maine Militia in a skirmish match to-day, 50 men teams from each regiment, 10 rounds, distance limited to 250 yds., position standing, 5 shots advancing and the same retreating, with one at each halt. The Second Regiment won with 1,432 points and 461 hits in a possible 500. The first Regiment had 1,550 points and 410 hits.

NEW ORLEANS RIFLEMEN.

NEW ORLEANS, Aug. 16.—The first day's shoot of the rifle tournament for the championship of the State took place today at the range of the Lawson Rifle Club, on Dumaine street, between the intersection of the club grounds and the city limits. The tournament was arranged by the Lawson Club, and a large number of fine prizes have been selected as fitting laurels for the victorious teams and the individual members thereof. The teams which participated in the shoot have been in practice for some time and an unusual amount of interest was manifested in the shoot. The teams which contested were eleven in number, and the personnel of the club representatives ranged from 8 to 13 men. The clubs contesting were the Eagles, Algiers, Expectations, Olympics, Endeavors, Perseverance, Southerns, Orleans, Pelicans, Volunteers and Arnauts. The shoot was commenced at 9 o'clock in the morning and was continued until nearly dusk, large crowds being constantly in attendance and encouraging their friends by their presence.

The only "possible" that was made during the day's shoot was that by Leo Keppler, of the Perseverance, who, on the first trial, knocked off 65 on the target. His other scores were also good, the lowest being 52 and his total 288 out of a possible of 325.

The individual scores worthy of note are as follows, arranged in the order of merit: John Christian (Expectations) 311, J. D. Bell (Expectations) 309, F. Mottis (Endeavors) 307, Harry Bouch (Olympics) 306, C. A. Hensley (Arnauts) 305, (Expectations) 304, Krammer (Expectations) 302, Capt. L. B. McNeely (Olympics) 302, P. Coyle (Endeavors) 301, M. Murray (Arnauts) 301, Paul Kneller (Arnauts) 301.

The above shows that Mr. Christian still holds control over the trigger and again carried off the honors of the day for his club, which had four members over the 300 notch, and which won the first and second prizes. Non-participants were eleven: Southerns, Eagles, Algiers, Volunteers, Pelicans, Perseverance or Orleans teams secured as high a mark for their individual marksmen as 300.

The lowest score made was that of George Orth, of the Pelicans, who made 17 points on the first fire and then withdrew. W. F. Schriever, of the Orleans, was the next worst shot, his score amounting only to 76. The scores by teams follow: Expectations.....3175 Eagles.....4775 Pelicans.....3091 Olympics.....3065 Algiers.....4738 Perseverance.....3759 Endeavors.....4984 Arnauts.....4244 Orleans.....3449 Southerns.....4949 Volunteers.....4074

SYRACUSE, N. Y., Aug. 19.—The new range of the Syracuse Rifle Club at Maple Bay was opened today with a regular shoot, in which a number of the club members participated. The Syracuse Rifle Club is much pleased with the new range and club house, and expect to have in a short time the finest range in the State. The members are grateful to W. S. Barnum, the proprietor of Maple Bay, who fitted up the range, built the club house and turned the whole thing over to the Syracuse Rifle Club. Both the Onondaga Sportsmen's Club and the Syracuse Rifle Club now have separate ranges at Maple Bay, and regular shoots will be held in the future as in the past. The Onondaga Sportsmen's Club occupy their range nearly every Thursday, and the Syracuse Rifle Club hold regular shoots every two weeks. The former club formerly used the Onondaga Valley range. This is the score of today's shoot:

	Off-Hand.	7	6	7	8	4	7	6	9	6	6-68
Smith.....	7	9	6	7	7	9	10	10	6	10-81	
Knapp.....	6	7	8	8	8	6	7	10	9	6-75	
Lathrop.....	5	5	8	9	5	6	6	9	5	5-63	
Knapp.....	7	7	5	6	6	6	7	6	8	4-61	
Seely.....	8	8	6	7	8	9	9	7	7	7-78	
Cately.....	8	9	5	7	7	7	7	5	6	6-64	
Ball.....	4	10	9	6	9	4	7	5	1-62		
Smith.....	7	9	9	8	10	9	12	6	9	10-89	
Barnum.....	9	9	9	10	8	9	11	11	8-83		

BOSTON, Aug. 22.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day. There were a number in attendance, but the weather conditions were unfavorable for good scores until late in the day, when J. Francis succeeded in securing 118 in the seal medal rest match. The best scores, 200yds., standard American target:

	(A) All-Comers' Off-Hand Match.	7	6	7	8	4	7	6	9	6	6-68

JERSEY CITY, N. J., Aug. 21.—The Excelsior Rifle Club, of Jersey City, held its first annual prize shoot at Greenville Schuetzen Park to-day. The event was held over the 200yds. range, which was in perfect condition. The shooting at the German ring target was open to all comers, and the competition was very brisk. The marksmen obtaining the highest scores on two tickets out of a possible 75 on each were: John Coppersmith, 70, 71; Geo. Joyner, 67, 68; E. Fisher, 66, 67; L. P. Hansen, 64, 65; H. Chavart, 54. G. C. Varick, president of the club, captured the first prize of the day, the first flag. The last flag was secured by John Coppersmith. In the shooting at the bullseye target, also open to all comers, the number of red flags, and the competition was very brisk. The winners were: Wm. Weber, 6, G. C. Varick, 4, H. Chavart, 4, J. Kaiser, 3, J. Boyce, 3, Wm. Robinson, 2, Thos. Hughes, 2, G. Jones, 2, C. Bunch, 1, Chas. Pinney, 1, W. Channing, 1. The target of honor shooting was open to members of the club only, and only three shots were allowed to each. The following scores were made: Capt. Louis Hansen, 63, Wm. Weber, 62, O. C. Boyce, 59, Henry Chavart, 56, President Varick, 55, Wm. Robinson, 53, Chas. Pinney, 52, Charles Thompson, 51, Benj. Hughes, 50. The prizes for the ring target ranged in amounts from \$5 to \$1. The premiums for the best work at the bullseye target were from \$20 to \$3; for the greatest number of bullseyes, \$7 in gold. The first red flag each day is worth \$2, and the last flag \$1.

SPRINGFIELD, Ill., Aug. 21.—In the skirmish run Captain Robert H. Aiken, inspector of rifle practice of the Sixth Infantry, Illinois National Guard, at the State rifle range here to-day, shot under United States army regulations upon the silhouette figures, and made a clean score, placing every shot upon the prone figure, making the highest possible score that could be made. The run consisted of 20 shots fired at 30-second intervals at unknown distances from 600yds. to 200yds. and return, double time and 10 halts being made. Captain Aiken is a resident of Chicago and captain of the State rifle team.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NEW YORK GERMAN GUN CLUB.—Wednesday, Aug. 18 was the regular shooting day of the above club and a goodly number put in an appearance at Dexter Park. The scores made were hardly up to the average, but the birds were a cracking good lot, and some of the men would not let a shot of some of the birds escape. The members of the club are a jolly lot and a bird scored lost has no effect upon their spirits. The members still adhere to the old position of gun, and clear below the elbow is the rule. Regular club shoot, 8 birds per man, handicap rises, ties shot miss and out:

J. Gerlitz (21yds.).....	121211-1	J. Frazer (21).....	12001010-4

WELLINGTON, Mass., Aug. 22.—There was a larger attendance at the grounds of the Wellington Gun Club to-day than has been seen there for several weeks, owing to the return of many from their outings.

BOSTON, Aug. 22.—To-day was the regular weekly shoot at Clarendon Hills of the Jamaica Plain Gun Club, and a goodly number of gunners drew beads upon the flying bluebirds during the afternoon.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

Aug. 25-27.—Buffalo Tournament, assisted by the Inter-State Manufacturers' and Dealers' Association. \$1,000 guaranteed. Aug. 29 and Sept. 7.—Sweepstake Shooting at Rutherford, N. J., on the grounds of Boiling Springs Gun Club. Aug. 29, sweep at 50 bluebirds, entrance \$5. Sept. 7 (Labor Day), sweepstakes at targets.

Sept. 1-3.—Hackettstown Gun Club. Two days at targets. For programmes address James L. Smith, Hackettstown N. J. Sept. 1-4.—Second Annual Tournament, Cheyenne, Wyo. Dr. A. A. Holcombe, Sec'y.

Sept. 7-9.—Three Days' Tournament at Atlantic City, N. J. Atlantic City Gun Club grounds. Managed by E. D. Miller, Springfield, N. J., and Harry Thurman, Germantown, Philadelphia, Pa.

Sept. 15-17.—Knoxville, Tenn., Inter-State Manufacturers' and Dealers' Association.

Sept. 15-17.—Dayton, O., Second Annual Tournament. Open to the world. First two days inanimate targets. Last day sparrows. Address W. Scott McDonald, Fifth and Ludlow streets, Dayton, O.

Sept. 15-17.—Stanton, Va., Inter-State Manufacturers' and Dealers' Association.

Nov. 17-19.—Savannah, Ga., Inter-State Manufacturers' and Dealers' Association.

THE GUNS AT LEXINGTON.

LXINGTON, Mo., Aug. 17.—The Missouri State Amateur Shooting Association has just closed its first annual tournament, which proved to be one of the most satisfactory shoots ever held in the State. At the meeting held the night of Aug. 12 the organization was perfected and the following officers were elected for the ensuing year: Emison Chanslor, President, Lexington, Mo.; C. L. Blanton, Vice-President, Paris, Mo.; G. A. Sturges, Secretary, Lexington, Mo.; A. Geyer, Treasurer, Lexington, Mo. The following gentlemen constitute the official board: C. E. Field, St. Louis, Mo.; P. P. Dalmeyer, Jefferson City, Mo.; C. L. Blanton, Paris, Mo.; John Rhodes, Slater, Mo.; J. H. Barre, Louisiana, Mo.; Longnecker, Kahoka, Mo. The following gentlemen compose the committee on constitution and by-laws: T. P. Hale, Paris, Mo.; G. H. Drake, Warsaw, Mo.; J. R. Davis, Lexington, Mo. This committee to make their report at the next meeting. It was declared that all "A" class shooters should be barred from membership in this association. Lexington was decided upon the place for holding the next meeting.

The Lexington Gun Club may well feel proud of the success of this tournament. The officers in charge did everything in their power to assure the pleasure of the attending delegates; and the outlook now for the next tournament is for the grandest and most successful tournament ever held in this State. The following are a few of the most interesting shoots of the tournament:

No. 1, 10 live birds, 30yds.	7	Rosen.....	212221022-9

MILWAUKEE-CHICAGO.

CHICAGO, Ill., Aug. 22.—The city of Milwaukee has a young but able shooting organization in the Milwaukee Field and Trap Association, now little over a year in age. This society is devoted to live bird shooting, and includes on its list many very clever followers of that sport. A short time ago this association concluded it would like a little visit to Chicago, and in that course arrangements were made by which a friendly match was to be shot with the Fort Dearborn Club of the latter city. Pursuant to the programme, the Milwaukee boys left home yesterday evening, sailing in the steamer Virginia, and braving the dangers of the unsalted seas, including the bumps of the Government pier. The voyage was a roughish one, and as the whole party was crowded into one cabin the night was spent in a highly wakeful manner, though one hardly conducive to good work at the traps on the day following. The following gentlemen comprised the Milwaukee party: Dr. J. L. Williamson, Dr. J. P. Carmichael, Messrs. H. Merrill, H. B. Tefft, G. L. Deiter, F. P. Stannard, A. H. Chapman, J. M. Marlett, W. H. Thurston, Percy Thomas, Geo. A. West, Chris. Schmidt, W. Bantam and Stephen Meunier. Ft. Dearborn Club had selected for its team the following gentlemen: A. and G. Kleinman, A. Thomas, C. D. Gammon, C. E. Felton, A. and G. Hoffmann, C. S. Burton, E. Ehlers, W. N. Low, W. L. Shepard, H. Kleinman, J. E. Price, C. B. Dicks and W. McKinnon; alternates, J. W. Lovday, W. L. Wells, J. M. Hutchinson, F. C. Donald and H. D. Nichols.

Shooting began late this morning at Watson's Park, Burnside, after a preliminary report down town. The conditions were 20 live birds, American Association rules, the match shot as a series of individual races, the team totals to count. Milwaukee shot only 13 men, instead of 14 as was in the programme, and this was due to the fact that one of the hoodooes began by straggling away from home on Friday. The Ft. Dearborn team was changed a little, Col. Felton, Geo. Hoffmann and Mr. McKinnon not shooting, and the team being made up as below. Dr. Hutchinson, from the alternates, shooting a very pretty score. The Kleinman family, as we see the scores, ran high as usual. Mr. Shepard let out one or two unsuspected notches. Mr. Low shot beautifully, and Al. Hoffmann also came within one of a straight. The only straight made in the shoot was accomplished by Br'er Gavge Kleinman, with his famous prize machine gun, the one with the discounts off.

The Cream City men, broken up as they were by their hard night, shot a very plucky race, and some performances were creditable. Mr. Merrill, probably the youngest of their team, did the best work, and came very near tying Geo. Kleinman. His style is very neat and clever. Mr. Thurston showed a pluck also. He shoots in the old style, gun below the elbow, and this position is so rarely seen nowadays that it attracted much attention. Mr. Thurston tied Andy Thomas, who had the misfortune of getting three birds altogether, which he hadn't the heart to kill. Dr. Williamson, Dr. Carmichael and Mr. Deiter all shot very neatly and got applause. Mr. Bantam, retriever for the team, did some brilliant work as short shot on incoming birds, once receiving an acknowledgment therefor. The following are the scores as made:

Milwaukee—G. L. Deiter (12-ga.)	22011212030122122-16
Chicago—C. D. Gammon (12-ga.)	10201212020111101-15
Milwaukee—H. B. Tefft (10-ga.)	11022102102010210-15
Chicago—J. E. Price (12-ga.)	10200112100011020-12
Milwaukee—W. Bantam (10-ga.)	01020303220201202-12
Chicago—H. Kleinman (12-ga.)	12112101103031210-12
Milwaukee—A. H. Chapman (12-ga.)	04012011121020222-10
Chicago—C. S. Burton (10-ga.)	010011202112101010-10
Milwaukee—Geo. A. West (12-ga.)	01100221121010101-10
Chicago—W. L. Shepard (10-ga.)	1112222112110102021-18
Milwaukee—S. S. Meunier (12-ga.)	011012010001010102-11
Chicago—A. M. Ho mann (12-ga.)	01111121222212211-19

Chicago—W. Low (10-ga.)	212121212222222-19
Milwaukee—J. P. Carmichael (12-ga.)	212121012010101212-12
Chicago—C. B. Dicks (12-ga.)	201022020122010102-12
Milwaukee—J. L. Williamson (12-ga.)	1121120120101010112-16
Chicago—H. Ehlers (12-ga.)	020010202222212102-13
Milwaukee—J. M. Marlett (12-ga.)	1102021012101012222-14
Chicago—G. M. Hutchinson (10-ga.)	22012121223001210-16
Milwaukee—R. Merrill (12-ga.)	12221201211122222-19
Chicago—Geo. Kleinman (12-ga.)	21222112112121212-20
Milwaukee—W. H. Thurston (10-ga.)	212101112221212101-17
Chicago—A. E. Thomas (12-ga.)	220002212101122222-14
Milwaukee—F. P. Stannard (12-ga.)	022001012121022022-19
Chicago—Abe Kleinman (12-ga.)	121210112122111112-12

The team totals therefore stood as follows:
Milwaukee Field & Trap Team.
G. L. Deiter.....16
C. D. Gammon.....15
H. B. Tefft.....15
J. E. Price.....12
W. Bantam.....15
A. H. Chapman.....13
G. A. West.....13
S. Meunier.....11
Chris. Schmidt.....14
Dr. J. P. Carmichael.....16
Dr. J. L. Williamson.....16
J. M. Marlett.....14
R. Merrill.....19
W. H. Thurston.....17
F. P. Stannard.....14-190
Ft. Dearborn won.

The first close game match shooting a pleasant address was made to the visitors by Col. C. E. Felton, captain of the Ft. Dearborn team, which was responded to by Dr. J. M. Williamson, president of the Milwaukee Field and Trap Association, the latter explaining that as they only had 17 members in all, they did not feel badly about the record 13 of them had made. Sweetstake shooting followed then until late in the evening.
The visiting gentlemen were entertained by the Ft. Dearborn Club to-night at a little spread at Werner's cafe, where an enjoyable time was had. They are a pleasant body of men, and it is hoped that they will come again. A return match will be shot in Milwaukee this winter. E. Hough.

BROOKLYN TRAP.

BROOKLYN, Aug. 17.—Several members of the Acme Gun Club had a day's outing at Dexter Park, Long Island, to-day. Six sweepstakes at bluebirds were shot. The first was at 10 targets each. H. Lemaire and R. Lambert won with a score of 9 each. The second sweepstakes, at 10 birds each, was won by H. Lemaire with 7. Third sweepstakes: Lambert 5, Lemaire 4, Ransch 3. Fourth sweepstakes, 15 targets each: R. Lambert 15, Lemaire 13, Ransch 11, Waldin 11, Morrissey 3. Fifth sweepstakes, 10 targets each: Lambert 6, Morrissey 5, Walding 5, Lemaire 3. Sixth sweepstakes, 10 targets each: Lambert 6, Ransch 7, Walding 2, Morrissey 4. A live-bird shoot at 3 birds each was won by R. Lambert. He killed 3 straight. After the shooting Dr. Hanshaw, D. Morrissey and H. Lemaire ran a 100yd. foot race. The latter won by a yard in front of Morrissey, the Doctor a good third.

Aug. 18.—The Kings County Gun Club held its regular monthly shoot at Dexter Park to-day. Only seven members shot for the gold medal. The shoot was at 20 bluebirds each, club handicaps. H. Barber won the medal with a score of 13. The other scores were: Greiner 8, Keller 12, Dethloff 12, Ibert 4, Shoetter 12, Zirkel 12. A sweepstakes at 6 bluebirds each was won by Shoetter. Tom Short took second money, and Zirkel third. Another sweepstakes was won by Dethloff. A third sweepstakes was won by Short.

Aug. 21.—Two matches at live birds were shot at Dexter Park to-day. The first was between L. C. Gehring of the Emerald Gun Club, and P. Kunzweiler. They shot at 25 birds each, 30yds. rise for \$50. Gehring won easily. Score: Gehring killed 17, Kunzweiler killed 13. The second match was decided at 6 birds only. F. W. Pfander of the First German Gun Club of New York shot against J. Gerry for a \$5 bill. Gerry killed 5 and Pfander only 2. The various teams entered to shoot for the championship of Dexter Park are practicing daily for the first time, which is to be held on Aug. 31 and Sept. 1. The prizes offered are of great value.

PENNSYLVANIA TRAPS.

LEHIGH, Pa., Aug. 21.—The first day (Aug. 20) of the tournament of the Lehigh Gun Club was a grand success. Clay-pigeons were shot at. The contestants included William H. and James Wolstencroft, William Wilson, A. Lawrence and Milton Landis, of Philadelphia; Fred Claus and George Wheaton, of Newark, N. J.; Fred Cooper, of Mahanoy City, and J. Nettles, of Phoenixville.

First event, at 5 birds: J. Wolstencroft 5, Brey 3, Benning 3, W. H. Wolstencroft 3, Wilson 4, Class 4, Cooper 4, Lawrence 4, Landis 4.
Second event, at 10 birds: W. H. Wolstencroft 9, J. Wolstencroft 7, Lawrence 7, Wilson 6, Class 7, Benning 8, Cooper 8, Landis 8, Ochs 6, Brey 9.
Third event, at 15 birds: W. H. Wolstencroft 15, Lawrence 12, Wilson 10, Benning 10, Landis 13, Class 11, Nettles 11, Cooper 12, J. Wolstencroft 11, Brey 9.

First special, at 16 birds: W. H. Wolstencroft 15, Lawrence 12, Wilson 10, Benning 10, Landis 13, Class 11, Nettles 11, Cooper 12, J. Wolstencroft 11, Brey 9.

Wilson 11, Benning 12, Landis 14, J. Wolstencroft 14, Cooper 15, Class 9, Nettles 14.

Second special, at 10 birds: W. H. Wolstencroft 10, Benning 7, Ochs 7, Cooper 10, Lawrence 9, Class 5, Wilson 5, J. Wolstencroft 9, Nettles 10, Landis 10.

Fourth event, at 10 birds: J. Wolstencroft 10, Wheaton 6, Lawrence 9, Cooper 9, W. H. Wolstencroft 9, H. Benning 6, Landis 8, Nettles 8, Class 9, J. Benning 8, Huffart 8, Smith 9.

Fifth event, at 15 birds: W. H. Wolstencroft 15, J. Benning 12, J. Wolstencroft 13, Lawrence 11, Smith 13, Landis 14, Nettles 10, Cooper 12.

The sixth event was at 5 live birds for a purse of \$10; the result was: J. Benning 5, Gelsinger 3, J. Wolstencroft 4, W. H. Wolstencroft 4, H. Hinderstutz 2, Cooper 4, Flickinger 4, Smith 5, Landis 3, Nettles 5, Lieberman 1, Wheaton 3, Gibbons 5, Febr 5, Michael 3, Class 4, Gieger 4, Brey 5, Schantz 4.

The tournament of the Lehigh Gun Club ended to-day. Two live-pigeon matches were shot with the scores as follows:

First match, 6 birds: Fried 6, Leonard 5, Melatt 6, 6; Smith 6, G. Lewis 5, L. Hell 5, 1; Febr 5, 1; Gelsinger 5, 1; George 5, 1; Guff 3, 3; Benning 4, 2.

Second match, 10 birds, purse \$150: Melatt 8, 2; Fried 10, 0; Gelsinger 9, 1; George 8, 2; Smith 9, 1; Blank 8, 2; Cullen 6, 4; McFadden 5, 5; Leonard 9, 1; Flickinger 9, 1; Benning 9, 1; Michael 9, 1; Gens 7, 3; Hell 9, 1.

ESSEX GUN CLUB.

The members of this old organization held their regular monthly shooting meeting at Al Heritage's grounds, at Warren, N. J., on Thursday last. The day was a perfect one for shooting, but the attendance was not as large as is usually seen upon regular club days. The birds were above the average in quality, and a strong cross wind helped them in their flight. The regular field day is announced for Sept. 17, when a general jollification meeting will be held, and a good attendance anticipated. Previous to the regular club event several sweeps were shot off, some of which in detail are as follows:

Sweep No. 1, 4 live birds, \$3 entrance, 3 moneys:
Freche.....1111-4
Briental.....1111-4
Thomas.....1111-4
C M Hedden.....0111-3

Sweep No. 2, same conditions:
Briental.....1111-4
C M Hedden.....1111-4
Thomas.....1111-4
S Hedden.....1111-4
Liddy.....0111-3

Sweep No. 3, same conditions:
Briental.....1111-4
Green.....1111-4
L O Hedden.....1111-4
Smith.....1111-4
Freche.....1101-3

ing first place until the end of the first leg of the second round. The canoes were then under sail, the wind being very light. Gwen was just astern of Cricket, neither making any headway, when Gwen's owner began to rock her violently from side to side. As the big peak of the sail flapped about, the boat began to move, leaving Cricket astern, and soon reached the buoy where her owner was at liberty to paddle again. This maneuver gave Gwen a lead which Cricket could not cut down, the finish being Gwen, Cricket, Tempest, Mab, Lieda, Igwana, Xmas, L'Hirondelle, Eel, Tornado, Io, Bubbie.

In the evening the Mohicans held a camp-fire, and another was held at Squaw Point. The night was most perfect, with a brilliant moon, while a strong N.W. wind, cool and crisp, covered the lake with whitecaps, which broke heavily on the beach.

Wednesday, Aug. 19.

Wednesday morning was very bright and clear, but quite cool the wind still blowing fresh and a good sea running. The sea serpent, which had been quietly sleeping on the bay all night, met with a sad disaster, being completely capsized. He was taken in hand by Mr. Seavey and rescued from a watery grave.

The sailing trophy race was the first event of the day, being started at 10:30 on the outside triangle, 6 rounds, 9 miles. The first thirteen in the windward leg were entered as a matter of course, the two chosen being Roy Sweny and H. M. Smith, making the 15 starters elsewhere given. Mr. Butler had been hard at work for several days over his canoe and rig, the boat being in perfect shape for racing, and a most exciting race was anticipated between him and Ford Jones, the present holder of the trophy for the second successive year. To the disappointment of every one, at the last moment the boat was being launched from the float in quite a heavy sea, a hole was stove in the starboard side amidships, making it impossible to start. Mr. Butler took the mishap very bravely, setting to work to repair the damage in time for the club race, though the disappointment was a very heavy one. Mr. W. L. Lee had been notified to be on hand in case any one withdrew before the start, and he took Mr. Butler's place. The start was a poor one, the boats being so close together that they spread out. Shortly before the start, Tornado capsized, her crew going completely overboard, but quickly righting the boat, regaining his seat and bailing out. Uno was in collision with Hornet before the start, unshipping her rudder and not starting with the fleet.

The two favorites were Canuck and Beta, Lieda also being considered good for a place. Beta had a good position at the start, and led on the windward leg, with Canuck second and Lieda third at first mark. On the reach and run Lieda gained, finally passing Canuck to leeward at the end of the first round, Beta still holding a good lead.

After Beta had completed the first round and started on the windward leg, Uno, with her rudder now in order, cut in with the second and third boats, thus making her start. She sailed with Canuck, claiming the right of way as one time when on starboard tack and compelling Canuck to tack. At the end of the second round she was just ahead of Canuck, but by the end of the third round Canuck had passed her and Lieda, and on the fourth round Canuck headed Beta, after which Uno dropped out of the race. On the jibe of the second round Lieda lost time, but still led Canuck. At the end of the windward leg of third round Lieda carried away her forward mast step, the heel of the mast going through the garboards, after which she withdrew. The mishap was due to the use of iron screws in the mast step, which had rusted away. Gwen had capsized at the jibe on second leg, and Igwana partly filled and withdrew, Hornet doing the same, leaving but eight canoes. On the windward leg of the fourth round Canuck made a decided gain on Beta, which she increased on the reach, making a neat turn and jibe at second mark and taking the lead.

Running with a quattering wind a fine luffing match took place; Beta luffed out and was met by Canuck, dropping back only to luff again, this time taking and holding a place on Canuck's weather beam. Her advantage did not last long; Canuck gave a leap and was clear, running away for several lengths. The race for first place was over, Beta being the winner. Beta was still ahead of the others. Cricket and Elida made a very pretty race for a time. When Canuck finished Beta had just passed the last mark, thus being nearly half a mile astern. The positions on each round were as follows:

	1st Round.	2d Round.	3d Round.	4th Round.	5th Round.	6th Round.
Canuck.....	1	1	1	2	2	2
Beta.....	2	2	2	3	3	3
Dawn.....	6	5	4	3	3	3
Mab.....	5	4	5	4	4	4
Cricket.....	4	7	8	6	6	5
Tempest.....	7	6	7	5	5	6
Elida.....	8	8	9	7	7	7
Tornado.....	9	9	9	8	8	8
Gwen.....	11	capsized.				
Lieda.....	2	2	disabled.			
Igwana.....	12	11	withdrew.			
Hornet.....	10	10	withdrew.			

Mr. Jones carried his smallest rig, two standing sails, the same with which he won the trophy last year. Mr. Moore showed a great deal of pluck in starting just after sunset, with wet sails, and completing the white flag miles though, at the end of the fleet.

At 4 P. M. the club race was called, with three representatives each from Youkers, Vesper and Toronto clubs. The course was an L inside the bay, two rounds, three miles. Bee won, with Uno second and Beta third, the Youkers crew scoring the smallest number of points and winning the race.

In the evening the Central Division held its meeting, electing the following officers: Vice-Com. E. L. French, Buffalo, N. Y.; Rear-Com. T. H. Stryker, Rome, N. Y.; Purser, C. D. Mead, Dayton, O.; Executive Committee: T. J. Kirkpatrick, Springfield, O.; C. P. Walters, Rochester, N. Y.; C. G. Belman, Amsterdam, N. Y.

A camp-fire and open-air entertainment under the direction of Mr. Seavey assisted by his trained sea serpent made the evening pass very pleasantly.

Thursday, Aug. 20.

Thursday was clear and bright, with a strong south wind. The first race was the record sailing, started at 10:40. The inner triangle was used, three rounds being sailed, the strong and squally wind with a heavy sea making the race very exciting. The start was made at the east angle, in front of the camp, with but 7 canoes, Mab, Cricket, Tempest, Igwana, Eel, L'Hirondelle and Gwen. Io and Tornado were at the line but did not start, Tornado's rudder head breaking.

Tempest, with two reefs in her jib-headed sails, was the first over, with a good start. L'Hirondelle had trouble with her mizen, the step apparently being loose, and lowered the sail at the start, soon hoisting it, but she had little benefit from it throughout the race. The first leg was to windward, the second nearly free, and the third a reach. Cricket passed Tempest on second leg, and took the lead. A little later Tempest was twice knocked down by a long wave filled, Mr. Archibald was twice knocked down, but resumed his course, lowering his mizen. Mab, after dropping her big mizen into the lifts at the mark, now passed Tempest and took second place, but her crew preferred to tack rather than risk a jibe at the mark. On the last leg Mab set her mizen and passed Cricket, making a wide turn but having first place at the buoy. Cricket was in trouble on the next leg, sailing with main sheet off. Igwana was third, Tempest fourth, with Eel, L'Hirondelle and Gwen in order.

On the second leg Mab again dropped her mizen, running under mainsail only and tacking as before. Cricket in the middle of the leg carried away her forward mizen step, (not put in by her builder). Mr. Palmer luffed up and shifted the mast and broken tube into the after tube, then he laid on deck forward for some time repairing other damages, several of the boats being damaged. Tempest was sailing again, though partly filled with water, and at the end of second round the order was: Mab, Tempest, Igwana, Eel, L'Hirondelle, Gwen, Cricket.

The last round was a hard one, as most of the boats had strained their gear or shipped water. Eel capsized at the last buoy, but sailed the final leg to the finish. Mab won by a long lead, but when sailing to the finish she was capsized by the windward, Mr. Archibald was in the water and up on his seat again in an instant, coolly trimming sheets and resuming his course. The full summary of the record is given in the tables.

The record for 1891 is as follows:

	Combined points.	Paddling points.	Sailing points.	Total.
Igwana, H. D. Murphy.....	3	5	13	21
Mab, C. E. Archibald.....	3	2	12	17
Gwen, Roy Sweny.....	6	3	11	20
L'Hirondelle, E. C. Knappe.....	2	6	8	16
Cricket, L. B. Palmer.....	5	4	1	10
Eel, J. W. Sparrow.....	1	1	4	6

Mr. Archibald's position is subject to a protest made against him for fouling in the paddling race by Mr. Douglas. The protest was not allowed by the regatta committee, but as the vote was not unanimous Mr. Douglas appealed to the executive committee, on the ground that the decision was made without all of his evidence being heard. The executive committee was also without sufficient evidence to decide the case at the meeting in camp, and the matter must now go over to the November meet-

* Subject to protest not yet decided.
† Tempest disqualified for using paddle.

w Withdrew.
d Disqualified.

ing. In the last of the record races Mr. Douglas was disqualified by the committee without protest for using his paddle, thus losing his place on the record, his claim that he was in danger at the time being disallowed.

The next race of the morning was the sailing upset and maneuvering, with only one starter out of seven entries—Gwen, Roy Sweny.

The Puritan C. C. is the only one which has made any attempt at camp decoration this year, on the fourth day in camp the prizes were presented, the regatta tents were very appropriately ornamented by a letter P some 20 ft. high formed of whisky and beer bottles.

During the morning the many handsome trophies and other prizes were arranged by the ladies on one side of the dining pavilion, all being displayed against a background of red cloth. Com. Lawson has provided a very handsome silver loving cup, which will be given for the record sailing race.

The first race in the afternoon was the tandem paddling, with four crews; Ianthe, Springfield, Toronto and Argonaut, of Toronto. There was a very strong wind and rough sea in the bay, making it a difficult matter to steer a straight course. Cricket, the only boat carrying a rudder, won easily. The light Toronto canoes were overweighed with two men, and also hard to steer, at times being blown down the bay.

The next race, club fours, had but two crews, Messrs. Palmer, Dodge, Douglas and Duguid, of the Ianthe C. C., and the Canadian crew, Messrs. Johnson, Tilley, Carnegie and McMillen. This race, under the same conditions as the tandem, resulted in a similar victory for the Ianthe crew.

Only three men entered for the gymnastics, Douglas, Dudley and Moore. Douglas was the first place. A meeting of the executive committee was held at headquarters, at which Vice-Com. C. V. Winn, of the Central Division, was nominated for the office of commodore by Mr. Ruggles, seconded by Mr. Wilkin. Mr. W. B. Wackerhagen, also of Albany, was nominated by Mr. Palmer for the office of secretary, and both gentlemen were unanimously elected. Messrs. Palmer, Stephens and Wilkin were appointed by Com. Lawson to revise and extend the list of lady members, numbering them in the order of election. On motion of Mr. Seavey, the number of Ezekiel Harvey Platt was declared stricken from the rolls. An appeal from the decision of the regatta committee in the matter of a protest in the record paddling race, made by Mr. G. P. Douglas, was read and referred to the regatta committee for further information. A letter from a member pressing charges of unethical conduct against two other members, accompanied by a letter from the vice-com. of the division to which all belonged, to Com. Lawson, was read and discussed, but as the evidence on both sides was not before the committee no action was taken. An informal vote was taken on a proposal by Mr. Wilkin, seconded by Mr. Ruggles, to limit visitors' day to the hours 1 to 5 P. M., the proposal being endorsed. A letter from a member pressing charges of unethical conduct against two other members, accompanied by a letter from the vice-com. of the division to which all belonged, to Com. Lawson, was read and discussed, but as the evidence on both sides was not before the committee no action was taken. CHERRY DIAMOND Y. C. CUP, AUG. 18.

THE second attempt to sail the first of a series of three races for the gold cup of the Cherry Diamond Y. C. was made successfully on Tuesday, the course being ten miles to windward and return from Brenton's Reef Lightship. The first attempt, which failed through the absence of a stakeboat, was declared off, but in resailing only the original starters were eligible, Mineola, Jessica and Nautilus, the latter not showing at the line. A sweepstakes of \$50 was also on this race, while the private match between these two boats for \$250 was by agreement decided by it.

The wind was light from S. W. as on the preceding day, the start being made at 11:50.

Jessica cut across on port tack to take Mineola's weather, but was too late, the other on starboard tack putting her about and covering her. Mineola gained steadily on the windward work. Jessica losing something at the mark by overstanding. The turn was timed:

	Start.	Finish.	Elapsed.	Corrected.
Mineola.....11	51 50	3 25 30	3 33 40	3 33 40
Jessica.....11	51 35	3 41 15	3 49 40	3 47 59

Aug. 20.

The second race was open to all the class, but Gloria declined to start, Mr. Morgan being ill through the week, and so Beatrix did not start, leaving the same pair as on Tuesday. The wind this time was strong N. E., the course being 10 miles to leeward, logged off by the tug Idlewild. The yachts crossed under clubtopsails and spinakers, being timed:

	Start.	Finish.	Elapsed.	Corrected.
Mineola.....12	38 42	4 11 46	3 33 04	3 33 04
Jessica.....12	38 42	4 11 46	3 33 04	3 33 04

Jessica was by 2m. 64. The races were sailed under the management of Capt. Sumner. The third race will be sailed at Marblehead next week after the Corinthian series.

CORINTHIAN Y. C. SWEEPSTAKES, 1891.

THE third annual sweepstakes of the Corinthian Y. C., of New York, was no less a success than the first two predecessors, being one of the first events of the year in the leading racing class. The interest in Gloria and Beatrix this year was even greater than that excited by Gosssoon and Minerva last season, while the question of the poorer places was this year of special interest. Though three of the ten entries, comprising all but one of the 45ft. class, were not present, their places had already been pretty well determined. The entries were as follows:

	Length.	Area.	Designer.	Owner.
Gloriana, K. C. Y. C.....54.17	2.57	Herreshoff, E. D. Morgan		
Oweene, K. C. Eastern.....54.62	2.57	Burgess, A. E. Turner		
Beatrix, C. B. Eastern.....54.59	2.29	Burgess, C. A. Prince		
Barbara, K. Eastern.....53.33	3.52	Pife, Jr., C. H. W. Foster		
Sayonara, K. C. Y. C.....54.06	3.01	Burgess, B. Thayer		
Jessica, K. C. Y. C.....50.23	7.28	Pife, Jr., W. O. McDonough		
Mineola, K. C. Y. C.....54.20	2.55	Burgess, A. Belmont		
Nautus, K.....54.17	2.55	Wint'gh'm, R. Maxwell		
Alborak, K.....54.17	2.55	Paine, C. R. Paine		
Uvira, K.....54.17	2.55	Pife, F. P. Sands		

The helmsmen were: Gloria, N. G. Herreshoff; Oweene, Capt. Chas. Barr; Beatrix, Capt. Crocker; Barbara, Capt. John Barr; Sayonara, Capt. Watson; Jessica, Capt. Harvey; Mineola, A. Belmont.

The date fixed was Monday, Aug. 17, immediately following the New York Y. C. Cruise. The course was the same 25-mile triangle, starting from Brenton's Reef Lightship. This year the club issued a very neat book containing rules and all information, including a chart of the waters.

The wind was light from S. S. W. on Monday morning when the tug Idlewild ran out to the start with the regatta committee. Messrs. E. B. Clarke, W. H. Plummer, Wm. Gardner and C. S. Davidson. The first leg was laid out 8 1/2 miles S. S. W., and the preparatory start being made at 12:07, the start at 12:17, the handicap limit being 12:20. All of the boats were started by their regular helmsmen, save Barbara, which for this race was in the hands of Capt. John Barr, of Cinderella.

All crossed on the starboard tack, with clubtopsails and balloon jibtopsails set, Gloria taking the lead, with Beatrix close to her, and the others strung out in close order, Barbara, Sayonara, Mineola, Oweene being a couple of minutes after the leader, while Jessica was handicapped, the times being:

	Start.	Finish.	Elapsed.	Corrected.
Gloriana.....12	17 12	4 11 14	3 45 14	3 45 14
Beatrix.....12	17 14	4 22 48	3 57 48	3 57 48
Barbara.....12	17 31	4 22 48	3 57 48	3 57 48
Sayonara.....12	17 35	4 22 48	3 57 48	3 57 48

All headed off shore at the start, but Barbara first and then the others tacked and ran for Narragansett Beach, holding the leg until close inshore, when Gloria was to windward of the fleet, with Oweene next best, the Burgess cutter coming out ahead of the Burgess centerboard Beatrix, when they crossed in tacking.

Beatrix held third place, but Barbara was fourth, having a good lead on Mineola and Jessica.

The last half of the windward work showed little change in position, the whole beat out being rather slow and not specially exciting. The work was timed:

	Start.	Finish.	Elapsed.	Corrected.
Gloriana.....20	45	2 40 33	2 03 33	2 03 33
Oweene.....20	45	2 43 09	2 03 52	2 03 52
Beatrix.....20	45	2 43 09	2 03 52	2 03 52
Barbara.....20	45	2 47 48	2 07 48	2 07 48
Sayonara.....20	45	2 47 48	2 07 48	2 07 48
Mineola.....20	45	2 47 48	2 07 48	2 07 48
Jessica.....20	45	2 47 48	2 07 48	2 07 48

The elapsed times show very fairly the merits of the windward work, Oweene making an even showing with Gloria, and far better than the rest. Balloon jibtopsails were set to port and the fleet reached for the second mark with but little gain or loss all around save by Jessica. Gloria split the foot of balloon when half over the leg, sending up her No. 1 jibtopail in its place. The times at second mark were:

	Start.	Finish.	Elapsed.	Corrected.
Gloriana.....20	45	2 40 33	2 03 33	2 03 33
Oweene.....20	45	2 43 09	2 03 52	2 03 52
Beatrix.....20	45	2 43 09	2 03 52	2 03 52
Barbara.....20	45	2 47 48	2 07 48	2 07 48
Sayonara.....20	45	2 47 48	2 07 48	2 07 48
Mineola.....20	45	2 47 48	2 07 48	2 07 48
Jessica.....20	45	2 47 48	2 07 48	2 07 48

	Start.	Finish.	Elapsed.	Corrected.
Gloriana.....32	45	2 40 33	2 03 33	2 03 33
Oweene.....32	45	2 43 09	2 03 52	2 03 52
Beatrix.....32	45	2 43 09	2 03 52	2 03 52
Barbara.....32	45	2 47 48	2 07 48	2 07 48
Sayonara.....32	45	2 47 48	2 07 48	2 07 48
Mineola.....32	45	2 47 48	2 07 48	2 07 48
Jessica.....32	45	2 47 48	2 07 48	2 07 48

The times of Oweene, Gloria, Mineola and Beatrix on this leg were practically the same, the other three all losing a little. After jibing at the mark, intermediate jibtopsails were set for the reach home, Mineola alone carrying a balloon. Gloria gained on all the rest save Jessica being about even, as the following times show:

	Start.	Finish.	Elapsed.	Corrected.
Gloriana.....42	25	4 25 27	4 08 15	4 08 15
Oweene.....42	25	4 28 23	4 09 06	4 09 06
Beatrix.....42	25	4 30 14	4 10 19	4 10 19
Barbara.....42	25	4 34 25	4 14 24	4 14 24
Sayonara.....42	25	4 35 55	4 15 25	4 15 25
Mineola.....42	25	4 39 40	4 19 14	4 19 14
Jessica.....42	25	4 45 50	4 25 50	4 25 50

The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Gloriana.....12	17 12	4 25 27	4 08 15	4 08 15
Oweene.....12	17 17	4 28 23	4 09 06	4 09 06
Beatrix.....12	17 17	4 30 14	4 10 19	4 10 19
Mineola.....12	17 51	4 39 40	4 21 49	4 21 49
Barbara.....12	17 51	4 39 40	4 21 49

BOOK OF THE GAME LAWS:

A COMPENDIUM OF THE LAWS RELATING TO GAME AND GAME FISH. REVISED TO DATE, AND EDITED BY CHARLES B. REYNOLDS, OF THE FOREST AND STREAM.

The scope of the work embraces all the laws relating to game and game fish of every State and Territory in the Union and the British Provinces. The better to insure accuracy, all the important sections are given in their full text, as they appear on the statute books. Errors which might arise from abstracting or paraphrasing are thus avoided. The preparation of the work has involved an examination of more than 800 distinct original and amendatory acts, scattered through multitudinous volumes of the compiled statutes and session laws of the fifty-nine States, Territories and Provinces here represented. The labor of compilation has been largely increased by the often careless and sometimes seemingly contradictory nature of the legislation. The BOOK OF THE GAME LAWS is the result of a painstaking and conscientious endeavor to furnish an accurate and reliable compendium. Price 50 cents. For sale by

ALL DEALERS IN SPORTSMEN'S SUPPLIES.

Notice to Fishermen. Cut Prices for 1891.

Here I am again as usual cutting the prices of Fishing Tackle. Low prices and good quality of goods increases my business. It will pay you to buy your tackle in Brooklyn.

CANOE HANDLING.

By C. B. VAUX (“DOT.”)

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duff between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with “Canoe Building. Price, postpaid, \$1.00.

OTTAWA AND CREEDMOOR.

DURING the present week the big meetings of riflemen at Ottawa by the Dominion Rifle Association, and Creedmoor by the N. R. A. of America, are on with good attendance, plenty of enthusiasm and every prospect of success in the gatherings. Each in its own field is working on the same lines. It is for the cultivation of the military spirit, for the encouragement of a love of firearms, and for the improvement of accuracy in their use among the civilian soldiery as distinguished from the regular army work, that the two associations are striving. The Northern one may be more distinctively national in scope than the gathering at Creedmoor, but it is only because the United States is too vast, and its several sections too great in their local ambitions to join in such a national display as that of Ottawa and Bisley.

The any-rifle civilian shots cannot complain that they have not been given abundant chance for competition. The management is rarely found laggard when there is a demand for this or that form of competition. It is put on the list and the attention of competitors invited to it. If there is really a demand for a match under those conditions it lives, if not the subsequent meetings miss it. In this way the matches now embody everything on which the management think they can command the support of shooters up to the full limit of the ability of the officers in charge. Neither Ottawa nor Creedmoor offer such a magnificent prize list as that at Bisley, but each is doing as great a work in its field, and if the time should ever come for anything more than the pleasant rivalry of fall meetings, each will render full return for every dollar and every hour spent in their maintenance.

ON THE ENGLISH RANGES.

THE suggestion made by our correspondent "W. W." in the Rifle columns is a most excellent one, and it is a surprise that it has not long since been acted upon. We have had teams go abroad, long-range teams to carry victory, military teams to suffer defeat, and there have been American riflemen as individuals who have won honors on the Wimbledon Common; Farrow gave points on off-hand work and Hyde played a lone hand as a long-range shooter. In each case they fought with American arms, and it is just at this point where, as our correspondent indicates, they missed the chance for the largest honors and the richest returns for their work. At present the bulk of the shooting at the great meetings there is done with the Martini rifle, and to gain the greatest showing at the prize list the visitor must adopt the arm with all the provisions of the conditions strictly adhered to. The rifles are very cheap and may be had at any one of a dozen dealers. Any American gun dealer will take an order for one of the pieces, and by plenty of practice in the most beastly weather he can select, the American having attended to his entry card, etc., will feel perfectly at home on Bisley ranges as the weather generally strikes it. "W. W.," a champion of champions at the Bisley meetings, and an old-time Wimbledon winner, though not as a rifle shot, but a revolver expert, knows fully whereof he speaks when he points out to his fellow countrymen here what a chance there is for glory and well-paid rivalry, with a Martini weapon particularly and finer arms as well at the great meets of the N. R. A. of Great Britain.

DEATH BEFORE THE TRAP.

A FRIEND lying dead at his feet, a widow and orphans rendered such by his hand, and a lifetime of regret, deep and bitter. Such is the calamity which in the twinkling of an eye fell upon James W. Cropsey at the recent meeting of the Atlantic Rod and Gun Club at Coney Island. He had a couple of cartridges in his hand, slipped them into his gun, snapped it shut and—bang! his friend lay dead. Chastisement to one careless gunner has come at one sharp swoop, and should he ever touch a gun again, it is very certain that it will be with a full realization of what a dreadful engine of destruction it is.

Again and again the list of "Don'ts" in connection with the gun is brought home to the vast army of gunners. "Don't load except at the score," is one of the prime directions of a well ordered meeting—one of the cardinal points of faith and practice on the part of the gunner worthy of his arm. Violate the rule, and though luck may again and again lean on the side of the careless, the time will come when the efficacy of the rule is brought home in a startling fashion, and such an occasion was the tragedy at the Coney Island range.

SNAP SHOTS.

THE chief ambition of fishermen at some of the popular resorts appears to be to make a prodigious score. The strings are duly displayed to admiring groups on hotel verandahs, weighed, recorded, and then passed over to the kitchen servants, to be cooked or thrown on to the compost heap. There is no sense in trying to correct this on the score of angling sentiment; if a man is by nature fond of fishing for count, and finds satisfaction in displaying a bigger string than his competitor, no denunciation of his fishing practices will effect a change of heart or modification of taste. We cannot gain anything by quarreling with another person because his fun in fishing is of a different texture from our fun in fishing. But because of the economic considerations involved, since fishing for count almost inevitably means an undue diminution of the general supply, no effort should be spared to discountenance and abate the practice of fishing for a score.

A handsome gun is interesting as a specimen of artistic handicraft; and there are men for whom firearms have the fascination of paintings. One of FOREST AND STREAM's contributors is happy in the possession of a collection of more than two hundred arms. On the walls of his "den" are displayed rifles and shotguns and pistols, illustrating the development of sporting weapons from flintlock to hammerless. The collection has cost more than \$3,500, and our friend contends that in addition to the pleasure of using these arms in the field during a

quarter century, he has been more than repaid for their cost by the satisfaction of looking at them. It is not given to every ardent gunner to invest so much money in guns; and it may be consoling to reflect that the degree of one's enjoyment of shooting is not to be determined by the wealth and variety of his armament. Certainly no owner of a hundred arms can feel the affection for any one of them that his more modest brother has for "the old gun," the tried and true companion of so many days together. To hear some gunners tell of the performances of their favorite weapons, one might almost imagine these contrivances of wood and metal to be sentient and reasoning beings; they recall the old story of the lucky shot made by the accidental discharge of a gun while the hunter slept; the proud possessor ever afterward contending that the gun went off of its own accord when the game came into range.

We publish to-day an interesting collection of notes on the rearing of native and imported game birds. Efforts in this direction are in line with the changing conditions of shooting in America. We have reached a stage of game depletion, and a stage too of the game-preserve system, where artificial propagation and rearing are resorted to in a growing degree; and every fragment of such experiences as are here detailed in our Natural History columns is useful for instruction or warning. A note from Mr. Verner de Guize, received too late for publication to-day, assures us of that gentleman's perfect success in pheasant rearing at Mahwah, N. J. Breeding can be conducted in this country, he assures us from his own experience, quite as successfully as in Great Britain; and the birds have shown themselves well adapted to their new surroundings. We hope to supplement what is printed to-day with further notes relating to the successes or failures of other enterprises in the same direction.

We are not at all surprised to learn that the Maine Fish and Game Commissioners have appointed "Jock" Darling a game and fish warden; and there is no reason in the world why the appointment may not prove a wise one. Darling has set the law at naught in the past, and has declaimed against the officers appointed to enforce it. For this we have blamed him; and blame him now. On the other hand, the man possesses certain traits of character that will admirably fit him for duty as a warden. The newspaper despatch reporting Darling's appointment adds that "it took a small army of officers" to arrest him last year. This is pure nonsense, as everybody knows who read Miss Hardy's account of the facts in our columns—an account which, by the way, went far to enlist sympathy for Darling in that affair.

A man forty-five years of age is not too old to take up shooting as a recreation, even though he may never have handled firearms and is totally ignorant of their use. There is health to be found in shooting, and strength to come of days in the field; and cheerfulness and lightness of heart and a braver spirit to be won in the fields and woods tramping. When by rational indulgence in such manly pastimes mental and physical upbuilding may be gained, it is a moral obligation resting upon every man to avail himself of them. And it is not too late to begin even though one be on the shady side of fifty.

The man mistaken for a deer has already been shot in the Adirondacks this season; and a like fate has overtaken the unfortunate companion of the man who did not know that his rifle was loaded. With all the handling of firearms by inexperienced handlers in the Adirondack season, the mystery is that the chronicle of accidents should not be ten times more extensive.

Albert Barnett, of Clayville, N. Y., who died last week at the age of 100, was a remarkable specimen of a well preserved sportsman. Until he was injured in a run-away accident in his 97th year, it is said, he handled rod and gun almost with the ardor and expertness of his prime, and he did not finally give up field sports until he had entered his 100th year.

The Nebraska prairie chicken crop is said to be unusually abundant this year, and 1891 may be remembered as a season when law-abiding sportsmen had a chance to bag a few birds left over at the beginning of the open season after the disgraceful scramble between market hunters and sportsmen before the law was up.

The Sportsman Tourist.

A COLORADO OUTING.—II.

IT had been arranged that Jimmie should be at Black Lake with a team the day after our arrival. Jimmie has light blue eyes that are round and a round nose. If he had to tramp one mile or one hundred, he would maintain a gait of two miles an hour and get there. He is gray and fifty, and I am never able to disabuse my mind of the impression that he has always been gray and fifty. He surrendered to Burnside at Cumberland Gap, and "hit was the end of my soldierin'," is the way and the extent of the information he gives one concerning his early history, conceding he has any history. He came to Black Lake in company with George and Charlie, drawing a reliable thoroughbred wagon; George and Charlie are seventeen; having grown up together they know each other's ways and they know Jimmie, and are just as reliable as he—they always get there. Going down hill, if the brake is not set to warrant the exact degree of friction requisite to their comfort they will lay back their ears and nip at each other like a pair of colts. This is their way of blaming each other and Jimmie; and Jimmie, thinking he understands his part of the business, remonstrates mildly, always first with George, then with Charlie: "George, what yo' doin'?"—Charlie, behave yerself; then the venerable bays will throw up their heads and champ their bits as if they were having a laugh all to themselves at their venerable companion and friend. All this time the lines are swaying in close proximity to the wagon tongue, and George and Charlie are herding themselves and the wheels never missing a boulder in the road or out of it.

Bidding our kind friends *adios* we cast our fortunes with Jimmie and his companions and start for the head of the Muddy. The Blue River Valley, down which we must go, is of itself not very attractive; there is a good deal of sage brush and grease wood on the narrow mesas, and we catch only an occasional glimpse of the river. The river is not attractive, because it is not blue, but yellow, roiled with the refuse of the gold hunter in the vicinity of Breckenridge, hence the loss of it is no grievance. An occasional peak or bib of a mountain range in the distance helps a little to divert the monotony, and Brother Byers, always observant of the practical side, misses no piece of meadowland, if it is no more than an acre in extent, and discusses with Jimmie the condition of every neighbor's hay crop in Middle Park, while I hold communion on the back seat with my brier root. The situation suits my mood, and I do not take the trouble to kill a mosquito that alights upon my hand, but give him a whiff of smoke instead. I am not over being tired yet, city tired, and it is enough for me to know that I am out of doors with nothing to do, and that we can be at home when the sun goes down, wherever we may arrive at that hour.

"There is Whitely's Peak," says Brother Byers, half turning his face toward me. I look off forty miles and see a mountain which appears to have been chopped down at one side, and that leans over as if it had been struck by a hard wind, and answer: "Yes, I see." Whitely's Peak has no interest for me, except that we are going in search of a lake in that vicinity—a lake where there are marvelous trout that no one can catch, and I promise myself in an indolent way that I will catch one.

About noon we reach Blank's and have dinner. We do this to save the trouble of building a fire. Blank is away from home, you can take your oath, but Mrs. Blank is at home with the baby, you can again take your oath. The house is neat, the baby is clean and the dinner substantial and inviting, you can again be sworn with no fear of perjury on your mind. Mrs. Blank accepts with a pleasant smile—which is a second course of dessert—the dollar and a half tendered for the dinners. I do not consider Mrs. Blank a robust woman, but cheery and ready to prepare a meal for the next wayfarer, or a half dozen of them; and to prepare meals all through the afternoon if occasion demanded. There is a Holy Bible and some odd volumes of George Eliot on a rustic table in the corner; the name on the fly leaves indicate that Mrs. Blank had contributed thus far to the literary necessities of the family and that the contribution was something left over from the days before Mrs. Blank had succumbed to the marital relation. I am not personally acquainted with Mr. Blank, but I take him to be broad across the shoulders and one to whom a few hours daily over a hot stove in the summer time would be a recreation, but that he has no passion for that sort of a pastime. Being in want of a toothpick I hunt for the woodpile and find a chicken feather which answers my purpose. Among the odd volumes on the rustic table was the story of Amos Barton, and, while I trimmed the chicken feather, I wondered if this were another case of Milly with the virtues of Amos left out; it must have been very, very hard even with poor Amos's tenderness, or may be worse; and would it be the same story in the end? "My dear—dear—husband—you have—been very good—to me!" It takes so little to make some women happy that to grudge the means is—what shall one say of it?

We reached Kremling in due course, at the confluence of the Muddy with the Grand River. Kremling has a store, a saloon and a dwelling house, but no paint. Kremling is not new, I have known of it a dozen years or more; neither is it interesting, except as affording food for reflection on the eccentricities of mind. Maybe by the next glacial epoch or just before the ice gets as far down again as Kremling and the other tillable land is converted into rice fields, the sage brush and greasewood will be grubbed up and burned and the land utilized. The road up the Muddy does not follow the valley of the stream, the valley is too confined to make a road convenient, but we go up "a draw" instead, that is trackless and has an adobe soil. I remember being caught in a severe rain storm once in this draw, and have reason to deprecate the soil. As we reach the summits of the low-lying hills, any direction affords magnificent mountain views; the depressions have their influence and effect upon even George and Charlie, who walk going down hill and trot up to get out of the general dejection. We reached a ranch during the afternoon that afforded an excellent garden, which cheered Brother Byers, affirming, as it did, his conviction of the capacity of the soil and the climate for the satisfactory production of "all sorts of garden stuff." The entire vicinity was a sort of exaggerated

rolling prairie, environed by picturesque mountains, and we camped that night on a small tributary to the Muddy and fought mosquitoes while we drank our tea.

The next day noon we took dinner with Riggles, under the shadow of Whitely's Peak, then followed a timber road two miles, then a wagon track through a few hundred acres of scattered aspens and wild flowers. Ah, those wild flowers! the first we had seen in twenty-four hours—asters, bluebells, hollyhocks, geraniums, blue petaled flax, larkspurs shaded from gray to deep blue, lilies, and dozens that we had no names for—affording a wealth of colors that was bewildering. The remembrance of the road we had traversed became pleasant under the delightful influence, and I did not care how far it was to Hetzer's Lake if we might have this garden at intervals, if not all the way. Skirting a few hundred acres of meadow sheltered by thick growing pines, overcoming a narrow slough and traversing several rocks with three wheels of the jerky in the air at one time, we finally reached a tent by the side of a pond. This was not the lake, certainly, it was two feet deep and overgrown with Egyptian lotus, according to Brother Byers, affording a rich carpet of golden blossoms, to me altogether novel and beautiful. Where was Hetzer, and more particularly where was his lake? The tent door was closed, and a quarter of elk was suspended from an adjacent pine, but there was no sign of life in the gulch, except a chipmunk, and he was very shy, because Hetzer has a kitten and a dog for company.

We would camp at all events, and Brother Byers would go prospecting if I would assist Jimmie with tent. My friend came back with Mr. Hetzer in a few moments and I superintended the erection of our cotton dwelling, even to the selection of a spot with a proper inclination and no lumps, near the base of a half-decayed aspen. Then I refreshed myself at one of the three springs bubbling up on the edge of the pond—selecting a camping place and overlooking Jimmie and Brother Byers while they cut and drive tent pins wears on the system. To the west of our camp and at an elevation of 300ft. from the base is the summit of a hill; aspens and pines and flowers cover this hill, and when I inquire for the lake I am informed that this hill is the lower rim of the basin, and that at a clump of pines, "just there in that sag," is the lowest part of the rim. We climb by a zigzag trail to the clump of pines and are surprised at a beautiful sheet of water over 300 acres in extent set in a mountainside. We have put the rods together and go down 50ft. to the margin and embark in a scow. Hetzer says the lake is 150ft. deep "most anywhere," and the scow is consequently questionable; he reassures us by saying it will carry ten, and I take it that he does not mean to the bottom. The lake is as clear as the springs, and 150ft. of line with a grapnell would have been reconciling, but Hetzer had no such appliance; being a lot owner in a cemetery nearer home I weigh the prospects of its occupancy while Hetzer weighs the anchor, and conclude that I prefer grass to water as a mortuary tribute to my virtues; then I don't approve of a headstone with nothing under it, it is a cold mockery and—

"Please shove off the scow, Mr. Hetzer." This, of course, is the request of Brother Byers—he cannot swim a stroke, and being unconscious of peril he is courageous. The scow is shoved off accordingly and silently propelled around the lake, with a coachman trailing on one side and a grasshopper on the other. The shores are wooded to the water and are quite abrupt, there is no beach, and we notice regularly stratified limestone between the lowest growth of timber and the surface of the lake. There is no outlet and the inlet is a mere apology, being dry most of the year, only in the spring it is a tiny stream from the melting snow on a distant spur of the Gore Range. There is no evidence whatever of glacial action, and every lake that we know of in the mountains is the result of a glacier. How was this lake formed? Brother Byers can give as the only solution that caves commonly occur in limestone, that this must have been a great cave and that the roof had fallen in and left a great cup in the mountain side. We had traversed half the circuit of the lake, it was a good time for trout anywhere else, in our experience, but we had experienced no evidence here, while Hetzer assured us that he had placed 10,000 trout in the waters. He had commenced stocking it with fish from the Muddy eleven years ago, and he knew they were here. He had seen them and handled them in spawning time, trying to get up the inlet—two, three, four, five, six, eight-pound trout—he did not go over that weight, and I was ready to believe anything he said—he sculled the old scow like a still-hunter, you could not catch a sound of the paddle, only the low tones of Hetzer's voice as he told of the marvelous trout just under us, but out of sight. When we returned to camp I commissioned Jimmie to catch me a frog; I had noticed some in the slough as we came in. He said he would try, and the only thing I regret now is that I did not follow him and hide in the timber that I might see him in pursuit of a frog; think of a man whose extreme speed is two miles an hour catching frogs. But by the time I was ready for the experiment in the morning, faithful Jimmie came with five frogs in an old fruit can with a rag tied over them.

Then Hetzer and I went out on the lake, and I ran the Sproat through the skin on the frog's back; I could not, of course, cast the inducement with the trout rod, so I lifted him over and he made for the scow as if he understood that it was the nearest way to land. I lifted him up and turned him around and dropped him on the water again. This time he struck off in the right direction, and on the clear, perfectly smooth surface it seemed that he must induce one of the marvels to come out of his lurking place. When the unusual lure gave token of weariness I lifted him up on the head of the scow, when he gathered his legs under him and sat winking and, I thought, no doubt wondering at the extraordinary gymnastics he was being forced to. I christened him John Henry, and told him that to all appearances he was absolutely irresistible and deserved to be immortalized as a dead sure thing on trout. Then I shoved him overboard, when he floated without any effort. Evidently he was a courtier duly registered in the batrachian blue book and impervious to flattery. I shook him up and admonished him in Western vernacular that he was destined to the performance of a certain duty and must not consider any personal sacrifice. He seemed then to awake to the notion that he had a mission that should not lapse for lack of energy, and after he had gone clear around the scow I mildly suggested to Hetzer my doubts of any trout in his lake.

While I was expressing myself there came a sudden swirl in the vicinity of the frog and he disappeared. I raised the rod, felt a tug on the line, and that was my mistake—the frog came to the surface and remained on his back, and Hetzer was vindicated. I brought John Henry in for a rest, and after he had recovered his wind I experimented again and for an hour, and consoled myself and tried to explain to Hetzer that, being so accustomed to fly-fishing, I had acquired a habit of striking quick. I told this to Hetzer a dozen times at least, and I think he believed me.

But we did not give up experimenting. It was asserted by Hetzer that in the evening, just before dark, the trout would come to the surface for a few minutes to feed. Brother Byers thought he would take advantage of the information, and I concluded to remain in camp. Jimmie went off to fraternize with George and Charlie, the sun went down in a bank of clouds that drifted my way, and as the twilight stole into the gulch I began to feel lonesome. It occurred to me that the neighborhood was a good one for game, and that game was not confined to deer and elk, and that I had only a small pocket knife. From the upper hills and the lake the wind came sighing mournfully and the gusts became more frequent. Then I thought I would find Jimmie for company, but while I debated the matter a stronger breath than any of its fore-runners came sweeping down the gulch, and with it came the sound of falling trees—there were no trees within a half dozen rods of me except the old aspen, and I concluded to remain where I was, notwithstanding the possible appearance of game. Jimmie came back and began to prepare supper, at which we should have elk steak, a taste of bacon and plenty of bread and butter and tea. When we had the meal about ready I heard the fishermen talking as they came down the trail, and Brother Byers displayed a 2lb. trout—a little one Hetzer decided it to be—which had suffered itself to be deceived by a grasshopper. It was the only victim secured during ten hours' work, all told, by two men on Hetzer's Lake. I concluded that the extremes of trout fishing as exemplified by our experience on the two lakes were not fully to my taste. Each had its attractions, of course, and was enjoyable, but the middle ground is the one with the fun in it, as well as the worth in all circumstances in life.

The next morning we broke camp and returned down the Muddy, and took a lunch just before crossing. We proposed to reach the Troublesome before night, by way of Antelope Creek, through the "Gun Light" (a big notch in a big mountain). Jimmie had been that way ten years ago on foot, he could not tell how the road was or whether there was any road. We met a man, resident on Antelope Creek, and he told us there was a good road, from his place to the Troublesome—they "done a heap of work on it." We found it: a furrow plowed around the mountain sides that presented an angle of say thirty degrees. We let the off or the near wheels take the furrow, as occasion demanded, and the opposite wheels took the chances with us. But we reached Troublesome and an excellent early camp in time to have trout for supper.

The banks of Troublesome are bushy, the only satisfactory way to fish it is to take to the bed, and that is always delightful. Before leaving home I was admonished not to go into the water, there was to be no more groaning and limping about my domicile because, as it was alleged, of this very indiscretion. To make assurance of my good faith sure, I called attention to the fact that my waders were in the cellar and not in my grip. But on opening my bedding which Jimmie had brought from Hot Sulphur Springs, I found a reserved pair. I had forgotten all about them; I could not resist a feeling of satisfaction at the discovery, although I considered that I should have no use for the temptation, as our sport was to be confined to the lakes. On the Troublesome, however, I concluded to experiment with the rheumatism and pulled on the boots. Within a minute after reaching the water I made up my mind that one boot leaked, then I experienced a recollection of former knowledge of the fact. Then the other boot leaked, but one foot was now wet and I had three trout already. A shower came up and I continued to gather in the trout regardless of consequences. I had a faint notion of repeating to myself, "What would she say if she could see me?" Well, I hadn't made any promise—that is, directly it was an invasion innocently expressed; besides a breach of promise with uncomfortable results was altogether out of the question with us. This is the first confession of my experiment and I have experienced no discomfort for indulging in a pardonable proclivity—the remembrance of the delightful hour is without price.

The next day, down on my favorite stream, the Grand, I caught 9lbs. of beautiful trout without wetting my toes and I told of that. In the evening Brother Byers and I had a bath in the hot sulphur pool at the Springs, and that was a fitting climax to a ten days' outing.

L. B. FRANCE.

DENVER, Colo., August, 1891.

Camp-Fire Flickerings.

"That reminds me."

FISHERMEN have an established reputation, so far as dealing in fiction is concerned, but I have doubts in regard to their being always entitled to the head of the procession. For instance, while outing in the northern part of this State last month I made the acquaintance of an honest, gray-haired, horny-handed worker of the soil, who gravely and very seriously informed me that years ago he was an excellent shot with the rifle and handled one a great deal, but never allowed one to remain loaded in the house over night. "On returning home with my rifle loaded," said he, "I always stepped to the door and unloaded it at random into an old oak tree, which stood about eight or ten rods from the house. Being out of lead one time I thought I would go to the tree and see if I could pick up a few old bullets. Well, sir, I got out of that tree, into which I had fired off-handed, a chunk of pure solid lead as big as a brick!"

Of course I did not by word or sign dispute my venerable friend, but in behalf of the few men that I know who go fishing I mentally voted the old farmer the medal.

Natural History.

REARING GAME BIRDS.

I AM much interested in the rearing and keeping in confinement of wild game birds. So far I have had very little experience, and I have been able to gain very little from anything I could get to read on the subject; but I think perhaps some of your readers would be kind enough to give their experience in rearing pheasants, ring neck (English) and golden pheasants, and by doing so would greatly add to the literature on this subject, which is very sparse. To make a beginning I will tell what I did:

I placed ten golden pheasant eggs under a game bantam about June 11 of this year, and on July 3 six hatched out, and one died in the shell, the other three eggs were clear. For two days I could get the small things to eat nothing. I tried them with hard-boiled egg and bread crumbs, but very little of it they would take. At the advice of a chicken friend I got them some meal worms, these they picked at a little. I then got some maggots which I had fed well on shorts for two days, and these seemed to be what was wanted. Two of the little ones died in less than a week, I think from exhaustion, but the other four never gave me the least anxiety since I got the maggots, which I continued to feed them on for about four weeks, with the addition of a little oatmeal, milk curds and small wheat. They had the run of an inclosed lawn with plenty of shade. Now, if I had known that properly prepared maggots were the correct thing, I think I could have raised the whole six birds.

I did not know how to get this very necessary feed till I was told how, and as I have never seen it in print, I will give you the details, which may be useful to others. Get a beef head, and expose it to the blow fly for a day or so; then hang it in a flour barrel and cover it over and keep in a warm place. Have a large-sized hole cut in the lower part of the barrel and have plenty of wheaten shorts on the bottom of the barrel. The maggots as they mature drop on the shorts and feed on it, and after about 24 hours in this they are nice, dry, firm worms; and are fit to feed to the young birds. I give each one five or six of them at a time, three or four times each day; and it was delightful to see how anxious they were to get them. In about a week they would play all over me when they expected a maggot.

By cultivating the maggots in the above manner there is nothing in the least disagreeable about it, as the head is placed or hung at the top of the barrel and covered over and the maggots are taken out of the dry meal at the bottom. Like many others, I thought it would be a horrid affair, but I was most agreeably surprised with the result.

If this is of any benefit, I will be much pleased; and if some others of your readers will give their experience in this line I will be more so.

M. B.

LONDON, Ontario.

A correspondent, "N. E. J.," writes: "Can you give me any information as to what has been or can be done toward introducing the Mongolian pheasant in the eastern United States? I am interested in a ducking shore on Chesapeake Bay at mouth of Middle River (near Baltimore), where we own nearly 400 acres of land, much of it low and wet and in timber. How do you think they would thrive in such a place, and can you refer me to the experience of any sportsman in this part of the country?"

In response to an inquiry from this office Mr. Hugh D. Auchincloss, of New York, says: "Replying to your favor of the 21st inst., inquiring what success I have had in introducing the Mongolian pheasant into the Eastern States, I beg to advise that as yet I have not had the birds a sufficient time to make a report of any interest or value. I did not obtain the old birds from Oregon until late in June, and have at present eleven birds (four cocks and seven hens), all of which are in capital condition. Two of the hens after arrival laid about three dozen eggs and from these I have so far raised about a dozen young birds. The transportation of the old birds so late in the spring stopped their laying, so this breeding season is virtually lost. I also obtained several dozen eggs from Oregon, none of which hatched out, the long railway journey having added them. I find that the old birds are very wild when kept in confinement, but are very hardy and easy to care for, and thrive very well on small grains, wheat, barley, etc., with plenty of green stuff. They are fine powerful birds, great fighters and of more beautiful plumage than the English pheasant, and so far I can see no reason why they should not be easily bred in the Eastern States. As soon as I can gather any facts that may be of value to intending breeders I will take pleasure in again writing you on this subject.

Editor Forest and Stream:

I have had for some time the intention of writing you from this unlikeliest of places for sport, and the sight of your issue of July 23 just to hand, has had the effect of settling me to carry out my intention. The first matter that I would note is "Jay Beebe's" failure to rear the young grouse he hatched under a hen. In this same issue you have reviewed my "Birds of Manitoba," and I am indeed gratified to find it so favorably held by the leading journal of sport in the Western Hemisphere. Among the notes which have unfortunately been crowded out of this work of mine was a chapter on the rearing of the sharp-tailed grouse in confinement, and how I accomplished it with perfect success. I am sorry not to be able to refer "Jay Beebe" to this, it is so exactly what he wants. In brief, however, the eggs were hatched by a Brahma hen; she managed some thirty young grouse. This was a mistake; another time I would take two or three bantam or game hens, for the Brahma by her clumsiness trampled several to death. I at once put the little ones into a tight pen on the open prairie, their natural habitat, and fed them with ants, ant's eggs, flies, worms, finely chopped meat, oatmeal and strawberries, the only available fruit. I found them extremely fond of drinking, and perfectly enraptured whenever I gave them a painful

of ashes to dust themselves in. I moved the frame or pen whenever the grass inclosed got stale. In this way I reared half of those hatched: the deaths were chiefly caused by the clumsiness of the hen, as stated. It is necessary to cover the pen with a netting, as the young of all grouse fly at the end of a week.

Too much stress cannot be laid on frequent changes of locality of the pen; with a change every two or three days, a pen 20ft. square will do very well for 15 to 20 young grouse and their foster mother.

I have had some experience with English pheasants (*Colchicus phasianus*), and all points to the same conclusion—viz., young game birds must have animal food, natural surroundings and protection from the wet.

ERNEST E. THOMPSON.

PARIS, Aug. 4.

For several months we have followed with lively interest the enterprise of Dr. W. O. Blaisdell, of Macomb, Ill., in his endeavor to secure from India a stock of black partridges to introduce into the United States. For a long time it appeared that his efforts would be futile, and when at length the birds were shipped their number dwindled until but three were left alive on their arrival in New York. On our recommendation the reception of the birds at this port was entrusted to Mr. E. B. Goldsmith, a Custom House broker, who is deserving of creditable mention for his part in so promptly forwarding the feathered immigrants. The safe arrival of the three survivors is told in the subjoined account. Dr. Blaisdell's project was commented on in the *Asian*, which is the *FOREST AND STREAM* of India, and the notice there given it brought out the following letter from a British officer, from which it appears that if the newly imported game shall thrive, it will supply a valuable addition to our game fauna:

DEHARA DOON, N. W. Provinces, India, Feb. 16, 1891.—Dr. W. O. Blaisdell, Macomb, Ill.: DEAR SIR—I see by the *Asian* that you are going to try and introduce the Indian black partridge into Illinois. The good wishes of all Indian sportsmen will be with you, and I heartily wish you may succeed. I am afraid five pairs are rather a small number to try conclusions with, but if you fail I hope you will try again. His limit in India is a small one, and this is what makes me think he may be a hard bird to acclimatize in the States. Northward he ascends the Himalayahs to about 5,000ft., and southward he extends to about half way down the continent to a line about east and west of Indore, where he is replaced by the red partridge—a closely allied type. In both sexes are plumaged almost exactly like the hen of the black partridge. His range eastward is also limited, as he apparently dislikes the warm, moist climate toward the Bay of Bengal; but westward he extends far into Afghanistan and Persia, where not more than five inches of rain falls throughout the year. Don't turn him out in the forest. What he likes is low, thick scrub or high grass thicket near wheat fields and water. By high grass, I mean grass from 3 to 10ft. high; your ordinary prairie grass would not be high enough for him. He never mounts a tree, and dislikes their shade, but occasionally perches on a low stump to crow in the morning. His food is essentially seed—wheat, maize, and above all, mustard and oil seed. He breeds out here in dense high pass jungle or tamarisk thickets, not far from water. He likes a bright sun in summer, and in winter does not mind a fair dose of frost, but he won't stand snow.

If you should find Illinois too hot for him you might try the painted partridge which is common in southern India. If too cold, the "Chickoo." This is a magnificent bird twice the size of the black partridge, and excellent shooting and eating. His range is very wide—from Scinde (the hottest part of India, and in climate and appearance very much like Arizona), up to 10,000ft. in the Himalayahs, and he extends away to the slopes of bluffs overlooking rivers and the steep sides of canyons and ravines near fields. He eats all kinds of seeds, especially maize, and in the Himalayahs lives on the outskirts of the village fields. On the hot, dry plains of Scinde he is equally abundant, but always near hills or broken ground.

Pardon my writing you this long letter when I am a perfect stranger to you. I am, first, that I am a sportsman, and in your undertaking, and secondly, when I was traveling in the United States some years ago, I received many kindnesses from Americans which I will not readily forget.

W. C. RAMSDEN, Lieut.-Colonel, India.

The Macomb *Journal* gives this report of their reception there:

"We are the three sole survivors of a family of nine little birds that sailed from Calcutta, India, on June 18. Expressmen and others who have charge, feed and water us well until we reach Dr. W. O. Blaisdell, Macomb, Illinois, United States of America." [Dated London, England, Aug. 3, 1891.]

Such was the label on the box containing three black India partridges (two males and one female) that arrived by express in this city Saturday night last, and have been viewed by hundreds and hundreds of curious and investigating eyes since. They were the birds that Dr. W. O. Blaisdell, of this city, has been negotiating for for over a year. Having brought to our country a number of Chinese pheasants from Oregon, he set about the plan of bringing here some of these wonderful game birds from the other side of the globe—the black India partridge. He opened correspondence with the American Consul at Calcutta. The Consul, Mr. S. G. Merrill, of Indianapolis, placed the letter in the hands of a bird dealing firm, Messrs. Rutledge & Co., who replied that the bird was difficult to capture alive, but they would procure them at so much per brace. Heading a subscription list with a liberal sum himself, the Doctor went among some of our business men who subscribed the funds, and soon a draft was on its way to Minister Merrill, at Calcutta, with directions to purchase the birds. For months after Messrs. Rutledge & Co., the dealers, have been endeavoring to secure the birds, and a number of letters passed between them and Mr. Merrill and Dr. Blaisdell. Failing to get the birds otherwise, the merchants sent a man on special trip into the mountains, and after, as he writes, spending more than the birds brought him, they were secured. Finally the little fellows were cooped and set sail on their long voyage. A letter from Consul Merrill stated that he went to the ship and saw the birds aboard, one was dead, another sick; he feared none would arrive alive. Counting the sick one there were nine that started. Down the Bay of Bengal by the Island of Ceylon, around the point of India and into the Indian Ocean; out of this water across the Arabian Sea to Aden, at mouth of the Red Sea; through this body of water and the Suez Canal, into and across the Mediterranean; out through the Straits of Gibraltar, up the Atlantic along the coasts of Spain and Portugal, across the Bay of Biscay into the English Channel to London. Thence back down that water across the broad Atlantic to New York, and by rail to Macomb. They journeyed over 16,000 miles—two-thirds the distance around the globe. Without doubt, they are the first of

their species ever in America. Taken as game, the persons who would eat them would be consuming meat that cost \$25 per pound. As before stated, but three arrived alive, but taking into consideration the distance traveled and the different hands they went through, it is a marvel almost that they got through.

The bird is not very large, but beautiful. He is likewise an important personage, as the three are probably the sole representatives of their breed on the western continent. The birds will be on exhibition at our county fair next week, and on account of the extreme rarity of the species are certainly worth seeing. If they fail to propagate and fill our woods, you will want to say at least you saw the only three India partridges ever in the United States; while if they multiply to millions it will be a feather in your cap to remark, "I saw the original three of this bird that now abounds as thickly as sparrows." So do not fail to see them at the fair next week.

In a late issue of the *Philadelphia Ledger* we find this account of successful quail breeding in that city:
